Known by its French acronym AMARC, the World Association of Community Radio Broadcasters is an international non-governmental organization serving the community radio movement. AMARC's goal is to support and contribute to the development of its members along the principals of solidarity and international cooperation.

AMARC's Declaration of Principles states, in part, that members of AMARC:

- believe in the need to establish a new world information order based on more just and equitable exchanges among peoples;

- contribute to the expression of different social, political and cultural movements, and to the promotion of all initiatives supporting peace, friendship among peoples, democracy and development;

- recognize the fundamental and specific role of women in establishing new communication practices;

- express through their programming: the sovereignty and independence of all peoples; solidarity and non-intervention in the internal affairs of other countries; international cooperation based on the creation of permanent and widespread ties based on equality, reciprocity, and mutual respect; non-discrimination on the basis of race, sex, sexual preference or religion; and respect for the cultural identity of peoples.

AMARC has two membership categories: regular members and associate members.

Regular members are community radio stations, production groups, federations and associations of community radio stations. Their representatives have the right to speak and vote at all meetings of the General Assembly and may hold elected office.

Associate members are individuals, groups and organizations who are in agreement with AMARC's objectives. They have the right to

From: weaver@sfc.sony.com
Message-ID: <1993Jul12.051846.2709@gagme.chi.il.us>
Source record: 42924

There are some events we want to cover in places rather out of the way.
It seems that satellite links are the most economical approach, so I'm
looking into transportable uplinks.

I've talked to NPR, and IDB, and a few places around here, and they
all want $2500 per day. Is there anyone who rents the stuff cheaper than that?

## 938. WLUP owners buy (The Blaze) WWBZ, more info?

Newsgroup: rec.radio.broadcasting
Date: 1993-07-12 05:19:04 UTC
From: ckunz@src4src.linet.org
Message-ID: <1993Jul12.051904.2742@gagme.chi.il.us>
Source record: 42925

Recently, I read in alt.fan.howard-stern that the owners of WLUP-AM-FM bought WWBZ ("The Blaze"). WLUP-AM is supposedly going to be sports-talk, WLUP-FM for personalities, and WWBZ for the rock format. This may have an effect upon whether or not Stern stays at the Loop. Does anyone have more info on this buyout? Has it really happened?

[Moderator's Note: Yes, Evergreen Media (parent of the LOOP) bought hard-AOR station 'the blaze' for about 28 million (plus 4 million to take over immediate control). Your Rumor is basically true, although noone is saying much. Probably, Stern will wind up on the Blaze mornings, if he is kept at all. His show is a pitiful 17th in the morning ratings :-(. The LOOP-FM will have Steve/Garry in AM drive, Kevin Mathews in middays, Johnny Brandmeier in PM drive Danny Bonnaducci (sp) evenings, Eddie Schwartz late night. The AM is rumored to be going all-sports. Bill]

# 940. Some New York Radio News

Newsgroup: rec.radio.broadcasting
Date: 1993-07-12 05:23:28 UTC
From: slutsky@tesla.njit.edu
Message-ID: <1993Jul12.052328.2898@gagme.chi.il.us>
Source record: 42927

Some New York Radio News:

WZRC 1480 AM became a Korean language station at 7 AM on 7/7/93. Radio Korea is licensing the station from Infinity Broadcasting, but it has an option to buy the outlet in a year. There are about 250,000 Koreans in New York City.

Juliet Papa, a reporter with WINS who covered the 1992 trial of John Gotti has written a book titled "The Mafia Handbook" published by Penguin. It presents a satirical look at wiseguys and their peculiar lifestyle.

WNYC-AM/820 has received approval to broadcast 24 hours at 10,000 watts during the day and 1,000 watts at night.

WPBX- 91.3 FM Southampton has received persmission to increase its power to 5,200 Watts.

WLIR/1300 AM Rockland County was recently sold and is broadcasting under an all Jewish format. They are a 500 watt daytimer and cannot be reached in the city.

A plastic bag which holds home delivered copies of the New York Times reads: If you can read the New York Times you can listen to WBBR.

[Moderator Note: Boy that country stuff didnt last long on WZRC. Why did they bother? Bill]

## 941. WCNN Atlanta is now all-sports

Newsgroup: rec.radio.broadcasting
Date: 1993-07-12 05:23:39 UTC
From: Oliver Tse <oliver_tse@cornell.edu>
Message-ID: <1993Jul12.052339.2920@gagme.chi.il.us>
Source record: 42929

While listening to "Sports Byline USA", a national sports talk show
originating from San Francisco, I heard the host, Ron Barr, mentioned
that WCNN, 680 AM, Atlanta, GA has recently changed
its format to all-sports. WCNN is also the flagship for Atlanta Hawks
basketball. According to the WRTH, WCNN's signal is DIRECTIONAL with
DIFFERENT day and night patterns. The wattage is 50kw daytime but only
10kw at night. Please add this station to the growing list of all-sports
stations that the readers of rec.radio.broadcasting are now awared of.

## 942. Red Sox on radio

Newsgroup: rec.radio.broadcasting
Date: 1993-07-12 05:24:06 UTC
From: olivert@msc.cornell.edu
Message-ID: <1993Jul12.052406.2973@gagme.chi.il.us>
Source record: 42930

In issue 109 of the Internet Radio Journal, I found the following posting in rec.radio.broadcasting by Scott Dorsey (kludge@grissom.larc.nasa.gov) regarding Boston Red Sox games on radio:

>In Atlanta comes in nicely. Red Sox would be on WBZ Boston.

Eric Cottrell (eac@world.std.com) correctly noted that the Red Sox is on WRKO-680 AM in Boston and NOT on WBZ-1030.

What Scott received nicely in Atlanta is actually WTIC-1080 AM, Hartford, CT. WTIC is a Red Sox AFFILIATE and it has a 50kW DIRECTIONAL (South and West) night-time signal. I've been able to receive Red Sox games on WTIC since 1991 when I found the station listed in the inaugural issue of _USA_Today_Baseball_Weekly_. Most recently, I listened to the Red Sox/A's game on Friday, 9 July 1993.

WRKO-680 in Boston has a DIRECTIONAL signal that is difficult to receive even on the East Coast south of New England. A 50kW station in Raleigh,NC (WPTF) also occupies 680 AM. In Atlanta, the 10kW all-sports WCNN occupies 680 AM. I have NEVER been able to receive WRKO here in Ithaca, NY because of a low power station 40 miles away in Binghamton, NY that also broadcasts on 680 AM. 680 AM is a awfully-crowded channel with 50kW stations in Winnipeg, MB (CJOB) as well as the non-directional 50kW KNBR "The Sports Leader" in San Francisco.

From: dstewart@world.std.com
Message-ID: <1993Jul12.052418.2982@gagme.chi.il.us>
Source record: 42928

You might try People's Radio Network. I'm doing it 24 hours on one of my AMs, and God forbid the transmitter (RCA BTA-1R) should pop off... the phones go nuts... this is in market #147.

Or musically, do something nobody else has ever done. I'm programming the TM Century Country Goldisc 1000 and 1500 series on an AM, and six weeks after I put that on, the station made money! Not much, but we paid the bills, and then some.

Key to automation (both my AMs and my FM are auto) is sounding live. Using the (argh) Pristine MMCS system on one AM and FM, and cue tones w/switcher for PRN.

# 944. Radio Ship Under Construction

Newsgroup: rec.radio.broadcasting
Date: 1993-07-12 05:27:22 UTC
From: Steve Coletti <bigsteve@dorsai.dorsai.org>
Message-ID: <1993Jul12.052722.3099@gagme.chi.il.us>
Source record: 42931

This report is of particular interest to shortwave listeners. If anyone has been following the Story on Glen Hauser's World Of Radio program or my news segments on SPECTRUM, you've been hearing the report of radio minister Bro. R.G. Stair, (heard on shortwave stations WWCR and WRNO), and his radio ship.

Since there seems to be a lot of wrong conclusions being taken as fact, including those in the July issue of Monitoring Times, I've figured that it's about time that I put all I know about it on the various online nets.

Brother Stair is a major investor in the ship, he is not the owner. The owner is Scott Becker, a satellite time broker and LPTV station owner/operator. At one time, Mr. Becker attempted to operate a broker time radio network, BSN, via his satellite subcarriers. He continues to own those subcarriers but has a full time leasees, one of which is Bro. Stair. All I have to say was told to me by Scott Becker, who has a reputation of exaggeration and fabrication, but at the same time is being frustrated by the untruths floating around.

There are many legal questions about broadcasting from a ship at sea, for the most part it is illegal. However, there are certain questionable ITU regulations about a country's ability to issue a permit to someone to legally broadcast from a seagoing vessel. It has become obvious that some country either wants to challenge or ignore this part of the treaty.

For that reason, certain facts are being kept secret until the ship is on the air. It is to avoid the country in question from receiving political pressure from other countries and backing out of the deal. These are; the country permitting the broadcasting, (which is also the country of registry), the name of the ship, and it's current location while it is being constructed. I do not know this information.

The ship has been reported as being in Boston harbor, it is not. It is a former fishing trawler, but, unlike another rumor, it is not the old Radio NY International vessel, it is larger, 165 ft x 30 ft. Neither Alan Weiner, nor RNI, have anything to do with the ownership, nor is there any financial investment by anyone of the RNI partners. Mr. Weiner has been hired by Mr. Becker to construct the radio station, his position is that of a salaried employee, nothing more. Alan is not sure at this time if RNI will return to the air via this shipboard station, but it is more than likely it will.

We can say that the ship is authorized by a Caribbean country, and that it will be stationed in the western Mediterranean. The country issuing the permit has done so in leiu of broadcast time. More on this later. The transmitting location has been determined by the footprint of the satellite

that delivers Bro. Stairs' radio service, GTE Spacenet 2. His programming will be received on a $48,000 satellite receiver that is designed for seagoing reception and broadcast over one of the two 40Kw shortwave transmitters on board. Also on board are two 10Kw shortwave transmitters. The 40kw and the 10kw's will be available to anyone wanting to buy broadcast time. Bro. Stair will be originating his programs this weekend from the studio on the boat as part of a progress report on the construction.

Also on board is a 20Kw, self contained, UHF TV station for the exclusive use of the country authorizing the ship. In addition there are AM and FM broadcast band transmitters that can also be used exclusively by the country if they decide they want to use them. Scott has no plans to activate them on his own.

The ship itself is powered by a single 1200 HP, 12 cyl. engine, top speed is 16 knots. Ship power is provided by an 80 KVA generator and a 75 KVA generator. 250 KVA and 60 KVA generators have been installed to provide power to the broadcast equipment, an auxiliary generator is on order. The first of 3 towers has been installed, the remainder of the antenna system will be completed in a few weeks. Right now the wiring is being completed between the transmitters and the studio.

They expect to set sail on September 15 and begin broadcasting in late October. Although the frequencies have not been announced, they plan to make test transmissions on 7415 Khz while enroute, after they are outside of US waters.

Personal comments. While many regulations have been passed to make shipboard broadcasting illegal, it was primarily done by the way of maritime rules and agreements between the British and the Dutch. They were written to outlaw the pirate radio ships in the North Sea. Radio Brod a/k/a Droit de Parole, a ship anchored in the Adriatic Sea that is broadcasting uncensored news to the former Yugoslavian republics has been receiving pressure to sign off fro the EEC. The ship, set up by a French organization and operated by Yugoslav journalists, has been causing interference with its 50kw transmitter on 720Khz. However, for the last two years, there has been a shipboard station, Voice Of Freedom, operating off the coast of Israel. No one has attempted to stop it's daily deluge of Christian programming, (including the infamous Dr. Gene Scott's program). Given this uneven track record, it is possible that this venture by Mr. Becker may just be a success.

A nit, but the Antelope Valley, where I live, is only about 60 miles north of LA. The traveled distance via Highway 14 from LA to Palmdale is maybe 20 or 30 miles further since 14 spends quite a bit of time going East/West to get around the pesky hills, like Mt. Tenhi and Hauser Peak. 14 even doubles back for some distance...

Message-ID: <1993Jul12.052746.3145@gagme.chi.il.us>
Source record: 42933

This may be kind of a shot in the dark, but we here at WUVA in Charlottesville are looking to compile a list of our alumni, especially those who have remained in the broadcasting field.

I'm told there are quite a large number of people such as these out there in the real world; there certainly should be after having more than forty-five years worth of continuous broadcasting in one form or another!

If you are a WUVA alumn or know of someone who is, could you please e-mail me your address and phone number, and also when you were here and what you did. We'd like to start some sort of alumni newsletter on a periodic basis, but it's kind of a daunting task to try to compile forty-five years' worth of names!

Any help you could give would be greatly appreciated!

Message-ID: <1993Jul12.053213.3328@gagme.chi.il.us>
Source record: 42936

WKRC is (at least it was as of the first of the year) being run by WLW
on an LMA between WLW and KRC owner Great American Communications.

Since I no longer work for GACC, I don't know if this is still the case...

WKRC had been pretty stable for years, but during the Gulf War they changed
the format to all-talk and after the war ended ratings went in the toilet.

A last-ditch effort to rebuild WKRC as full-service AC was too late to save
it, so GACC signed the LMA with "arch-enemy" WLW in an attempt to return
the property to profitability.

It seems ironic that as GACC works its way through Chapter 11, its
(and predecessor Taft's) flagship changes not only management hands, but
calls as well.

Steve

## 953. Dirty words that seem to be in songs, that are broadcast

Newsgroup: rec.radio.broadcasting
Date: 1993-07-12 05:37:14 UTC
From: wa2ise@netcom.com
Message-ID: <1993Jul12.053714.3533@gagme.chi.il.us>
Source record: 42940

While listening to KITS San Francisco, they played "Creep" by Radiohead.
Maybe it was my imagination, but it seemed that the line "you're so
f__king special" was in the song. Twice. (you know, the word that rhymes with
"duck".) Now, I'm sure that the "F word" is probably at the top of the
FCC's list of forbidden dirty words, so I would expect that stations
might want to avoid stuff that might sound like it.
I have a copy of the CD with this song on it, and just gave this song
another listen. Maybe the word is "funking", but I've never heard of
such a word. (No lyrics are printed in the little booklet in the plastic
CD box). CD: Pablo Honey, Radiohead
I don't think I'd want to play this song on MY radio
station (if I had one!), what with big FCC fines being issued lately
(Howard Stern, and such).

KITS is a commercial FM station in SF, format is modern rock.

==========
"A thousand a week doesn't go far anymore" - George Jetson
"Modern rock for you, paychecks for us" - Jingle heard on WDRE and KITS

[Moderators Note: Robert, I am not the FCC so if you want to use the word
fuck, in descriptive fashion (as you were using it here) feel free to do so.
Same goes for other 'explitives'. Id prefer that they not be used for insult
or stupidity value, but we are (practically) all adults here and I have no
problem with such phonetic combinations of alphabetic sounds :-). Bill]

## 954. Introduction to rec.radio.boadcasting (NEW)

Newsgroup: rec.radio.broadcasting
Date: 1993-07-12 05:41:47 UTC
From: wdp@airwaves.chi.il.us
Message-ID: <1993Jul12.054147.3685@gagme.chi.il.us>
Source record: 42941
Cross-posted to: rec.radio.broadcasting,rec.radio.info

Greetings:

Rec.radio.broadcasting (r.r.b) is a Usenet newsgroup which
was founded in April of 1992, in order to provide a forum for
discussion of topics pertaining to 'domestic broadcast radio'.
Already in existance was rec.radio.shortwave, which centers around the
International radio scene, and rec.radio.noncom who's focus is,
obviously, non-commercial radio. Rec.radio.broadcasting was intended
to 'fill the gap' between these groups.

The Internet Radio Journal is a periodic email digest consisting,
mainly, of articles found in the newsgroup. It is intended for people
who either cannot access the newsgroup from their system or for some
reason perfer a digestified format for reading. Subscriptions to IRJ
are free, and available to anyone who wants one, and who is equiped
with some form of email service.

-=*=- DOMESTIC BROADCAST RADIO -=*=-

By domestic, we mean broadcasts which are intended, primarily,for
reception in the same country/nation in which they originate. R.r.b
is an international newsgroup, though, and the term 'domestic' should
not be taken to imply 'USA' or even North American. Readers in other
nations are encouraged to participate.

-=*=- SUBJECTS -=*=-

If it has to do with broadcast radio, and not _specifically_ international
shortwave, it is welcome here. Occasionally an article which IS
primarily about shortwave will be posted if the subject seems broad
enough that the readership of r.r.b might be interested, or be able
to assist the poster in some way.

Generally, if a subject 'seems' like it would be of interest to the
broadcasting community (which includes those involved in creating,
transmitting or listening to broadcast radio) will be published.
These subjects include (but are not limited to)..

1) Formats and programming.
2) Engineering & technical matters and interests.
3) DXing (long distance reception) on the standard broadcast bands
4) Community broadcasting (including non-commercial and clandestine stations).
5) Pirate broadcasting (especially non-shortwave, domestic pirates).
6) Legislation affecting the industry, and its 'offspring' industries.
7) Technologies affecting the industry, and its 'offspring' industries.
8) General station information. Who is going on and off the air, and why.

9) Radio's historical and cultural significance.
10) Radio's current and future trends.
11) Political and news coverage and its impact.
12) Job openings and help to those seeking work in the industry.
13) Information on equipment and techniques involved in transmission and reception of broadcast radio signals.
14) The International Scene and how broadcast radio is shaping up in the various nations of the world.
15) Gabfesting and all matters of general interest to those involved in, or interested in, the general subject of domestic radio broadcasting.

-=*=- POSTING -=*=-

1) Post to rrb as you would any other Usenet group. The software does the rest.

2) Email your article directly to rrb@airwaves.chi.il.us. Using other addresses to post will needlessly delay your article. You might consider installing an alias in your mailer for emailed articles, especially if you post a lot of stuff. See the end of this file for all applicable addresses.

-=*=- POSTING GUIDELINES -=*=-

* If you post a question that is of potential interest to others in the group, ask that replies be posted, instead of emailed to you. We all would like access to the answers.
If you do receive email replies, post a summary to the group. This forum is only as good as it's posters and readers. Keep the info flowing.

* If you email an answer to a question, send a Cc: to the group's submission address, rrb@airwaves.chi.il.us, so we can all learn from your knowledge. When id doubt... POST POST POST! :-).

* PLEASE edit quoted text to a minimum! Most users of this group are fairly regular readers and do not need, or want, to read the entire text of a recent article in every reply. Of course, if the thread is less current, more quoted text may be appropriate. Use your brains (and your editor :->).

* If your message is basically a one or two line "Me Too" or "I disagree" post, consider emailing it to the poster. However if you go into some details as to WHY you agree or disagree, then please post it.

* If you are replying to an article in the Internet Radio Journal, simply use your mailer's reply feature, and again, edit the text to ONLY the article you are replying to, and include the article's name in the Subject field. Subjects of "Re: Internet Radio Journal" are confusing and may result in needless delays.

* If you post about a local radio station or personality, realize that 95% or more of the readers will know little or nothing about it. Offer a little background, like location, station format, type of

music played etc.

* Last but not least, avoid flames and personal insults. R.r.b has a high percentage of broadcast professionals among it's readers. We try to maintain a reasonably high brain to bulls*it ratio here. It is perfectly fine to say "I think that what you said is the stupidest bunch of crap I have ever heard", instead of "YOU are the stupidest jerk I have ever heard". If you *must* make personal attacks, do it in email.

-=*=- MODERATION -=*=-

R.r.b is a _very_ loosely moderated group. Normally, all legitimate articles will be posted to the group. Matters that may cause an article to be rejected by the moderator include...

---

* Articles which are not on (or reasonably near) the stated charter and scope of the group (domestic radio broadcasting) or pertain to 'non-broadcast' radio services, such as cellular, two-way, ham, citzens-band, and such.

* Articles that are too long for submission as-is. If your article is longer than 10k (10,000 bytes), consider splitting it into two parts, or better yet, edit it down to a more reasonable size. Check to see if you can eliminate any quoted text. If you believe that your article is of an especially urgent or inforamative nature, and you also feel that you cannot reduce the size without damaging the content, let me know and I will try to work with you.

* Articles which are merely multiple repetitions of an identical answer which has already been offered several times. Often these will be bundled together into a single article to conserve bandwidth and increase readability.

* Articles which contain 'miles' of quoted and multiple quoted text followed by a few lines or less of original text. Please edit quoted text to a minimum and try to adhere to the *50% rule*, that is 51 (or more) percent of original text to 49 (or less) of quoted text. If the thread is not curent, more quoted text is appropriate. Only the worst offenders are omited, usually I will edit quoted text myself, when I have time.

* Articles that 'blatently' solicit funds or make requests for contributions to causes, even if that 'cause' is radio related. For sale ads that appear to be commercially based. Folks selling some radio-related personal belongings (i.e old time radio shows, single pieces of equipment or other stuff that does not appear to be comercially motivated) will generally be allowed. Commercial posts are technically prohibited over the NSF backbone on which the Internet (and Usenet) travel.

* Articles which are unwarrantedly offensive, abusive or contentious for the sake of contention. Personal attacks and ridicule are considered such. Discussion, even argument, of issues and opinions are welcomed and

encouraged. Flame-wars and such are not. We have discussions here, not shouting matches.

Note: Since most articles are used, we do not send out confirmations. If your article *is* rejected, you WILL receive a note explaining why the action was taken. If you do not receive such a note, and you do not see your article in the group, notify the moderator at once and include a backup copy if you have one.

-=*=- ARCHIVES -=*=-

Archives of past Internet Radio Journals are kept for anonymous FTP at deja-vu.aiss.uiuc.edu . They can be found in the directory /misc/rec.radio.b-cast. In that directory you will find a file called INDEX, which contains the issue numbers of all Journals, and the title of each article contained within. The archives are updated every week or so. If you need help with FTP, write me.

The Journals are arranged in sub-directories of about 100 issues each, and are in compressed (.Z) format. Remember that compressed files should always be sent using the "binary" mode. If you have trouble accessing anything, or if you have any questions about the archives, send email to rrb@deja-vu.aiss.uiuc.edu. If you appreciate the archives, send your notes of appreciation to the site admin, C. Lance Moxley <lance@deja-vu.aiss.uiuc.edu>. He has been very gracious in his willingness to store our archives on his machine.
* Please do not bother the system admin with problems, direct those to me. *

-=*=- ENJOY THE GROUP! -=*=-

I hope you enjoy the group. Remember, it is only as good as it's contributors. So don't be shy :-). If you have a question, or answer, even if you are not sure, post - post - post.

I am open to suggestions on how to improve this group. Send them via e-mail to wdp@airwaves.chi.il.us -or- rrb@deja-vu.aiss.uiuc.edu.

Thanks to all who have, and continue to, participate.

We now return you to your regularly scheduled newsgroup :-).

# 955. Berkeley Free Radio

Newsgroup: rec.radio.broadcasting
Date: 1993-07-12 19:56:57 UTC
From: ka6etb@GRAFex.Cupertino.CA.US
Message-ID: <1993Jul12.195657.14055@gagme.chi.il.us>
Source record: 42944

Picked up from ba.broadcast:

> Subject: Free Radio Berkeley
> Date: 9 Jul 93 19:35:21 GMT
> Sender: netnews@ccc.amdahl.com
> Reply-To: pts10@DUTS.ccc.amdahl.com (Peter Stanley)
> Organization: Amdahl Corporation, Sunnyvale CA
> Lines: 134

I got this letter from one of the mailing list's I subscribe to that deals
with the fm-10 broadcaster. I have no idea if this is creditable info.

I am posting this without permission of the author...but since it was
headed for alt.radio.pirate I figured it was ok.

Peter Stanley
---

<This first part is from Mycal, who maintains the fm-10 mailing list>
The following is from Stephen Dunifer. He asked me to forward it to the
alt.radio.pirate groups. So I put it here, could someone do the honors of
putting it on alt.radio.pirate.

Check out the kits Stephen has too!

--------------cut here--------------------

RECLAIMING THE AIRWAVES

Using inexpensive hand built transmitters, Free Radio
Berkeley and other micro power broadcasters are challenging the information
stranglehold imposed by the corporate media and enforced by federal
regulation. Every Sunday evening from 9 PM to 12 midnight, a broadcast
is made from somewhere in Berkeley at 88.1 on the FM band. Running
with an output power that varies from 5-15 watts, Free Radio Berkeley
has been picked up as far away as 35th and Geary in San Francisco. Free
Radio Berkeley is a First Amendment challenge to the restrictive federal
regulations which only favor those with money and power.

It is the contention of Free Radio Berkeley that most communities, however
they may be defined, are denied their own voice. Unless one has at least
$50,000 to start a 100 watt FM station, there is no way any community
without those resources can have a voice. Before 1980 it was possible
to apply for and receive a 10 watt Class D educational station license
with very little money in the bank. Thanks to an alliance of
reactionary elements who sought to suppress voices outside the mainstream
and liberal elements such as the Corporation for Public Broadcasting

(NPR) who sought to establish more "professional" stations (translation, more likely to be funded by corporate blood money laundered through foundations), the FCC eliminated all 10 watt station licenses as of 1980. This move prevented the 90% of the US population who do not have the monetary resources from having a voice on the FM band. Especially African Americans who are grossly underrepresented in the media.

If the airwaves were not dominated by the corporate media pirates, there would be plenty of FM radio spectrum space available for all to use. Even in the congested Bay Area FM radio spectrum, there are quite a number of frequencies that would be appropriate for low power (.5 to 10 watts) community broadcast operations. Unfortunately, like so many other public resources such as old growth forests, the air waves have been hijacked and polluted by the corporate state in its relentless pursuit of profit and control of all public resources.

Free Radio Berkeley is part of a growing movement of individuals and communities across the country who have set up these micro power (1 to 15 watts) broadcasting operations. Most notable of these is Black Liberation Radio, which covers a housing project area in Illinois. Black Liberation Radio has been under severe attack by both the local police and federal agencies. Despite police and federal harassment, Black Liberation Radio is on 24 hours a day offering some of the finest programs to be found anywhere on almost no budget to speak of.

Very recently the FCC filed a Notice of Apparent Violation against one member of Free Radio Berkeley, Stephen Dunifer, with an attached civil fine of $20,000. Free Radio Berkeley and Stephen Dunifer are being represented by Louis Hiken from the National Lawyers Guild Committee on Democratic Communication. It is hoped that this case will result in some major precedents being set for Micro Power Broadcasting. Efforts are under way to organize the Free Communications Coalition to defend and support Micro Power Radio. Funds for legal defense will be raised through a series of benefits and public forums. Call the voice mail number (510) 464-3041 if you can help in any way with this effort.

Just imagine the possibilities of having hundreds of micro power broadcasts like this across the country. Cost is not a problem since a basic station can be put on the air for around $200. With determination and purpose we can break the stranglehold on the flow of cultural and artistic expression, information and ideas in this country. Consider giving your community a voice. Very soon, inexpensive (less than $500) UHF TV transmitter designs will be available as well.

Free Radio Berkeley encourages you to take up the microphone and let a thousand transmitters bloom. Your support, ideas, and involvement are essential to micro power radio flourishing. We will have a complete handbook out very soon which will cover all aspects of micro power broadcasting. Please call our voice mail number for updates on upcoming events and workshops. Our address is:

Free Radio Berkeley, 1442 A Walnut St., #406,
Berkeley, CA 94709 <D>

Phone # (510) 464-3041

Or, come to the FRB collective organizing meeting on Wednesday, July 21
- 7:30 PM at the Long Haul, 3124 Shattuck Ave., Berkeley

For anyone on the net in the vicinity of New York City, I will there on the weekend of August 6 through the 10 or 11th. I am trying to set workshops on micro power radio on Monday & Tuesday. It looks like the Paper Tiger Folks will find a facility large enough to hold 20 or 30 people. Transmitter kits ($40 for 5 watt units) will be available as well as a book on Micro Power Broadcasting that I am working on now. I am asking a donation of $10 to $15 per person for the workshops. Hopefully that might cover my travel costs unless there is an extremely kind beneafactor(s) on the net who would like to donate to a good cause.

If anyone on the net wants to order the kit send $40 (made out to cash) to the above address. The new and improved stereo kit using the Rohm BA1404 with one watt output will be available soon at a cost of $35. I have a 6 watt (requires only 1/4 to 1/2 watt input) amplifier kit which will drive a PA-1 to full power, it costs $25. Another design which will be in kit form soon is a 15 watt amplifier that only requires 1/2 watt input, cost will be about $30-$35.

Stephen Dunifer

>Does anyone know how I can receive a radio program called "Brave New Waves"f
>broadcasted from CBC radio? By the way, I am in New Brunswick, New Jersey.

Brave New Waves is on CBC's Stereo network (Sunday - Thursday [or Monday-Friday, depending on how you do these things] 12:00 AM - 4:00 AM). The stereo network is all FM, none of them particularly powerful. The nearest to you is Toronto at 94.1, but I doubt you'll ever get it there in New Jersey.

## 957. Distant FM reception (was: Re: CFNY Toronto heard 150 miles)

Newsgroup: rec.radio.broadcasting
Date: 1993-07-12 20:01:20 UTC

Sorry to be a spoilsport, but KFJC is heard at Echo Summit in the Sierra Nevada range, a distance of about 180 miles, with only 110 watts ERP.

Antenna height is almost everything in VHF work, and ours is 2690 ft MSL (1860 above average terrain).

## 958. Speaking of radio...

Newsgroup: rec.radio.broadcasting
Date: 1993-07-12 20:01:46 UTC
From: haynes@cats.ucsc.edu
Message-ID: <1993Jul12.200146.14268@gagme.chi.il.us>
Source record: 42946

(Note cross post to rec.radio.broadcasting - probably followups should go to rec.music.classical only.)

Since a discussion of classical radio, and popularity of classical music, comes up from time to time, I got to thinking about musical broadcasting back in the days when TV was in its infancy and network radio was still big. I don't remember this very well - I'll modestly claim not to be all _that_ old - but those were the days when classical music was part of the mainstream programming for the public, wasn't it?

Maybe for the sake of nostaliga we can build up a file of
program,
network or local,
frequency (I mean like weekly or monthly, not the radio frequency)
duration,
theme music played at beginning and end of show,
sponsor,
anything else you want in there? (maybe what program competed on that time slot on other networks)

Some things I can remember, but only in fragments, are
NBC Symphony
Bell Telephone Hour
Houston Symphony - theme was something where a French horn plays D-C G-F at the beginning.
some Saturday-morning program for kids (and like Patty says in the Peanuts comic strip, they always play "The Sorcerer's Apprentice")
Cities Service Band of America - theme was its own piece, "Cities Service Band of America March"

And any comments you wish on the relation between these broadcasts and public appreciation for classical music then and now.

Message-ID: <1993Jul12.200240.14306@gagme.chi.il.us>
Source record: 42947

In article <1993Jul11.032135.16439@gagme.chi.il.us> Robert Alexander
<rfa@hopper.acs.virginia.edu> writes:
This morning my boss came to me and gave me a challenge. He wants me to
see if I can dig our A.M. station out of the hole.
<..deletia..>
Here is a rundown of our current formatics...Have a look at this and give
me what ever input you can on how YOU would improve on, add to, delete or
otherwise change this set-up to make it a winner in a 250th market with
3 AM's and 6 FM's ( 2 of which are college stations).

Keep in mind this is a computer driven station and they aren't going to
put a live airstaff back on.

6a to 11a Oldies (Jones Music Satellite from Colorado)
11a to 2p G. Gordon Liddy (from WJFK Washington DC)
2p to 7p More Oldies
7p to 10p Bruce Williams
10p to 11p Dr. Harvey Reuben
11p to 6a Jim Bohannon

I have a news dept. to work with and they are actually quite good.
<..deletia..>

We are considering taking the Oldies Music off completely and taking the
station all talk.
<..deletia..>

What I am looking for from this group is a little input. Like who is doing
all talk. What they are doing with it. How is it standing up against other
type formats in bigger markets. Is there any way talk radio can be truly
competitive with music formats that do big contests and have live folks
on the console answering phones and putting people on the air?

If you have a big talker in your market could you please give me the calls
and who their PD is or who might be a contact at the station for me to talk
to about what is working best for them.

Any help on this would be appreciated...Just think.....you could be the
program director by remote control...Or maybe we could make this a group
experiment and everybody could take credit for helping me to make this
station successful again

Thanks
Robert

Not knowing what the rest of the market's stations are up to, best I can
do is make general suggestions...

I don't think being completely satellite is going to generate the listenership needed to "save a dying AM". You can make some improvement by dumping satellite oldies for satellite talk, but I think you need something local to get people listening, especially in the morning. Much as I might like oldies, say, or even Howard Stern, man, what I really want to know is what today's weather is. And it's nice to know whose house burned down overnight, and whether World War III started. So I'll tune into a station that gives me this stuff. And because I'm busy getting ready for work and don't want to futz with the radio to find music after I get my info hit, I'll leave the station on. The station whose morning slogan is, "Weather every ten minutes!" gets my listenership! I suggest a news/weather/information/weather/ sports/weather morning show, run by your news department.

When I get out of work, I want to know what's going on, as well. I do like to hear music at this time, too. But every day I tune to WBOW-AM in Terre Haute thinking, "I'll listen to ABC news and then a few local stories and then plunk in a tape or switch to the rock station," but every day, I end up listening to all of their 20 minute news show. They do world, national, and local news, plus stocks, agri-business, sports, and a thorough weathercast with the meteorologist from crosstown TV-2. They are smart to put that last, because it's what I stick around for. I've listened to this most days for the four years I've lived here. It's good enough I don't really need to watch the 6:00 news. Sounds like you could easily do the same thing. For information, the news director at WBOW is Taylor Brown, and the program director is Tom Lisella. (812) 232-5034.

WSBT-AM in South Bend is pretty successful - always a top-rated station - with a day like this:

6:00 - 10:00 "JT in the Morning", a news/information/weather
morning show, with intermittent music. JT is
mostly the ringleader, segging between elements
and giving brief weather just about every time he
cracks the mic. A woman reads the news; a
meteorologist from their TV station does full
weather, etc.
10:00 - 11:00 Dr. Dean Edell
11:00 - 2:00 Rush Limbaugh
2:00 - 5:00 Alan Combs (or however you spell that)
5:00 - 6:00 Newshour - CBS news, plus local, sports, features,
etc., some locally done, some from CBS
6:00 - ... I haven't been in South Bend during the week
enough to be sure what goes on after 6, but I
know it's satellite talk, incl. Jim Bohannon.

WSBT's PD is a man named Jack Swart.

I think the key is to put out something consistently good while people are getting ready for and driving in to work, and while people are driving home. Fill the rest of the day with the right talk.

You're not imagining things, Robert, I was driving around San Francisco one day listening to KUSF in the middle of the day when they played a Skatenigs song that had one of the most recognizable (i.e. almost spoken word) "fucks" broadcast over the air. I almost cringed, but the dj just let it slide and continued with the song. (Such an offense would be a two week suspension at KRCL, where I program).

I heard numerous other songs broadcast through my stay in the Bay Area that had "offensive language" as well, so I know it wasn't limited to just a particular time or dj. Is it something about community values that let them broadcast these songs, or is it a "devil may care attitude" that could get the station in a lot of trouble should someone complain?

Robert.

The group "Extreme" has released a few songs with the word "shit" in the lyrics ("It's a Monster", for one), and the word "fuckin'" ("Am I Ever Gonna Change") in a few as well. 98Rock (WIYY Baltimore, 97.9 FM) plays these uneditted.

However, "Pearl Jam" has a new song out which starts with the line "What the fuck you doin'" and they routinely cover it with a split-second of dead-air or some short soundbite ("D'ohh!", usually).

I assume it depends on how clearly the word can be heard. Of course, these standards seem to be lowering all the time. So who knows what they will or won't edit next week.

-Me

[Moderator's Note: Here in CHicago, All-Rap radio WJPC plays a lot of stuff with explitives either in plain view of badly masked. I guess it is hard to play that music without them :-). Bill]

>
McLendon is credited as the first programmer to recognize the desire of
listeners to hear music from a tight playlist. As the story goes, he
was in a bar one night and stayed through closing. He observed the barmaids
putting tip money into the jukebox to play the same few records over and over.
Eureka...
McLendon also invented beautiful music radio right here in the Bay Area
on KABL AM and FM.

## 963. Brave New Waves

Newsgroup: rec.radio.broadcasting
Date: 1993-07-12 20:33:21 UTC
From: Bolt <boltb@Operatns.mohawkc.on.ca>
Message-ID: <1993Jul12.203321.14902@gagme.chi.il.us>
Source record: 42953

In response to Jaslin@trident.usacs.rutgers.edu, The CBC program "Brave New Waves" originates from CBC Montreal and according to the Audience Services department is produced by David Ryan. The pleasant lady I talked to said that David is not available Monday mornings (but then again who is?). The program is normally done live and she doesn't think that copies are available.

Give David a call...and good luck.

Phone (514)-597-5970 or fax David at (514)-597-4511.

## 964. Radio frequencies in other countries

Newsgroup: rec.radio.broadcasting
Date: 1993-07-12 20:33:32 UTC
From: "Duncan J. Shaw" <dshaw@scf.usc.edu>

Source record: 42951

In response to your question, the answer to whether or not an American walkman will work in Israel has two possible answers.

AM (MW) Spacing in the eastern hemisphere is 9 kHz, compared to the 10 kHz spacing of the Americas. (ie instead of stations being on 540, 550, 560... they are on 531, 540, 549....). FM spacing in the eastern hemisphere is .1 MHz, instead of .2 MHz here. (ie where in the US FM stations all end in .n, with n being an odd number, in Israel you may find stations at frequencies at 104.6 FM).

So if your walkman is analog (dial) tuning, you will have no problem. It picks up 1400 in the US just as easily as 1341 in Israel. Same for FM.

If you have digital tuning, you _could_ run into a problem. Most digital walkmen sold in the U.S. _only_ pick up American channels. Therefore, to listen to 1341 AM on a digital US walkman, you would have to tune to 1340. Not much of a problem, but when you have to tune in to 1305 AM on wither 1300 or 1310, you don't get a really good signal.

However, a few walkmen will have a "9 kHz - 10kHz" switch, allowing you to use either Western or Eastern hemisphere spacing plans.

Hope this helps.

I probably won't be able to help you out here, but I was wondering, where you are, how big is your market, what are the other stations in your market doing, and do people receive other stations from nearby markets?

I suppose these factors would be important in determining what you could or couldn't do.

BTW: I have NO experience in radio other than being a keen listener and taking a keen note in what is good radio and bad radio here and in other places. But I would still like to know.

P.S. I tried sending mail to rfa@hopper.acs.virginia.edu but it said that this service is unavailable.

The Denon TU680NAB includes CQUAM AM stereo. This may be the best sounding AM receiver since the glory days of H. H. Scott. The FM section is excellent also.

There are three stations or so broadcasting CQUAM in Portland Oregon, and one in Seaside. The CQUAM on KINK 620 splatters much of the south end of the band. When KKSN used Kahn I could not detect any splatter, remarkable given the strength of their signal at this QTH. KEX is mostly talk radio and news, so CQUAM doesn't do much beyond setting off the STEREO light.

I have a couple of comments on WCNN. WCNN is _not_ the flagship station for the Atlanta Hawks. That 'privelege' belongs to Jaycor's WGST/Atlanta. Hawks basketball is distributed via Jaycor's Georgia Network (Galaxy 6, T3, 73.8 SCPC) backup channel.

WCNN is the flagship station for Georgia Tech sports, but that's it. WGST also has the Atlanta Braves, and WSB-AM has the Atlanta Falcons.

WCNN is in fact directional. Always has been, even when it was WRNG (Ring Radio). 50Kw day, 10Kw night, different patterns for day and night... they had some difficulty with the nighttime pattern a while back, but the details escape me.

## 968. Duplicate IRJ's

Recently some of you may be getting duplicate Internet Radio Journals. You are not going crazy and it is not your fault :-).

There is a redundancy problem at gagme (where I post and mail) which is causing this. The sysadmin is aware of it but feels that as long as the problem exists, it is better to risk a duplicate than to risk missing mail.

Until the problem is diagnosed and corrected, there may be some more of this duplication from time to time.

Thanks for bearint with me.

Note however that the CBC Stereo stations in New Brunswick (Canada
not New Jersey) are both 100kW. CBC Stereo is also available on satellite
(sometimes the ID doesn't get blanked out by the local station. "Your
listening to CBC Stereo delivered via satellite to your local cable company")
but I am not aware of which one, probably one of the ANIK series.

> another listen. Maybe the word is "funking", but I've never heard of
> such a word. (No lyrics are printed in the little booklet in the plastic
> CD box). CD: Pablo Honey, Radiohead

Creep is one on several songs played on KITS (aka Live 105) that contain
the word 'fuck' in one variation or another. These songs are
generally dayparted to the evenings, with modified (edited, muted, etc.)
versions played during the day.

> I don't think I'd want to play this song on MY radio
> station (if I had one!), what with big FCC fines being issued lately
> (Howard Stern, and such).
>
> KITS is a commercial FM station in SF, format is modern rock.

KITS is owned by Entertainment Communications (last time I checked...)
who are a group (reportedly) of Philly lawyers. If there was a
problem with the language, as it is used in the music, they wouldn't
play it. The station makes no pretense toward being anything but an
adult (as opposed to teens, or children) oriented station. I suspect
they believe local community standards will allow them to continue.
San Francisco is a pretty liberal place, as far as this sort of thing
goes. The context of the language has more to do with what KITS
censors than the actual 'dirty' words.

You can tell a lot about what goes and what doesn't when you listen
to Alex Bennet's morning show. Alex calls the process playing
"Seven Second Lawyer" with the live callers and guests. Alex
even dumps himself sometimes.

Words being used in a perjorative fashion are the real problem.
For instance, talking about your penis is acceptable,
calling someone a penis (or dick) is not.

The word fuck (or the other 7 dirty words, for that matter) are
not allowed in routine jock-patter or on the morning show.
Just in some of the music, some of the time.

> "Modern rock for you, paychecks for us" - Jingle heard on WDRE and KITS

One of my favorite liner carts.
Who is the Voice on the KITS liners?

Yeah, I'm pretty sure they do say "fucking". But such words in song lyrics seem to not be nearly the big deal that they'd be if they were spoken. I'm sure that any of the jocks at our local straight-laced classic rock station who said "Who the fuck are you?" on the air would be fired in an instant, but they let Roger Daltrey say it once a day or so.

At our station it depends on context. We do allow the airplay of certain songs that use "bad" words in a casual or humorous fashion, but we forbid others where the same words are used in a cruder or more offensive manner. We even play one song called "Shit Creek" by The Bad Livers - but we won't let the jocks back-announce it by the proper title. "Why Don't We Get Drunk And Screw" by Jimmy Buffett gets played but not announced also. Those two examples define where we draw the line fairly well.

You should hear the song "You Suck" by Consolidated (featuring the Yeastie Girls). I think you can guess the subject matter of the song from the title and the fact that the group singing it is called the "Yeastie Girls". Anyhow, our GM happened to hear it on our station not long after the broadcast of a football game (we're a commercial college station; the largest one in the country at that! :-). The Directorate had a cow to say the least. However, the label of the Consolidated CD says we're allowed to play it after 7PM. Considering the sexual language in that song, I certainly wouldn't let it be played if I were the GM!

BTW -- WDCR is also a modern/alternative rock format. :-)

[Moderator's Note: OK... OK, Just because I said that I didn't mind an explitive or two in a descriptive fashion is no reason to turn this thread into a "Lets drag out every skanky modern song lyric in the world :-)". Did I speak too soon when I assumed that we were all (or mostly) adults here? :-). Carry on, but let's try to keep the brain-to-bullshit ratio as high as possible, OK?. Bill]

I don't know the details, but I do know that many commonly played songs have dirty words in them. Steve Miller's "Jet Airliner" has a line "Don't want to get caught up in any funky shit going down in the city". "Who Are You?" by The Who contains "Who the fuck are you?". I've heard these songs played numerous times.

Note that song singles may be released with alternate recording. "Jet Airliner", on the single, replaced "shit" with "kicks".

I live in College Station, Texas (I'm not sure the market rank but it's
about half the size of Austin, Texas which is 75 I believe. There are two
all- satellite stations, one is oldies, the other is talk. The talk
station, WTAW, does have a local host in the morning but he basically
just reads the weather and plays small segments such as farm and ranch
reports and "The Osgood File". In addition, they have a local news
anchor who comes on for one minute every hour with quick headlines and
the weather and takes ten minutes at the 5:00 hour to update local news
, sports, and stocks.
Here's the lineup:
6-9am: Morning Show
9-11am:Lee Meriball(sp.?){satellite}
11am-2pm:Rush Limbaugh
2pm-3pm: Alan Combs {Daynet Live}
3pm-4pm: Dr. Dean Edell
4pm-7pm:Bruce Williams
7pm-10pm: Gil Gross {CBS}
10pm-4am: Jim Bohannon
4am-6am: America in the Morning

I don't remember the PD's name, but you can reach WTAW at (409) 846-1150.
I hope this helped a little. Oh, by the way, I live near Houston (#10),
and Dan Patrick, PD at the very successful KSEV/KPRC can be reached by
calling (713) 558-5738 or (713) 270-8255 and asking for the office
number.
later,
Jeff A. Miller

College Station,Tx

## 976. Refurbished Super Radio II problem.

Newsgroup: rec.radio.broadcasting
Date: 1993-07-13 12:14:31 UTC
From: bew4568@rigel.tamu.edu
Message-ID: <1993Jul13.121431.26782@gagme.chi.il.us>
Source record: 42964

Just in case you wanted to know: I got a refurbished SRII in the mail today. I opened it up to discover that the yellow and purple wires that carry the FM antenna signal to the PC boards had been cut with diagonal cutters. It was a 5 minute job fixing it, and it's fine now, but it's puzzling why the supposedly refurbished unit still had a major problem. Maybe the fellow who returned it to GE did it, and they never caught it.

For your consideration,

Bruce bew4568@zeus.tamu.edu

# 977. Howard Stern Radio Listing - SHORT FORM

Newsgroup: rec.radio.broadcasting
Date: 1993-07-13 12:14:50 UTC
From: clout!imageek.york.cuny.edu!src4src!ckunz
Message-ID: <1993Jul13.121450.26811@gagme.chi.il.us>
Source record: 42965

Welcome to the Howard Stern Radio Network list - short form! Here's what we've got for this month:

Last update: July 12, 1993

New stations in the past 30 days: -None-

Possbile new markets mentioned in the past 30 days: -None-

News on current markets:

WJFK-AM-FM in Baltimore/Washington DC is cutting off Howard at 11am to make room for G. Gordon Liddy, middays. If Howard ends before 11, they play a taped bit to fill the remaining time. G. Gordon Liddy's show is also being syndicated to various markets.

Rumor has it that Boston's WBCN will be moving Howard's show to mornings. The date of this move is currently unknown.

The long form of this radio list, which includes the stations in all markets plus phone numbers to dial Howard direct, is posted monthly to alt.fan.howard-stern. If you do not have access to the alt.* heirarchy, drop me a note at ckunz@src4src.linet.org and I will e-mail a copy of the list to you.

As usual, please send via e-mail any new markets or changes to old markets. Catch you next month!

Chuck

## 978. WBZ no longer stereo?

I think Boston --as it always has been--is a real mirror of the
problems in the radio industry. It, in particular, is one of the
most tired markets in American broadcasting. As with other cities,
the management of radio stations just keeps recycling one
tired broadcaster after another. You see the same names over and
over again...marching from one station to the next. In programming,
no new innovative outsiders (hell, no outsiders, period!) have
been in the market in some time. Newsrooms are stale. and the stations
generally do the same adequate job they've always done.
It used to be one of the best markets. Now it's just the same as it's
always been...just with different call letters. And being the same as
you've always been is DEATH in radio.I wonder why that's so hard for
people to understand?

FCC's Actions Against Alleged Micro Power
Broadcaster Challenged by Recently Filed
Legal Response.

In response to the Notice of Apparent Liability, in the amount
of $20,000, brought by the Federal Communications
Commission,against Stephen Dunifer for allegedly broadcasting
without a license, attorney Louis Hiken has filed a 13 page
response that refutes this action by the FCC on the grounds that
it is "unwarranted, procedurally flawed, constitutionally invalid,
and calls for a forfeiture amount that is grossly disproportionate to
the alleged violations and which exceeds the maximum limits set
by statute".

Quoting further, "The Federal Communications Commission
policies with regards to micro radio broadcasting have failed to
keep pace with the rapid proliferation of technological advances
in the field of communications. The FCC's current regulatory
scheme completely prohibits micro radio broadcasters and their
listeners from accessing the public airwaves. To enforce this
absolute prohibition, the FCC is relying upon regulations which
were intended solely for application to large-scale, commercial
broadcasters, and which were promulgated long before the
advent of technology that makes possible micro radio; indeed,
even before the advent of FM broadcasting. The FCC's
application of these regulations violates the First Amendment
rights of individuals seeking to exercise those rights via methods

and mediums that were technologically impossible when the regulations were created."

The fundamental problem is that the FCC has not provided procedures by which micro radio broadcasters can become licensed or authorized. Instead, the FCC is applying severe administrative and criminal sanctions, intended for application to large-scale operators, to micro radio broadcasters with the goal of completely precluding all such broadcasts.

As the named party by the FCC, Stephen Dunifer stated "This recently filed response is an extremely clear and succinct defense of micro power broadcasting. It is my hope that we can establish a clear and binding legal precedent which will protect the internationally recognized right of communication between individuals and communities. In light of the FCC's pitiful ruling that the Home Shopping Channel serves the public interest, it is obvious the FCC is more interested in protecting the status quo of commercial and corporate interests than actual public interests. As the one dissenting FCC commissioner, Evin Duggan, put it - 'Today, sadly. the commission puts forward a minimalist definition of the public interest standard, at precisely the moment we should be mending and refurbishing that tattered banner,'. Despite the most recent actions of the FCC, Free Radio Berkeley will continue its weekly Sunday broadcasts as a community free speech project, from 9 PM to 12 Midnight at 88.1 on the FM band . We will not be silenced by federal agencies who hide behind a facade of serving the public interest to mask their flagrant abuse of regulatory power, public money and resources to defend, promote, and serve private corporate media interests."

Peter Franck, speaking for the National Lawyers Guild Committee on Democratic Communications(NLGCDC), stated, "The NLGCDC has laid the groundwork for the defense of Mr. Dunifer and Micro Radio practioners. The work of the CDC focuses on the rights of all people to have a world-wide system of media and communications based on the principle of cultural and informational self-determination. Its research has led it to find that the FCC's ban on low power community broadcasting violates both the US Constitution and International Human Rights Law.

Full length copies of the brief may be obtained by calling one of the above numbers. On Wednesday, July 14 a public forum is being sponsored by a newly formed organization, the Free Communications Coalition (FCC). The forum is entitled - Micro Power Broadcasting and the Right to Communicate - will be held at the Unitarian Fellowship on the corner of Cedar & Bonita in North Berkeley one block east of Martin Luther King Way. It is scheduled to begin at 7:30 PM.

The forum will feature a panel of speakers that include: Norman Solomon, syndicated columnist and author of Unreliable Sources; Louis Hiken from the National Lawyers Guild Committee on Democratic Communications; Maria Gilardin, independent radio producer; Keith Mc'Henry from Food Not Bombs Radio Network; Richard Edmondson with San Francisco Liberation Radio; Stephen Dunifer representing Free Radio Berkeley; and Rahim Habib with Radio Free Babylon. Complementing the speakers, a video produced by Paper Tiger on Black Liberation Radio and Irish Women's Radio will be screened. In addition, a micro power broadcasting station running within the legal limits will be set up to broadcast the forum live to North Berkeley at 88.1 on the FM band. A donation of ... is being requested at the door. Proceeds will go to the support, promotion and defense of micro power broadcasting.

**********

More info from Free Radio Berkeley & Stephen Dunifer

In the last posting our net address was left out, it is:

stephenpd@aol.com

The workshops are coming together for New York City. It looks like they will be held on Monday, August 9 and Tuesday August 10. Paper Tiger TV folks are looking for adequate space at this moment. Times have yet to be figured out. Overall, the workshops will cover the basics aspects of micropower broadcasting and the assembly of small wattage (1-5 watts) kits which will be made available at a cost of $40. These will have enough power to drive the Ramsey PA-1 to full power.

In regards to the Ramsey FM-10 we will have a kit available that will boost the output power to about 3/4 of a watt. Cost is projected to be $20-$25.

After the book on micro power broadcasting I am writing is finished (end of July, hopefully) I will be available to set up workshop tours in various parts of the country. So, if anyone is interested in hosting workshops in their area, please get in touch.

For those in the SF Bay Area, there will be an abbreviated workshop at the Epicenter in San Francisco on Friday, July 16 starting around 8:15 PM. The Epicenter is located at 475 Valencia, near 16th. A full day workshop is scheduled for Saturday, July 24 starting around 11 AM at the Long Haul, 3124 Shattuck Ave. in Berkeley, across from LaPena and the Starry Plough, 2 blocks from Ashby BART and 3 blocks south of Ashby Ave. A donation of $5-$15 is requested for these workshops. Kits will be available at a cost of $40.

This coming Wednesday evening starting at 7:30 PM there will be a public forum on Micro Power Broadcasting and the Right to Communicate. It will be held at the Unitarian Fellowship on the corner of Cedar & Bonita in Berkeley. Featured speakers include: Normon Solomon, co-author of Unreliable Sources; Luke Hiken from the National Lawyers Guild; Maria

Gilardin, independent radio producer; Stephen Dunifer, Free Radio Berkeley; Richard Edmondson, San Francisco Liberation Radio; Keith Mc'Henry, Food Not Bombs Radio Network; and Rahim Habib, Babylon Free Radio. A Paper Tiger Video on Black Liberation Radio and Irish Women's Radio will be screened as well. A donation of $3-10 is requested at the door. Proceeds will benefit the Free Communications Coalition, supporting, defending and promoting micro power broadcasting.

Free Radio Berkeley is having an organizational meeting on Wednesday, July 21 at the Long Haul, 3124 Shattuck Ave. in Berkeley starting at 7:30 PM. If you ideas, programming materials, energy, etc you would like to contribute to this process, please attend this meeting. If you have any program tapes you would like to have put on the air, send them to:

Free Radio Berkeley, 1442 A Walnut St., #406, Berkeley CA 94709

If you are interested in the various kits we have available, drop us a note and ask to be put on the mailing list for the kit catalog. It will be out by the end of July.

In all of this, it is essential that as many transmitters go on the air as possible. If only a few operations go on the air, it will be very easy for the Feds to nail people. Consider it a form of electronic civil disobedience or how ever else you want think about it. Free speech rights have to be constantly fought for. Free speech in public, in theory a legal right, has been a hard fought battle. In the early 1900's Wobblie (IWW) labor organizers would show up in town to begin organizing local workers. When they would start speak about the workers struggle they would be arrested by the local sheriff. Word would then go out to Wobblieorganizers and workers for hundreds of miles around about these arrests.
Within a week hundreds of Wobblies would show up in that town where they would que up in line that might extend for several blocks to speak on an upturned wooden crate or whatever was handy. As soon as one would open his or her mouth (the IWW was the only union at that time that encouraged women as labor organizers and leaders) the sheriff and deputies would whisk that person off to jail which would soon be filled to bursting with singing and chanting Wobblies. As a result, the whole local judicial structure would basically collapse due to the shear numbers of people arrested. And sleep deprived judges (they usually lived near the jails, where the Wobblies would be chanting and singing on a 24 hour basis) would just throw up their hands.

So, let a thousand transmitters bloom.

Stephen Dunifer

I just killed an article explaining why Bernstein's firing would be a
cause to celebrate in my house, after realizing that most of its
content, although true, was pretty mean-spirited. Let's just say that
as a WTIC alumnus, his professional demise would ratify the old saying
of "what goes around comes around."

And no, he never fired me ... but he ruined a few good careers.

Someone said Brave New Waves was only broadcast FM but is there no way to
listen to it some other way (someone mentioned satellite). Shortwave perhaps?
...or must I be left to dispair without the words of ol' Brent.

## 984. Speaking of radio...

Newsgroup: rec.radio.broadcasting
Date: 1993-07-14 09:21:52 UTC
From: haynes@cats.ucsc.edu
Message-ID: <1993Jul14.092152.10241@gagme.chi.il.us>
Source record: 42972

(apologies if you see something like this twice - I tried posting last night, and haven't seen the article show up yet so maybe it didn't go out.) (note cross posting to rec.radio.broadcasting, but replies should probably go only to rec.music.classical)

We've talked on rec.music.classical about modern classical radio, and also about the audience for classical music. I got to thinking about classical radio programming back when it was presented to mainstream radio audiences in the days of the radio networks.

Maybe we can build a nostalgia file containing
Program
Sponsor
Orchestra and conductor (if they were the same from one program to the next)
Live or recorded
Frequency (like weekly or monthly, not the radio frequency)
Length of program
Theme music
(anything else you'd like included?)

I was pretty young at the time, but some I can remember are
NBC Symphony, Toscanini
Bell Telephone Hour
Cities Service Band of America
Houston Symphony
Some Saturday morning program for kids (and as in the Peanuts comic strip, they always play "Sorcerer's Apprentice")

Cities Service Band of America had its own theme music, the "Band of America March". Houston Symphony was sponsored by Texas Gulf Sulphur Co. and I don't know the name of the theme but it started with a French horn playing D-C-G-F . (See how effective that advertising was! even today 45 or so years later if I wanted to buy a carload of sulphur I'd know who to buy it from.)

Comments welcome on how nationwide prime-time broadcasting of classical music in those days affected the public's taste - and how popular were those programs compared with others competing for audience in the same time slot?

Most modern rock stations have been using the edited version of that Radiohead song, "Creep," but I suppose KITS just made a mistake. I have heard WZXL-Wildwood NJ make the same mistake. WHFS-Annapolis is smart enough to avoid that. In the edited version, "fuck" is replaced by "very."

Source record: 42973

At my station (WRBC in Lewiston, ME), all the DJs are severely threatened and stuff not to play anything that is an FCC no-no, but sometimes you can't help it, espcially with the format I do. I have a comedy show and I have to listen to everything that I'm going to play on my show beforehand to make sure it is kosher. Even then, there are times when I have played something and it surprised me with f*** or s*** or a**hole. FCC will let you say anything that is an official body part, so I could accept ass, but not a**hole. So I have had bad words on the air which I had no idea were coming, and luckily no one from the FCC was listening at the time, but as I was saying, once it has happened, what can you really do? Stop the song and tell people "oh no they just used the word f*** on the air! oh no!"? It's kind of pointless once it has happened, and you hope that not a lot of people heard and just go on. At least that's what happened to me. Since the day it happened, nothing else hashappened that's bad because I've been so careful since then.

Sarah

Source record: 42976

Good luck with your upcoming project. If I were in your shoes I would dump the oldies in the morning and afternoon and go full talk. In the mornings I'd insert Howard Stern or, if Howard is too raw for your area, try the Greaseman via tape delay. In the afternoons I would DEFINATELY add Don & Mike of WJFK fame. You and I both know they are very funny and, I think, would work well in any market.

What you would end up with is a talk station like no other within a hundred miles of your station. Talk variety. From the serious subjects on Dr. Rueben's show to the zany antics on the Don & Mike show. I think it would work beautifully.

Again, good luck. When a decision is made please post a note here letting us know what the final decisions were.

## 990. AM receiving loop antenna design request

Newsgroup: rec.radio.broadcasting
Date: 1993-07-14 09:27:38 UTC
From: bew4568@summa.tamu.edu
Message-ID: <1993Jul14.092738.10597@gagme.chi.il.us>
Source record: 42979

There have been several loop antenna designs posted in this group over the past year, but I noticed none of them appear in the FAQ. Could some of you who have good working antennas tell us how they're built?

On a related note, I have a spool of what I guess to be 40 ga. wire (used to relay data from a descending ocean probe back to the research ship) which I want to use for the loop antenna I plan to build. Is wire this narrow going to have too much resistance for a loop antenna, or is the current in the wire too low to make a difference?

Thanks,

Bruce bew4568@zeus.tamu.edu

Re. audio resources for short radio courses
---

The Media Training Project for Community-based Organisations
(MTP) in Windhoek, Namibia is to start a five-week radio
course shortly. The course will be aimed at media workers who
want to work on a community radio which is about to become a
reality here in Windhoek.

However, as there are no such radios in existence in Southern
Africa (the one in Capetown was closed immediately after it
started sending), the available audio material to use as
examples in presentations is very scarce. I was wondering
whether you could be of any help.

What I need are examples of interviews, examples of
on-the-spot reporting, newsreading, telephone-programmes etc.
We will only be working with cassette tapes.

It would be of great help if you could fax a list of what is
available (if anything), how much it would cost, and how it
could be arranged for us to get the material as soon as
possible.

The MTP was started 2 years ago by five Namibian NGOs and is
funded by the Danish organisation Ibis (former WUS-Denmark).
We are so far the only body training mediaworkers in this
country.

I hope for a positive response

Kind regards

Liz Haltrup
Tutor, MTP

[ Author was Brian Nunes ]
[ Posted on Tue, 13 Jul 1993 20:41:11 GMT ]

I help put together the weekly gay/lesbian radio program THIS WAY OUT, which is a magazine-formatted show consisting of news, interviews and music heard on about 80 stations around the world.

My problem: Currently we have a *VERY* unofficial list of stations carrying our program, but it is far from complete. Two major oversights:

1) We list both stations that carry our entire program, and stations that carry just excerpts from the program, but we can't tell the difference;
and
2) We don't know the day or time that the program is aired. If anyone is familiar with the program and can either question for your city, please e-mail me with a response.

Thank you for your help!!

>What Scott received nicely in Atlanta is actually WTIC-1080 AM, Hartford, CT.
>WTIC is a Red Sox AFFILIATE and it has a 50kW DIRECTIONAL (South and West)
>night-time signal.

Not quite right. The null in WTIC's nighttime pattern is toward the
southwest, protecting KRLD, which shares 1-B status with WTIC on 1080.
The reason WTIC is so strong where you are is that the towers are on
top of a mountain, rather than in the usual swampland most AM's prefer.
This creates a tremendous skywave signal for WTIC. Unfortunately, their
groundwave is so poor at night that there are areas in Connecticut that
cannot receive them after dark. Their antenna system is curious as well
because unlike most stations that switch their antenna patterns at an
average local sunset and sunrise time, WTIC, being the older station on
the frequency, goes directional at sunset Dallas time and
non-directional at sunrise Hartford time.

The nighttime skywave phenomenon at WTIC is so marked that some nights
when I was there, it was impossible to listen off-air to the modulation
monitor output because of the strong heterodyne from WBAL (Baltimore).

Can someone who knows radio tell me how delays work. Like for
those talk shows there's a 5 second delay in case someone
curses or something. How do they mute and cut things out.
i.e. A guy calls up and says, "i think you are wrong on
this issue and you're a f*cking a**hole." And when you
listen on the radio it comes out "..this issue and you're
a hole.

# 997. Re: Help me save our dying AM!!!

>
>I probably won't be able to help you out here, but I was wondering, where
>you are, how big is your market, what are the other stations in your market
>doing, and do people receive other stations from nearby markets?
>
I'm located in Charlottesville Virginia. It is about 100
miles south of Washington D.C. The market is not really very
big. We figure the total population of the listening area to
be around 200,000.

The closest LARGE Market is Richmond, 70 miles to the west.
There are a few stations that make it over here but, they
are unreliable as far as reception goes and of course don't
cater to the local news and weather that would be pertinent
to this market.

>P.S. I tried sending mail to rfa@hopper.acs.virginia.edu but it said that this
>service is unavailable
Hmmm! can't unnerstan why...Everyone elses mail is gettin
here....

And on that note I like to publicaly thank those of you who
have made suggestions. There are some great programming
ideas out there. With your help...I think I just might be
onto something.

Robert;

Music (and broadcast) history is rife with airings of one of Carlin's seven
in the course of prerecirded popular music. Consider:

"Money" by Pink Floyd...."Bullshit"
"Erotic City" by Prince..."Fucks are free to you and me"
"Walk on the wild side"..."Even while she's giving head" and "all the colored
girls say"

and the examples go on and on. I won't pull this group down further by
rolling off more of them, suffice to say there;s hundreds.

The FCC is currently relying on "Community Standards" as much as anything
else to determine their NALs. This might mean that F--- all you
C---------- F------ up the a-- might not get a fine in New York City, while
"I wrecked my goddamned car" would get nailed in, say, Abilene, Texas,
International Falls, or any other small, conservative, "Bible-belt" city.

My feeling has always been that there's just no need to air these vocabules
in the public's airwaves. You could go to any bar, cable TV access channel,
or Junior High School playground to enjoy these quality conversations.

While at a classic rock station in Odessa, Texas, I got WAY into it with the PD
over the playing of some of these "Classics" that contain such language.

I submit that these groups, railing against the "system", as was their entire agenda, and their recurring inspiration, sat around in a smoke-filled rehearsal hall for hours trying to find a way to work "bullshit" into a song. Their defense, of course, is their First Amendment right to free speech. Radio stations furthered this corruption of the amendment's intent by playing these recordings into the GROUND. But, that's another posting :)

With the hundreds of touhsands of words in the english language available to every songwriter every day for all enernity, I think they could find better ways of exercising their "rights", especially over the airwaves.

A CHR that I worked at until Guy Zapoleon consulted me out of a gig played "asshole" by Dennis Leary until a local government hot-shot strongarmed the flaccid GM into yanking it. At this point, I got *really* honked at the self-appointed social savior for deciding that he would enforce his version of morality upon us. I suggested playing it hourly after the ID. Let the record show a vote of no confidence. Anyway, this points up the fluid nature of "indecency" laws. It all comes back to the community, and in large part, to the demeanor of the FCC field rep when he comes a 'knocking.

By the way, for my money, Howard Stern should be fined exactly what he's been hit with and more. He appeals to the lowest-common-denominator in us. This gives morning radio a bad name.

>FCC's list of forbidden dirty words, so I would expect that stations
>might want to avoid stuff that might sound like it.

Squeezing in a dirty word or two has been going on forever, it's just more
blatent now.

In 1957, Alan Freed played _PEPERMINT STICK_ by a group called the Elchords
a few times, then pulled it. Lead singer, "Little Butchie" Saunders used
the words, "Eat My Dick", twice in the song at the end of the bridges.

In 1962, Capitol records was so concerned about the word DAMM they
overdubed a guitar twang over it in the song _GREENBACK DOLLAR_ by the
Kingston Trio. Ironicly it was released as a single after the unexpugated
form LP cut was already being broken in a few markets.

If you remember the Vanilla Fudge's version of _YOU KEEP ME HANGING ON_,
someone, at the end of the umpteen minute LP cut, screams something that
sounds like, "fuck'em". This ending was also on the 7 minute single which
some stations played when the DJ went to take a whiz.

Source record: 42990

Since many of the "modern" songs are crossing over, more stations will be playing them. We must remember that even though the FCC currently is going after comlaints against stations filed for siring between 6AM and 8PM, a complaint still has to be filed. You can play roulette, or daypart. Our ]modern format with NPR news in the daytime, prohibits our jocks from backselling song titles with expletives. We also have to abide by our licnesee's antidiscrimnation policy by not playing sexually or racially descriminating material. This limits some of the Rap and rock programming we play, but not that much. However, we have little difficulty with the policy.
By the way, an

Source record: 42987

I don't want to open a hornets nest, but while I applaud efforts to further the opportunity of local broadcasts, I think the use of 10-15 watt tansmitters is bound to cause problems. The FCC still recognizes Class D allocations that currently exist on a secondary basis, and a 10 watt signal, as you mentioned, can go pretty far. As the manager of a College/Community run station, that also is a memeber of the "Bad Guy" NPR, I would be pretty upset by one of these 10 watt stations possibly interfering with the reception of my signal. Under current law, the tranmitter output allowed by these transmitters is in the milliwatt range, and pushing the power up on some of the "kits" causes the potential for quite a bit of frequency instability and interference to local broadcasters..
I think that there should be access, similar to the concepts of the shared uncoordinated VHF Amateur repeater pair frequencies that are being assigned. In this way, the FCC could set up a frequency in any locations that could be used for this purpose. However, just doing it on your own, getting fined, and trying to badger your way through courts, with high legal fees and no cert certain outcome, seems to be not an efficeint way of going about this. Since t Congress established the FCC and The Communications Act which is the road block to this type of activity, this is where the energy seems best directed. Current court sympathies are against this type activity, as already evidenced by other past actions.

## 1003. CFNY and distant reception

Newsgroup: rec.radio.broadcasting
Date: 1993-07-15 07:41:46 UTC
From: WEOS-FM <BLACK%HWS1%HWS.bitnet@CUNYVM.CUNY.EDU>
Message-ID: <1993Jul15.074146.29659@gagme.chi.il.us>
Source record: 42994

With all the drop ins, distant reception is becoming a thing of the past. CFNY is harder to get in the Rochester area than a few years ago. The 80-90 docket has pput on the air in the Rochester area alone, 5 of these "local" stations, and there are applications or CP's for 7 more!

Ducting is not a new thing. amateur radio operators have been using it for years. Last Summer, in Geneva New York, We were picking up Houston's KUHF FM station loud and clear. A few years ago, we were hearing South Dakota Public Radio in this area. Strange things do happen.

A little smilie story for this thread. Back in 1978 when had just started as a Student DJ at the college station, during my second ever show, all alone in the studio, doing the 9pm to 1am shift, I had an interesting experience.

I guess it was the sort of initiation that every new DJ got at that time. After the last shift left, and I was alone to do my own show, I had call after call from some *fans* who loved my show and had me playing requests left and right.... and then it happened... a request for Donovan, "Intergalactic Laxative"... Well, after I played it, it seemed my fan club stopped calling... in it's place, someone proporting to be from the FCC following up on profanity on the air.

... It can really spook a newbie... I wonder if that brown spot is still in the on air chair. ;-)

Uh, Thank's Roy.

This confuses me. I gather that this is a situation where the individual DJ/announcer selects his/her own arrangement of material, as opposed to the normal commercial operation where the on-air person is told what to play by someone else.

In this instance, especially with a comedy show, wouldn't the ONLY things you select be items you already heard, enjoyed, and felt were worth playing? So you'd already be familiar with the contents...

Or are you referring to listener call-in or write-in requested items you hadn't heard before yourself?

Will

QEW is doing GREAT! Their ratings in the spring book tied those of
WQXR-FM, with both posting a 1.5 AQH, total week, 12+. In comparison,
the other classical, WNCN, barely broke a 1.0.

Oh yeah, as for WBBR-1130...their ratings were below 0.3. Yes, below
such noted NYC radio giants as WWDJ-AM Hackensack, WMJC-FM Smithtown,
and WDHA-FM Dover. Or to put it bluntly: Nobody's listening!

One wonders how long Mr. Bloomberg will keep subsidizing this venture.

And, Jerry, my reception here in Waltham (some 25 miles SW of Andover)
is about equal for 1560 and 1130.

I believe Zev Brenner who has his own talk-show on NJT(National Jewish
Television) and syndicates his 2-hour radio show 'TalkLine with Zev Brenner"
is one of 'LIR's co-owners. A few months ago I read an article about
'LIR's attempts to syndicate its programming(all or some) to stations
in major markets. 'LIR has also bought 30-second TV spots on NJT asking
interested cable viewers to call their local cable companies to ask about
the possibility of carrying 'LIR's sattelite signal on one of the info/
text cable channels.

In reply to the "dirty Words" postings, and to Amy's post, THE FCC and NOT your local community is the standard bearer of the interpretation of "community standards." While use of the word fuck may not cause a head turn in New York, as it would in Abilene, if a valid complaint is filed, the FCC could and probably will go after it.
I have had some students cry 'censorship" because we do not allow air play of certain songs or the play of songs at certain hours. However, as long as the material is available for purchase or can be accessed, it is not censorship, when you will not play Creep (non-radio safe version) before 8PM or refuse to play 2 Live Crew. It is there, if the people want to get it, and it keeps the FCC off your butt. How many College or Community stations want to have to come up with a large fine, answer to their Licencees (usually the Board of Trustees of the school) in tight fiscal times, and/or bring noteriety to the school because of playing explicit material out of Safe Harbor? is it worth having the school "abandon" the license?

On a seperate note, Butler University sold its Public station WAJC-FM, to Susquehanna Broadcasting. It felt it no longer needed a 48,000 watt station for student training, and instead, is concentrating on its TV efforts, with a new PTV station.

Food for thought, in light of the above. By the way, any news on WSUC Cortland's $23,000 FCC fine for indecency?

I seem to recall some one mentioning that they had an
ASCII file of transmitter locations. I would like
to make a map of transmitters on the west coast of
north america to help with aiming a beverage antenna
for some MW DXing from out here in the mid-Pacific.

Any pointers would be appreciated.
Thanks.
-matt

# 1017. Idea about non-comm radio programming

Newsgroup: rec.radio.broadcasting
Date: 1993-07-16 09:50:43 UTC
From: Will Martin <wmartin@STL-06SIMA.ARMY.MIL>
Message-ID: <1993Jul16.095043.22287@gagme.chi.il.us>
Source record: 42851

I made the following suggestion to a local non-coommercial radio station (KDHX) here in St. Louis, one that has different types of programming on each day:

It might be worthwhile to consider a rotation of programming day-to-day over a period of months. I'm sure there are people who only listen on Monday, say, or only Tuesday-Thursday, or other such fixed schedules due to work, school, or some other reason. If the programming shifted from one day to the next every two months, for example, that way those people would gradually be exposed to the entire range of KDHX programming over a period of a year or so. What I mean is that the Monday programming would shift to Tuesday, Tuesday to Wednesday, etc., and so on thru Saturday shifting to Sunday, every two months. So if one listened to KDHX every Monday all day for a full year plus, one would hear every KDHX program eventually. You could have a sort of "celebration" day on the first of every other month announcing this program shift.

******

I don't know of any radio station that does this; does anyone out there know of any stations that do this or anything like it?

It would be a way to practically "force" a fixed-time listening audience to be exposed to a wider variety of programming. Does this seem like a way to get listeners to appreciate a wider variety of music styles and other non-music programs, or is it simply a sure way to kill your audience every two months? :-) Anyone have any comments as to the viability of such a practice?

Regards, Will

I believe Zev Brenner who has his own talk-show on NJT(National Jewish
Television) and syndicates his 2-hour radio show 'TalkLine with Zev Brenner"
is one of 'LIR's co-owners. A few months ago I read an article about
'LIR's attempts to syndicate its programming(all or some) to stations
in major markets. 'LIR has also bought 30-second TV spots on NJT asking
interested cable viewers to call their local cable companies to ask about
the possibility of carrying 'LIR's sattelite signal on one of the info/
text cable channels.

>...espcially with the format I do. I have a comedy show and I
>have to listen to everything that I'm going to play on my show beforehand
>to make sure it is kosher.

This confuses me. I gather that this is a situation where the individual DJ/announcer selects his/her own arrangement of material, as opposed to the normal commercial operation where the on-air person is told what to play by someone else.

In this instance, especially with a comedy show, wouldn't the ONLY things you select be items you already heard, enjoyed, and felt were worth playing? So you'd already be familiar with the contents...

Or are you referring to listener call-in or write-in requested items you hadn't heard before yourself?

Yes, Liddy during mid-day is great. I think you should put Howard Stern on in the morning. While a bit more controversial than Imus, Stern does get better ratings, and has in NY for years. Imus has a 3 share on average, and Stern normally has a solid 9 share.. Of course, everyone knows that Stern is the king of morning drive, anyway.

As for putting Don and Mike on in the afternoon, go for it! They get great ratings, and they're an excellent team. Their chemistry is simply incredible. You won't be sorry.

Source record: 42861

Recently, I've gotten a couple of requests for supplying radio and television equipment to underdeveloped areas. Both studio and broadcast hardware are needed. I don't know where to turn--I'm a computers and datacomm type.

I assume there is an active aftermarket for radio and tv equipment. But, where do I find it? What's the standard reference for radio/tv equipment pricing? Where are auctions carried out? Who is the acknowledged market maker or auctioneer?

Thanks in advance for any pointers.

> ....
> 8 WFAN Imus 3.9 tie

> A guy 'good enough to syndicate'(Imus) is behind a pair of Guardian Angels
> turned broadcasters!
>

Imus can be good in towns like Tampa(his first syndie affil),Scranton,PA
Providence,RI where the morning radio war doesn't really exist but in
markets like Boston and Washington,DC(starts on July 19th), he'll will not
be a player for one simple reason : he's not an entertaining radio
personality.

After 1 week in Boston(I did give him a chance), I have to say his show
is bogus and unfunny. How many times in one hour can you praise yourself
for being drug-free for the past 6 years without mentioning the fact that
he was a big loser to turn to cocaine in the first place while at the top
of NY's radio in the old WNBC days? All his interviews and phone-calls
are lame. His daily chit-chat with his brother Fred is the dullest radio
I've heard in years...His sidekicks(news and sports guys) are pretending
to be funny...Those of you can't yet get Imus(the guy will be
in your town tomorrow..Hello,Rush Limbaugh!),consider youselves very
lucky...

Source record: 42866

A week ago I picked up WSTW when i was down at the Jersey Shore.
The station broadcasts out of Wilmington Delaware, at 93.7 on the dial. I
estimated that I was at least 80 miles from the tower, possibly more like
90. The amazing thing was the signal came in clearer than WMMR and WYSP on
93.3 and 94.1 respectively.

> this issue and you're a f*cking a**hole." And when you
> listen on the radio it comes out "..this issue and you're
> a hole.
>

We used to do delays with tape loops. One station I worked at used two reel to reel decks with a single roll of tape going through both. A while later, we "advanced" to a machine that was about three feet high that had a big narrow drum to loop the tape around. During the talk show we'd move the heads around to give the typical seven second delay. The rest of the time we'd move the heads around to give us a little reverb on the air. Other stations used customized cart machines for tape delay.
Eventually, solid state delays came out. These just have an analog to digital converter dumping stuff into a RAM buffer and a digital to analog converter pulling stuff back out of the buffer a few seconds later. I think it was Eventide that came out with the first "smart delay" that had a button on it that would "dump and go". Hitting the button would move the output buffer pointer back to the same point as the input pointer, putting the output back in "real time". Then, the system would slowly build the delay back out. This was really clever because it didn't take a whole lot of thought to make the system work. You just hit the button, cut off the caller and went on. With the old tape delay systems, we'd have to time the bad words and try to figure out when to put the audio back on the air. We would generally listen in cue, but we tried doing it based on time once. We immediately cut the audio, then brought it back up just in time to put the "bad words" on the air... Not too smooth.
So... there are my thoughts on audio delays. Now, I think these devices do lots and lots more. They are really an audio effects box where delay is just one of the capabilities. Those who are actually in stations can probably comment more on this. I've been out of stations for almost 20 years now, though I talk to a bunch of stations every day, but generally about transmitter control...

Harold

>> (staged by DJ, Steve Dahl)."

>> Can anyone explain what this was all about? What was the radio promotion
>> behind the thing, and what took place?

Chris, the "disco demolition" was a classic radio stunt, which affected my professional development nearly as much as Mr. Dahl already had while working in the Motor City.

In fact, as I remember, Dahl was still working in Detroit when the "demolition" took place, but had recently begun to be simulcast in Chicago. The basic concept: Pop music was in one of its cyclical lows at the time, maybe or maybe not because of the disco craze which had just reached his zenith, although not many of us knew it at the time.

BEFORE that White Sox game (Mistake #1), Dahl had invited fans to bring records that they'd most like to see destroyed, particularly disco records. This attracted a lot of the anti-white-pants-and-mirror-ball crowd to the good ol' ballpark (Mistake #2), and Dahl was allowed to emcee (Mistake #3).

He whipped the throng into a frenzy (Mistake #4), and then blew up all the records, out in centerfield. Pandemonium ensued.

As I recall, they tried to get the game started, but had to quit after a few innings because of the ongoing fracas in the stands.

Anyhow, that's my recollection and analysis of it all, some 15 years after the fact. As I said, I was starting out in this biz at the time, and it sure made an impression on me -- if not for the details, for the tremendous power the stunt demonstrated that radio still had.

Amazing. Thanks for reminding me.

[Moderator's Note: I believe Steve Dahl was indeed working in Chicago, at WLUP-FM (after WDAI-FM went all-disco and fired Steve). He called his group of followers the "Insane Coho-Lips" and thier slogan was "Disco Sucks". Steve has matured quite a bit since then :-). Bill]

# 1032. Re: Where's the radio equipment marketplace?

Newsgroup: rec.radio.broadcasting
Date: 1993-07-18 03:01:22 UTC
From: dstewart@world.std.com
Message-ID: <1993Jul18.030122.1702@gagme.chi.il.us>
Source record: 42870

For used radio/broadcast gear, I turn first to Radio World. The Broadcast Equipment Exchange is nice.

Also, Harris Allied maintains a used 'department.' They frequently have things available.

Bill Mountjoy, somewhere in TN, has incredible amounts of used stuff.

Those are the first places I turn (and can get numbers for you Monday... I don't feel up to running to my station this evening)

One word of caution: I have never had, nor heard of, a good experience with Chuck and the gang at Radio Resources in Baltimore. I _have_ had to scramble just to find Belden audio wire that they ordered to have in their office the day they'd promised I'd have it (and the GM scheduled a studio move on that day... air studio!). That's just one example... and not libelous, since it's an actual experience.

Be careful.... there are some great deals out there... and some crappy ones too...

Lemme know whatcha need... I nmight even have a piece or two I'd let go.

## 1033. Dunifer's response

Newsgroup: rec.radio.broadcasting
Date: 1993-07-18 03:05:12 UTC
From: "Frank C. Haulgren" <haulgren@henson.cc.wwu.edu>

Source record: 42872

The following was posted on teh Alt.activist list and is a response by Free Radio Berkeley's Stephen Dunifer to some of the concerns that have been voiced in various news groups and lists about the technical aspects of "micro radio".

A point that seems to be missed by some critics of FRB and KPAW in Phoenix and BLR in Springfield Illinois is that these folks want to have a message or messages thay want to put on the air. This being the case where is the logic in positioning their signal so that it causes interference with other broadcasters rendering both signals unlistenable?? This smacks more of vendeta rather than a desire to increase the possibilities of what can be heard out there. It is true, that if the FCC were to back off and allow micro broadcasting to flourish that there would be goofy "kids" out there abusing the opportunity and privelege... but, as some people have pointed out that is happening right now! Wouldn't it be better if the FCC said- OK, we will permit "micro broadcasting" it will be unlicensed, but, you must follow these guidelines... and if complaints are received about your activities from licensed broadcasters that you are anoying we will be there.

Anyway, Stephen Dunifer's response - which follows - seems to point out that he is more than the loose cannon some would like to paint him as and that the concerns of "legal" broadcasters are also shared by him.

Subject: Re: re RM Transmitters
##########

I agree with you on the technical problems of drift, harmonics etc. I working with one person, Mycal, on a sythesized exciter. Hopefully everything will be done soon. Harmonic suppression is relatively easy

to deal with if one uses a 7 section low pass filter. Drift is definitely a problem, FET based VCOs are relatively stable. We are going to be offering low power FM stereo kit based on the BA1404 IC using only the stereo generator section, not the FM xmtr section. It will modulate a FET VCO, we are calling it the better Ramsey kit. All people using transmitters will be urged to use the 7 section filter kit, about $5. It will include the coils and caps for the differnet sections of the FM band.

Crystals are a pain to get enough frequency deviation out of without using a chain of frequency multipliers which are beyond the scope of any beginner to tune and build. I have one design that claims to get enough deviation out of a crystal at the direct frequency of choice. Ultimately ,we will most likely only provide the frequency synth exciters. For the moment, it is good experience for people to at least build something.

Thanks for the interest.

Stephen Dunifer

The WQEW/WQXR-AM signal may be weak in Andover, MA or in the local NYC
area but they are consistently loud and clear at night in Rochester, NY.....
even on a small inexpensive portable radio.

# 1035. Questions.

Newsgroup: rec.radio.broadcasting
Date: 1993-07-18 03:05:57 UTC
From: "Ellis P. Carter Jr." <epj2@Ra.MsState.Edu>
Message-ID: <1993Jul18.030557.1967@gagme.chi.il.us>
Source record: 42873

Three questions:

[Moderator's Note: Please *post* any answers you may have for this fellow. Especially on the station classes and such. They would make great FAQ material. Bill]

1)
The last definition of the classes of FM broadcast stations I read was in the 1977 rules and regs, Class A, B, C, and noncomm. I did not see the AM broadcast station classes.

The definitions seem to have changed since then (this is NOT news for most of you). Could someone please post the different classes of AM, FM (and TV, if there are classes in this category) broadcast stations. Or mail will suffice. I am interested in limits on ERP and antenna height, although I would appreciate all information you can provide.

2)
Does anyone know of an application being filed for a new FM station license for the Starkville/Brooksville MS area? If so, could you mail me the applicant's name? If not, could you give me an idea on where I can go to find out this information.

3)
A question about the recent posts concerning foul language. I have heard that foul language (or indecency in general) is not actionable by the FCC between the hours of 8pm and 6am. Is this true? If not, what are the current "guidelines" (and I use the term loosely)?

Thanks in advance.

Regards,
Ellis

# 1036. Re: Help me save our dying AM!!!

Newsgroup: rec.radio.broadcasting
Date: 1993-07-18 03:06:11 UTC
From: julian@bongo.tele.com
Message-ID: <1993Jul18.030611.1995@gagme.chi.il.us>
Source record: 42874

I am not a broadcaster, I don't even play one on the radio.
But I have always been a fan of radio, so much so that I don't own a
TV.

I have lived with British Broadcasting (BBC, Pirate radio,
local radio etc), and Scandinavian broadcasting. All my life I have
been fascinated with U.S. radio. My fascination has always been that
here is a radio market that is trully driven by what the public wants.

And that last sentance above is I think the key to successful
radio in the U.S.

I have noticed one thing about radio in the U.S. There will be
a pile of stations all trying to do the current thing and not going
anywhere. Then some P.D. that is not listening to head office will
come up with a new format. The result is that will be the only station
in that market with a different format. Guess what? Terrific ratings.

Someone mentioned the Short Playlist breakthrough (mentioned
also in Ian Whitcom's Rock and Roll Odyssey). The all news format. And
the KROQ dirt head music.

So one key seems to be to provide what no one else has. This
obviously is a good key in a crowded market. In a small market, people
have less choice so will take what is offered. Governemnt broadcasting
is of course of this type - 2 stations to chose from, you get what is
good for you.

Message-ID: <1993Jul19.060755.20748@gagme.chi.il.us>
Source record: 42875

Here in Baltimore, MD, there is a mix station which did a 70's Saturday Night show. The DJ was Baltimore Legend Johnny Dark, formly of WCAO (big top 40 station, changing to country in 1982.) Johnny worked at WCAO for 30 years before being fired (along with the rest of the staff) for a gospel format.

Anyway, he's been doing this Saturday night show for a little over a year. He was replaced with Dick Bartly (SP?) during that timeslot.

The paper has nothing on this subject, and WWMX people wouldn't comment on it when I contacted them. Does anyone know what happened? He was talking about doing parties at people's houses just 3 weeks ago. I'm shocked he's not on the air. Maybe some kind of story/roomor leaked out somewhere about this.

Thanks,

Chris

>Chris

Yeah, WFNX in Lynn, MA has had some lack of censoring in the past too. And you know what? I'm VERY GLAD. The album version of Radiohead's "Creep" does say "You're so fucking special" however the radio version says ".. very special" THAT is pathetic. What is even more pathetic is that people just don't get it yet... When Two Live Crew had the album which had a million different offensive whatnots, what did the media do? Reported on it so much that the album sold millions. How 'bout "Cop Killer" by Ice-T? If noone had said anything, noone would have heard of him and his band pop up in every dinnertime conversation.
Moral: Don't want to hear it? Turn it off.
Don't want your kids to hear it? Talk to them about it. Help them understand that swearing is a very important, powerful thing, but only if rarely used and heart-felt. I just don't understand why people have so much against swears!!
Don't think anyone should hear it? Leave this country. This is America, remember?

What I think is pathetic is that jocks need to do this - either through fear of a j. random FCC fine or because management somewhere said to watch out for them words or the station go down. For example, at KPFT, we've been told repeatedly that we must screen our sources carefully and we MUST clear any language through the PD before it goes on the air. Otherwise, we're responsible for cutting out the "objectionable" material. I've heard what I would consider "objectionable" material on many stations (including KPFT), but at the same time I recognize the right of artists to say what they want, for stations to play what they feel like playing, and for consumers (myself included) to use the freedom of the on/off button.

Rant off. :=)

This was to be a mid-game promotion between the games of a scheduled double header at Comiskey. The promotion was for fans to bring disco records to be bu
header at Comiskey. Fans were to bring disco records to be burned in an anti-disco bonfire in the outfield. Fire was great, field was not in such great playing condition afterwards.

I say God punished them for having a DH rule, not a disco bonfire. :)

Steve Dahl, a present Chicago (and former Detroit) radio personality
of somewhat crazed bent, was at the time in 1979 conducting a "Disco
Sucks" campaign. Listeners to his show (don't recal if he was on WLUP
at that time) were invited to show up at the White Sox-Tigers Twi-
nite doubleheader, where, between games 1 and 2, with the "blessing"
of Sox management, all the disco records brought into the stadium
were to be burned in a large bonfire. Needless to say, things got
out of hand. A minor riot ensued, and the field was unfit to
continue. The Tigers demanded and the umpires agreed to a forfeit
by the White Sox of the unplayable game. That's how I remember it,
anyway!

Close, but not quite. It was a Doubleheader, and the demolition
occurred between games. (There is a brief shot of it on the Rolling
Stone 20th Anniv. Video.) The problem was that it badly scortched the
field and little chunks of vinyl were all over the outfield, rendering
the field unplayable. The baseball rules say that if a field is deemed
unplayable do to an act of the home team or it's fans (ie not rain or
other natural acts) then the home team must forfeit the game.

# 1045. NEW MEXICO RADIO MARKET UPDATE -- Talk-Radio Station Sold.

Newsgroup: rec.radio.broadcasting
Date: 1993-07-19 06:19:03 UTC
From: Robert Smathers <roberts@triton.unm.edu>
Message-ID: <1993Jul19.061903.21314@gagme.chi.il.us>
Source record: 42882

According to an article in the Wednesday July 14, 1993 Albuquerque Journal, a talk radio station was sold.

KMBA-AM (1050 am) in Albuquerque was sold by Don Davis to a group of investors, New Mexico Investment Enterprises Inc.

One of the investors in the New Mexico Investment Enterprises Inc. group is former Albuquerque disc jockey Bobby Box. Box was a disc jockey on KQEO-AM 920 from the mid 1960's to the mid 1970's (when KQEO had a oldies format).

Davis claims he was not out to sell the station, but he got a very attractive offer from the New Mexico Investment Enterprises Inc. people and he could not turn it down.

The article goes on to ask the question "Is talk-radio dead in Albuquerque?" Interviewed in the story to talk about this question was program director Henry Tafoya from all-sports-radio KDEF 1150am, general manager Doyle Peterson from talk-radio KQEO 920 am, and Jim Pidcock from KKOB 770 am. Basically, the responses mentioned that talk-radio is a new phenomena in radio (Peterson said it was the "rage of the 90's" and used Rush Limbaugh, Larry King, and Bruce Williams to back up his statement). Tafoya believes the greatest days for talk radio are ahead.

FYI, Winter Arbitron radio survey for the Albuquerque Talk Radio Stations:

KKOB 770 am 12.5 share 50,000 watter -- ABQ Dukes, UNM Lobos
KQEO 920 am 1.2 share Larry King, Bruce Williams, CNN HN format
KDEF 1150 am .5 share all sports format -- has a FM simulcast
KMBA 1050 am DID NOT REGISTER (the one that was sold)

(I added the format comments)

KMBA's call letters were changed to KJBO and there is a format change. It will be know as "Jukebox Oldies, the nifty 1050" and it is on the air as I write this. Music is from the mid 1950's to the mid 1970's.

In all honesty, I haven't heard Imus for myself, although I've heard many
negative comments about his show. I will just have to tape Imus's show while I
listen to Stern. What station will he be on in DC? I'll give him a listen.

I agree that Imus won't play well out of New York. I disagree with your reasoning, however. Imus' guests can be informative and entertaining, irrespective of the host (who, I agree, has become a little bit too self-absorbed to be entertaining in his own right). I think Imus is an acquired taste, and those within the signal area of the late, lamented WNBC now WFAN have had nearly twenty years to get used to the junk and to filter out the repetition and the drivel to get to the occasional gem.

I don't think that will work in other markets, because most of them are on one-year contracts, and radio station management these days is not likely to give a high-priced show a chance to catch on.

Stern has succeeded as a plug-in-and-play because lowest common denominator humor is universal. Vulgar is vulgar in any city, and any comic will tell you that you get the easiest laugh from a toilet joke.

>receiver. If we've got to use sixty-year old equipment as our standard
>of reference to hold modern state-of-the-art stuff up to, something is
>terribly wrong.

The problem is, AM isn't the state of the art, hasn't been for years since FM Stereo was "perfected".

Back in the mid-sixties, there were one or two FM stations I could receive easily in Sugar Camp Wisconsin (northern WI), the closest being about 60 miles away. There were two local AM stations, and they were nearly impossible to hear at night. Last week I logged 10-12 local FM statios, and the same two AM stations. Guess what I could hear at night? No the AM locals.

In fact AM reception was worse than before thanks to light dimmer buzz.

I had a TRF radio for a while in 1965. I used it to listen to the late nite classical music on WLW. Since I can't get any of the Eastern clear channel stations from Oregon, I made it a point to verify that WLS, WLW, WWL, WSM, WHO, WGN, WBBM, KMOX et al were still on the air.

The AM band is more interesting in Wisconsin than it is in Oregon. Only two CA stations come in clearly, since KFI 640 and KNX 1070 are stomped out by CQUAM splatter from Portland stations. I can still hear KKHI's classical music under nearby KVAN on 1550, but things were more much better when KVAN was a daytimer. That leaves KGO and KFBK.

# 1052. Re: WSTW Wilmington Del. Heard in Toms River, NJ

Newsgroup: rec.radio.broadcasting
Date: 1993-07-19 06:29:00 UTC
From: cpaulus@cap.gwu.edu
Message-ID: <1993Jul19.062900.21957@gagme.chi.il.us>
Source record: 42889

mac18@po.CWRU.Edu (Michael A. Cornell) writes:

"A week ago I picked up WSTW when i was down at the Jersey Shore.
The station broadcasts out of Wilmington Delaware, at 93.7 on the dial. I
estimated that I was at least 80 miles from the tower, possibly more like
90. The amazing thing was the signal came in clearer than WMMR and WYSP on
93.3 and 94.1 respectively."

On good days, I can pick up WSTW, WYSP, and WMMR from my bedroom here in
Baltimore, MD. It fades in and out, but it's clear more than not.

Does anyone know what constitutes a good signal for a station? Why is it that
stations from far away are clear on FM, but some days you can't hear them at
all? I always thought it had something to do with the weather/atmosphere.

Chris

I'm not kidding, during the summer, WDRE-FM Garden City NY is emitting a high-frequency tone inaudible to humans but deadly to bugs. So, all you do is turn your radio on outside and the buggies go away.

This prompts a few technical questions, like, how do they do it? They play music while the tone is emitted (the tone operates 24 hours a day), so how does this have an effect on their "peak level" meters on their boards? Or do the VU meters only register frequencies audible to the human ear? What would the meters read if there was *only* the tone?

Long Island radio... gotta love it (where else can you hear an AM digital stereo station broadcast analog recordings? :)

[Moderator's Note: Geez, wonder how the area dogs like it :-) Bill]

If you do with Cleveland what Mark Shneyder does with Boston, it
should be well received.

But I would also want to know things about what certain stations are doing.
For example: Has WMMS completely backed away from playing hits like
they were in '86 and gone back to AOR. Are they battling WNCX for the
album rock audience and how much of MMS mix is classic rock?

Is MMS responding to WENZ presence - is the End perceived as a hits station
or an album station, or somewhere in the middle

How is Jammin '92 different from WZAK? Whats WJMO-AM doing?

Is WQAL the closest thing to a top 40 station in Cleveland now?

Perhaps an introduction to the market would be a good first column.

Steve Dahl was simulcast on Detroit's WABX (99.5) during the time of the disco demolition. He was simulcast to go against Ken Johnson, and George Baier (who were the morning hot-shots at the time). Kinda funny, is the fact that Detroit never really went Disco (had only 1 disco station, all the rest were Album oriented Rock). WRIF ( Ken and George's station) had an organization called D.R.E.A.D, which stood for (Detroit Rockers Engaged in The Abolition of Disco). You could get these membership
cards which would entitle you to get discounts (like the Tribune's Press Pass).

At any Rate, after the disco demolition event, Steve Dahl and Garry Meier disappeared from the Detroit airwaves.

Growing up, I really liked Detroit's Radio. WABX was the best (I think it was the first all rock station in the midwest). Now, the "X" is gone, WWWW (W4) too( well, it plays BACF music now, which is almost as bad as disco).

The only station similar to the X, is probably WABT (103.9), and it's only for the NW burbs..

Actually the incident occured between the 1st and 2nd game of a double header. The 2nd game had to be cancelled because when Steve blew up the Disco records he also blew a large hole in center field of the Old Comisky Park. Bill Veeck (then owner of the White Sox) subsequently banned Dahl from Comisky Park. The ban lasted several years, but was lifted at some point as Steve now holds season tickets to the White Sox games, and is an avid fan of baseball. In fact when the Old Comisky was demolished Steve wrote an excellent song in tribute to the ballpark and all it stood for, and apologized for the problems "Disco Demolition Night" caused.

# 1057. Steve Dahl/Disco Demolition

Newsgroup: rec.radio.broadcasting
Date: 1993-07-20 14:16:02 UTC
From: jtl@genesis.MCS.COM
Message-ID: <1993Jul20.141602.13291@gagme.chi.il.us>
Source record: 42895

For the most part, the postings on this topic were correct except for a few minor details. As a former card-carrying member of the Insane Coho Lips and and attendee at that very game (I still have my membership card, Loop T-Shirt, and ticket stub from that game), let me pass along my take on the events of that night, with a little background thrown in:

Steve Dahl came to Chicago with much fanfare in early 1978. He joined the ABC-owned FM outlet in Chicago, WDAI, after doing very well in the Detroit market on ABC's station there. WDAI had been an "album rock" station since the early 1970s, and Dahl took over the morning drive.

In December of 1978, WDAI decided to change the format of the station to disco. On a Friday afternoon, after he had been handing out flyers on Michigan Avenue dressed in a Santa Claus outfit (in a promo for the station), Dahl was called into the offices of station management and was told that the station would be going disco effective immediately. At this point, stories conflict: Dahl sometimes says he was fired, and other times he says he didn't want to play disco records; it's sufficient to say that Dahl's personality and "act" did not fit into what the station was trying to do (all music, little on-air personality).

A few months later, in early 1979, Dahl resurfaced in the morning drive slot at WLUP-FM, a newer player in the Chicago rock market (formerly known as WSDM, the station had earler held a jazz format, followed by a rock station air-staffed only by women known as "den kittens").

Dahl brought his act to the station and immediately latched onto the growing "anti-disco" sentiment and became an ersatz "messiah of rock and roll," forming his fans into a "gang" called "The Insane Coho Lips," and performing "Disco Demolitions" at area bars with his band, "Teenage Radiation." Dahl and his group also staged "raids" of popular discotheques, where they'd shout anti-disco epithets at the people entering and leaving the establishments.

He also created a minor marketing phenomenon by coming out with products in the spring of 1979 such as key chains and "Coho Cola," a drink canned by Chicago beverage producer Canfield's and sold in six-packs at local record stores.

In July of 1979, the Chicago White Sox, in an attempt to boost the lackluster attendance at their games, agreed to a "Teen Night" which would be sponsored by WLUP. Fans of the station

were told to bring a disco record to Comiskey Park and they'd be admitted to a Sox/Detroit Tigers double-header for $1.00 and the records, which would be collected at the door.
In between the two games, Dahl and sidekick/newsreader Garry Meier would walk into center field and "blow up" the records, and the second game would begin. (There was never any intention of creating a "bonfire:" the records were to be sent into the air through the use of fireworks cleverly insulated from the records, and were never supposed to catch fire.)

The game was held on a weekday evening. (Dahl claims, to this day, that the attendance that night was the highest the Sox had seen in years.) During the first game, players of both teams were plagued by records that were flung on the field by people who hadn't turned them in at the door. Play was stopped a few times during the game to clear the field of debris and to admonish those who were unable to control themselves.

After the first game ended, the field was cleared, and a huge canvas "hopper" was wheeled into center field filled with the disco records. Dahl and Meier, attired in battle fatigues and helmets, rode on the back of a Jeep to center field. Dahl led the crowd in a rendition of his parody song, "Do You Think I'm Disco," and pressed the button which sent the records through the air, scattering them all over the outfield. Dahl, Meier, and their entourage got back in their Jeep and left the field. A "Disco Sucks!" banner unfurled from the upper deck.

Within about a minute, hundreds of people had broken through the security gates and flooded the field. Bases were literally "stolen", the turf was torn up, and a group of people had ignited the records on the field. Security guards tried to clear people out, and a couple was "making out" on top of home plate. Amongst all of this, the "Sox-o-Gram" electronic message board simply read, "Please return to your seats."

My friends and I, who were fans of both WLUP and the Sox (we were in the minority, I'm sure), took this opportunity to leave. When we turned on the car radio as we left, there were reports all over the dial about a "riot" at Comiskey Park and the Sox had forfeitted the second game of the double header due to the damaged playing field and the crowd's unruliness.

The next morning, as the headlines of the Chicago Tribune and Sun-Times screamed about a "melee" at the ballpark (a slight exaggeration), a very subdued Steve Dahl called his followers "bad little Cohos" and played a lot of music. It took a few weeks for the furor to die down, but soon Dahl was relishing his notoriety and featured a photo of himself at Disco Demolition Night on the sleeve of his "Do You Think I'm Disco" 45, released in August of '79.

Dahl's popularity was high throughout the rest of the year, and he was still doing well in December, 1980 when we was fired by WLUP for "violating community standards." In early 1981 he and Meier were

picked up by ABC, where they worked at the top-40 WLS-FM (formerly WDAI), and longtime top-40 WLS-AM. He returned in 1986 to the WLUP fold as afternoon personality and part owner of the new WLUP-AM (formerly WCFL). Dahl and Meier now (once again) work the morning-drive shift on WLUP-FM.

It was between the two games of a double header, and the promotion was that
you could get into the park for 98cents (the WLUP is FM98) if you brought a
disco album to be sacrificed.

The umpires and the league decided that the field was un-playable due to
the explosions of the records and the fans running onto the field tearing
it up. This forced the Sox to forfeit the second game. The second game
never did start.

Have no fear, Johnny Dark fans. Johnny has been hired by WBIG-FM (100.3) to work Saturday nights from 6PM-midnight. Don't be surprised if the oldies station finds a full time slot for him though, this guy is still VERY popular. Also with WBIG's powerful signal, Baltimore fans can still hear Johnny.

FYI in Sunday's Washington Times they reported that Johnny Dark set a ratings record back in the Fall of 1961 at WCAO. His quarter-hour share at that time: 63.9! That's right, 63.9!

Message-ID: <1993Jul20.142103.13529@gagme.chi.il.us>
Source record: 42899

There are a couple of ways that the delay is done ...

1) Two reel-to-reel tape drives with the large 10" reels of tape are positioned next to each other with some sort of guides for the tape itself so that 40-50" of tape are between the record head on the first machine and the play head on the second machine. The live audio is recorded on the first machine, and the broadcast audio comes from the second. If a bad word is said, there's enough time for someone to cut the feed from the playback.

2) The modern way is an electronic digital delay system which stores 5 to 7 seconds of audio. When the bad words are said, the live host can hit a big red button during the offending period. When the "bad" words are done being said, the live host releases the button, and the machine automatically expands the distance between the words being broadcast to build up to the original time delay. Sometimes you can't tell that the editing has been done. I saw this system in use at Mutual in Washington, DC a couple of years ago.

>

Phone calls to new DJ's can be interesting. Some stuff tends
to be on the "practical joke" side, which I generally don't like, but
I thought I'd pass on a couple I heard...
A friend does a real good job imitating various voices (many
of the characters from Rocky and Bullwinkle plus the local radio news
guy who's been on the air here for 25 years or so... "Peterson.....
...... and the news"). So, my friend does a series of phone calls
to the new midnight to six DJ in Peterson's voice saying to not
broadcast anything yet, but it appears the Pozo dam is leaking and there
may be a flood. My multi-voice friend does a series of these calls,
including one as the sheriff telling what's going on with the Pozo dam.
The new DJ finally calls thnews guy at home, waking him up. At that
time, he learns that while there is indeed a Pozo, there is no Pozo dam.
The other practical joke I've seen done locally is for someone
familiar with the station to call the DJ and say, "This is [mumble
mumble] up at the transmitter. I've gotta do a little work here. Could
I get you to go hit number 2 lower on the remote control? Great. I'll
call you back when I'm done." He wasn't at the transmitter; he wasn't
the engineer; he never called back.

Both "Radio World" and "TV Technology" are tabloid trades that have lots of equipment classifieds in the back. They're published by a company in Falls Church, VA. Both magazine names are in the phone book there.

Good luck!

I guess it's not really fair to consider Don Imus a smash or trash. I listened to his show today on WTEM-AM 570 from Washington, Dc. I'm not sure how long I should give him, but all I know is that I couldn't stand to listen to him for more than 5 minutes at a time. He kept talking about his brother Fred. Also, I didn't care for the insane laughter from his sidekicks after Don would say something that is supposed to be funny. I can't stand his impressions, and his jokes aren't funny. Maybe he is targeted for an older audience (i'm 19), but I don't really feel that an older croud would appreciate him, either. This is obvious from his 3 share in NY.

Despite all this, I'll be a good and fair radio listener, and give Imus the rest of the week. I'm a devoted Stern fan, and I don't feel that any morning show can be better than his.

[Moderator's Note: Then you never heard Steve & Garry, Jonathon Brandmeier, or Bob Lassiter. Sterm is 18th in Chicago and is about to get the axe at WLUP-AM. Steve and Garry, on the LOOP-FM in morning drive were fourth, I think. Ill be posting ratings for Chicago soon. Bill]

# 1066. Non-Commercial FM Radio

Newsgroup: rec.radio.broadcasting
Date: 1993-07-20 14:27:26 UTC
From: eefacml@prism.gatech.edu
Message-ID: <1993Jul20.142726.13773@gagme.chi.il.us>
Source record: 42804

Our Georgia Tech student station is at 91.1 FM. (I am their faculty advisor.) I made a air check this morning and found they were not on the air. While tuning to each side of their frequency, I stopped briefly at 91.5 FM which is a non-commercial religious station that originates from an adjacent county. While listening to this station for less than 5 minutes, I heard at least 3 commercials. (At least they sounded like commercials to me.) What are the current FCC regulations concerning commercial announcements on non-commercial radio? WREK (the Georgia Tech student station) acknowledges monetary grants with the announcement "This program has been made possible by a grant from 'business XYZ'," or something like that. The announcements that I heard this morning were blatanly promotional in nature. It seems to me that this is an abuse of the right to use the non-commercial band.

# 1067. RE: NY Radio Ratings Spring 93

"Ellis P. Carter Jr." <epj2@Ra.MsState.Edu> writes:

>1)
>The last definition of the classes of FM broadcast stations I read was in
>the 1977 rules and regs, Class A, B, C, and noncomm. I did not see the
>AM broadcast station classes.

>The definitions seem to have changed since then (this is NOT news for most
>of you). Could someone please post the different classes of AM, FM (and
>TV, if there are classes in this category) broadcast stations. Or mail
>will suffice. I am interested in limits on ERP and antenna height, although
>I would appreciate all information you can provide.

The old definitions:

Class A: no more than 3000 watts at 300 feet AAT
Class B: no more than 50kw at 500 feet AAT
Class C: no more than 100kw at 1000 feet AAT

Class A stations could be assigned anywhere on the country on 92.1, 92.7,
93.5, 94.3, 95.3, 95.9, 96.7, 97.7, 98.3, 99.3, 100.1, 100.9, 101.7,
102.3, 103.1, 103.9, 104.9, 105.5, 106.3, 107.1 MHz. Class B and C stations
were on the other FM channels from 92.3 on up to 107.9. Class B stations
were allotted to Zone I, essentially the Northeast, and to Zone I-A,
essentially California. Class C stations were allotted in Zone II,
the rest of the country. There were a few grandfatered operations with
more power.

The new definitions:

[remembering that any class of station can now be placed on
any frequency between 92.1 and 107.9]...

Class A: 100 to 6000 watts at up to 100 meters (both zones)

ZONE I and IA only:

Class B-1 3100 to 25000 watts at up to 100 meters AAT
Class B 25100 to 50000 watts at up to 150 meters AAT

ZONE II only:

Class C3 6100 to 25000 watts at up to 100 meters AAT
Class C2 25100 to 50000 watts at up to 150 meters AAT
Class C1 51000 to 100000 watts at up to 299 meters
Class C 100000 watts at 300 to 600 meters AAT

Note that stations not meeting the new Class B and C criteria were
downgraded to Class B1, C2, or C1. Note also that both then and now,
a station with tower height higher than given here may adjust
power accordingly to cover the same distance.

>2)
>Does anyone know of an application being filed for a new FM station license
>for the Starkville/Brooksville MS area? If so, could you mail me the
>applicant's name? If not, could you give me an idea on where I can go to
>find out this information.

Call the FCC Mass Media Bureau, check the newspaper of legal record
for the area (an ad has to have been taken out at some point), or call
the M Street gang at +1 212 473 4668.

>3)
>A question about the recent posts concerning foul language. I have heard
>that foul language (or indecency in general) is not actionable by the FCC

>broadcasted from CBC radio? By the way, I am in New Brunswick New Jersey.
---
It is used as the fill on our local AM (690 kHz) CBC outlet in Vancouver
on the west coast and on the 6010 ShortWave. Perhaps it is also out
on the EAst coast as a filler too.
See the World Radio TV Handbook in your public or college library
under the Canada chapter.

# 1070. Washington, D.C. Spring '93 ratings

Newsgroup: rec.radio.broadcasting
Date: 1993-07-21 18:37:25 UTC
From: lacko@enh.nist.gov
Message-ID: <1993Jul21.183725.7771@gagme.chi.il.us>
Source record: 42815

Attached is a list of overall ratings for metro Washington, D.C. listeners aged 12 and older for this Spring.

Station/Format Spring Winter
1- WPGC FM95.5/URBAN 9.4 8.6
2- WMZQ FM98.7/COUNTRY 7.2 6.7
3- WRQX FM107.3/AC MIX 5.0 5.3
4- WKYS FM93.9/URBAN 4.7 4.1
5- WGAY FM99.5/EASY LISTENING 4.7 4.3
6- WJFK FM106.7/CONTEMPORARY TALK/JAZZ 4.2 4.0
TIEWMMJ FM102.3/UPBEAT AC 4.2 3.5
8- WMAL AM630/TALK 4.0 5.3
9- WWDC FM101.1/ROCK 3.9 3.4
10-WHUR FM96.3/URBAN 3.6 3.4
11-WTOP AM1500/NEWS & ORIOLES 3.5 3.2
12-WXTR FM104/OLDIES 3.4 3.2
13-WGMS FM103.5/CLASSICAL 3.2 3.3
14-WASH FM97.1/AC 2.7 2.8
15-WHFS FM99.1/MODERN ROCK 2.6 2.9
16-WCXR FM105.9/CLASSIC ROCK 2.6 2.1
17-WJZE FM100.3/CONTEMPORARY JAZZ 2.4 3.0
18-WLTT FM94.7/LITE ROCK/LITE JAZZ 2.2 2.8
19-WYCB AM1340 1.8 1.9
20-WWRC AM980/TALK 1.6 1.9
21-WOL AM1450/CONTEMPORARY TALK 1.2 1.5
TIEWWDC AM1260/BIG BAND 1.2 1.0
23-WAVA FM105.1/RELIGIOUS .9 1.0
24-WRCY FM107.7/COUNTRY .7 .6
TIEWTEM AM570/SPORTS TALK .7 1.0

On June 2, WJZE FM100.3 changed from it's Contemporary Jazz to Oldies. Call letters were changed to WBIG.

When I get drive time numbers, I'll post those too.

|>DC a couple of years ago.
|>

the original digital delay was the Eventide Clockworks model BD955. As in all broadcast equipment, there is a story behind it...the BD comes from Bob Deitsch, who was CE of WPLJ-FM in NY, the 955 is their freq (95.5MHz). Bob was instrumental in helping Eventide design, debug, and install the first digital delay at PLJ. Eventide now also makes, in addition to its broadcast equipment, moving maps for general aviation airplanes that are normally driven off lorans or gps systems.

Simplicity itself: one button on the front panel marked "DUMP". Couple of open collector pins in the back to control relays or whatever. We had them hooked up at ABC Radio to 1) dump the offensive cretin, 2) dump the phone line, and 3) block phone feed to the console until the dely had gained back 4 or 5 seconds.

Simple enough, even a jock could figure it out (with some training and positive reinforcement...)

# 1072. drop-ins

Newsgroup: rec.radio.broadcasting
Date: 1993-07-21 18:38:17 UTC
From: barry@jab.tucson.az.us
Message-ID: <1993Jul21.183817.7901@gagme.chi.il.us>
Source record: 42807

Bill,

the whole point of the docket 80-90 was to "drop-in" fm allocations wherever possible to add first or second local services in communities all over the country. Of course, some of the drop-ins (mostly the lower powered "A" allocations, limited to 3, now 6 kW) fell in larger areas, like Tucson. Often they were limited to a certain number of miles from the center of a town or area, and provided less than optimal coverage of these larger markets. However, there was a great demand for the allocations, since they could be sold quickly, for big bucks, at least until the bust of the late 80's.

All of which is a long winded answer to "what is a drop-in." It's a station sited *by* the FCC, usually within some limitations, so it would allow the most stations possible to fit.

On the other hand, there was (and likely are) a number of professional engineers who make a living filing "mutually exclusive" applications. What they do is identify a large market where a good facility would be a money winner, and then avoid the comparative hearings by filing on a small town, just far enough away to cripple the potential station in the major market. For the right amount of money, the smaller station would be "happy to move a few miles, or go DA."

AN even worse variation, is to set up an MX sitation, and then refuse to deal. The larger market station is dropped. The smaller station is built, and, wonder of wonders, files a CP to move to the larger market.

Of course all of this is harder these days than it used to be. But there are an amazing number of applications still being filed to frustrate the process.

# 1073. Re: Questions.

Newsgroup: rec.radio.broadcasting
Date: 1993-07-21 18:42:32 UTC
From: fybush@world.std.com
Message-ID: <1993Jul21.184232.8120@gagme.chi.il.us>
Source record: 42819

[Bill Pfeiffer asks about drop-ins...]

The drop-in FM was effectively created by the FCC's Docket 80-90,
passed in the full flush of deregulation in the Late Reagan Era.

I don't have the detailed text of 80-90, but it did a number of
things: It eliminated the rule that Class A stations can appear
only on Class A channels (92.1, 92.7 etc.). This allowed
stations like WZEA 102.1 in Hampton NH. WZEA is a class A
station, but 102.1 was formerly a Class B channel. Under
the separation curves, there was no way to put a class B
station on 102.1 in Hampton, since it's too close (about
70 or 80 miles) to 102.1 WAQY Springfield MA, not to
mention stations on adjacent frequencies like 101.9 WPOR
Portland ME, 102.5 WCRB Waltham-Boston, and 101.7 WFNX Lynn MA.
But there is room for a lower-powered class A station
there, hence the drop-in.

The FCC also created intermediate classes like B1, C1, C2,
and C3, which allow stationss to be squeezed in where
none could be before.

The effect was to reduce FM reception in many areas to
conditions like local AM channels: you can get a
station clearly within a few miles of the transmitter;
anywhere else the frequency is hash and interference.
And needless to say, the markets like Albany and Rochester
NY that were open enough to squeeze in drop-ins have seen
the inevitable happen, just like on AM: The old-line
Class B and C stations licensed to the center cities
still have good receotion in the whole market (like
WCMF and WPXY Rochester or WPYX and WGY-FM Albany), and
retain their profitability and high ratings,
while the new drop-ins are financial losses and
end up bankrupt or LMAed or part of duopoly.

Thank you, FCC. Thank you, Mr. Reagan. And can we
maybe freeze the FM band already, now that it's
too late ;-)?

Ratings-wise, he'll be no big deal. That's fore sure!

Our fearless Moderator should be aware of the fact that Imus desperately
wants to land on a station in Chicagoland and it wouldn't surprise me a
bit if that'll be his next market after Albany and Cleveland come aboard
in about a week or so...

-Mark

Message-ID: <1993Jul21.184812.8475@gagme.chi.il.us>
Source record: 42810

[Marshall Leach refers to a station which I believe to be WWEV-FM 91.5 Cumming GA running what sound like commercials on the air, and wonders what to do about it]

For starters, tape some of the offending programming; the FCC will generally ignore *any* complain that is not backed up with tape.

Then you could start by being a nice guy and writing to WWEV at Box 1500, Cumming GA 30130 and asking them to cease and desist. Then follow that up to the FCC. This happens to be one of the VERY few things the FCC still takes seriously...so there could actually be action on this front, probably in the form of a hefty fine.

I am disgusted with noncommercial stations, be they religious, college, or "other," selling airtime under the guise of underwriting...and I think the FCC should get tough with its rules on what is and is not acceptable underwriting announcement.

Agree with me? Then you'll join me in calling WWEV at +1 706 889 0095, won't you now? ;-)

-=Scott Fybush - fybush@world.std.com=-

## 1078. Noncommercial Commercials

Newsgroup: rec.radio.broadcasting
Date: 1993-07-21 18:48:48 UTC
From: WEOS-FM <BLACK%HWS1%HWS.bitnet@CUNYVM.CUNY.EDU>
Message-ID: <1993Jul21.184848.8509@gagme.chi.il.us>
Source record: 42818

In response to a post, Non-Commercial stations are allowed to acknowledge businesses or or other entities that contribute funds or services to the station by stating the following:
Business, address, phone #, description or statement of product or service, and possibly a "slogan" if it is not motivational in nature.

The language may not Promote, Motivate or Qualitate.
No Price may be mentioned.
Hours of operation are OK.
Here is an example:
USAIR OFFERS 3000 NON STOP FLIGHTS EACH DAY. (This is OK)
USAIR OFFERS MORE FLIGHTS THAN ANY OTHER AIRLINE. (This may be true, but it can not be said in an underwriter).

Saying "CALL FOR MORE INFORMATION" is not good, as CALL is motivational.
Where "For information, XXX PIZZA's Phone # is 666-6666" is OK.

The FCC is looking harder at these, and recently fined a station for using the business name too many times in an underwriting spot.
What you describe sounds like a clear violation, and from a !ack! religous station is even worse. Send the FCC a tape if you like.
However, note that Full Blown Commercials can be aired for Not-for -Profit businesses, ie churches, hospitals (public), arts organizations, schools, etc. and can mention price, etc. However, they must be true IRS 503C non-profit entities.

First of all, congrats on the great frequency. I DJ at WCNI 91.1 in New London, Connecticut (Connecticut College).

Rules do allow sponsorship recognition messages somewhat more elaborate than Georgia Tech uses. We use about 30 second spots. Basically, it boils down to sponsorships doing nothing more than providing facual information about the sponsor, rathing than advertising hype.

So, while you can't say "Go to Joe's Deli, it's the greatest, you'll live longer, etc...", you can say, "Sponsored by Joe's Deli at 123 Main Street, home of Screaming Joe Pastrami, and featuring 37 other varieties of vocal meat products." All factual, no opinion, no exaggeration, no embelishments.

>music while the tone is emitted (the tone operates 24 hours a day), so how
>does this have an effect on their "peak level" meters on their boards? Or
>do the VU meters only register frequencies audible to the human ear? What
>would the meters read if there was *only* the tone?

This is improbable at best, apparently a gag. FM, by FCC regulations, only carries frequencies up to 15Khz, which is audible to most people with normal hearing (and very irritating at that). Almost all women and children, anyway, hear this frequency well.

While it might be possible to go slightly above 15Khz, the stereo pilot signal makes anything at or above 19Khz truly impossible. Many people could still hear this.

Besides, what's the point, anyway? Most people don't have speakers on their radios will go very far above hearing frequencies, anyway.

# 1084. Cincinnati Radio Ratings -- 2nd Quarter '93

Newsgroup: rec.radio.broadcasting
Date: 1993-07-24 03:08:57 UTC
From: john.simpson@sdrc.com
Message-ID: <1993Jul24.030857.20100@gagme.chi.il.us>
Source record: 42822

This is my first post to rec.radio.broadcasting. I have been reading this group for several months, and find it to be very interesting. I have no connection whatever with radio, other than having been an interested listener for about as long as I can remember. Here are the ratings for the Cincinnati market for the 2nd quarter. The numbers are from the _Cincinnati Enquirer_ and format descriptions are my own.

There were no big surprises this quarter, as WLW-AM regained the #1 spot, as expected, although their lead this quarter is much less than it was this time last year. AOR WEBN improved, as expected, due to the format change of the other station it programs (WAQZ) from hard rock/heavy metal to modern rock. WAQZ's ratings for their first quarter as a modern rocker were barely half of what they were for their final quarter as the "Power Pig". In the AC wars, it looks like WIMJ's (Majic 92.5) attempt to place themselves between WRRM (Warm 98) and WWNK (Wink 94.1) has failed. It wouldn't surprise me to see a major format change there within a year.

1. WLW-AM 700 Full Service 11.8
2. WUBE-FM 105.1 Country 10.0
3. WEBN-FM 102.7 Album-Oriented Rock 7.5
4. WOFX-FM 94.9 Classic Rock 6.7
5. WGRR-FM 103.5 Oldies 6.6
WKRQ-FM 101.9 Contemporary Hits 6.6
7. WWNK-FM 94.1 Hot Adult Contemporary 6.0
WIZF-FM 100.9 Urban Contemporary 6.0
9. WCKY-AM 1530 News/Talk 5.3
10. WRRM-FM 98.5 Adult Contemporary 4.4
11. WIMJ-FM 92.5 Adult Contemporary 3.1
12. WLWA-AM 550 News/Talk/Adult Contemporary 2.9
13. WYGY-FM 96.5 Contemporary Country 2.3
14. WBND-AM 1160 Nostalgia/Soft Urban Contemporary 1.7
15. WAKW-FM 93.3 Chirstian 1.4
WAQZ-FM 107.1 Modern Rock 1.4
17. WCIN-AM 1480 Classic R&B/Black Gospel 1.1

# 1085. RE: Johnny Dark no longer on WWMX

Newsgroup: rec.radio.broadcasting
Date: 1993-07-24 03:09:10 UTC
From: cpaulus@cap.gwu.edu
Message-ID: <1993Jul24.030910.20130@gagme.chi.il.us>
Source record: 42823

lacko@enh.nist.gov (Tom Lacko) wrote this exciting news:

"Have no fear, Johnny Dark fans. Johnny has been hired by WBIG-FM (100.3)
to work Saturday nights from 6PM-midnight. Don't be surprised if the
oldies station finds a full time slot for him though, this guy is
still VERY popular. Also with WBIG's powerful signal, Baltimore fans
can still hear Johnny."

Yay! That's great news! For all I know, Dark just left WWMX because of a
contract dispute of some sort. It was like he was there, then he wasn't.
Thanks for the tip. I'm just disappointed I missed his first show on WBIG.
Although I'm only 19, 70's music is very vivid in my memory. I was glad to hear
Dark here in Baltimore on WWMX after WCAO went gospel. I met him once when I
was back in high school when some of us took a trip to see how radio worked.

And yes, his 63.9 share was very cool.

Chris

# 1086. Re: DELAYS

Source record: 42826

nelson@titan.ppd.kodak.com (Bruce D. Nelson (67890)) writes:

"There are a couple of ways that the delay is done ..

2) The modern way is an electronic digital delay system which stores 5 to 7 seconds of audio. When the bad words are said, the live host can hit a big red button during the offending period. When the "bad" words are done being said, the live host releases the button, and the machine automatically expands the distance between the words being broadcast to build up to the original time delay. Sometimes you can't tell that the editing has been done. I saw this system in use at Mutual in Washington, DC a couple of years ago."

I listen to the Howard Stern show on a regular basis, and I hear when they build up the delay, but it sounds like whatever's going on is under water for a short period of time. What's also interesting is that the speed of the programming is slowed down so as to build up the delay, while the frequency stays the same (ie: playing an album slightly slower than it should be.) It's also interesting to hear Howard come out of the delay back to live stuff. His voice is sped up just a little, but the frequency (again) stays the same.

Chris

This reminds me of an incident that occurred when I was on air at a certain station on the East Coast... I used to have to drive the desk for the 5 till 7 show (which was sent up from the 'mother' station on Reel to Reel), go into the news at 7, and then jock until 10.
The problem was we didn't like the IRN news at 7, so decided to pick the mother station's national news - but they always preceded the bulletin by local sports headlines of variable length. We needed a variable delay, so the first week an engineer rigged up a tape that was recorded on one machine in studio 2, went out the door, along the corridor, and onto a machine in studio 1, where it was played for air. The tape had a little marker on it to indicate the start of the news. All I had to do was keep on talking while I watched for the marker, align the marker onto the play head, finish talking, and fire it after the news logo cart. In effect a long, variable length delay.
Of course you can imagine the rest... when the time came to try the system (live!) the engineer tried to stick the marker on the tape... which was moving at 15ips... he put a hand on the spool to slow it down before realising it was live, so ended up chasing down the corridor trying to stick this marker on... half way along he realised it wasn't going to work, so grabbed the tape and tried to stick the sticker on which had already lost its stick...
By now there was a lot of tape piling up in the corridor with that wonderful news on it, so in a desperate bid to avoid it getting knotted, he grabbed a handful, and ran into the office shouting at the sales staff to hold their fingers up, and used them to take in this now vast tape loop...
Meanwhile I was starting to go potty in studio 1. There really is a limit to how long you can waffle about who will be on air next, the weather, time checks, and come out with all the tag liners about 'wacking out those hits, yanking and cranking that volume knob...'.
I thought relief was in sight when I saw the marker, and I could hit the remote pause for the tape, lean across to cue it on the play head - and find that from the desk it was impossible to REACH the damn thing!
I fiddled for a long jingle, stuck in to into the box, hit the fire

button, and then dived over the tape deck and moved the marker onto the play head... of course by now there was about 200 feet of tape rapidly wrapping itself around the outer office, and it had started to look like some sort of bizarre mothers crochet meeting, while the friction of the tape had cut into everyone's fingers and the blood from this had covered some parts of the tape in thick goo... There was this cheer as I went into the news, followed by a groan, as everyone realised that they would have to sit there for the whole of the five minute bulletin.
I was more concerned as to why the newsreader sounded as he was on bad acid, thanks to that engineer putting his hand on the reel right at the start... this was as nothing to the effects though once the blood on the tape had started to build up on the takeup spool.
Needless to say, the next week we went back to IRN.
Hope you enjoyed my reminisce! These tape delay machines are more trouble than they are worth...

Julian Lorkin - IBM Hursley, UK.

# 1088. Free Berkeley Radio

Newsgroup: rec.radio.broadcasting
Date: 1993-07-24 03:14:11 UTC
From: Richard Links <ISSRZL@uccvma.ucop.edu>
Message-ID: <1993Jul24.031411.20378@gagme.chi.il.us>
Source record: 42825

Here's an INACCURATE posting for you! Your comments, please.

----------Original message----------

Hello Steve!

I saw the posting of yours which featured the so-called "Free Radio Berkeley", with which I was unfamiliar. I noticed the date and time of a meeting concerning this issue, which was to take place on July 21 at 7:30 pm at the Long Haul, 3124 Shattuck Avenue, Berkeley.

I attempted to attend this last night and found (1) that nobody else bothered to show up (not surprising) and (2) that the folks at 3124 Shattuck Avenue knew absolutely NOTHING about this subject or supposed meeting.

Did something get a little mis-interpreted along the way, somehow?

I am still interested in the topic, but did I miss out on any 'updates' for the meeting, or am I in the Twilight Zone along with Rod?

Thanks!

# 1089. Don Imus (was: RE: NY Radio Ratings Spring 93)

Source record: 42828

lacko@enh.nist.gov (Tom Lacko) writes:

"Don Imus began simulcasting today, July 19, on WTEM AM 570 here in Washington, D.C. I have not heard his show yet. Everyone I know in radio says he's no big deal. We'll see how his ratings are soon enough."

Considering wtem's ratings (or lack thereeof), we'll see what happens. I've decided that I can't stand the man, and I won't listen. Maybe this is what WTEM needs to consider themselves a real radio station, even though his ratings will not be so good. They'll at least be put on the map. Anything's better than Paul Harris.

Chris

## 1090. Imus radio list

Newsgroup: rec.radio.broadcasting
Date: 1993-07-24 03:18:28 UTC
From: field@alcatraz.progress.COM
Message-ID: <1993Jul24.031828.20561@gagme.chi.il.us>

Here is a first attempt at a list of stations carrying WFAN's Don Imus
"Imus In The Morning" program.

State/City Station
---------- ----------
Florida
Tampa WQYK AM 1010

Massachusetts
Boston WEEI AM 590

New York
New York WFAN AM 660

Pennsylvania
Scranton WINH FM 95

Rhode Island
Providence WWRX FM 103.7

Washington D.C. WTEM AM 570

I think Albany is next but I don't know the station yet.
The I-Man should shortly be in Chicago, Cleveland, and Los Angeles.

Source record: 42836

I just got on the net and saw this subject header. Imus soon in Albany?
On what station? I work at a News/Talk station here in Albany and
know that he won't be on our station. Where did this information come

# 1092. AM loop antenna design oddity

Newsgroup: rec.radio.broadcasting
Date: 1993-07-24 03:18:50 UTC
From: bew4568@rigel.tamu.edu
Message-ID: <1993Jul24.031850.20614@gagme.chi.il.us>
Source record: 42830

I've looked at a couple of loop antenna designs and have observed something
I think is odd, so if someone could explain it to me I'd be grateful:
News-Software: VAX/VMS VNEWS 1.41

The loop antennas I've seen are as follows:

Number of turns Diameter of loop Width of loop Inductance (L)

20 14" (0.199 m^2) 1" (0.03 m) 0.333 H
12 2' (0.3716 m^2) 6" (0.1524 m) 0.4412 H
22 3' (1.0 m^2) 1" (0.03 m) 0.61 H

(N) (A) (d) (L)

The equations I used are:

L = (4*pi*10^(-5))*(N^2)*A/d

f = 1/(2*pi*(L*C)^(0.5))

Here's the problem: all of these designs use a trim capacitor with a range
from 90 pF to 365 pF. Given this range, the loops will be resonant at
frequencies less than 30 kHz, well below the 500 to 1600 kHz range of AM.

So what's the deal? Did I get it wrong, or is there a reason these designs
are tuned to be resonant well below the operation frequency?

Help!

Bruce bew4568@zeus.tamu.edu

## 1093. Bigger better WLUP mailing list.

> profit entities.

When I was working at a non-commercial TV station (KTEH in San Jose, an
independent PBS affiliate) a waiver was required from the FCC in order
to solicit funds for other organizations. An example was a telethon
to collect money for an earthquake disaster relief organization after
the Loma Prieta quake in '89. Of course, this was an all day beg-a-thon
rather than simple underwriting announcements.

Bill

We are subscribed to rec.radio.broadcasting, so all news
I obtain in "real-time" mode. Because IRJ is a collection of articles
in broadcasting newsgroup, there is no need to put me in mailinglist.
Nevertheless, your info about ability to subscribe to
IRJ is very useful, and I can use it in future.
Thank your for two issues of IRJ. They help me to obtain
general opinion about this newsgroup and journal.
So I wrote a message on the subject:"Local broadcasting in
Russian province (based on example of Ulyanovsk region)". I have no
my equipment here (SW or UHF receivers and so on are now in Moscow),
that's why information is got by talking with my friends here and
some phone calls to radio center.
This infomation may be useful, I think, as example of situation
with local broadcasting in Russian province, far from centers of
life, such as Moscow or S.Petersburg.
You can freely use all information from me in any form. I have
only one request: in case of posting, please, correct my grammar mistakes!

Mike.

---------- Local broadcasting in Russian province --------------------
Ulyanovsk: population about 650,000, center of Ulynovsk oblast.
Oblast = region, unit of administrative division of Russia.City is
placed on the both banks of Volga-river. Ulyanovsk is a birthplace
of Vladimir Ulyanov /Lenin/, great Russian Communist. Historical
name of city - Simbirsk. Oblast is in multi-nation encirclement:
Tartar Republic and Chuvash Republic on the north, Mordovian Republic -
on the west. This region is also a place of accomodation of ethnic German's
of Volga-Region. All nation minorities have influence on local life
and so, on local broadcasting.
The second town of oblast, which has own broadcasting is
Dimitrovgrad ( George Dimitrov - great Bulgarian Communist ),

historical name of Dimitrovgrad is Melekess.
Unlike to Moscow the FM radiobroadcasting has no changes from
before-Perestrojka times. Only two all-Russia channels are available
here, there is no commerce, music independent FM broadcasters.

Radio, FM:

Ulyanovsk: Equipment is placed in RadioTV Center in north part of town,
antennas - on 150 meters tower.

71.00 MHz - "Radio-1", all-russia programm,
morning&evening - local Ulyanovsk news,weather,
musical programms.

72.56 MHz - "Mayak" (i.e. "Lighthouse"), all-russia programm

Dimitrovgrad:
67.19 MHz - retranslator of all-russia programms + local
broadcasting

Veshkaima: \
70.40 MHz | Local retranslator's of all-russia programms
Novospasskoe: |
68.98 MHz /

New broadcasters select another target: television - the number
of active TV channels changed from 2 to 6 during last year.

TV:

Ulyanovsk:
ch. 5: Transmitters of RadioTV Center, north part of city, 150m tower

"Russia" all-russia state channel,

evening: Broadcasting of Ulyanovsk TV Radio State Company:
local news, weather, meetings with oblast government.
Some programms for nation minorities on tartar,chuvash,
german languages.

ch.10: Transmitters of RadioTV Center, north part of city, 150m tower

"Ostankino" all-russia state channel

ch.12: Private transmitter, tower of Ulyanovsk Commandant Military School
of Communications on high bank of Volga-river, about 30-40 m height.

"Simbirsk-Efir" ("Simbirsk-Ether"),
Ulyanovsk commerce channel. News, movies, cartoons,
advertisement.
ch. 3: ??
"2X2 na Volge" (2 times 2 on Volga )
all-Volga_Region commerce channel. Music, comedies,
advertisement.

ch. 8: Transmitter of Radio TV Center, 150m tower
"S.Petersburg" rebroadcasting of S.Petersburg TV Company.
Political and cultural life of "north capital" of
Russia.

Dimitrovgrad: ??
ch.40: local commerce channel

--------End of local broadcasting in Russian province-----------------

Our moderator writes:

"[Moderator's Note: Then you never heard Steve & Garry, Jonathon Brandmeier, or Bob Lassiter. Sterm is 18th in Chicago and is about to get the axe at WLUP-AM. Steve and Garry, on the LOOP-FM in morning drive were fourth, I think. Ill be posting ratings for Chicago soon."

That may be true, but why is it that Stern is doing so well in other markets, while not moving anywhere on the Loop? Steve and Garry can't be the only team that is good in the world that can currently beet Stern. No one really listens to AM radio, and maybe if they put Howard on FM, it would be an improovement. Of course, some shows are doing well on AM. The Don and Mike show (broadcasting from Washington dc's WJFK, and heard in Baltimore via WJFK-AM), are doing well on the AM side after almost two years of slithering up in the ratings. They just made a huge jump. By saying this, I guess my AM comment (up there) doesn't hold up.

I guess there is no real explanation, but we'll just have to see what happens.

Chris

## 1100. Starting a radio station - what do I need?

Newsgroup: rec.radio.broadcasting
Date: 1993-07-24 03:27:50 UTC
From: ssegan@panix.com
Message-ID: <1993Jul24.032750.20971@gagme.chi.il.us>
Source record: 42839

Hi. My sister goes to an interesting school, which has interesting school projects. It's out in the woods of Vermont, and she wants to start a radio station. The necessities are:

She wants to start a station to broadcast music and speech to a 1- to 5-mile radius which is basically radio dead across the spectrum to anyone without a >powerful< receiver.

So:
What equipment does she need? What licensing, if any? Her school -- it's a boarding school -- would sponsor this. Is FM or AM better? (There's plenty of room on the dial in her area.) How much would this setup cost? Where do you get the equipment? What sort of technical knowledge does it take to assemble and maintain? Would broadcasting to a smaller radius (1 mile, 1/2 mile, whatever) mean an easier/cheaper setup?

Thanks a lot.

Please respond by email.

## 1101. Broadcast monitor tuners wanted

Newsgroup: rec.radio.broadcasting
Date: 1993-07-24 03:31:42 UTC
From: Richard Links <ISSRZL@uccvma.ucop.edu>
Message-ID: <1993Jul24.033142.21062@gagme.chi.il.us>
Source record: 42838

I am trying to locate an intact H.H. Scott model 4310 stereo FM broadcast monitor tuner. This unit was manufactured during the 1960s and is a vacuum tubed design. I am also interested in finding a clean Fisher model FM-1000 tubed tuner, hopefully complete with the optional crystal controlled front end. They called the rack-mounted version of this unit the "FMR-1", as I recall. Any other reasonably-priced tubed FM tuners would be of interest, including Marantz 10 or 10-B or McIntosh MR-71s.

Anyone know of a source for Western Electric 300-B, 310-A or 350-B tubes? I am restoring some amps and am in need of sourcing some of these. Thanks!

It could be the 19Khz pilot signal. Some mono portables don't have
much/any filtering above 15Khz, and if the pilot injection is a bit
high or the main program level is low, the pilot can even be audible.
Normally the audio circuits and the lousy speaker in the portable
radios low-pass the audio enough that people don't hear it.

I doubt that any ultrasonics emitted by most speakers would make any
difference to nearby bugs. The commercial 'pest eliminators' are
very efficient piezo tweeters driven with a few milliwatts of an
ultrasonic tone.

# 1103. WDRE and WDRE?

Newsgroup: rec.radio.broadcasting
Date: 1993-07-24 03:32:03 UTC
From: dh11s12@ocnet.cscns.com
Message-ID: <1993Jul24.033203.21119@gagme.chi.il.us>
Source record: 42840

The last few times I visited Philadelphia I noticed that they had a new Modern Rock station up there. It broadcasted on 103.9 FM and its call letters were WDRE.

Huh?!?

Woah, wait a minute... what about WDRE in Garden City, NY? Is this the same station with two different transmitters and different sets of commercials? (It is the same format, apparently. But on the Philadelphia station, there are commercials aimed specifically at a Philly audience, so it isn't simple rebroadcasting.)

As an unrelated sidenote, does anybody know how far west of New York City WDRE-Garden City can be picked up? Soon I'll be living 25 or 30 miles west of NYC. I know WDRE only has 1,000 watts, but I'm hoping....

Sounds pretty strange to me... If the station is stereo, they
have the stereo pilot at 19 KHz which must be protected. Your stereo receiver
has low pass filters to get rid of everything above 15 KHz or so... So,
I think they are being untruthful in their claims. It would be
interesting to get more details on their claims.
I've also heard that the ultrasonic bug repellers (never heard
anyone claim they killed bugs, but instead just repelled them) don't
really work. I once had a neighbor who bought one but had to take it
back, since it kept changing channels on his TV... but that's a
different story.

## 1105. WKQX to full alternative?

Newsgroup: rec.radio.broadcasting
Date: 1993-07-24 03:36:09 UTC
From: testnet!pr@pegasus.att.com
Message-ID: <1993Jul24.033609.21231@gagme.chi.il.us>
Source record: 42843

I'm hearing talk that WKQX is going all the way to rock-alternative
from their sorta modern but sorta adult contemporary sorta album
rock format that I heard on tape last year. I suppose Mark Goodman
replacing Murphy in the Morning is a positive step in that direction
(had heard that Murphy couldn't stand the music).

Also (while I'm here) would people kindly post the call letters
of stations that the Infinity-syndicated hosts are debuting on as
they happen (aside from Stern...C-Kunz' list is deadly accurate)?

Ie Don n Mike (where besides WWKB Buffalo) Imus (WTEM/DC, WEEI/Boston)
and whatever 1010 is in TAmpa...what station in Providence?

(Won't bother asking about Liddy, he's up near a hundred already).

# 1109. IRRS to areas outside EU

Newsgroup: rec.radio.broadcasting
Date: 1993-07-27 06:29:47 UTC
From: 100020.1013@CompuServe.COM
Message-ID: <1993Jul27.062947.105@gagme.chi.il.us>
Source record: 42846

---

This message is cross-posted to several individuals, and groups. Feel free to distribute and circulate to who might be interested. If you do not want to receive further postings in the future, please send mail to NEXUS-IBA at: 100020.1013@compuserve.com. THANK YOU.

*** IRRS-SHORTWAVE may soon discontinue its daily broadcasts on 7,125 kHz
*** from 02-03 UTC (03-04 wintertime) beamed to areas outside Europe.

Discussions are undergoing in Milano, Italy, at the seat of NEXUS-Int'l Broadcasting Association, home of IRRS-Shortwave (The Italian Radio Relay Service), to discontinue the daily broadcast now at 02-03 UTC to areas outside Europe on 7,125 kHz Shortwave. None of NEXUS-IBA members is sponsoring the cost of such transmission, and NEXUS-IBA finds now difficult to sponsor the cost of airtime and extra-maintenance required for this daily operation. This transmissions have - however- quite a following in the Americas (East Coast, mainly) and (far) Eastern Europe, where IRRS-Shortwave signals come in rather good quality at that time of the night.

IRRS-Shortwave carries daily programming on behalf of its members, which include United Nations Radio, UNESCO Radio, and European Gospel Radio, as well as a number of other small broadcasters and program producers, aminly beamed to its listeners in Europe. Programmes are in English (90%), French, German, Spanish, Russian and Italian. These particular transissions between 02-03 UTC are in English, except on Sunday (Sat eve USA time): in Russian & English.

NEXUS-IBA is a private, non profit, non-commercial organization entirely sponsored by its members and listeners. We welcome your ideas, suggestions and support, especially on this matter, before a definitive decision is taken. More on this subject will be released in mid-August. Stay tuned!

Source record: 42848

The Washington Public Disclosure Commission is trying to decide
whether a radio station's publicity should be counted as a campaign gift.

Commission director Graham Johnson says talk show host Mike Siegel
(SEE'-gul) of Seattle station K-V-I may have gone beyond political discussion.

To drum up support for anti-tax initiatives 601 and 602, Siegel mentioned
the names of businesses where petitions could be signed.

General Manager Shannon Sweatte (swet) says the station has decided to
report air time given to businesses supporting the initiatives. That
information will be sent to the Disclosure Commission.

Siegel calls the claim of a campaign contribution ``ludicrous'' and
says he
was talking about ideas and beliefs.

The station has offered Governor Lowry and initiative opponents the
opportunity to respond to Siegel on the air.

Amen (too bad Limbaugh has the [tm] on "ditto"). When purchasing time
for a major campaign earlier this year, my dealings with Connecticut
Public Broadcasting were identical to those with the "real" commercial
stations, except that Public's rates were higher.

Just for sh*ts and grins, when I called CPB, I asked for the "sales
department." I was put right through.

Level the playing field. Cut the selling or can the begging.

ObStern: Stern=sewage. Bring back local talent. It's there, if
management is willing to <gasp> take a chance on it.

The reason that Stern is doing so poorly in Chicago is because there was
already an outlet for his kind of "shock" humor on WLUP itself. In most
other markets there wasn't any real competition.

Also Stern's humor seems to me to be very New York-esque and I believe
rubs Chicagoans the wrong way.

You're comment about nobody listening to AM is definately wrong. The Loop
AM received excellent ratings (I believe they were third in the market).

I still don't think putting Stern on an FM station would help anything.
People wanting humor have already found it in Steve and Garry, Kevin Matthews
and Jonathon Brandmeier. And as far as I know, most of Howard Sterns
fans seem to be pre-teen or at least that's what I've heard from
my mom that teaches middle school... :-)

Chris

P.S. More Loop discussions can be found on the WLUP mailing list.
Mail looplist@uiuc.edu for more information! (sorry 'bout the shameless
plug)

WLUP-AM was doing excellently and were/are a unique force in radio inventing the format they have and featuring a roster of top-notch air talent. They were a 'cinderella story' in the industry. Every shift on the AM LOOP was a winner, in the top 5. Also all the personalitys were of the same cut as Stern. Irreverent, often explicit and in many cases going way over the accepted line and getting away with it, and indeed prospering.

Stern is by far the lowest rated show on the station, despite much hype and fanfare as Howard arrived. Trouble was that Chicago has an army of top-notch radio players and The LOOP had been showcasing them for years. So the arrival of a New York-based satellite signal of someone who, frankly, was little more than a half-baked version of what was on the LOOP already, didnt light many fires. While Stern is talking about local New York stuff, All the other stations are doing stuff pertaining to Chicago and Chicagoans.

> Steve and Garry can't be the only team that is good in the world that can
> currently beet Stern. No one really listens to AM radio, and maybe if
> they put Howard on FM, it would be an improovement.

No, I am sure they arn't. But S&G are really unique as they deal with more than penis and breast references and they have grown and matured with this city and their listeners. They are very funny, but they also have a real and serious perspective too. In otherwords they talk TO their listeners instead of just throwing schtik at them.

> Of course, some shows are doing well on AM. The Don and Mike show
> (broadcasting from Washington dc's WJFK, and heard in Baltimore via
> WJFK-AM), are doing well on the AM side after almost two years of slithering

> AM comment (up there) doesn't hold up.

Well music programming definitely has an edge on FM. But if there is a unique and interesting product available, people will go to whatever source provides it. WLUP-AM is a 50,000 watt station at 1000khz and provides that product. Not to mention a very good reiable daytime signal in 4 states, and half a continent at night! They have been an industry leader and innovator

for many years. They have brought life back to AM. How they will fair if they continue to screw with their line-up is anyones guess.

> I guess there is no real explanation, but we'll just have to see what
> happens.

Well sure there's an explanation, Chris. Chicago just doesn't care much for Howard's act. We have our irreverent and pseudo-shock jocks, we have heard the word penis on the air, and it aint-no-big-deal. Howard has been used to dropping into markets (most without any real powerhouse, pseudo-shock air talent) and wipe the ratings books all over town! In NYC he is king because he is 'their boy' and he is local. In Chicago, however, he is just another radio idiot to most. In a way, it is good to have Howard realize that he is not immortal and his charm(?) is not universal. Howard is a professional and very successful. This means that he is obviously pleasing many people. That I respect. But that dont mean he is infalible or even that I have to like him. Although, even with all of the above, I am still a bit surprized that his showing is so abysmal.

Thanks for the post, Chris.

Bill

I think this is one of those nonsense promos intended as a goof.
A recent example in the SF bay area occurred several months ago when KGO proudly claimed their new transmitter to be operating at "a Jillion watts." A Sacramento FM stations offers listeners the "Million Dollar Guarantee" - you pay them a Million Dollars and they'll play any song you want.

As for WDRE, it's actually that angry British rock that knocks off the bugs. :-)

103.9, in a suburb of Phili, is co-owned with WDRE in Garden City. The actual callsign is WIBF and the station is licensed to Jenkintown. WDRE sources program material for its sister WIBF in much the same way a live syndicated satellite format is delivered to client stations, call letters excepted, obviously.

There is nothing special about WDRE's 1KW signal. They are a garden variety Class A(-) station, which is local coverage by definition.

>The last few times I visited Philadelphia I noticed that they had a new
>Modern Rock station up there. It broadcasted on 103.9 FM and its call
>letters were WDRE.
> Huh?!?
> Woah, wait a minute... what about WDRE in Garden City, NY? Is this the
>same station with two different transmitters and different sets of
>commercials?
WDRE bought out a station WYBF (or is it WIBF?) and broadcasts the same programming as their Long Island station. Listen to the ID at the top of the hour, they say something like "WDRE, Garden City, WYBF, Jenkentown"
> As an unrelated sidenote, does anybody know how far west of New York
>City WDRE-Garden City can be picked up? Soon I'll be living 25 or 30 miles
>west of NYC. I know WDRE only has 1,000 watts, but I'm hoping....
I used to live in Brigdewater NJ a year ago, and I was able to get WDRE from Long Island. I needed a sensitive stereo reciever (Or at least my Akai AAR32 isn't bad) and an antenna I made placed in a "hot spot" behind a bookcase in my apartment, and a bit of luck that that hot spot even exists. There is a country station on the same freq (92.7MHz) somewheres in the area to the south. Bridgewater is located where I78 and I287 intersect.
If you are allowed to use outdoor antennas, get the Radio Shack FM antenna. The directional one with six elements (rods). Or more if they have it. Not a TV antenna (salesman said "But this TV antenna is on sale. But I need an FM only antenna. Well, okay". And consult a map to aim at a spot near the border of Brooklyn/Queens and Nassau county, at about the midpoint of Long Island north-south. Do a few iterations to maximize signal strength and or signal to noise ratio.
Enjoy.

WDRE was my favorite station when I lived in New Jersey. They would
occasionally make silly fake "commercial" announcements similar to:
"WDRE helps build stronger bodies 12 ways". The above insect story
is probably just another silly fake statement of this sort.

>According to a blurb in the August issue of _Monitoring Times_, the new
>band will be offered first to daytime-only stations in markets of 100,000+
>that do not have their own stations.

>The first station to jump into the new band is WJDM in Elizabeth, NJ.
>WJDM is currently running 1 kW (no freq given in the article), but
>if they get approval to move into the new band, they will kick their
>power up to 10 kW, and their coverage area will include New York City.

And if you inquire into the reason behind the rule giving the first expanded-band stations to markets of 100K+ without full-timers, you'll find it was basically written into law by none other than the owner of WJDM! And if you try to make a list of the stations that meet that criterion, it will look essentially like this:

1) WJDM Elizabeth NJ

>WJDM is awaiting FCC approval.

No surprise...having gotten a law written that's essentially just for them, why not take advantage of it? (and anybody wanna guess how much they'll serve Elizabeth once they get to 10kw full time on 16X0? Let's face it, they're trying to be a NYC station!)

## 1123. Misrepresentation of lottery probabilities

Newsgroup: rec.radio.broadcasting
Date: 1993-08-02 02:58:55 UTC
From: mcovingt@aisun3.ai.uga.edu
Message-ID: <1993Aug2.025855.4589@gagme.chi.il.us>
Source record: 42712

If a TV station runs an ad that is designed to misrepresent the true probability of winning a state lottery, is any regulation being violated?

WSB-TV is hyping tomorrow's "Georgia Millionaire" drawing by running an ad in which people say, in a "debunking" tone of voice, "They said I'd have a better chance of getting hit by lightning... they said I'd have a better chance of having quadruplets." The implication is that people should ignore such warnings about the slim probability of winning.

This appears to be an ad produced by WSB-TV internally, not a paid advertisement for the lottery.

For further information call:

Louis Hiken, Attorney at Law, (415) 705-6460
Free Radio Berkeley (510) 464-3041

FCC'S ACTIONS AGAINST ALLEGED MICRO POWER BROADCASTER
CHALLENGED BY RECENTLY FILED LEGAL RESPONSE

In response to the Notice of Apparent Liability, in the amount of $20,000, brought by the Federal Communications Commission, against Stephen Dunifer, a long-time activist and resident of Berkeley, California, for allegedly broadcasting without a license, attorney Louis Hiken has filed a 13-page response that refutes this action by the FCC on the grounds that it is "unwarranted, procedurally flawed, constitutionally invalid, and calls for a forfeiture amount that is grossly disproportionate to the alleged violations and which exceeds the maximum limits set by statute".

Quoting further, "The Federal Communications Commission policies with regards to micro radio broadcasting have failed to keep pace with the rapid proliferation of technological advances in the field of communications. The FCC's current regulatory scheme completely prohibits micro radio broadcasters and their listeners from accessing the public airwaves. To enforce this absolute prohibition, the FCC is relying upon regulations which were intended solely for application to large-scale, commercial broadcasters, and which were promulgated long before the advent of technology that makes possible micro radio; indeed, even before the advent of FM broadcasting. The FCC's application of these regulations violates the First Amendment rights of individuals seeking to exercise those rights via methods and mediums that were technologically impossible when the regulations were created."

The fundamental problem is that the FCC has not provided procedures by which micro radio broadcasters can become licensed or authorized. Instead, the FCC is applying severe administrative and criminal sanctions, intended for application to large-scale operators, to micro radio broadcasters with the goal of completely precluding all such broadcasts.

As the named party by the FCC, Stephen Dunifer stated "This recently filed response is an extremely clear and succinct defense

of micro power broadcasting. It is my hope that we can establish a clear and binding legal precedent which will protect the internationally recognized right of communication between individuals and communities. In light of the FCC's pitiful ruling that the Home Shopping Channel serves the public interest, it is obvious the FCC is more interested in protecting the status quo of commercial and corporate interests than actual public interests. As the one dissenting FCC commissioner, Evin Duggan, put it - 'Today, sadly. the commission puts forward a minimalist definition of the public interest standard, at precisely the moment we should be mending and refurbishing that tattered banner.' Despite the most recent actions of the FCC, Free Radio Berkeley will continue its weekly Sunday broadcasts as a community free speech project, from 9 PM to 12 Midnight at 88.1 on the FM band. We will not be silenced by federal agencies who hide behind a facade of serving the public interest to mask their flagrant abuse of regulatory power, public money and resources to defend, promote, and serve private corporate media interests."

Peter Franck, speaking for the National Lawyers Guild Committee on Democratic Communications (NLGCDC), stated, "The NLGCDC has laid the groundwork for the defense of Mr. Dunifer and Micro Radio practitioners. The work of the CDC focuses on the rights of all people to have a world-wide system of media and communications based on the principle of cultural and informational self-determination. Its research has led it to find that the FCC's ban on low power community broadcasting violates both the US Constitution and International Human Rights Law.

Full length copies of the brief may be obtained by calling one of the above numbers.

On the weekend of August 6-8, the National Lawyers Guild will be holding its national convention on the campus of NYU. As part of that convention, on Sunday, August 8 there will be a special panel, sponsored by the NLG Committee on Democratic Communications, which will focus on the emerging "Right to Communicate" as a human right fundamental to democracy in the world of the present and the future.

Stephen Dunifer, along with Lavinia Mohr, a founder of the World Federation of Community Broadcasters (AMARC) will speak as part of the first panel, of three, on "Community Empowerment Through Radio."

Two more panels are featured as well. "From Algiers to Dublin: The Struggle for an Emerging Human Right" will include Dr. Fernando Reyes Mata, Chilean delegation to the United States, and Colleen Roach, author Communication and Culture in War and Peace.

The third panel, "Towards a New International Legal Standard: The Right to Communicate," will present Alan Korn, author of NLG brief

on Constitutional Right to Micro Radio and Michelle Schwartz, Board of Directors of Human Rights Advocates

Stephen Dunifer, as part of his trip to New York City, will be leading workshops on micro power broadcasting - see following flyer. These workshops will be oriented to imparting hands on knowledge of radio broadcasting fundamentals including the assembly of 5 watt FM transmitters which will be offered to workshop participants as kits at a cost of $40 each. With an assembled transmitter unit and a $100-$200 worth of audio gear, cable and an antenna, any group or individual will be capable of putting their own micro power station on the air. An output power of 5 watts will, depending on conditions, project a 1 to 5 mile radius of coverage.

Paper Tiger Television will be hosting these workshops at their offices on Saturday, August 7 from 11 am to 4 pm and Monday, August 9 from 7 pm to 10 pm.

Paper Tiger TV is located at 339 Lafayette Street in NYC. Phone number is (212) 420-9045.

Questions and inquiries regarding the National Lawyers Guild Convention may be directed to the NLG New York office. Stephen Dunifer may be contacted through the Paper Tiger office during his stay in NYC. Press packets on micro power broadcasting and copies of the legal response as well as the larger legal brief prepared by the NLG Committee on Democratic Communications will be available during that time.

Topic 365 Vinny Mohr @ Gui NLG Conv.
igc:pfranck amarc.general 6:19 pm Jul 22, 1993

From: Peter Franck <pfranck>
Subject: Vinny Mohr @ Gui NLG Conv.

/* Written 5:17 pm Jul 20, 1993 by pfranck@igc.apc.org in igc:nlg.interact */
/* ---------- "Comm on Demo Cmmncns Conv Panel" ---------- */
PANEL

NLG COMMITTEE ON DEMOCRATIC COMMUNICATIONS

Title: The Right to Communicate as a Basic Human Right in
the 90s and beyond.

The Panel will be presented at Noon on Sunday the 8th
AMARC founding member Vinny Mohr will be a featured
panelist at the (US) National Lawyers Guild Convention
in New York. The Convention will be held at NYU
Aug 5-8. This panel is at noon on Sun the 8th.
All are invited.

This Panel will focus on the emerging "Right to Communicate"
as a human right fundamental to democracy in the world of the
present and the future.

BACKGROUND:

For more than 30 years there has been a major movement
throughout the world (but almost entirely blacked out by the U.S.
press) and originating in the Non Alighted Movement, for a "New
World Information and Communications Order."

Commissioned by UNESCO, the 1980 Report of the MacBride
Commission (chaired by the distinguished Irish statesman Sean
MacBride) crystallized the notion of communications and cultural
sovereignty as basic human rights of all peoples.

Today the Right to Communicate is essential to the grass
roots democratic mobilization of the world's peoples. That
mobilization is the world's only hope against the current rush to
the centralization of power in giant multinational corporations
and super-states (the European Community, NAFTA, etc.).

The Presentation will be in three sub-panels, with question
time:

Panel 1: Community Empowerment Through Radio: Steven Dunifer, micro radio practitioner assessed $20,000 fine by FCC. Lavinia Mohr, founder World Federation of Community Broadcasters.

Panel 2: From Algiers to Dublin: The Struggle for an Emerging Human Right. Dr. Fernando Reyes Mata, Chilean delegation to the United Nations. Colleen Roach, author Communication and Culture in War and Peace.

Panel 3: Towards a New International Legal Standard: The Right to Communicate. Alan Korn, author NLG brief on constitutional Right to Micro Radio. Michelle Schwartz Board of Directors of Human Rights Advocates.

The speakers:

1. Stephen Dunifer is a member of Free Radio Berkeley and the Free Communications Coalition (FCC). Charged with micro radio broadcasting without a license Dunifer has been assessed a $20,000 fine by the Federal Communications Commission. He is being represented by members of the NLG Committee on Democratic Communications. Dunifer will speak on "Micro Radio, The Voice of the People."

2. Lavinia (Vinny) Mohr is a founder of the World Association of Community Radio Broadcasters (known by its French acronym AMARC). AMARC is an international Non-Governmental Organization based in Montreal composed of hundreds of member community radio stations of all sizes worldwide. Ms. Mohr will speak on Community Radio, the Right to Communicate and People's Movements Around the World.

3. Dr. Fernando Reyes Mata is professor of International Communications at the National University of Andres Bello Chile, and a member of the Chilean delegation to the United Nations. Dr. Mata played a leading role in the historic NWICO Movement, having been present at the founding meeting in Algiers. He will speak on The Right to Communicate at the End of the 20th Century and Beyond.

4. Professor Colleen Roach is Professor of Communications at Queens College, New York. A United Nations representative of the International Organization of Journalists. She will speak on the Emergence of the New Human Right Called the Right to Communicate the People's Struggles for Self-Determination.

5. Alan Korn is a 1993 graduate of Golden Gate Law School is the author of the Committee on Democratic Communications brief on the constitutional and international law in validity on the ban on micro radio. He will speak on The Constitutional Law Legal Basis for the Right to Communicate.

6. Michelle Schwartz holds an LLM in International Law
from the London School of Economics. She is a member of the
Board of Directors of Human Rights Advocates, and Senior staff
attorney at National Heritage Institute. She has represented
NGOs before the Human Rights Commission in Geneva and has drafted
a human rights intervention on behalf of micro radio. Human
Rights Advocates is an NGO actively presenting human rights
violations to the UN subcommission on Human Rights in Geneva.
She will speak on The Development of The Right to Communicate
within the U.N. and NGO systems.

>
>I defend public radio and television simply because I believe they provide
>a service unavailable and unthinkable by commercial broadcasters and that
>they should actively pursue both sponsorships and fund drives to remain
>viable.

And I agree with you. There are blatant exceptions to what was once the rule that noncommercial broadcasting was an alternative; it is to them that I direct my objections.

Connecticut Public Broadcasting, for example, has, of late become nearly indistinguishable from a commercial station save for the fact that the spots are more clustered.

At the same time, several local college radio stations (since CPB has a virtual lock on NPR and APR) continue to provide something a world apart from the commercials, as do the very fine stations of (to use an NPR example) WAMC's network from Albany.

My point is that someone must draw a line in the sand beyond which the bean counters don't start looking at public broacasting with the same bottom-line-exclusive attitude that soured commercial radio in the late '60's and early '70's.

There are fine examples of noncommercial radio. Long may they live; and I will give them my membership dollars to help. But when "public" stations engage in the same marketeering (e.g. "Barney"(tm)) as the commercials, they can get out of my face for pledges, and forget about my tax dollars.

# 1128. Underwriting Rules

Newsgroup: rec.radio.broadcasting
Date: 1993-08-02 03:03:58 UTC
From: WEOS-FM <BLACK%HWS1%HWS.bitnet@CUNYVM.CUNY.EDU>
Message-ID: <1993Aug2.030358.4860@gagme.chi.il.us>
Source record: 42719

Someone requested Underwriting Rules. Perhaps put into a FAQ file?
In any event, here are the rules:

Underwriting may identify the sponsor: Name, address, phone #, Hours of operation, product line or service

Underwriting may use a business slogan, as long as it's not motivational ex: Providing legal services since 1793 is OK. The oldest law firm in NEWCITY is not (comparative).

No price is allowed, no comparative or qualitative language, no motivational language. The Best, Newest, Come on In , Call, For a Free Test Drive, etc. are all illegal.
What is legal: For information, XXXX Phone # is 555-5555.

In addition, the FCC recently ruled that using the business name "excessively" would not be permitted. Note this is up to interpretation. There is no length limit on UC announcments. Also, UC can only be played at breaks in the programming. They should nor interrupt a program. For example, in the middle of a debate or hearing, or live lecture, it would not be legal to play an underwriting message. At the end of a quarter in game, a time out or break/intermission in a concert or end of a record would be OK.

Music under a UC: You will not get a clear answer from the FCC. Some say no some say its OK. It's up to you. BE careful
as to how it sounds.
If it sounds too much like a commercial, it may raise the dander of some local commercial stations who may complain.

Nonprofit agencies and organizations: Full blown commercials may air, with price, motivation, etc. The non-profit must have official IRS 501c3 status as a non-profit, and the organization should be identified in the commercial, such as SICKWAY HOSPITAL, THE PODUNK SYMPHONY, etc. NOTE: NOT ALL non-profits qualify nor are some organizations that look non-profit are that way. Arts organizations, hospitals, museusms and school clubs may not always be non-profit. It is good to check them out.

Each station sets its own policy as to how far they will go. For example, some will not take any non-profit advertising. SOme will use music, some will use s
hort ID only type UC credits. However, ALL stations that are non-commercial should obey the rules.
I hope this helps.

I seem to recall reading in Broadcasting that the stations facing fines over Stern's broadcasts have ratings showing there are no kids in the audience, so no harm done. Will Chris's mom's students end up testifying in court?

> content.

San Francisco is similar in that respect. Rush Limbaugh is the only syndicated talk show that is doing anything here (and it is wiping the floor with everyone). Other than that, except for some weekend stuff, talk radio is local. Howard Stern is doing very poorly so far.

> sports teams as does Chicago.

Well, San Francisco still is home to the Giants baseball team, and it had to screw Tampa/St. Petersburg out of a purchase deal to keep it. :-)

Digital techniques may improve AM (almost anything could improve AM), but as far as "blowing analog FM away", I seriously doubt it. To these classical-music-loving ears, virtually all bit-robbing schemes are sorely lacking. Maybe snake-oil salesmen can tolerate the disposal of part of the music, but there are still some of us left who savor the subtle nuances. For instance, I find the Sony Mini-Disc unlistenable, particularly on complex orchestral passages (I carry a DAT Walkman when jogging--or even my old WM-D6). Let me know when they figure out how to get a 32 KHz sampling rate (with even twelve bit resolution) without throwing anything away on AM and then I will be interested.

bertel@wam.umd.edu (Doug Bertel) writes:

> morning radio from New York would be an inherent turn-off to listeners
> in Chicago.

KGO recognizes this about San Francisco, and for this reason has, except for Bob Brinker's money talk, only local talkshow hosts. Some years ago, when Owen Span went to work for ABC in New York, KGO continued his "local" show via satellite. It did not take long for San

Franciscans to tire of the fact that Span had become a "New Yorker" and the show, which had been very popular when he lived in SF, bombed big-time.

Note that KGO is going to repeat this past mistake in September. Popular talkshow host Jim Eason got fed up with city life and moved back to the state of his birth, North Carolina. He will resume his show in the fall from his NC home via satellite on KGO. Only limited psychic powers are required to predict that this will never fly. San Franciscans will never remain interested in someone who will rapidly lose touch with this area. I am tempted to call Mickey Luckoff and remark about that madness by saying two words, "Owen Span".

> Local radio triumphs.

At least it eventually does.

# 1132. Administrivia: Where Have All The Posters Gone?

Newsgroup: rec.radio.broadcasting
Date: 1993-08-02 05:50:22 UTC
From: rrb@deja-vu.aiss.uiuc.edu
Message-ID: <CB4Avz.6r5@news.cso.uiuc.edu>
Source record: 42707

A good friend of mine once remarked...

"Life is a small quanity of light sources....
...and a large number of reflective surfaces."

Well that seems to be equally applicable to Usenet, and rrb in particular.

Whenever a new subject is brought up, many people respond. Once the responses die down, so does the traffic here... until another source of light creates a 'new' subject. Also, this is summer break and the number of readers is far less than during the winter.

So now is the time for all good broadcasting posters to come to the aid of their newsgroup :-). An excerpt from the 'welcome to rrb' posting ...

------

... subjects include (but are not limited to)..

1) Formats and programming.
2) Engineering & technical matters.
3) DXing (long distance reception) on the standard broadcast bands
4) Community broadcasting (including non-commercial and clandestine stations).
5) Micro-radio (Low-power, usually unlicenced <pirate??> radio)
6) Legislation affecting the industry, and its 'offspring' industries.
7) Technologies affecting the industry, and its 'offspring' industries.
8) General station information. Who is going on and off the air, and why.
9) Radio's historical and cultural significance.
10) Radio's current and future trends.
11) Political and news coverage and its impact.
12) Job openings and help to those seeking work in the industry.
13) Information on equipment and techniques involved in transmission and reception of broadcast radio signals.
14) The International Scene and how broadcast radio is shaping up in the various nations of the world.
15) Gabfesting and all matters of general interest to those involved in, or interested in, the general subject of domestic radio broadcasting.

---------

Lots of ground to cover.

So what's going on in radio where you are? Did you read an article recently? Hear something new in the industry? Let's hear about it. Don't wait for someone else to post something to respond to, post it yourself :-)!

Do you belong to another broadcasting forum? Feel free to crosspost here (if the other forum allows that).

I see too few technical or engineering subjects in rrb. Lots of programming and format stuff, but I'd love to see more engineering and tech stuff posted. Gives the casual observer the idea that we only talk about Howard Stern, Imus, and other programming stuff.

Don't be shy, post!

Hope to see *at-least* 15 new submissions a day :-).

Take care!!!

# 1134. Help needed identifying Bumper Stickers

Newsgroup: rec.radio.broadcasting
Date: 1993-08-03 18:57:22 UTC
From: dhansen@ua.d.umn.edu
Message-ID: <1993Aug3.185722.15773@gagme.chi.il.us>
Source record: 42722

Hello to all:
I have some radio stickers which remain unidentified because my sources must not cover the right year(s). I would like to know the callsign and/or city of the following:

1) WICS TV 20 (NBC peacock) Where Linconland Comes Home!
2) WATCH IT, DUDE! (Bart Simpson, pink background) FOX KTXL TV
3) Atlanta's 99 FM Soft Hits (99 FM is orange/yellow, bacgnd is Darkblue)
4) Pure Gold Fox 103 yellow letters on black background
The back has Bonanza Restaurant coupons, Expires Aug 4, 1991.
5) SWEET 16 1600 AM great gold (black backgnd, yellow/red letters, with "racetrack" shaped lines around the text) Rumor that this is Canada?
6) ROCK JUST GOT HARDER Z.ROCK 102.7 WDZR FM (white letters on black)

Thanks for any insight on the calls/cities of these stickers!

# 1135. Re: New SCA Demodulator from SCS - A Review...

Newsgroup: rec.radio.broadcasting
Date: 1993-08-03 18:58:16 UTC
From: joe@netcom.com
Message-ID: <1993Aug3.185816.15818@gagme.chi.il.us>
Source record: 42724

I recently ordered and received three SCA demodulator boards from SCS Radio Technology after noticing an advertisement in Radio News. Bruce Elving's SCA design uses a CA3089 IF/detector chip and a PLL (I designed his XR2211 PLL SCA demodulator) SCA. Bruce also sells FM receivers modified with the boards.

What was interesting about the SCS SCA board design, while it uses a CA3089E IF chip also, a multipole filter in front of the 3089 decreases main channel crosstalk interference (by 60 dB). David's board is of excellent construction, with no jumpers and small size to be inserted in an FM receiver's FM detector stage (before deemphasis attenuates the SCA signals).

Anyway, three pretuned boards are available from SCS, 57Khz, 67Khz, and 92Khz - $20.00 each. I am satisified with the design and construction of each board. One area of modification I would make is to monitor the SCA signal's multipath and level with an x-y monitor. Use pin 13 of the 3089 chip for a signal level (scope y) output and pin 7 for the y axis output. Of course levels must be set to set vertical and horizontal traces. A flat vertical line, max amplitude, is the ideal signal for tuning. A "wavy" line illustrates multipath. This is a great tool for tuning FM signals...

SCS's Address and Phone Number:

SCS Radio Technology
5742 Fairoak
Springfield, MO, 65810

Phone: 417-881-8401

(I have no affilication with SCS, only as a satisfied customer)

# 1136. Directional Power

Newsgroup: rec.radio.broadcasting
Date: 1993-08-03 18:58:40 UTC
From: wmbr@athena.mit.edu
Message-ID: <1993Aug3.185840.15875@gagme.chi.il.us>
Source record: 42723

Hi there, I posted this question a while ago to rec.radio.broad., but I really only got one reply, and I didn't receive full satisfaction from it.

I would like to hear from engineers/technicians who work at, or have worked at stations (especially FM radio stations) that employ directional antennas. By directional, I'm referring to antenna systems that have a greater gain in one direction than another, allowing a station to shape its contours so as to not interfere with other specific stations.

Our engineering studies have been done, but I've heard negative things about these kinds of systems. Specifically that "dead zones" can be created in the local area when the antenna's interference pattern (necessary to create the directionality) generates a null.

I'd like to hear things like "Yes, we've been transmitting 80% more power to the northeast than to the rest of our area for the past 5 years, and we've never had a single problem", or perhaps "We installed a directional antenna and it has caused problem after problem. We eventually went back to an omni-directional pattern because too many of our listeners complained of poor reception while driving in their cars on Rte XX."

Thanks for your help. I await your replies.

Ohio University Electronic Communication

Date: 03-Aug-1993 09:30am EST

To: Remote Addressee ( _MX%"rrb@airwaves.chi.il.us" )

From: Daniel Gulino Dept: Chemical Engineering
GULINO Tel No: (614) 593-1495

Subject: The Greaseman

I few days ago I asked for information about "The Greaseman," who was a dj on WAXC (top 40, now long gone) in Rochester, NY in the early '70s, but who left after that time to go to (I think) Washington, DC. The responses I received are summarized below.

From Henry Seimer (siemer@umbc.edu)

> He was on the air in Washington DC from 1981-1993. He is now in LA
> doing his show and it can be heard in various markets via the Unistar
> Satellite.

From Sarah Plummer (splummer@abacus.bates.edu)

> There is a guy who has a nightly show on WXRK 92.3 FM in NY who
> calls himself the Greaseman. Try there.

From Greg Doerschler (gkd@wpi.edu)

> I wonder if this was the same "Greaseman" who was on WPOP-AM in
> Hartford, CT during the early 70s. He left when the station went
> all-news; I don't remember the exact year. He sort of had a Wolfman
> Jack type voice. I still have a tape of "The Ballad of the
> Greaseman" which he recorded describing the station's format change
> and his departure.

> This probably isn't much help to you; but I hadn't heard mention of
> any "Greaseman" in perhaps 20 years.

And finally, the definitive answer from jcastro@mason1.gmu.edu

> Hi,
> The Greaseman is now broadcasting out of Los Angeles. He broadcasts
> to NYC-KROCK 92.3 FM
> PHIL-WYSP 94.1 FM
> DC-WJFK 106.1 FM
> Atlanta (?)
> San Jose (?)
> Los Angeles (?)

> On August first it will be his 43d b-day.

> From Rochester, he went to DC to Jacksonville, FL to DC to
> syndication with infinity broadcasting (same company that syndicates
> howard). More info on him can be found on alt.fan.greaseman.

Greg, yes I do recall that his on air persona was that of a
train-riding hobo, or something like that. His voice was very low and
gravelly and syrupy (but not really as frantic as the Wolfman can be),
and you just got the impression from listening to
him that he probably hadn't taken a bath in a year. I loved it.

I recall that his real name is Doug Hacht or Hatch or Tracht or
something like that.

Thanks again to all for the responses.

Dan Gulino

Received: 03-Aug-1993 10:00am

## 1139. Kid's Radio, has it been tried?

Newsgroup: rec.radio.broadcasting
Date: 1993-08-03 19:04:40 UTC
From: lspangle@nyx.cs.du.edu
Message-ID: <1993Aug3.190440.16143@gagme.chi.il.us>
Source record: 42727

Does anyone know of a successful station programming to a preteen or elementary school aged crowd. Seems it might work, at least during the non-schooling hours. But what to broadcast dayside when the 5-13 year old crowd are pounding the crayons and books.

It might sound like a wacky idea, but the advertiser base would seem to be there, and if the listener-to-advertising-dollar ratio's were good (as in enough to keep the station on the air) someone might be able to make a go of it.

Just wondering... well...there is one frequency which went dark recently...nah...just wondering.

Lance Spangler
lspangle@nyx.cs.du.edu
--
|-----Straight-----|-------IN REAL LIFE-------|-------Colorado-------|
| but not | lspangle@nyx.cs.du.edu | be ashamed for the |
| narrow minded | is | passage of Amend 2! |
|------------------|----Lance A. Spangler-----|----------------------|

[Bill Sez <was Moderator's Note:> Lance, this not only has been tried, but seems to be doing quite well. The main player in this arena is 'Radio AAHS' <pronounced 'OZ'> which originates on WWTC-AM in Minneapolis, and is sent out on the satellite to affiliates in LA, Phoenix, Somewhere in Texas and I think the Washington DC area. They are a great station, full of fun and imagination, in a radio-world of dull, predictable, bland formats. I wrote an article several months back on the subject. In addition to AAHS, I know of two stations doing a similar format, but locally programmed. These are WFUN-FM, near St Louis and KIDS in Springfield Mo. and there may be others. How well they do ratings-wise varies from location to location, but AAHS's flagship station is doing fairly well considering their niche' format. Frankly, I think that AAHS has one of the best formats in the industry today and they go farther than they have to to provide a format that is positive, educational, non-preachy, and most of all *FUN* not only for children, but for the kid in all of us :-). If you have FTP access, go to the archive site <deja-vu.aiss.uiuc.edu> and look in the INDEX file for the string "AAHS brings inagination back to radio". If you dont, write me and I'll dig it up for you. BTW, what frequency went dark? What were the calls, power, etc Send me mail. Bill]

## 1140. Lassiter revisited (& NPR question)

Newsgroup: rec.radio.broadcasting
Date: 1993-08-03 19:08:14 UTC
From: moscoso@ux1.cso.uiuc.edu
Message-ID: <1993Aug3.190814.16261@gagme.chi.il.us>
Source record: 42728

Hello,
I've been a moderate lurker here, and recall a post several
months back on the whereabouts of Bob Lassiter (formerly of WLS-chicago).
I'm afraid that, during all this time, I've missed some news about this
very entertaining show-host...
Also, is there anyone out there who taped some of his shows? A
few weeks back, I happened on snippets I must have recorded during some
of his broadcasts [some Gulf-war talk, the complaint-letter regarding
his /secret-code/ scheme, anti-skateboarding, etc..] and caught myself
laughing again. I'd love to know where I could find tapings of some
shows I can only remember faintly...

Also, as the subject states, I am curious about how NPR stations rate around
the country in listenership. One afternoon up in Chicago listening to 91.5FM
while parked, a woman came up to me and nearly went into hysterics because she
found someone who enjoyed listening to "Fresh Air". Was she overreacting,
or are few people tuning in?

--
-ivan moscoso@ux1
***DISCLAIMER: My views do not necessarily represent
those of the CCSO.

[Bill Sez: (was Mooderator's Note) Yeah, Lassiter. What a guy. I loved his
show, but I suffered from a disease called "It's-always-gonna-be-here-itis"
and did precious little taping. I have a piece of a classic bit where
Lassiter interviews (and totally aggrivates) Rush Limbaugh!. I would love to
hear tape from either his 'lawnhead' routine (absolutely a killer) and
his 'skateboard' routine. Could you get me a copy of that? I'd trade for
the Rush interview!!! Last I heard he is at WSUN in Tampa Fla. Bill]

# 1141. KKOB-AM 770 PICKS UP A NEW SYNDICATED TALK RADIO SHOW

Newsgroup: rec.radio.broadcasting
Date: 1993-08-03 19:08:37 UTC

Message-ID: <1993Aug3.190837.16283@gagme.chi.il.us>
Source record: 42729

KKOB radio has recently picked up the G. Gordon Liddy show.

Now, I have a few curiosity questions about this.

I know he is syndicated (the UNISTAR radio network I've found out).

I think the UNISTAR RN is distributed on DATS (C5/15?).

What I would like to know is the time of distribution. KKOB plays
him from 2pm MT until the end of his show -- I haven't listened to
a whole show so I don't know if his show is 2 or 3 hours long. Is
KKOB playing his show in tape delay?

Now, all I need is the Greaseman or Howard Stern and I'll be perfectly
happy. 8^)

Robert
roberts@triton.unm.edu
Albuquerque -- why can't we get the hot talk show hosts?!? ;(

## 1142. Listing of all U.S. AM and FM stations

Newsgroup: rec.radio.broadcasting
Date: 1993-08-03 19:09:03 UTC
From: bew4568@rigel.tamu.edu
Message-ID: <1993Aug3.190903.16315@gagme.chi.il.us>
Source record: 42730

I saw in the library a set of books that looked useful (and if you knew Texas A&M's library you'd know just how amazing this is). They were the listing of all television stations in the U.S., including maps showing the radius of transmission, operating hours and powers, and lots of useful stuff. I looked but could not find a similar set for radio. Is there one? What I'd especially like to find is a list of the transmitter antenna patterns, so I can see if I really am getting a rare find, or if I'm sitting in one of the transmission lobes.

Thanks for advice,

Bruce,
bew4568@zeus.tamu.edu

.. And John Higdon <john@zygot.ati.com> Responds...

I thought this balogna went out with the sixties. Can you imagine thousands of five-watt smeary, splattery signals all piling over one another with people yelling and screaming about their right to be on the air?

Don't you children have anything else to do? Pay the $20,000 and slink away. Gawd knows I've stood up for causes in my lifetime, but this is a horse that won't fly; a bird that won't run.

---

And I respond to John thusly...

John, for a long time I used to follow along the same lines of reasoning, but after reading more about this thing, i must admit a substantial change of heart. While I might not go so far as to proclaim 'a right to broadcast' (and that proclamation might be the downfall of the whole thing) I do agree that by imposing a total ban on such ultra low-power broadcasting, and the imposition of draconian fines against those who violate... the FCC is, indeed stifling what might be a viable thing. No, I dont suggest the willy-nilly proliferation of splattery, unregulated 'kits' overlaping and jamming one-another. Unfortunately, that is all that is available. That or multi-tens-of-thousands (or more) to 'attempt' to set up a licensed station under the current laws. An attempt that has no guarantee of success, despite the expenditures.

What I *would* support is a class of service that requires the taking and passing of tests and the use of 'type accepted' transmitters/antennas etc. These stations could be licensed on a non-interference basis with their higher-powered counterparts and would be subject to inspections, log-keeping and perhaps proofs of performance in order to keep their 'license'. Those going over-power or transmitting out-of-band would be sited and required to either shape-up or shut-down. In these cases, I would support the imposition of fines and confiscation for those who are licensed and still insist on going over-limit or out of band.

I would LOVE to see a provision in law permiting such stations to operate. I think the Free Radio Berkley case is important because it is bringing up the very real point that by keeping micro-radio illegal, the FCC is creating a 'forbidden fruit' which because of it's illegality is difficult to regulate

and gives spawn to the 'splattery' transmitter kits, as well as making criminals out of those who would otherwise not be criminals. No, I would not like to see the CB mentality on the broadcast bands. But, the current illegal status of micro-radio not only does not discourage such a mentality, but actually *encourages* it by disallowing any reasonable legal, regulated, alternative for those so-inclined.

Also, legal, technically regulated, micro-radio would 'weed out' a lot of the child-pirates that are now flocking to 'sandbox-radio' <as you have called it> and it would provide a very good way for budding broadcasters to learn, not only the legal requirements <logs, etc> of station operation, but would offer some valid experience as well. There could be clubs and classes set-up to teach the fundamentals of operating a broadcast station. The transmitters could be made with actual meters, just like their higher-powered cousins.

Realize, also, that with today's technology, it is relatively easy to manufacture a highly stable, harmonic-supressed clean transmitter in the 1 -5 watt range for a very low cost, and in a package no larger than a carton of cigarettes. Even if the entire operation (transmitter, antenna, license and basic courses in operation) were to cost as much as $500 - $1000, it would be a far cry from the 100k - 500k it now costs just to get a minimal station up and running *IF* you can find a frequency and *IF* you are even granted a license after you do all the work and spend a small kings ransom.

In this day of satellite-fed radio, it is harder and harder for up-and-coming broadcasters to cut their teeth. I believe that micro-radio, properly done, could be a boon to the industry rather than the scourge that, due to it's unregulated and pirate nature, it is becoming.

Where would we put these signals?

It is often pointed out, correctly so, that in most metropolitan areas, the bands are already so jammed with signals that one would be hard-pressed to find *a single* frequency, let alone enough for several of these stations to operate. Well, here's an idea.

In many cities, where UHF-TV channel 14 is *not* allocated, the frequencies have been re-claimed by land-mobile services in search of spectrum space. Well the same thing can hold true for micro-radio. In places where there is no channel 6 TV, micro radio could be authorized to use 87.9 or even 87.7 MHz. These frequencies are usually tunable on most FM radios and would be a great place to stick these 1 - 5 watt signals, once they are made legal and licensed. In places where there *is* a channel 6, then that service would, of course, have priority in their service area. No such micro-stations would be licensed in that area, on thoes frequencies. Stations operating anyway, and causing interference, would be subject to the same sanctions as the pirates are now subject to.

John, you grew up in radio's heyday. The medium was young, vibrant and it was much easier to get into the industry than it is today. We now have a record number of operating radio stations in this country.. and a record low in actual opportunities, due to the monumental attraction of centralized,

satellite programming <especially in smaller markets>. It is easy for someone who has been involved in virtually every facet of radio <as you have mentioned in past articles> to sit back and condemn the idea of micro-radio as childish.

You have had your breaks, and you have worked very hard to attain what you have attained. But today is a whole different game. There are fewer and fewer doors open to new talent. Perhaps micro-radio IS childish and stupid, but I dont think it has to be. By changing it from an unregulated, splattery, playground for technically inept children wanting to 'play DJ' -- to a licensed, technically regulated (as opposed to format regulated) training ground for radio's future, I believe that not only would it *not* be a bad thing, but would likely blossom into something very positive.

With the advent of duopoly, the airwaves are becoming more and more the property of large broadcast conglomerates who see fit to continually pump out their familiar drone of hot-hits, Mix-FM, Classic Rock, Morning Zoo's, 20-minute news wheels and right-wing talk shows. When the likes of Howeird Stern can rake in top-dog ratings by talking about his penis, something is wrong somewhere. What is wrong is that radio has gotten so predictable and stale that Stern is seen as 'different' and thus he gets listeners.

Micro-radio, while not being the total solution to the radio blues, might well be the shot-in-the-arm that many communities need, but cannot afford. But it cannot achieve much more than 'sandbox-radio' status as long as it is patently illegal and it's practitioners are relegated to shitty, splatterbox transmitters and the potential of fines and other legal complications.

So, don't be so quick to sell this micro-radio thing short as some silly and stupid annoyance. If the Free Radio Berkely (and others) are successful <and I hope they are> broadcast radio might be in for some very interesting programming. Programming geared to communities, rather than conglomerates.

Just my 8 kbytes worth.

Bill

Perhaps it's time to drag out this old .sig I used to use... :-).

## 1145. Right to broadcast

Newsgroup: rec.radio.broadcasting
Date: 1993-08-03 19:14:52 UTC
From: af660@freenet.carleton.ca
Message-ID: <1993Aug3.191452.16530@gagme.chi.il.us>
Source record: 42732

Although some of these pirate stations are fun to listen to, I don't really see a whole group of these stations coexisting with either the higher powered stations, or each other.

There probably won't be space on the FM band (in particular) for everyone (in a large city, for example) who thinks they might want to talk on the radio.

What if two or more of these "micro-broadcasters" interferes with each other? How will such conflicts be resolved?

# 1146. Re: Non-Commercial FM Radio

Newsgroup: rec.radio.broadcasting
Date: 1993-08-03 19:15:31 UTC

Message-ID: <1993Aug3.191531.16566@gagme.chi.il.us>
Source record: 42734

Some thoughts on micro-radio and noncommercialism:

(1) Last night, the local non-commercial TV station broadcast "commercials" (excuse me, sponsorship announcements, whatever) that were LOUDER than the main program by several dB. So this particular pestilence has now afflicted them too...

(2) Micro-radio sounds like the kind of thing Clinton and Gore could be persuaded to support...

(3) I'd like to associate the ideas of non-commercialism and INDEPENDENCE. We need more diversity in broadcasting; we do not necessarily need more outlets for ONE network (NPR or PBS) that calls itself non-commercial.

# 1147. Radio Ship II

Newsgroup: rec.radio.broadcasting
Date: 1993-08-03 19:16:14 UTC
From: Steve Coletti <bigsteve@dorsai.dorsai.org>
Message-ID: <1993Aug3.191614.16620@gagme.chi.il.us>
Source record: 42735

A few weeks ago we posted the "official" story of the Radio Ship currently under construction. All the information, as inconsistent as it sounded, came from Scott Becker, the owner of the ship. Even though I suspected he was building a smoke screen to cover up the true stories that were leaking out as "rumors", I published it anyway.

Of course, anyone who has read the Pirate Radio topic on the Genie Radio Round Table, or who has spoken to the management of WWCR, knows that I knew I was being used, but I had no proof that he was lying. I will now list Mr. Becker's story, as we aired it on the Spectrum program, and as countered by the proof we have since discovered that he was again fabricating disinformation.

Mr. Becker denied that the ship was in Boston in the first interview. The next week, however, I had him and Johnny Lighting on my Crossband program. During the second interview he admitted that the ship was in East Boston and that if you called him first, he would tell you where to come and see it. He said you could not get on board due to insurance restrictions.

In the first interview, he would not disclose the name of the ship, the radio station or the name of his company. During the second, John disclosed the name of the station as Voyager Broadcasting International a division of Voyager Broadcasting Services. The name of the company and the actual location were broadcast as a news item my me on that weekend's Spectrum.

With the mention of East Boston, my Spectrum teammate, WBZ's Scott Fybush's ears went up. After a few telephone calls between us, where I gave him Alan Weiners number along with all the other information and speculation I had, he set out on finding the ship. He found it in one of the worst sections of the harbor and got permission to go on board, something Becker said you could not get.

Scott went onboard last week and got an interview with the ship's Captain and First Officer. His report was aired on Spectrum this past Saturday night. Scott Becker specifically denied that name was the "FURY" in his first interview with me. Scott Fybush's first discovery was that the name was the "FURY V". In the course of the interview, Fybush found out the destination of the ship would be the Caribbean, exactly what the rumors said. Becker said it would be the Mediterranean.

One thing that Becker had said in the first interview was that this deal with the Caribbean country was, "a done deal, signed sealed and delivered". In the second interview he alluded to the fact that he didn't want the name of the country to get out because pressure from the US government might get

them to back out. But if it was a done deal, why was he leaving the country that Friday? What Scott Fybush found out was that Becker was trying to get the license finalized by the country, St. Kitts & Nevis, the same country Becker had denied in the first interview was the country of registry.

Ok everybody, believe everything you hear about the ship if it DOESN'T come from a Scott Becker press release or interview. In the course of the investigation we were doing we contacted Bill Dugan, the pirate broadcaster from Phoenix who is currently fighting the FCC for the creation of a class of community radio broadcast license. Dugan had been contacted by Becker, he wanted him to work for him. If Dugan had been contacted, how many others were? And how much true info came from Becker as selling points to those people?

How much interest does Brother R.G. Stair in the venture? He's the cash source for Scott Becker, but does that mean he knows all? Does he know what Scott really thinks about him? An attitude he spilled out in my Crossband interview. Well, look for IT to hit the fan. I found out that WWCR was recording the Crossband interview, they told the good Brother about it. Bro. Stair asked them to send him a copy.

==========

Spectrum is heard on WWCR shortwave, 7435 Khz., on Saturday nights at 11:35PM eastern time/0335 UTC, Sunday. It is also heard simultaneously on the Let's Talk Radio Network, see signature below.

# 1148. WRMR 1620 New York

Newsgroup: rec.radio.broadcasting
Date: 1993-08-11 00:44:06 UTC
From: markson@rapnet.sanders.lockheed.com
Message-ID: <CBKKpJ.Mt2@news.cso.uiuc.edu>
Source record: 42736

I logged a station on 1620 (extended AM band) which surprized the heck
out of me. The signal was quite strong and was playing classic rock
music. The quality of signal was good but sounded tinny. A guy
IDed as "The Big One 1620 WRMR New York". He said it served the Sullivian
County area and was playing non-commercial music. Anyone else hear it? I
logged it at 04:10-04:30 UTC Wednesday 8/4 (and it was still playing).
It sounded like something you would hear on 7415, but the signal was
propogating similar to WQEW 1560 New York, so it could not
have been local to me (Southern New Hampshire).

# 1149. Re: Anyone on 1620-1705 yet?

>If it's not, I'd be pleased.
>73, doug
>
The radio in your new truck may not have been manufactured after the legal
cutoff date for including the new frequencies. Maybe they had a stock of older
AM radios to work from when building the new trucks? Just a thought.

Incidentally, I picked up (here in NJ) a broadcast around 10pm on 8/2 or 8/3
on 1620kHz. It faded in and out, but it sounded like they were id'ing
themselves as "1620 WRMR" or WRNR in the Catskills in New York State.
Unfortunately, when I looked up those call letters, one was assigned to an
Ohio station, and the other to West Virginia, so I must've gotten something
wrong there. A quick search of NY call letters didn't turn up anything that
looked right, either.

/* ---------- "Times article about AMARC" ---------- */

No, not the New York Times... But the current issue of
Monitoring Times (Vol. 12, No. 8, August 1993) has a
feature article entitled "AMARC: Social Change and
Community Radio".

The article is by Peter Gellert and focuses on the
Latin American community radio movement. It is based
on interviews conducted at AMARC's fth World
Conference of Community Radio Broadcasters, which took
place in Mexico in August, 1992.

Monitoring times is a magazine that mainly deals with
short wave radio. It is available at radio specialty
stores and better magazine shops everywhere.

It seems to me that when I was living near Hartford, Conn., the New York Yankees could be heard on WPOP, 1410 AM but that was several years ago.

If you call the Yankees (probably at Yankee Stadium in the Bronx) and ask for the press office, they can probably tell you. If that's not who to ask for, someone there will know who to ask for. They're business people and will want to assist their fans as much as possible.

Radio Brod answered to my reception report from the Paris address,
v/s Enisa Alicehic.

The letter mentioned that the correct address in Italy is:
Via Bozzi 45C, c/o Gruppo Regionale Verdi, I-70123 BARI, Italia.

According to recent news the radio ship is now silent and in harbour in Bari.
Yugoslavia complained about the station to ITU. However, the director
promised that the station will be on the air "soon", according to SCDX.
Frequencies are 720 kHz 50 kW and 97,8 MHz. Location is somewhere in the
Adriatic Sea.

>up testifying in court?
>

Since ratings don't count anyone under 12, and since radio people don't care that much about people under 17, how can the ratings be an accurate tool to judge who listens to Stern?

No harm done? Have you read the transcripts of the shows for which he was fined (they ran in one of the broadcast/legal newsletters just after the Supreme Court upheld the fines)? This is not even close to funny, nor is it something I think any child of mine should be listening to. Perhaps if parents spent a little more time paying attention to their kids, the kids would not be as influenced by Stern, then his ratings would drop, he would go away, and I, for one, would be ecstatic.

I recognize, though, that tthis is only MY OPINION, and that Stern is entitled to the same right to free speech as myself (as are his listeners). But those rights extend to adults, not children .. and even the right to free speech has a price (or, as the old quote goes, you can't yell "Fire"in a crowded movie house).

Point is, Stern IS reaching children, and despite my traditional, liberal media attitude on most things, I'd rather have kids hearing Rush Limbaugh than Howard Stern ...

I am from the Chicago area and lived here all my life. I am not sure if loyality is the reason why some syndicated programs do poorly in the ratings in any radio market. Most radio markets these days are flooded with synidcated radio programs, talk and music, and there seems to be a lack of creativity in programming that gives a radio station a unique personality. I think this why I listen to more tapes& CDs these days. One positive sign I've seen of people getting tired of radio stations over syndicating is WHAS 840 AM. WHAS is out of Louisville Ky and can be heard over most of the eastern US. They have an all night oldies program, local DJ, and the station was going to replace it with RERUNS of the Rush Limbaugh show. A flood of mail came to the station from around the country and they cancelled their programming change. As far as AM sound quality goes there can be a lot of improvement on both the transmitter and rxcvr

designs. A new set of AM broadcast standards called AMAX is an attempt to make techincal improvements to the sound of AM. Where I live some stations sound much better in AM stereo than FM stereo. If you really want to get picky about sound quality and AM vs. FM than I'll choose my CD player at baseband any day of week! I've done technical research on AM Stereo and would be willing to discuss this on the side.

## 1155. EBS & unattended operation

Newsgroup: rec.radio.broadcasting
Date: 1993-08-11 00:45:08 UTC
From: kwgs_fc@vax1.utulsa.edu
Message-ID: <CBKKr8.n02@news.cso.uiuc.edu>
Source record: 42743

We're on the verge of ordering equipment that will allow us to run unattended overnight. I'm satisfied that our choices will meet legal requirements for transmitter operation and ID insertion, but we haven't yet figured out how to legally handle EBS.

[1] Where is a good source of compact, inexpensive, and portable EBS receivers?

[2] Would anyone be willing to share creative solutions for unattended operation that have passed inspection or received Commission approval?

With the FCC's consideration of a new EBS system, this isn't the best time to invest in hardware solutions that may soon become obsolete. We do, however, want to meet the letter and spirit of the law, both now and in the future.

# 1156. CBS And Cox Swap KLRX and WYNF

Newsgroup: rec.radio.broadcasting
Date: 1993-08-11 00:45:24 UTC
From: "Chip (C.D.) Kelley" <chipk@bnr.ca>
Message-ID: <CBKKro.n1A@news.cso.uiuc.edu>
Source record: 42744

THE DALLAS MORNING NEWS reported today that CBS and Cox will swap stations soft AC KLRX-97.9 "Lite 97.9" Dallas (Cox to CBS) and AOR WYNF-94.9 Tampa (CBS to Cox). It will result in a duopoly for each company: CBS will own KLRX and AOR KTXQ-102.1 "Q102" Fort Worth, and Cox will own WYNF and talk WSUN-620/soft AC WWRM-107.3 St Petersburg.

The DMN reports that 26 Cox employees will be put out of work by Q102 and Lite 97.9 merging, but CBS may hire some of them back. Until the FCC approves the swap, CBS and Cox will take over their new properties on August 16 under a LMA.

This will be Dallas/Fort Worth's second duopoly. Alliance now owns hit country KYNG-105.3 "Young Country" Dallas and classic/easy country KSNN-94.9 "Sunny 95FM" Arlington.

Dear Daniel and Greg,

The Greaseman's real name is Doug Tracht.

Yes, he is the same DJ that had been on WPOP. I used to live in Wethersfield, Conn., just south of Hartford before moving to Washington, D.C. Actually, there are other DJ's in Washington now who at one point in their careers had been in Hartford.

Had to throw my two cents worth in.

One more to add to the mix...before (apparently) he was in Rochester, he was the nighttime jock on top-40 WENE, Endicott (a suburb of Binghamton), NY (now WMRV-AM). In the early 70's I was an undergraduate at the State University of New York at Binghamton and worked on the college station, WHRW-FM. Those of us who appreciated top-40 radio knew that this young "Dougie T on the Big E" was destined for larger markets: he had the voice and the patter. As others have indicated, he's now distributed nationally. Small footnote...a few of us thought he was such a hoot that once or twice we did a takeoff on the Greaseman on the college station. In fact, I was "the Greasyman." Never got a note from Tracht, so I don't think he heard us. Don't have any airchecks, and this should not be considered a great moment in broadcasting history....but it's a little connection to fame, I suppose.

# 1161. "Urban" format question

Newsgroup: rec.radio.broadcasting
Date: 1993-08-11 00:46:05 UTC
From: J.Theodore.Schuerzinger@Dartmouth.EDU
Message-ID: <CBKKst.11@news.cso.uiuc.edu>
Source record: 42749

I have a few questions about the "urban" format. First, when did Arbitron start using the label "urban", and what was the name of the format before it was called "urban"? I know that there are various names for it in the industry, and have been over the years: R&B, soul, black, urban, etc., but the problem is that there's not really one good name for the format. Second, why urban? Does that make other types of music "rural"? (Only half a smiley here -- this is a somewhat serious question!) Music from Appalachia might well be 'rural' music, but I certainly wouldn't call the grunge rock from the Seattle bands 'rural'. On the other hand, what about the 'life music' of a group like Arrested Development -- I don't think of anything urban when I hear that.

If you were a radio executive and you had to name the format, what would you call it? And do you think there are other formats that have poor names? One that comes to my mind is 'beautiful' music. Does that make jazz music ugly? :-)

# 1162. Radio in New Mexico

Newsgroup: rec.radio.broadcasting
Date: 1993-08-11 18:07:21 UTC
From: David Fritchman <david@baervan.nmt.edu>
Message-ID: <CBLx09.IrC@news.cso.uiuc.edu>
Source record: 42750

Here in central New Mexico, the closet AM radio station is about 75 miles away. The FM station carries country/western and other syndicated material popular in this region, plus the usual "on-site" DJs when a local event (festival, etc.) warrents the expense. AM is pretty worthless in this state, unless the listener happens to enjoy country/western, talk shows, minor league baseball and college sports, Mexican oriented Hispanic material, or "teenny bopper" material. FM is not much better outside of the major cities. FM is the major carrier for mainstream and oldies rock. The major FM (and TV) stations are carried to the rural areas by "repeaters". (I personally call them "slave" stations, since they are remotely operated and carry several different commercial stations.) Albuquerque and Santa Fe have several minor "specialty" stations that carry alternative music, jazz, etc., but they aren't rebroadcast here, and don't have the power to reach 75 miles. The AM station in town folded long before I moved here, perhaps because the low population (~15K souls in this county) could not support two stations. At night, especially during the winter, I can pick up "border blasters" (high powered higher frequency AM stations, just on the Mexican side of the border), plus KOMA (AM) out of Oklahoma city (perhaps 500 miles away).

The PBS station in Albuquerque (KUNM) has gone through quite of management/directorship/volunteer strife in the past several years. The fuss is mostly over program content and how much of it would be done and decided on locally, and how much of the more expensive NPR syndicated to use. (The Albuquerque station does not carry "Car Talk", for example, even though the PBS radio station in southern N. M. carries the program despite its high syndication cost, because it's popular.) The Albuquereque PBS radio station seems to be in a perpetual financial crisis.

I had better close before I ramble on some more. Are these the kind of issues that would be appropriate for this newsgroup?

David

WICS is the NBC-TV station in Springfield, Illinois. Springfield, which is Illinois' capital, is where Abraham Lincoln was a lawyer, a state legislator, and a resident when elected president. He is also buried in Springfield. Much of central Illinois calls itself "Lincolnland" because there are many Lincoln connections around the region.

>to the northeast than to the rest of our area for the past 5 years, and
>we've never had a single problem", or perhaps "We installed a directional
>antenna and it has caused problem after problem. We eventually went back
>to an omni-directional pattern because too many of our listeners complained
>of poor reception while driving in their cars on Rte XX."

You are unlikely to hear any of the above. Directional antennas are not
generally a metter of choice, but one of necessity owing to the need to
put a certain signal level over a metro service area, or to protect a
station short-spaced on the same or an adjacent frequency.

And AM is a completely different game than FM. With an AM array, you
must construct multiple towers (since the tower is the radiating
element), and phase the signal using a combination of the effect of
multiple tower placement and electronically phasing the signal going to
each tower by means of an inductive/capacitive circuit ... heavy stuff.

A directional FM generally involves a radial element that has been
physically designed to throw the signal in a certain direction ... much simpler.

You can't generally play around with these things; they are generally
conditions of licensure. So deciding to go back to omnidirectional is
not an option ... it's not the station's decision to make.

Just wanted to add, yes radio AAHS has an affiliate in Washington.
The calls are, I think, WKTL, and it's owned by two local lawyers.
They have also bought a station in Northern Virginia and another in
Baltimore that simulcast their flagship in Washington.

## 1170. Kid's Radio, has it been tried?

Newsgroup: rec.radio.broadcasting
Date: 1993-08-11 18:14:57 UTC
From: Ben.Harvey@lambada.oit.unc.edu
Message-ID: <CBLxCx.JBK@news.cso.uiuc.edu>
Source record: 42759

I know there are a number of kids radio stations across the country. "Radio Ahhs," the most prominent kids radio station, is actually a network. It's broadcast via satellite to a number of different stations over the United States. It's quite an interesting concept, but I have no further information.

I, currently, am trying to work out a deal with "Radio Ahhs," because I produce a show entirely run and deejay'ed by teens. It's titled "Teen Voice USA," and is run by kids from all over the country. We communicate via Online services such as Prodigy, GEnie, America Online, FidoNet, and the Internet.

We discuss ideas for shows online, then each and every disc jockey makes their segments for the show, and sends them to me. I, then, compile the segments and make them into a monthly "zoo" show. It's a lot of fun, and a great show, considering it finally lets kids control the airwaves.

I'm trying to create a newsgroup, Alt.radio.djs (or alt.radio.deejays) where Teen Voice USA can reign, so if anyone is interested, write to me or check out this news group!

I'd be interested in hearing about other Kid/Teen radio shows/stations!

I was mulling over a few ways in which to reconcile my strong belief in the concept of having at least some small sliver of the public airwaves available to those who wish to engage in "micro-broadcasting" with John's very real concerns about the CB-ization of the FM band, when, lo and behold, a few presses of the 'n' key brought me to William Pfeifer's well reasoned and insightful thoughts on the matter. I couldn't have said it better. No, I couldn't have said it as well.

It might be interesting to toss around some other thoughts on how such operations could peacefully co-exist with broadcasting as we know and love/hate it. A low powered non-com band in the expanded AM band? ???

# 1174. Right to broadcast, part 2

Newsgroup: rec.radio.broadcasting
Date: 1993-08-11 18:15:30 UTC
From: af660@freenet.carleton.ca
Message-ID: <CBLxDv.JG2@news.cso.uiuc.edu>
Source record: 42762

I read a few of the articles in response to the article on
"micro radio", "a Constitutional right to broadcast", etc., as
well as a few others in this group. There are basically two
concerns:
1. Technical
First of all, there is a lack of space on the AM and FM bands,
especially in or near major cities. Someone did suggest using
frequencies between 87-88 mHZ (in cities where there is no
TV Channel 6) for low power broadcasting purposes; however, that
still would not guarantee that everyone who wanted a station
would be able to find a frequency.

a channel (particularly on AM, but FM suffers from this problem
to a more limited extent as well). The deregulation of the 1980's
has brought on too many stations in many cases, which have only
a limited useable coverage area, and nothing but interference
in large areas. At one time, AM stations across the country
could be easily heard for hundreds, if not thousands of miles.
Nowadays, much of the nighttime AM band has nothing but
3 or 4 stations trying to be heard at once.

And now, we should repeat this same mistake with "micro radio"?

Also, although stable but inexpensive transmiters do exist, and
licensing procedures (similar to ham radio) could be implemented,
there will always be those who will insist on broadcasting without
a license, for whatever reason. . .

2. Program content.
This is a controversial subject, as we may be dealing with First
Amendment issues here.

Proponents of these "micro radio" stations decry commercial radio,
NPR and even Pacifica for lack of "diversity". While one's interest
in any program is more of a matter of taste and opinion than anything
else, I am not convinced that the programming a "micro-radio" station
might produce may be any "better" than that of any other kind of
radio station.

Sure, they might play some unknown bands, or do some radical programming
that no "real" radio station would go near. Someone else on here
mentioned Howard Stern and the ribald jokes that make up a large part
of his program. Now, if we (as radio programmers, listeners, etc.) are
"supposed" to feel guilty beacuse Stern gets high ratings doing off-color
jokes, why should we feel more enlightened when some self-righteous
"micro-radio" talks about the same kinds of things, perhaps cloaking

it in politics to offer an air of legitimacy?

"Micro radio" may have a place on the American broadcasting scene.
An implementation that would be beneficial to all radio listeners
(not just those who happen to be tuned in to that particular station)
remains to be seen. . ..

# 1175. Re: Right to communicate panel in NYC

Newsgroup: rec.radio.broadcasting

From: resystom@web.apc.org
Message-ID: <CBLxEB.JGz@news.cso.uiuc.edu>
Source record: 42763

I very much appreciated Bill's excellent intervention on the
micro radio movement. It was a very insightful contribution to
a debate that is becoming increasingly important.

One small point: Bill writes:

> While I might not go so far as to proclaim 'a right to
> broadcast' (and that proclamation might be the downfall of the
> whole thing) I do agree that by imposing a total ban on such
> ultra low-power broadcasting, and the imposition of draconian
> fines against those who violate... the FCC is, indeed stifling
> what might be a viable thing.

I have before me a 120 page draft of a legal brief prepared by
the National Lawyers Guild Committee on Democratic
Communication for a case " Mbanna Kantako, Micro Radio
Practitioners, the Communities if the United States v the
Federal Communications Commission".

One of the things that is clear in the brief is that we are
not talking about a "right to broadcast", but a "right to
communicate".

The difference between the two is that the right to
broadcast would rest with the broadcaster, while the right to
communicate is shared by the broadcasters *and* the listeners
(hence the plaintiffs in the case against the FCC include both
the micro radio practitioners and the communities).

The National Lawyers Guild brief argues that by arbitrarily
disallowing micro radio, even when there are available
frequencies and the signals do not interfere with other
linenced operations, the FCC is not only interfering with the
First Amendment Rights of the broadcasters, but of the
listening communities. It is a compelling legal argument with
lots of legal precedent to support it.

Anyway, thanks for sharing your insights, Bill.

af660@freenet.carleton.ca (Charles Hobbs) writes:

> What if two or more of these "micro-broadcasters" interferes with
> each other? How will such conflicts be resolved?

I'd say let them duke it out among themselves. Take some of the rules for broadcasting in Alaska: stations must not interfere with, and accept interference from, government installations and uses (paraphrased). If we get a piece of the band reserved for microbroadcasting (say... 88.1 to 89.1 perhaps?) or even just a rule of "no interfering with a major station; you cannot be closer than .2 to an existing, licensed station", then everyone that populates the band with microbroadcasting would have to fend for themselves.

If you have an effective broadcast radius of a mile or two, then 88.1 to 89.1 would be PLENTY of room (for 6 stations), even in a relatively urban area full of relatively OK to do people (like Clear Lake City). The whole band would be even better.

On a recent trip to Kansas City, I was fortunate enough to watch #1 (above) at a hotel room in Litchfield,IL. I don't remember the exact city of license, but I believe WICS TV 20 to be located in either Decatur, IL or Springfield, IL.

As far as #6 goes, it seems that the station is part of the Z Rock heavy metal radio network, of which Cleveland, OH once had a station. I was a loyal listener of Z Rock when it was in Cleveland, and can tell you that it is based in Dallas. This may or may not be the city of locale for your station, but it might be a starting point for finding it.

Good to find someone else with the hobby of collecting radio stickers! Is there anyone else out there? Anyway, hope I was of help.

# 1182. Herald Broadcasting

Newsgroup: rec.radio.broadcasting
Date: 1993-08-12 01:29:03 UTC
From: damian@wshb.csms.com
Message-ID: <CBMHGF.6sM@news.cso.uiuc.edu>
Source record: 42770

AUGUST 9, 1993

The Christian Science Church today announced a consolidation of its international news and religious radio broadcasting operations.

"The changes in our shortwave operations are part of a Church wide review of all of our activities in an effort to improve their effectiveness," said Herald Broadcasting President Al Carnesciali.

The Church's Herald Broadcasting arm said it would centralize US shortwave operations at station WSHB, located in Cypress Creek, South Carolina. The Church announced plans to acquire an additional transmitter and antenna for WSHB so that it can broadcast to Africa. The Church's news and religious programs draw a strong response from listeners in many African nations.

Herald Broadcasting announced plans to sell WCSN, its station in Scott's Corners, Maine. The station was completed in 1987 and broadcasts to Europe and Africa. WCSN will continue to broadcast to Africa six hours a day until the new transmitter and antenna are installed in South Carolina. The South Carolina station is already capable of broadcasting to Europe.

The Church will continue to broadcast to Asia, Australia and New Zealand from KHBI, its shortwave station located on Saipan in the Mariana Islands.

"Our station in South Carolina was designed with future expansion in mind," Carnesciali explained. "By consolidating all of our US shortwave operations in one location, we are able to serve our international listeners more efficiently. We expect that a new owner can be found for WCSN in the near future and that layoffs at the station thus can be avoided.

"We have designed a new schedule which ensures that we are on the air at peak listening times in the areas to which we broadcast," Carnesciali said. An estimated 9 million listeners currently listen to the shortwave stations. Our news and religious programs provide diversity which is especially important to listeners who live in countries where informmation is subject to government influence or control"

The shortwave stations have been broadcasting to target areas in program blocks, or slews, which are two hours long. The new schedule is based on one hour program blocks. On Saturdays, the Church will continue to broadcast 48-minute versions of The Christian Science Sentinel in English and The Herald of Christian Science in French, German, Portuguese, Spanish, Czech, and Russian. The Russian programs are now produced monthly.

"Active steps are being taken to begin producing a weekly broadcast in Russian," said Richard C. Bergenheim, Editor-in-Chief of The Christian Science Publishing

Society.

On Sundays, the shortwave stations will continue to broadcast the Sunday Service of The Mother Church, The First Church of Christ, Scientist, in Boston, to English speaking countries. Listeners in non-English speaking countries will continue to receive the Bible Lesson in their language. They will also hear a new, half-hour version of the Herald religious broadcasts, Bergenheim said.

The international news broadcasts heard on the Church's shortwave stations Monday through Friday also are being reformatted as a result of the changes in station operating hours.

"We will offer international listeners a new, hour-long broadcast which combines the strongest elements of our broadcasts on American Public Radiowith features of special interest to international listeners," Monitor Broadcasting Editor David Cook said. The features will include a listener letter segment, the daily religious article from The Christian Science Monitor, and special pieces focusing on international news. Monitor Radio's hourly headline service will continue to be heard both on APR stations and on shortwave.

The Church said it will reduce the number of hours its shortwave stations are on the air, beginning September 28. The number of hours of broadcasting will vary from station to station. During those hours when its stations are not transmitting Publishing Society programs, the Church will offer broadcasters an opportunity to lease time on its stations if they comply with Monitor standards.

The Changes annouced today will not result in any layoffs at Herald Broadcasting's stations in South Carolina or Saipan or on the radio broadcasting staff of The Christian Science Publishing Society. CSPS Produces the programs heard on Herald Broadcasting stations.

Expenditures for all radio broadcasting totaled $16.6 million in the fiscal year ending April 30, 1993. This included editorial expenses of 8.5 million, station operating expenses of $7.4 million, and captial cost of $700,000.

Church Managing Treasurer Donald Bowersock said that after the Maine station is sold and US shortwave operations are consolidated in South Carolina, annual operating savings will total $1.6 million. The cost of adding a new transmitter and antenna for WSHB will be paid out of the proceeds of the sale of WCSN.

## 1183. Dr. Demento/ Los Angeles

Newsgroup: rec.radio.broadcasting
Date: 1993-08-12 01:29:19 UTC
From: jmora@netcom.com
Message-ID: <CBMHGv.6tJ@news.cso.uiuc.edu>
Source record: 42771

well, hope i'm doing this right, as it's my first 'real' Usenet post (i.e. not just following a thread). i'm glad i found this group as radio has been a passion of mine for a while. i've dabbled in commercial radio in a previous life... but enough about me.

Today's _Los Angeles Times_ reports that Dr. Demento (a/k/a Barret E. Hansen) has been dropped from KLSX-FM/ 97.1, the classic rocker (and Stern affilate). Apparently they've made a business decision to not renew any syndicated shows. Demento's distributor is apparently talking with another "youth-oriented" LA station, which was not named. My guess would be KROQ-FM/ Pasadena 106.7, the modern rocker... i just couldn't see Demento on one of the CHR's here, though i suppose some of his almost 200 affiliates must be that.

question: i've heard him here on KLSX, where he had been on Sunday nights 8-10 pm Pacific. it sounds like he does the show live from KLSX - the breaks are very smooth and he often has local content just where you'd expect it for a local station as opposed to only before and after the stop sets. anyone have an idea how he works it? does he record the show live here then edit it for syndication? or does he do the same show here, just live?

# 1184. Directional antennas

Newsgroup: rec.radio.broadcasting
Date: 1993-08-12 01:29:25 UTC
From: Andy Jacobson <afj@DRMEMORY.NUC.UCLA.EDU>
Message-ID: <CBMHH1.6uF@news.cso.uiuc.edu>
Source record: 42772

Howdy,
My experience w/DA's is from a while ago. I used to be with
WMXM Lake Forest Il. At one time 10w, the station went to
300w (in anticipation of the 100watt minimum protected
contours the FCC imposed around 1980 or so.)
We got a horizontal only DA from Cetec Jampro (one radiating,
one parasitic element), and put it up on the roof of College
Hall (the coupola). The pattern gave us 300w true north,
10w (the old power) south, to protect WMWA Glenview Il.
which at the time was on the same frequency, 88.9MHz. The
pattern was cardioid (heart shaped) and gave us about 250w
to the east and west, with a sharp null only south.
Because we were going from 10 to 300, we couldn't say we lost
anything really that we previously had, but there were clearly
some places we didn't do so well that we should have.
Because we went to a DA to protect (at that time they were
protected) a 10 watter in order to get our CP approved, we were
required to get some very very expensive and time consuming
surveying work done to verify that the antenna was pointed exactly
north. In addition we had to have extensive field strength tests
done to document our contours at some important points between
the two stations. Quite a lot of bother really, and the pattern
wasn't so hot. Now, I can say that antenna design has gotten much
much better since that time, and a DA now can be routinely tested
at the factory (out on the range) to determine exactly what pattern
you will have. This is routine. For a big chunk of change, you can
get them to put the thing on a mock-up of your tower and hammer
some metal on it to get it to be the pattern you specify, so
you get exactly what you want. This is expensive and not recommended
if your tower is a short stick on top of a building, as the
building will do many things to your signal.
(Note this service is not limited to DA's, it can be done for
an omni pattern too.)

Other experiences I've had with DA's are quite negative indeed.
They involve stations not using them. Since they are
expensive, and decrease your contours, I've seen two stations
simply lie about using them. One of these stations simply changed
their application to an omni pattern after recieving a waiver
from the station I was at to accept a small amount of interference
from them with the DA. The FCC simply let them apply our waiver
to their omni pattern, (This was on a second adjacent, short spaced
station). We didn't challenge them at the time as we didn't know
they changed the CP. (Thanks to the asshole who was our paid

consultant.)
The other situation was a station that got approval to go to
250 watts, with 10 watts pointing towards us. (Each of these
are different stations by the way.) They went with 100
watts omni, and pled poverty to the FCC when we complained.
They were allowed to keep it, at least temporarily, as we had to go
about proving that their contours interfered with ours.
(They just touched our grade B, but we lost half of Chicago in the
process). I'm not sure where the appeal process is as I haven't
been there for a while.

This business of getting the go ahead with a DA, and quietly
switching mid-CP to an omni is a fairly common practice
being promoted by a certain unscrupulous consultant who does a lot
of business with non-comms. The reason it works so well, is that
all your public notices and major change applications go in with
the DA, then you simply ammend the CP once approved. As long as
your contours no more than touch (maybe even more than touch
in some cases) on your terrain maps, the FCC appears to let it
slide.

My suggestion to all is to go as high power as you can
ASAP, before someone else puts up a stick claiming to leave you
alone, and winds up taking over your extended listening area,
and causing major interference within your contours.

That's my experiences on the subject. Good luck with the CP
if you decide to go for it.
-A.J.

Subject: Sports play by play position wanted

I am posting this for a friend of mine who is visiting from out west.
He is currently about to start his eighth season of doing the play-by-play of
NCAA Division I-AA football and basketball.
He enjoys what he is doing tremendously, but is always keeping his
ear to the ground to explore opportunities to move up in the sports play-by-
play field.
Naturally, he would like to graduate to doing the play-by-play of Division
I-A sports. Also, he has been diligently working on his baseball play-by-play
skills, and would relish the opportunity to do play-by-play for a minor league
baseball team.
If anybody would know a position or be able to offer some insight as
to determining other available opportunites, I would appreciate an e-mail
message, and will forward information accordingly.
Thank you
Dr Robin Singla

# 1187. NPR's Soundprint "From Here to Infinity" howler

Newsgroup: rec.radio.broadcasting
Date: 1993-08-12 01:29:53 UTC
From: dmr@andromeda.rutgers.edu
Message-ID: <CBMHHt.6xw@news.cso.uiuc.edu>
Source record: 42775

Last night I was listening to the National Public Radio weekly half-hour program _Soundprint_ on WNYC (820 AM), New York City's public radio station. The program was called "From Here to Infinity" and featured a long interview with a Michael Gillen (I may have the spelling wrong) who was presented as teaching math and science at Harvard and as being a science correspondent for ABC. If this is the case and if what he said on the air was representative of what he says elsewhere, math teaching at Harvard and news coverage through ABC for the American public are in serious trouble indeed. More details below.

While I was listening to the program, I was playing with my fifteen-month old daughter, so I didn't get a chance to write down the address of Soundprint when they broadcast it at the end of the program. They gave both an ordinary mail address, in Baltimore, MD, and an Internet e-mail address that sounded like it was at Johns Hopkins University. (They also gave a phone number, but I'm not going to bother calling them.) Does anyone know either of these? I'd love to write to them to set them straight.

For those who are interested, Mr. Gillen was describing Cantor's theory of transfinite numbers. He claimed that Cantor showed that the number of pairs of integers was greater than the number of integers (first mistake), and then went on to give, as a finite analogy, the idea of taking pairs from the set {1, 2, 3}. He gave a few examples of pairs ({1, 2}, {2, 3}, etc.) and then said there were 2^3, or 8, such pairs. Clearly he was thinking of the number of subsets, but he didn't say that, and any bright 10-year old could see that he was wrong by enumerating pairs (ordered or unordered, with repetition allowed or not, you're not going to get 8 pairs). I can imagine what lay listeners think of Cantor, and (even worse) what their resulting opinions of mathematicians in general must be, after hearing this sort of nonsense.

I've crossposted this to sci.math, rec.radio.broadcasting, and rec.radio.noncomm, in the hopes that some of the rec.radio.* readers might be able to help with the address. Readers of rec.radio.* who want to follow any further discussion of this are hereby advised, however, that I've directed followups to sci.math only, since the main concern here is with the math.

Source record: 42779

I 've lived in Chicago area all my life and I am well aquainted with Chicago radio. I really don't think that "local loyality" as far as radio programming goes is unique to Chicago. Over the past several years radio markets across the country are being flooded with syndicated programming, both music and talk shows. I am glad that I am not a radio personality ISO employment because so many stations have dumped local personalities for syndicated programs.

I think listeners are looking for new and creative radio personalities, and program managers. A couple of weeks ago, WHAS 840 AM (a 50,000 watt clear station out of Louisville was going to replace a local DJ's rock n' roll oldies show with RERUNS of the previous days Rush Limbaugh show. The station was flooded with unfavorable mail from across the country on this decision so the station abandoned their programming change.

As far as the future of AM there is definite plans to improve the technical aspects of the broadcast quality. AM broadcast technology is still way behind the times compared to its FM counterpart. A new spec called AMAX will use a 75 microsecond pre/de-emphasis process similar to FM stereo transmissions. I have done considerable technical research on AM stereo and would be willing to talk in greater detail about this topic. Most people laugh when you mention listening to music on AM these days, however I laugh now when I hear talk radio stations on FM. It seems like the once sharp division between radio programs on AM and FM stations is becoming more obscured. Where I live some of the AM stereo stations have better sound quality than FM stereo. This is especially true in the car when the FM stereo blend takes over and degrades the high audio frequencies. Bill where did you hear about digital AM stations?

Also, Although I am not a real sports fan I found you're remark about the Chicago sports teams sort of misleading. The Chicago Bulls have won 3 straight NBA championships in a row! A feat without no equal.

Rob c12019@email.mot.com

[Bill Sez: Thanks for the post, but I want to clear something up. I never meant to suggest that Chicago sports teams are all losers. What I said was that Chicagoans will support losing teams like no other city I know of. The Cubs are, arguably, one of the consistantly worst teams in America, yet Wrigley field is always full! Such cannot be said for many other cities. While Chicago will continue to support the likes of the Cubs, they go *WILD* for the likes of the Bulls! I know, I was in the middle of the pandamonium when they clinched the series. As for AMAX, it is already in wide use on AM. It does help, and with a wide-band receiver, and a transmitting antenna with low SWR across both sidebandes, it does sound decent. Bill]

>greater gain in one direction than another, allowing a station to shape
>its contours so as to not interfere with other specific stations.
>
>Our engineering studies have been done, but I've heard negative things
>about these kinds of systems. Specifically that "dead zones" can be
>created in the local area when the antenna's interference pattern
>(necessary to create the directionality) generates a null.
>
>-Ted Young
>Chief Technician, WMBR Radio 88.1 FM, "...community radio at MIT"

I'm not an engineer, but I (sometimes) play one on radio....
_Any_ multi-bay FM antenna, directional or "nondirectional", will
have nulls somewhere. The key is to make sure they land where they matter
least.
Our 87.1 kW sister station, KEDM, which has been on the air for about
two and a half years, has a directional antenna and has had no problems with
coverage. The directional antenna was necessary to avoid TV-6 interference,
which I am guessing is also the reason for your interest in directionals,
given your frequency. With KEDM's antenna, the field gain at the back of the
antenna is about 1/3 of that of the major lobes. Fortunately, in our
situation, the back of the antenna is orientated away from the population
centers.
KNLU is located on the same tower, and is licensed as an
omnidirecional antenna. As part of our last antenna upgrade, I requested a
pattern measurement study from the manufacturer (Jampro). One consideration
many people ignore is the fact that the prediction studies in your license
application are based on free space radiation. Most antennas are mounted in
anything other than free space. In our case I was concerned about the effects
of the tower on the pattern. You see, our antenna is leg-mounted on a tower
with 3-inch legs and a 5-foot face! The studies proved my concern was
justified: our "omnidirectional" antenna was, in some respects, even more
directional than our sister station's directional! The pattern study allowed
me to orient the antenna in the most desirable direction.
For both stations, the nulls (1st and 2nd) fall about 0.5 and 1 mile
from the tower site. Since the tower is located about 10 miles from campus,
and is also outside the metro area, we don't encounter any problems with nulls
on either station. Some stations add "null fill" to their antenna, at
additional expense.
By the way, the directional antenna was manufactured by ERI (also sold
under the Continental name). Additionally, we have a commercial FM tenant on

our tower that uses an ERI. As the tower site manager, I can say both the ERI people and Steve Schott at Continental are terrific to work with--give Steve a call and he may be able to give you some advice (214/423-3644)--not a paid endorsement, just genuine positive experience. Al Jason at Jampro is also good to work with.

# 1194. Re: Directional antennas

Newsgroup: rec.radio.broadcasting
Date: 1993-08-12 03:06:50 UTC
From: WEOS-FM <BLACK%HWS1%HWS.BITNET@VM1.NoDak.EDU>
Message-ID: <CBMLzE.8rI@news.cso.uiuc.edu>
Source record: 42782

Anytime mentions Directional Antennas for FM, it makes my skin crawl. It is
a natural engineering response to what happened to AM. WIth the FCC allowing
it on FM, we could have similar problems long term. However, the BEST
directional applications are wide protection, stations that are on a coast and
want to send their signal into land rather than the water, and where terraign
is a problem. However, just with AM, the more complicated the pattern, the
more expensive the antenna system. A simple reduction in on direction is
not as bad. A station in Rochester has a CP for an antenna whose pattern
looks like the Bat Signal! It will cost major $$ for it. In addition, with
any directional system, you will get nulls in places that may not be
predicted, due to multipath and proximity type effects. Unlike their
AM counterparts, once designed, the FM directionals are stable, except
for any type of failure or detuning process (Ice, heavy snow, etc). If you
are prepared for the cost and the system is an added benefit, go for it.

# 1195. Don & Mike Metro Washington, D.C., ratings

Newsgroup: rec.radio.broadcasting
Date: 1993-08-12 03:06:57 UTC
From: lacko@enh.nist.gov
Message-ID: <CBMLzM.8sE@news.cso.uiuc.edu>
Source record: 42783

Here are the latest Don Geronimo and Mike O'Meara afternoon ratings from their afternoon show on WJFK. Note: ratings are for WJFK in Washington, **NOT** WJFK in Baltimore (although I understand the Baltimore ratings are just as impressive).

| Age Group | Spring '91 (when they joined WJFK) | Winter '93 |
|---|---|---|
| 12 & up | 1.5 | 5.8 |
| 18-49 | 2.0 | 7.2 |
| 25-54 | 1.7 | 7.1 |
| Men 25-34 | 4.4 | 12.7 |
| Men 35-44 | 1.6 | 7.7 |
| Men 25-54 | 2.5 | 8.9 |
| Women 25-34 | 2.0 | 6.4 |
| Women 35-44 | 0.1 ! | 5.8 |
| Women 18-34 | 2.5 | 5.9 |

Ratings are taken from the latest Don & Mike newsletter, volume 1, issue 5, June, 1993.

Congratulations Don & Mike on another great book! You guys always make me laugh!

Yes, he is now syndicated. He is on WJFK-Washington/Baltimore in my area and on WYSP in Philly... He's broadcasting in New York as well. I don't know where else he is broadcasting. You might do well to post to alt.fan.greaseman and ask where you can pick him up in your area, if at all.

# 1197. IRRS-SW off the air

Newsgroup: rec.radio.broadcasting
Date: 1993-08-12 03:07:22 UTC
From: "Alfredo E. Cotroneo" <100020.1013@CompuServe.COM>
Message-ID: <CBMM0A.8u4@news.cso.uiuc.edu>
Source record: 42785

Just a short note to inform our listeners that IRRS-Shortwave is momentarily off-the-air. On Sunday Aug. 8, at aproximately 22:40 Central European Time the station was directly hit by lightning, during heavy thunderstorms which hit the area around Milano. Damages to the facility have been reduced by the recently installed lightning protection systems. NEXUS-IBA technicians has started working today, Monday Aug. 9, and we hope to be able to resume transmisions as soon as late next Sunday Aug. 15, or on the following week.

IRRS-Shortwave may be heard in Europe and beyond on 7,125 kHz (41 meter bands), relaying programmes from NEXUS-IBA members, including United NAtions Radio, UNESCO Radio and European Gospel Radio programmes. NEXUS-IBA is a non-profit Association based in Milano, Italy. Recently, IRRS-Shortwave started airing special programmes in English from the United Nations on the current situation in the ex-Yugoslavia and Somalia.

For more information, and up-to the last minute news, listeners are invited to call our numbers in Milano on : +39-2-266 6971 or +39-337-29 7788, or check our mainsteam frequency (7,125 kHz). More information will also be distributed by e-mail when available.

Stay tuned!

73,

# 1198. Re: Kid's Radio, has it been tried?

Newsgroup: rec.radio.broadcasting
Date: 1993-08-12 03:07:28 UTC
From: Brian Gregory <briang@halcyon.com>
Message-ID: <CBMM0H.8uz@news.cso.uiuc.edu>
Source record: 42786

Kidstar (KKDZ, 1250 AM, Seattle) approaching their six(?) month point and while touting success, has failed to show in the spring Arbitron. They recently have changed their ownership structure and have moved on to their second morning guy. Third if you count the person hired but never made it to the air.

I like the concept but not so sure it can surivive.

[Bill Sez: Remember, folks, that pre-teens are not filling out Arbitron diaries. Therefore these children's formats are hard to rate using conventional means. Radio AAHS has used something called 'ACCU-RATINGS' to rate the station. They do things a bit differently than Arbitron. Bill]

Hi! Sorry, I am trying to remember what wisdoms were contained here.

Kidstar (KKDZ, 1250 AM, Seattle) approaching their six(?) month point and
while touting success, has failed to show in the spring Arbitron.
They recently have changed their ownership structure and have moved on to
their second morning guy. Third if you count the person hired but never
made it to the air.
I like the concept but not so sure it can surivive.

## 1200. New York Radio News

Newsgroup: rec.radio.broadcasting
Date: 1993-08-12 03:07:53 UTC
From: slutsky@tesla.njit.edu
Message-ID: <CBMM15.8wz@news.cso.uiuc.edu>
Source record: 42788

WHTZ (Z-100) was acquired by Shamrock Communications on July 30. Gary Bryan's contract will not be renewed. This has fueled speculation that Shamrock will either trade or sell the station. Paul Colford of New York Newsday is thinking that Duopoly will come to the Big Apple. Viacom, Westinghouse, Infinity, Emmis, or Capital Cities/ABC might want a second FM station. Sit tight!

WSKQ-FM, a Spanish AC station has changed to a salsa format. WSKQ-AM is talking less and playing more music.

Bernard Meltzer of WOR has announced his retirement.

In article <CBKKsn.n54@news.cso.uiuc.edu> WILLCOX@ucsvax.ucs.umass.edu (ALAN T WILLCOX) writes:
>Thanks to everyone for all the input on non-comm underwriting spots...
>NEW QUESTION...
>
>To what extent, if at all, are non-commercial stations allowed to air
>"official" and "unofficial" editorials. By this I mean, the first case,
>"This represents the official view of the management of WXXX...", and in
>the second case "This is the opinion of the speaker only, and does not
>necessarily represent the views of the management of WXXX..." when used
>before or after a short (1min) editorial?

To the best of my knowledge, this is up to the station's discretion. I don't know of any specific ruling on this. I would imagine that editorials would fall under the category of free speech, and as long as they adhered to the FCC's "you can be profane, but not obscene and only when we say you can" policies regarding proper language usage, you should be okay. We've never encountered any problems at Wellesley regarding this. I think I would only worry about using the disclaimers if what is being said is controversial enough that it could possibly harm the station's status, i.e. get its license yanked. Better to lose a DJ than your station.

## 1202. Superadio III

Newsgroup: rec.radio.broadcasting
Date: 1993-08-12 03:08:04 UTC
From: gulino@ouvaxa.cats.ohiou.edu
Message-ID: <CBMM1G.8yr@news.cso.uiuc.edu>
Source record: 42790

I had seen some discussion of the Superadio III in here when it first came out, but I haven't seen anything lately. I have owned a Superadio II for the last two years, and I purchased a III at Kmart over the weekend for $46. This if the first time I'd seen a III in any store anywhere, and I've been looking. (I wanted one radio for home and the other for my office.) With both a II and a III, I was able to sit down at the kitchen table on Saturday and make an A-B comparison.

The following are my comments/impressions, and please remember that they come from someone who doesn't know a phase-locked loop from the Chicago loop nor a ferrite rod from a fishing rod.

As noted earlier by previous posters, the III has the tuning knob on the right side, rather than on the front. I like it on the side better. Also, the feel of the tuner on the III seemed better (less backlash). On the other hand, the dial readings were much more accurate on the II. On the III, the readings on AM are consistently 30 kHz low (a station broadcasting at 610 kHz comes in at about 580 on the dial). This is most certainly a sample defect, but it doesn't harm the enjoyment or usefulness of the radio at all.

Both radios have an FM antenna you pull out and can swivel around. Both have an on-off switch on the top right (the feel of the switch on the III was slightly better, as if that matters), AM-FM switch, AFC switch (something you never see anywhere else anymore), an earphone jack, and treble, bass, and loudness knobs. The AFC on the III seemed to work better in that it seemed better able to lock onto and hold a signal, especially a relatively weak one located next to a strong one. In fact, in some instances I have found that the II holds a station better if I leave the AFC off. I'll have to live with the III for a while and see how its AFC performs over time.

The III has an extra "wideband" switch which you are supposed to use when listening to local (strong signal) AM stations to give "better sound fidelity," according to the owner's manual. I didn't notice any difference in sound when using the switch.

On the II, the dial pointer is in front of the dial, while on the III it is behind. I have no preference. On the III, the dial markings are more evenly and widely spaced, and I liked that better.

As far as performance, I couldn't detect a single difference, on both AM and FM, between the two radios. I mean, they performed identically as I tuned each one up and down the AM and FM bands. I'd give a slight edge (very slight, and a different pair of ears might disagree) to the II for tone quality. Both radios performed admirably and ably, and I'm

glad to own both. I could not say that one radio is better than the other.

My office is on the first floor of a four story building, so I'm surrounded by concrete, steel girders, and fluorescent lights. A good radio is a real must here. I decided to bring the II to my office, for no particular reason.

One other thing I noted. While the II says "Superadio II" on a little plate right on the front, the III doesn't actually say "Superadio III" anywhere on it. It says only "Superadio." If I didn't have the box or the owner's manual, which both say "Superadio III" (although the manual only uses the "III" once that I could find), I wouldn't know it was a III. In fact, I even compared the model number stamped on the back of the radio with the model number written on the box just to reassure myself that it really is a III!

# 1206. Broadcast Antennas

Newsgroup: rec.radio.broadcasting
Date: 1993-08-12 05:01:57 UTC
From: jherman@hawaii.edu
Message-ID: <CBMrBA.Arq@news.cso.uiuc.edu>
Source record: 42794

Being an amateur radio operator, what I find most interesting about broadcasting is the antenna systems used. Thus, I hope we can start an ongoing discussion concerning this topic.

Here's some elementary observations on my part:

Each time I am in San Francisco, I marvel at an AM station's antenna location: right on the water! I don't recall the station's callsign, but what an excellent location - having the entire bay as a ground-plane. Since the AM broadcast band requires such an extensive grounding system, why aren't more AM transmitters located in the shallow water areas of the Bay?

Here in Honolulu, there is an AM broadcast tower less than 50 yards from a canal that leads to the ocean. At the base of this tower are dozens of radial cuts in the pavement extending away from the base; many of these cuts are carved into a city street running adjacent to the tower (how they got the city's permission to do this we'll never know...). Heavy wire has been placed into these cuts so we know it is a groundplane they've tried to construct; and some of the wires do lead into the canal. This is just an observation to share with you.

Concerning groundplane systems, their efficiency must be dependent upon the conductivity of the earth in which they are buried. After a heavy rain the conductivity increases, which must cause problems in keeping the antenna system properly matched to the transmitter. Or put differently, as the earth dries out, the engineer must see a change in the SWR over a certain period of time. This must require a constant adjustment of the transmitter-antenna matching system. Yes?

When I see an AM broadcast tower, am I looking at a 5/8 wavelength antenna? If not, generally what wavelength is chosen?

Okay, someone else's turn!

Jeff Herman, University of Hawaii Mathematics, jherman@hawaii.edu

[Bill Sez: Thanks for the post, Jeff. I believe the station in S.F. was 1010-AM, and way back when I was there in the seventies, the calls were WIQI. That is if the towers were an inline row of three (or was it four) at the east end of the bay bridge. Anyway, all who have answers to this, please post them. Bill]

# 1207. Classes of FM stations and their limits...

Newsgroup: rec.radio.broadcasting
Date: 1993-08-12 05:02:04 UTC
From: fybush@world.std.com
Message-ID: <CBMrBG.Asn@news.cso.uiuc.edu>
Source record: 42795

"Ellis P. Carter Jr." <epj2@Ra.MsState.Edu> writes:

>1)
>The last definition of the classes of FM broadcast stations I read was in
>the 1977 rules and regs, Class A, B, C, and noncomm. I did not see the
>AM broadcast station classes.

>The definitions seem to have changed since then (this is NOT news for most
>of you). Could someone please post the different classes of AM, FM (and
>TV, if there are classes in this category) broadcast stations. Or mail
>will suffice. I am interested in limits on ERP and antenna height, although
>I would appreciate all information you can provide.

The old definitions:

Class A: no more than 3000 watts at 300 feet AAT
Class B: no more than 50kw at 500 feet AAT
Class C: no more than 100kw at 1000 feet AAT

Class A stations could be assigned anywhere on the country on 92.1, 92.7,
93.5, 94.3, 95.3, 95.9, 96.7, 97.7, 98.3, 99.3, 100.1, 100.9, 101.7,
102.3, 103.1, 103.9, 104.9, 105.5, 106.3, 107.1 MHz. Class B and C stations
were on the other FM channels from 92.3 on up to 107.9. Class B stations
were allotted to Zone I, essentially the Northeast, and to Zone I-A,
essentially California. Class C stations were allotted in Zone II,
the rest of the country. There were a few grandfatered operations with
more power.

The new definitions:

[remembering that any class of station can now be placed on
any frequency between 92.1 and 107.9]...

Class A: 100 to 6000 watts at up to 100 meters (both zones)

ZONE I and IA only:

Class B-1 3100 to 25000 watts at up to 100 meters AAT
Class B 25100 to 50000 watts at up to 150 meters AAT

ZONE II only:

Class C3 6100 to 25000 watts at up to 100 meters AAT
Class C2 25100 to 50000 watts at up to 150 meters AAT
Class C1 51000 to 100000 watts at up to 299 meters
Class C 100000 watts at 300 to 600 meters AAT

Note that stations not meeting the new Class B and C criteria were
downgraded to Class B1, C2, or C1. Note also that both then and now,
a station with tower height higher than given here may adjust
power accordingly to cover the same distance.

>2)
>Does anyone know of an application being filed for a new FM station license
>for the Starkville/Brooksville MS area? If so, could you mail me the
>applicant's name? If not, could you give me an idea on where I can go to
>find out this information.

Call the FCC Mass Media Bureau, check the newspaper of legal record
for the area (an ad has to have been taken out at some point), or call
the M Street gang at +1 212 473 4668.

>3)
>A question about the recent posts concerning foul language. I have heard
>that foul language (or indecency in general) is not actionable by the FCC
>between the hours of 8pm and 6am. Is this true? If not, what are the
>current "guidelines" (and I use the term loosely)?

I'm not touching this one :-)

[Moderator's Note: Great piece, scott. Adding it to the 'raw' FAQ file! I
have another question. What exactly is a 'drop-in'? I know it is a lower
power FM added in a given area, but what criteria is used for placement?
What power/antenna/directional etc restrictions? They seem to be popping up
faster than police at an all night donut shop :-) and most have horrible
coverage. Bill]

## 1208. Dallas and Orlando radio

Newsgroup: rec.radio.broadcasting
Date: 1993-08-12 05:02:09 UTC
From: bnunes@netcom.com
Message-ID: <CBMrBL.AtI@news.cso.uiuc.edu>
Source record: 42796

Would anyone care to post (either publicly or privately to me) any information on what's on the radio in either or both of those two cities? I'll be traveling next month and will have my ears open, but I'd like to know about anything notable beforehand.

Also, I'm attending the NAB Radio Conference (that's why I'm going to Dallas). Anyone else going??

-Brian

# 1209. Fictional Market Data, Part 1

Newsgroup: rec.radio.broadcasting
Date: 1993-08-12 05:02:15 UTC
From: ij59@vaxb.acs.unt.edu
Message-ID: <CBMrBr.AuD@news.cso.uiuc.edu>
Source record: 42797

O.K. Since there haven't been any posts in the last few days, I don't feel bad about posting something meaningless. I, in my spare time, thought it would be interesting to create an imaginary radio market and make up ratings and programs for the different stations in this fictonal market. I got the name Green Rain out of an old children's book that had 3 sections, "Green Rain", "Blue Grass", and "Red Gold." Rather than just randomly pick what stations were rated higher or doing it on my personal preference, I did some independent research where I live, a market slightly smaller than the one I have created. I'll post the ratings in the first message and a brief description of the stations' programming in the second message. I welcome any comments or questions, even if you're only writing to tell me I have way too much free time on my hands.

Thanx,

Jeff A. Miller
College Station,TX

# 1210. Fictinal Market Data, Part 2

GREEN RAIN,TEXAS RADIO STATIONS' PROGRAMMING INFORMATION

KRRC-FM (93.5) runs what I have coined a "Key Word Variety" format. They basically play what is on the Hot 100 of Billboard. Since Billboard has expanded the Hot 100 to cover country and AC records, it fits right in with "Hot Rod 93.5"'s format. It's a station where Metallica and L.L. Cool J. can be heard back to back, followed by Wynonna. It's mass appeal is because it's the perfect station for those who like all kinds of contemporary music.

KRCB (Newstalk 710 AM) is a "hot talk" format. They have freqent news reports but are focused more on talk shows. Most is local, but "Rush Limbaugh" and "Gil Gross" are taken off satellite. This station's high ratings are due to Limbaugh and the fact that it runs the most sports programming in the market: Rangers baseball, Rockets and Spurs basketball, Cowboys football, as well as CBS Sports Programming.

KTCS (K-95.3 FM) is a top 40/adult station. They play almost everything mainstream top 40 plays but they eliminate the hard rap and hard rock, and play a few more country crossovers. This staion is big on "less D.J. chatter, more music."

KKMR (Lightning 103.7 FM) is quick to boast that they are Green Rain's original hit music station. With over 30 years of programming the same top 40 format, this is true. They are the typical chattering top 40 aimed at 18-34 but of course capturing quite a bit of the 12-17 audience. Frequent contests and weekend programs like "Rick Dees' Weekly Top 40" and "The Dr. Dimento Show" keep listeners tuned in.

KTTL (Country-kickin' T-101.5 FM) is the typical "everything from Randy Travis on" country station. They are big with young listeners, but keep the older ones tuned in with occasional oldies, but not as many as crosstown KCSR. KTTl is an affiliate of "American Country Countdown with Bob Kingsley" as well as "Nascar Country."

KMBC (AM 550) is a Mutual-affiliated N/T station. They run local news and talk in the morning and evening, and Mutual programs "Pat Buchanan", "Larry King" in the daytime, and "Jim Bohannon" at night. On weekends, they feature ESPN Radio programming, Oilers Football, and high school

football and basketball.

KTOL (106 Jamms FM) is an urban contemporary format, which also serves as the primary black community radio station. This community-orientation and nightime "Slow Jamms" programming appeals to the older audience, while the younger listeners like the standard R&B and Rap music.

KRCK (Mix 98.7 FM) is a hot AC station modeled after Houston's KHMX. The programming is very similar to that of KTCS, but eliminates of few of the more top 40-sounding records that KTCS plays. Mix 98.7 runs the syndicated "Casey's Countdown" from Westwood One on the weekends.

KJBS-AM-FM (J-Rock AM and FM) is an all-purpose album rock station. They keep enough of the harder stuff and young-oriented humor to attract young rock fans, but play enough classics and new stuff by classic artists to bring in the older die-hard rock folks as well. J-Rock airs the syndicated programs "Z-Rock 50" and "Rockline."

KRRC-AM (KRRC Classic) is the most varying formatted station in the market.They play lots of contemporary and traditional jazz but also throw in new age, world music, easy listening, and some soft AC records. During the fall and spring, they also air educational programming for both children and adults. On the hour news from NBC keeps KRRC's listeners informed.

WZRX (Newsradio 82 AM) is an 24 hour news station affiliated with ABC. The station programs two syndicated talk shows, "Alan Combs" in the daytime, and "American Sports Line"(from Sports Entertainment Network) in overnights. They also air two local talk shows, "Stephen Furman" in middays and "Late Night Talk Line" at 11pm. Everything else is news, weather, sports, and traffic updates. During the summer, the station is an Astros baseball affiliate.

KZGR (Country Z-100.3) is 96% current/recurrent intensive. They have a lively morning show and a general fast and peppy attitude that appeals to younger listeners but also draws some 35+ into the fold based solely on their music content. The "Weekly Top 30 with Harmon & Evans" is run every Sunday morning.

KJEF (1440 AM) is my favorite station (notice the call letters.) It is a full-service AC station which plays mostly mid 80's to early 90's music, with news reports on the hour 24 hours a day from USA Network and local news, sports, and traffic updates in the morning and afternoon drive time. The music gets softer in overnights, and "Countdown America with Dick Clark" and "CCM Top 20 Countdown" syndicated programs keep things lively on the weekends.

KOAD-FM (Dove 102.3 FM) shies away from the "Christian" label. They don't air any praise or worship programs, just 24 hour music. Some mainstream AC records crossover if the station feels that the songs are consistent with a christian message. The syndicated "20, The Countdown Magazine" is aired every Saturday.

KCSR (Country Star 1180 AM) is a full-service country AC station. They play many current songs if deemed "not too hard" as well as quite a bit of oldies. The station carries the Texas State Network's "Texas USA" and "Texas Overnight" talk shows as well as Paul Harvey and national and local news.

KTRC (104.1 FM) is primarily a classical and classical crossover station but does include some world music and NPR's "All Things Considered."

WSCT (Business 910 AM) is the market's oldest station. It has been programming an all-business format since 1987. The station gets most of its programming off satellite from carriers such as CNBC and BRN, but does air a few local financial talk shows and local news updates.

KOAD-AM (1590 AM) is a Christian news and talk station with "Bob Larson" and CBN programming during the day as well as a local news hour in the morning and afternoon. Praise and worship programs are aired in the evenings, and the overnights are filled with traditional christian music.

KACS (Oldies 92.1 FM) plays pop oldies from the 50's, 60's and 70's but doesn't play anything that would be considered classic rock such as Santana or Led Zeppelin. The only syndicated shows are "Pure Gold" and "Dick Clark's Rock, Roll, and Remember" on the weekends.

Well, that's it! Again, any comments or questions are welcome even if it's "Jeff? What the hell are you doing with your life?"

Thanx,

## 1212. Questions about FM elements

Newsgroup: rec.radio.broadcasting
Date: 1993-08-12 05:02:42 UTC
From: testnet!pr@pegasus.att.com
Message-ID: <CBMrCI.AxE@news.cso.uiuc.edu>
Source record: 42650

In viewing FM tower sites I note that the elements are all on the same side of the tower:

a)Does that cause radiation on that side of the tower to be stronger than on other sides

b)How does a station decide whether to have 2 elements (like WHTG-FM Eatontown NJ), twelve (like WFMX-105.7 Statesville NC) or some number in the middle?

c)Is there any benefit to having more elements?

I've also noted that for some stations, rather than being sort of anchor shaped, look more like coffee mugs - any benefits here?

Is it true that a directional FM will have a piece of metal covering the antenna element to minimize radiation in that direction? I ask this because the stations I described above (all elements same side of tower) are listed as non-directional.

# 1213. High-Definition Audio...

Newsgroup: rec.radio.broadcasting
Date: 1993-08-12 05:02:48 UTC
From: madison@wam.umd.edu
Message-ID: <CBMrCo.Ay9@news.cso.uiuc.edu>
Source record: 42651

98 Rock (WIYY Baltimore, 97.9 FM) advertises that it is now broadcasting with a system called "High-Definition Audio". At the time I did not notice a difference, but I recently decided that their programming was no good and started listening to Rock 103 (WXZL Grasonville, 103.1 FM) instead.

Occasionally, reception in my lil' Toyota is not too good for Rock 103, so I will switch back-n-forth between the two stations. The audio difference was made INCREDIBLY clear to me then.

Once, I was pulling into the lot at school (near DC) and happened to flip from one to the other and they were playing the same song. There was simply no comparison. Rock 103 could have been in New York, and 98 Rock could have been broadcasting from the trunk of my car, the difference was so incredible. (And from UM, Grasonville is quite a bit closer than Baltimore.)

So -- what is involved in "High-Definition Audio", what makes its reception so much clearer, and why aren't more FM stations using it?

>>
>
>Since ratings don't count anyone under 12, and since radio people don't care
>that much about people under 17, how can the ratings be an accurate tool
>to judge who listens to Stern?
>
>Court upheld the fines)? This is not even close to funny, nor is it something
>I think any child of mine should be listening to. Perhaps if parents spent
>a little more time paying attention to their kids, the kids would not be as
>influenced by Stern, then his ratings would drop, he would go away, and I,
>for one, would be ecstatic.
>

I to have a copy from the FCC regarding this fine, have read and even heard the actual air tapes (via Crucified) and I personally thought they were funny (note humour is SUBJECTIVE). I agree that parents should spend more time with their children, what they watch, what they listen to etc. I further believe that Government should not be "parents" to myself or "my children". I would much rather "my children" listen to Stern then Phil, Oprah, etc (need I mention the afternoon soaps).

Secondly having "grown-up" in the MTV era I personally was not interested in "talk radio" nor are most teenage people (in my part of the country with people of that age group), they are interested in "music" and avoid "howard types" for the most part. I was not interested in Howard until after I graduated college (even though he had been broadcasting in this area for 3 years).

Now those transcripts which I assume that you are talking about are either those with the "penis" reference or the one with the Aunt Jemima reference. Neither of which are offensive to me (then again I dont think anything any one could say would really offend me). In fact the Aunt Jemima reference could be considered by some as "less" offensive then the previous fine.

Another fine point to make is how about European tv alot of that is very risque, but they dont seem to have a problem.

>Point is, Stern IS reaching children, and despite my traditional, liberal
>media attitude on most things,

What in the world could Howard say on the air that a child would
not pick up off the street.

Sorry for the negative tone of this but I personally would love to see the
fall of the FCC broadcast regulations regarding content. To me it is the
government telling me what I can watch and what I cant watch. In addition
there application of these rules is very subjective (ie not everyone who
"breaks" the rules are prosecuted equally).

[Bill Sez: I, too would like to see the same 'free-market' approach to
broadcast content as we have for print media. I am sorry to see Stern as the
test case, though, because IMHO, Stern's act *is* offensive. Not
for the reasons often stated, but because he insults my intelligence.
However, I have a perfect tool for banning Stern from my ears... It's called
a tuning control. I simply change the station! I totally agree with this
poster's position that government should not be in the business of dictating
what *my* children (or me, for that matter) can listen to, watch or read. It
is still amazing to me how willing so many Americans are to just hand over
ntheir self-control to government censors. The same Americans can be heard
bemoaning censorship in the (ex) Soviet Union and other places, but see no
problem in allowing, in fact demanding that, *our* government take an
ever-increasing role as guardian of our senses. People just don't realize
what a precious thing they are willingly giving away by encouraging such
government censorhip. There are people in other nations (and in this
nation's past) who have died to preserve these freedoms. Sad that todays
Americans can't see beyond the end of their collective noses as they trade the
most precious of all rights for the sad illusion of some sort of protection
from an imaginary demon. Joseph, I am sorry to say that you can probably look
forward to *more* controls, not less, as the airwaves succumb to a
fools-chorus of increasing government restrictions on content, more
centralized programming and continued relaxation of multiple-ownership
<duopoly> regulations. The current direction of broadcast radio <IMHO> does
not bode well for those who enjoy the unusual, creative or even provocative,
<what is mistakenly refered to as> pseudo-shock programming. I also
agree that Stern is pablum compared to the patently violent and insipid fare
on prime-time (and cable) TV. So, more power to Stern, Dahl,
Radio-Free-Berkely and anyone who is doing something different
(whether or not *I* like it has nothing to do with it) on the
airwaves. I'm sorry, but I have never seen or heard convincing
evidence of the spoken <printed or broadcast> word damaging someone's
life. However, history is repleat with examples of damage caused by
the restriction and censorship of information. Never mind, I must be
a commie-lib to even suggest such a thing. :-) Bill]

There are.. KGO 810 AM has their towers in the Newark area, if you are
crossing on the Dumbarton bridge, you pass right by their towers near the
causeway as you cross towards the Newark Side
>
> [Bill Sez: Thanks for the post, Jeff. I believe the station in S.F. was

Don't know about the number of the towers, but it's KIQI which is a Spanish
broadcaster "La Grande 1010"... and I'm not certain about this one either,
but I thought KDIA in Oakland had their towers out there too...

While it's a good idea technically, it's expensive to build the
system in the water. You have to build the concrete bases deep
into the mud. Of cousre, the water is probably cheaper than land
around here these days.

There are at least 3 different stations built just off shore in the
San Francisco bay. I don't remember which ones.

>

The ground system is a critical part of the AM antenna system. The
construction of the ground system is spelled out in the technical
portions of the license application. At least one of the stations
here in the bay, KKHI, has a complete wire ground system installed
at approximately water level.

BTW, there are maps in the FCC rules showing the 'offical' ground
conductivity of the US, that are used for making AM antenna

calculations.

There are some AM directional arrays that so critical, that the grass growing over the ground system has to be kept mowed to a certain height, in order to keep the pattern legal. I've heard of some stations that would spread salt and then water their ground system for better efficiency.

But actually, most stations don't keep tweaking the antenna matching system, as changes along those lines can require a lot of testing to prove the system is in tolerance of the license.
You go for long term stability, rather than constant tweaking. The hardware involved does not stand up (mechanically) to constant adjustment, and lots of the adjustments can only be done by moving taps on coils, so you can't do them while operating.

>
> When I see an AM broadcast tower, am I looking at a 5/8 wavelength
> antenna? If not, generally what wavelength is chosen?
>

Anything from about 60 to 200 degrees. Lots of stations are around 1/4, 1/2, or 5/8 wave. Depends on how cheap things are, vs. the frequency on the desired vertical radiation characteristics.
If you know the frequncy of a station, you can generally guess the tower height.

(from memory, a few approx heights)

600 Khz 500 feet ~ 1/4 wave
1000 Khz 250 feet ~ 1/4 wave
1600 Khz 300 feet ~ 1/2 wave

Up to about 150 feet can be done cheaply with Rohn 25 or similar.
A lot of stations are in the 200-500 foot range, on 16-24 inch wide tower.

Then you can feed the towers series or shunt. That's a whole 'nother topic.

GAAAAAAAAAAG. That sounds like what caused the FCC and its
predecessors to be formed in the first place - spectral chaos.

My 1990 edition FM Atlas shows WFXF-FM 103.3 Indianapolis and
KRFX-103.5 Denver as two stations using "Fox 103" around that era.
Any clue from the addresses?

'Tisnt Indianapolis. They were "103.3 The Fox", running a classic rock
format. The station is now WRZX "Solid Rock 103 The X"

Also, power is sometimes de-rated with excess antenna height;
KUFX 94.5 in San Jose is a full Class B but at 4000 ft. They
get only 1200 W instead of 50,000.

My station, I was surprised to learn recently, is not a class A but a
B1, with just 110 watts! The antenna height of 1860 ft. AAT has something to
do with that...

AAT = Above Average Terrain

From: hhallika@tuba.calpoly.edu
Message-ID: <CBn1IA.o3@news.cso.uiuc.edu>
Source record: 42663

I'd avoid the term "unattended operation", instead calling it
off-premises control, since the FCC still requires operators to be in
charge of the transmitter. Note that apparently the Communications
Act of 1934 was recently amended to allow broadcast stations to operate
without licensed operators, but the FCC has not put forth rules
reflecting this change. I heard they might introduce something by the
end of the year.
To satisfy the FCC with off premises control, I'd suggest the
following...
The off premises control point should have its own EBS receiver
(Gorman Redlich receivers are pretty inexpensive). 73.932(a) requires
the staff to be alerted immediately on receipt of the attention signal.
I'm not convinced that system that rely on dial-up to the control point
on receipt of EBS tones meets this requirement.
The off premises control point operator should have sufficient
control to fulfill the various requirements, including EBS. For EBS,
this includes being able to get announcements from the EBS checklist on
the air, getting EBS tones on the air, and getting emergency programming
(typically from the EBS receiver) on the air. If you are using dial-up
access, this can possibly be done by allowing the phone audio to go on
the air for the announcements and using DTMF to put EBS tones and EBS
receiver audio on the air.
The FCC tends to enforce rules that are not there with regard to
"failsafe" or alternate means of shutting down the transmitter. The FCC
Rule Clarification (FCC Public Notice 88-194) outlined a requirement
that a dial-up circuit, if used must be available for the exclusive use
of the operator or an independent method must be available to shut down
the transmitter. This requirement is not contained in the rules.
Various other parts of this clarification have been admitted to be in
error. However, an FCC inspector will often cite a station for
violation of 73.1410(e), which requires a station to be shut down
immediately when in an interference causing condition. I have argued
that one cannot violate this rule unless the station is causing
interference and doesn't shut down. The FCC has cited stations for
having the CAPABILITY of causing interference and not being able to shut
down. So, to be safe, I'd try to find some alternate means of shutting
down the transmitter, even though the rules do not require it.
Note that 73.1400(c) requires the FCC be notifed within 3 days
of starting to use a new control point. Control points must be at fixed
locations, not a cellular phone that roams.
Make sure the duty operators at the control point are qualified.
Can they run an EBS test? The FCC will likely ask off-premises
operators to do this during an inspection. Can they properly handle
actual EBS conditions?

Finally, I'd outline the proposed operation in a letter to the
FCC in Washington prior to beginning operation. They will generally
come back with an explanation of any shortcomings. If they approve,
you're pretty safe during an actual inspection. Note also that under
certain circumstances, the FCC may grant waivers of certain rules.
Skylight affiliate stations have been granted a waiver of 73.933 during
times the network is in control of the subscriber stations.
I would also be interested in hearing the experiences of
stations in off-premises control.

That's the theory, but in practice, it's a crap shoot.

>
> b)How does a station decide whether to have 2 elements (like WHTG-FM
> Eatontown NJ), twelve (like WFMX-105.7 Statesville NC) or
> some number in the middle?

You can trade off transmitter power for antenna gain. A 100KW
station can use a 20-25 KW transmitter and 10-12 bays of antenna
to get 100 KW erp.

Here's a table out of my NAB handbook for a 50KW erp.

TX power Input power Bays Ant. Gain Beamwidth
10kw 9.09kw 10 5.5 db 6.1 degrees
20kw 18.52kw 5 2.7 db 12.2 degrees
40kw 33.30kw 3 1.5 db 20.0 degrees

>
> c)Is there any benefit to having more elements?

Technically, you prefer fewer elements, as there is less exposed
hardware up on the tower and multipath is better with fewer elements.

The electric bills on a high power FM are significant. So a
lower power transmitter will pay for a high gain antenna quickly.
Also, the feedline can be smaller on a lower power antenna system,
which is important on a tall tower.

>
> I've also noted that for some stations, rather than being sort of
> anchor shaped, look more like coffee mugs - any benefits here?

The `coffe mugs' are radomes, to keep ice and rain away from
the actual radiating elements. The antennas generally also have
electric de-icers to keep ice from forming. They are expensive
to run, also.

>
> Is it true that a directional FM will have a piece of metal covering

FM directional antennas are black magic. They will have arms poking
out in funny directions, or parasitic bars jutting out on supports
to create the pattern. It's not as simple as a shield on one side
or the other. There's no rhyme or reason about the directional
setups, unless you know the theory behind a particular model of
antenna in great detail.

# 1222. Re: Questions about FM elements

Newsgroup: rec.radio.broadcasting
Date: 1993-08-12 08:42:21 UTC
From: bdboyle@erenj.com
Message-ID: <CBn1IL.pv@news.cso.uiuc.edu>
Source record: 42661

In article <CBMrCI.AxE@news.cso.uiuc.edu>, testnet!pr@pegasus.att.com writes:
|>
|>In viewing FM tower sites I note that the elements are all on the
|>same side of the tower:
|>
|>a)Does that cause radiation on that side of the tower to be stronger
|> than on other sides

Theoretically in the line of the vertical tower on the opposite side from the elements there is a slight null, but not enough for the engineers, antenna designers or the Commission to be worried about. Most (I imagine in 1993) FMs are circularly polarized now to minimize this and other problems with phasing of separate horizontal/vertical elements....

|>
|>b)How does a station decide whether to have 2 elements (like WHTG-FM
|> Eatontown NJ), twelve (like WFMX-105.7 Statesville NC) or
|> some number in the middle?

A number of factors: 1) Licensed ERP versus transmitter power/height/desired gain, 2) money, 3) tower space avialable, 4) efficiency of design, 5) pattern.

In some respects it is a black art. For instance, WFUV-FM (90.7, NYC) is running a 3-element RCA antenna being fed from a 20KW Broadcast Electronics transmitter (used to be a Gates FM20H, for those that remember that iron...). Output from the xmtr is 18.3 KW nominal, and the gain of the array at 190' is a little over 2x (someone want to ding me for the db gain-it has been a while..) to provide the 50KW effective radiated power directional.

OTOH, WKXW-FM (101.5, Trenton NJ) is running 20KW out of their xmtr (used to be a collins...sigh...don't know what it is now...) into a 4-element non-directional array at 220' agl. They are also 50KW.

YMMV...
|>
|>c)Is there any benefit to having more elements?

It depends. More elements usually mean that you can run a lower-powered transmitter and get the same ERP (in general, please, no flames...) as a higher powered transmitter with fewer elements.

<*personal opinion mode on*>
This is a trade off that is offset by potentially higher maintenance costs; more coax connections to maintain, more deicers to worry about, narrower beam tilt, wind loading, etc. In some instances, you have to design 4, 5, 6, or more element stacks. I prefer having the output RF from the transmitter up there and less metal exposed to the elements than someone down south that

doesn't have to do maintenance on the deicers in January...
<*personal opinion mode off*>

|>
|>I've also noted that for some stations, rather than being sort of
|>anchor shaped, look more like coffee mugs - any benefits here?

generally, the anchor shaped ones are made by Cetec Jampro (we had another name for them that can't be used here...) and the the ones that look like coffee mugs are out of the RCA labs (I forget the name of the co., but they are up in maine...). Comes down to engineering design to get the job done...

|>
|>Is it true that a directional FM will have a piece of metal covering
|>the antenna element to minimize radiation in that direction? I ask
|>this because the stations I described above (all elements same side
|>of tower) are listed as non-directional.

Parasitic elements are usually either rods or plates mounted in back of the active element (I know slot antennas are another animal, but not as dispersed as the folded/twisted/origami dipole stacks out there (at least up here in the northland...). If the elements are covered, they are probably covered with fibreglass radomes (another alternative to deicing versus in-element heaters...).

(all this is my $.02, and based on personal experience/observation/jobs)

Message-ID: <CBn1J1.qv@news.cso.uiuc.edu>
Source record: 42658

... and some mildly interesting DX sometimes fades in.

Last Tuesday night (8/10), about 23:45 east coast time (I live in Wilmington, DE), while waiting for MST 3K to start, I happened to tune into WGN, Chicago, 720 khz., to see if the Cubbies had won their game yet. Instead of WGN, whose signal usually screams in here at night, I was surprised to hear CHTN, Charlottetown, Prince Edward Island. Got the scoop on the latest ferry schedules to the mainland. Signal strength was excellent right up through midnight. By then, however, Joel, Tom Servo, and Crowe were calling ...

WRTH (1990) lists CHTN as 7.5 kw at night with directional antenna. Wilm, DE to P.E.I. is about 1400 km., eh ?

# 1225. Re: High-Definition Audio...

Newsgroup: rec.radio.broadcasting
Date: 1993-08-12 08:42:49 UTC
From: weaver@sfc.sony.com
Message-ID: <CBn1JE.sn@news.cso.uiuc.edu>
Source record: 42656

Probably this "High Definition Audio" involves some dynamic equalization
done by a multi-band compressor. There are half a dozen brands of this
kind of thing these days. I expect they were boosting the higher bands
a bit and perhaps the bass somewhat.

Skillfully applied, it CAN make a station sound quite good.

# 1226. micro radio

Newsgroup: rec.radio.broadcasting
Date: 1993-08-12 08:42:55 UTC
From: WEOS-FM <BLACK%HWS1%HWS.bitnet@CUNYVM.CUNY.EDU>
Message-ID: <CBn1JJ.tJ@news.cso.uiuc.edu>
Source record: 42665

A recent post mentioned allocating 88.1 - 89.1 for micro radio. Question: what about all the stations that are already there? How about the FCC allocating 87.9 MHz (in non-channel 6 markets) or some other frequency as a "micro channel" frequency. This would be similar to the amateur low power repeater pairs that are now allocated. Since the area's are only to be a mile or two tops, this could accomodate quite a few of these voices.
However, I disagree that their is a "right to broadcast." There is a right to communicate, but there are limitations placed on how you can do this. You can publish a paper or flyer, but money may not permit you to print it. You may not place it in mail boxes, as it is a violation of postal law. You could place it in doors or hand it to people. Public speeches are the same thing. You may be able to speak publically, there are limits to when, where, and how this accomplished. However, I have yet to see a constitutional interpretation that gives each citizen the right to broadcast. Even Email discussion lists have limits on what can be posted.
Perhaps the new "super information highways" will provide suitable outlets for this, and no one has touched upon DAB. If an out of FM band system is proposed, micro radio may be not even a concept anymore, or left alone to do its own thing. Time will tell.

# 1227. H or V polarization?

Newsgroup: rec.radio.broadcasting
Date: 1993-08-12 08:43:11 UTC
From: A.Cotroneo@it12.bull.it
Message-ID: <CBn1Jz.uH@news.cso.uiuc.edu>
Source record: 42666

I am resending a previous message since it was returned as it bounced.
I also made some correction, in case it was actually received.

---

Sorry if this might be slightly out of place in a radio amateur's newsgroup:

I have always been puzzled by the fact that most broadcasting stations use vertically polarized antennas, but still some do exists (e.g. in my hometown Milano) which use H polarization on FM. Forgetting all the theory, in pure practice, which would be the advantages and disadvantages of using H polarization instad of V or Circular? In the case of the FM station in Milano, the engineers chose H to try beating near co-channel interference from V polarized stations on very near frequencies. This happens in Italy where often we have more than one station on the same channel, and spacing may be as little as 100 kHz (no rules set by the PTT on this yet!).

As for AM broadcasting (we call it Medium Wave in Europe), would an H polarized antenna have an advantage for a low power **long distance/nighttime** station, assuming that the station has little interest in broadcasting during the daytime and does not want to cover the area next to the transmitter (no ground waves so to speak)?

I do not know of any example of H polarized AM/Medium Wave broadcast station in the world, so perhaps there is something wrong in what I am writing.

Any hint or reference to stations which use **H** polarization (and why) will be appreciated. Please reply by e-mail, and I will be glad to summarize if there is interest (I do not get a full feed of this newsgroup).

Thanks,

73,

# 1228. Using Selector

Newsgroup: rec.radio.broadcasting
Date: 1993-08-12 08:43:17 UTC
From: Mark Hayes <mhayes@alsvid.une.edu.au>
Message-ID: <CBn1K5.vD@news.cso.uiuc.edu>
Source record: 42668

Hi, everybody, and greetings from Lismore, Australia.
Does anybody know about or even use a computerised radio scheduling product called Selector, made by Radio Computing Services in New York?
I am teaching a course in computer applications in radio stations at the University of New England - Northern Rivers, and the core of the course involves introducing students to Selector.
I have done extensive literature searches, and turned up only one article on Selector.
The product is widely used, or so RCS in Sydney assure me. It has been put to me that nobody is prepared to talk about Selector, and how they use it, because radio is such a competitive business that nobody is going to help a competitor by even whispering about how they use Selector.
So, any information anybody might be prepared to share with me would be helpful - critical, comparative, evaluative, whatever. Anybody else out there, aside from the AFTRS and ourselves, teaching students how to use Selector?
Please e-mail me directly, and indicate if confidentiality is required.
Looking forward to hearing from you,

Source record: 42669

The design of FM braodcast antennas and the number of "bays" determines ERP. In most cases, depending on the design, 2 bays is unity gain. Any more is an increase of power gain. 4 is about double. and so on. However, depending on the design, the polarization is vertical, horizontal, or circular. Many stations opt for circular. Our ERI antenna's elements are in a twisted X shape. By varying the element placement, this can cahnge the pattern.
AM antennas use phase and power division to shape their patterns. This is accomplished by tuning units at the base of each tower and at the transmitter end. SOme of these AM arrays can be quite complicated. I remember a station in Detroit (or was it Chicago) that had a teardrop pattern.
I hope that sheds some light on this. It is a simplified account.

There are.. KGO 810 AM has their towers in the Newark area, if you are
crossing on the Dumbarton bridge, you pass right by their towers near the
causeway as you cross towards the Newark Side

Don't know about the number of the towers, but it's KIQI which is a Spanish
broadcaster "La Grande 1010"... and I'm not certain about this one either,
but I thought KDIA in Oakland had their towers out there too...

From: newman@netcom.com
Message-ID: <CBvuBo.7wA@news.cso.uiuc.edu>
Source record: 42673

Top-40/CHR stations are quite rare in Northern Californiia, and you have to do some SERIOUS DXing in order to enjoy the latest hits on the pop charts. Here is a list of stations I have DXed from two locations, Marin Co., and Sacramento. For some odd reason, broadcasters and advertisers tend to shy away from Top 40/CHR, even though it is a popular format, especially with the younger generations.

CALLS FREQ CITY NAME
KEWB 94.7 Cohassett B 94-7
KHQT 97.7 San Jose Hot 97-7
KWNN 97.7 Elk Grove/Lodi 97-7 K-WIN
KDON 102.5 Monterey K-DON 102-5

# 1237. Re: EBS & unattended operation

Newsgroup: rec.radio.broadcasting
Date: 1993-08-17 02:45:45 UTC
From: hhallika@tuba.calpoly.edu
Message-ID: <CBvuC9.7y1@news.cso.uiuc.edu>
Source record: 42675

I'd avoid the term "unattended operation", instead calling it
off-premises control, since the FCC still requires operators to be in
charge of the transmitter. Note that apparently the Communications
Act of 1934 was recently amended to allow broadcast stations to operate
without licensed operators, but the FCC has not put forth rules
reflecting this change. I heard they might introduce something by the
end of the year.
To satisfy the FCC with off premises control, I'd suggest the
following...
The off premises control point should have its own EBS receiver
(Gorman Redlich receivers are pretty inexpensive). 73.932(a) requires
the staff to be alerted immediately on receipt of the attention signal.
I'm not convinced that system that rely on dial-up to the control point
on receipt of EBS tones meets this requirement.
The off premises control point operator should have sufficient
control to fulfill the various requirements, including EBS. For EBS,
this includes being able to get announcements from the EBS checklist on
the air, getting EBS tones on the air, and getting emergency programming
(typically from the EBS receiver) on the air. If you are using dial-up
access, this can possibly be done by allowing the phone audio to go on
the air for the announcements and using DTMF to put EBS tones and EBS
receiver audio on the air.
The FCC tends to enforce rules that are not there with regard to
"failsafe" or alternate means of shutting down the transmitter. The FCC
Rule Clarification (FCC Public Notice 88-194) outlined a requirement
that a dial-up circuit, if used must be available for the exclusive use
of the operator or an independent method must be available to shut down
the transmitter. This requirement is not contained in the rules.
Various other parts of this clarification have been admitted to be in
error. However, an FCC inspector will often cite a station for
violation of 73.1410(e), which requires a station to be shut down
immediately when in an interference causing condition. I have argued
that one cannot violate this rule unless the station is causing
interference and doesn't shut down. The FCC has cited stations for
having the CAPABILITY of causing interference and not being able to shut
down. So, to be safe, I'd try to find some alternate means of shutting
down the transmitter, even though the rules do not require it.
Note that 73.1400(c) requires the FCC be notifed within 3 days
of starting to use a new control point. Control points must be at fixed
locations, not a cellular phone that roams.
Make sure the duty operators at the control point are qualified.
Can they run an EBS test? The FCC will likely ask off-premises
operators to do this during an inspection. Can they properly handle
actual EBS conditions?

Finally, I'd outline the proposed operation in a letter to the
FCC in Washington prior to beginning operation. They will generally
come back with an explanation of any shortcomings. If they approve,
you're pretty safe during an actual inspection. Note also that under
certain circumstances, the FCC may grant waivers of certain rules.
Skylight affiliate stations have been granted a waiver of 73.933 during
times the network is in control of the subscriber stations.
I would also be interested in hearing the experiences of
stations in off-premises control.

Harold

In reply to editorial rules for non-commercial stations:
At one time, non-comms. were prohibited from broadcasting editorials by FCC rules. However, the courts ruled that unconstituional, and therefore it is legal to have editorials on non-commercial stations. However, note that the editorial represents the views of the station, its management, and or owners( different than a commentary which is one person's opinion). So, you may have to determine, especially if licensed to a College or some other educational board or institution, whether or not they will permit editorials or not on the air, as an editorial could represent their opinion, which may be drastically different than your own, or that of the student staff.

# 1239. Estonian Radio closes external service

Newsgroup: rec.radio.broadcasting
Date: 1993-08-17 02:45:57 UTC
From: tijoma@uta.fi
Message-ID: <CBvuCL.7zz@news.cso.uiuc.edu>
Source record: 42677

The director of the Estonian Radio Mr. Herkki Haldre announced this week that all programmes in foreign languages will be discontinued since October 1st, 1993.

This means an end to the external service of the newly independent state. Estonian Radio has been been broadcasting in Finnish, Swedish and English on shortwaves and mediumwaves for decades.

Mr. Haldre told about the decision by phone to the representatives of the University of Tampere, Finland. The University of Tampere has had cooperation with the Estonian Radio for about three years. Students from the department of journalism and mass communication have been working at the Finnish language department of Radio Tallinn. They have read news, made radio programmes and teached Western radio journalism to their Estonian colleagues. Now this exchange comes to its end.

Mr. Haldre did not tell if the present broadcasts on short- and mediumwaves are replaced by relays from the Estonian Radio domestic services.

Many years ago, I paid a visit to NYC's Empire state buliding. Went up to the little round room just under where King Kong once stood fighting the airplanes. Antennas all over the place outside. There was a whole set of antennas mounted just under the windows, T shaped structures about 4 feet long mounted at about a 45 degree angle. About 20 of these. A note posted in the room said that this was a shared antenna system used by about 8 FM broadcast stations. Also noticed that the window glass had criss-cross ing grid of wires imbedded in it (to keep the intense RF fields away from the people in the room, and also keep the people in the room from getting out?). Anyone know the techinal details of designing and maintaining such an antenna system? I imagine that keeping the other transmitters' RF out of each transmitter could be an adventure. Probably use circulators (a gismo that uses some sort of electromagnetic black magic to send RF from one port to the antenna port, and reflections and other stations' RF from the antenna port get sent to a dummy resistive load).
Even more fun must be the political environment of keeping multiple stations happy. And what might go on when one of the station's program director gets into a pissing contest with one of the other stations' PD. I suppose the stations' engineering depts probably distance themselves from the PDs' ratings battles (like years ago when WPLJ and WHTZ went after each other's throats (WPLJ said stuff like "We're putting the squeeze on the Zit", and WHTZ, "Z-100" said "Don't listen to the Wimp")).

KVHS has been on the air since 1969 at Clayton Valley High
School. You can reach them at 1101 Alberta Way, Concord, CA 94521.
Phone +1 510 682 5847. I pulled this from my OLD Broadcasting Yearbook.
The station went on the air the year I graduated high school a few miles
away in Orinda. I've spoken with people at the station, but never been
there.

... and some mildly interesting DX sometimes fades in.

Last Tuesday night (8/10), about 23:45 east coast time (I live in Wilmington, DE), while waiting for MST 3K to start, I happened to tune into WGN, Chicago, 720 khz., to see if the Cubbies had won their game yet. Instead of WGN, whose signal usually screams in here at night, I was surprised to hear CHTN, Charlottetown, Prince Edward Island. Got the scoop on the latest ferry schedules to the mainland. Signal strength was excellent right up through midnight. By then, however, Joel, Tom Servo, and Crowe were calling ...

WRTH (1990) lists CHTN as 7.5 kw at night with directional antenna. Wilm, DE to P.E.I. is about 1400 km., eh ?

> ================================================================
>

How about just assigning micro-radio by what empty frequencies
there are in certain markets, for example, there are unused frequencies
in the Sacramento market on both AM and FM that would be perfect for
Micro Radio that are far enough away not to be "blown out" by more
powerful stations:

AM

1010-1080 KHz
1160-1180 Khz
1260 KHz

FM

89.7 MHz
90.5 MHz
92.9 MHz
94.5 MHz
94.7 MHz
94.9 MHz
99.5 MHz
102.9 MHz
105.5 MHz
106.9 MHz

In The Bay Area, there are presently the following frequencies

AM

540 KHz
790 KHz
870-890 KHz
930 KHz
1030-1080 KHz

1370 KHz
M

87.9 MHz
91.5 MHz
103.3 MHz

As you can see from the above examples, if Micro-Radio Licenses are ever granted by the FCC, they should let the frequencies assigned depend on what blank frequencies there are on all ends of the dial.

But this assumes rules and cooperation and a modicum of self-control.
What I hear from microbroadcasting proponents is that the FCC has no
authority to impose its rule structure on them. If the rules were
modified to define a portion of the band that would be usable for MB,
the kids would say that they had the "right" to use any portion of any
band they pleased. If you imposed a power limit, that would be declared
"unconstitutional".

If some kid got his hands on a 10KW FM transmitter and could arrange a
site and pay for the electricity, we would be at it all over again. If
the FCC has no right to control five-watt stations, why does it have
any authority over 10KW stations? So now, come to think about it, why
do we nasty commercial broadcasters need to pay any attention to the
FCC? What goes for a bunch of bored kids certainly goes for
broadcasting professionals, no? I think some power increases are in
order. Most FM receivers can handle 200KHz deviation, so let's turn up
the volume. FCC citations? They can stuff 'em. I think that the
commercial broadcasters can scare up enough legal talent to put the FCC
in its place, right?

My question is this: why is a little anarchy OK and real high-power
anarchy not OK? What will define the power limit on MB? Will be
determined by the limited equipment some kid can afford on his
allowance? What if the kid is a drug dealer and can afford a
Continental 70KW monster?

> If you have an effective broadcast radius of a mile or two, then 88.1 to 89.1
> would be PLENTY of room (for 6 stations), even in a relatively urban area
> full of relatively OK to do people (like Clear Lake City). The whole band
> would be even better.

In the SF Bay Area, 88.5 is the frequency of a mega-power
corporate-owned NPR outlet. With the necessary separations, etc., the
88.1 to 89.1 spectrum becomes pretty tight. Remember, MB children
consider themselves more deserving and legitimate than licensed

broadcasters. So if "their" band was occupied by a real broadcaster,
they would just go somewhere else and just break the rules.
Come to think of it, isn't that what they are doing now?

>a commie-lib to even suggest such a thing. :-) Bill]

I agree with Broadcasting Magazine's use of the "print model"
for the broadcast medium's free speech rights. The problem brought up
by critics is the public nature of the spectrum. People often argue

that since the government grants these valuable licenses to stations, a certain public responsibility (read "government control") is upon the stations. For example, the FCC threw out the "fairness doctrine" several years back, which required stations to provide an opportunity for opponents of views expressed to present their views. As I recall, Florida put a similar requirement on newspapers (an equal space requirement), but it was quickly thrown out in the courts. It seems to me that it obviously should not be required of broadcasters, yet there are bills in Congress to codify the Fairness Doctrine. Surely it is a good idea for broadcast stations and newspapers to cover a variety of viewpoints, but it is not up to the government to decide if the coverage is balanced enough. The scarcity argument is often used to justify the fairness doctrine, yet there are more broadcast stations than newspapers in most communities. What would the writers of the Consitution have put in the first amendment if radio had been around then?

Another example of government control of broadcast content is the Lowest Unit Rate, where Congress voted to give itself low cost broadcast airtime (lowest rate offered to a commercial advertiser, regardless of whether the political advertiser qualifies for the quantity discounts a commercial advertiser qualifies for). Congress is now considering requiring FREE political advertising of broadcast stations. Would they put such a requirement on newspapers? They'd have a hard time getting past the first amendment.

Violence warnings for television programs? Children's television requirements? Howard Stern? In each case, proponents of broadcast speech restrictions point to the "public trust" nature of broadcast licenses. The fix, in my opinion, is spectrum leasing. NAB is quite opposed to this, probably because it will cost their members money. We might, however, consider it to leases in national forests for the paper industry to make newsprint. I expect that eventually we'll see auctions for broadcast channel leases (probably for 20 year terms or so). This would also solve an accounting problem broadcasters have where they are trying to depreciate the value of their licenses when the renewal expectancy makes it hard to put a life on the license (as is typically done with other depreciable assets). Here, the life of the asset is 20 years. It has no value at the end of the term. The IRS cannot argue with its depreciation.

Finally, there is indeed more violence on television for my taste, and it may indeed have a detrimental effect on society. I would hope there are other ways of dealing with this problem than restricting freedom of expression.

Not necessarily.

Sure there are a great preponderance of 'Micro-Radio children' out there
without a clue and with an attitude. But just because there are those people
does not mean that micro-radio *its self* is bad. The current situation is
such that no legal, licensable, alternative to pirate radio exists. With
such a carte-blanche prohibition, and the imposition of <as I have said
before> draconian and truly outrageous fines it is not difficult to
understand why some of the proponants of this 'service' have gone a little
over the deep end in their dislike and distrust of the FCC.

>If some kid got his hands on a 10KW FM transmitter and could arrange a
>site and pay for the electricity, we would be at it all over again. If
>the FCC has no right to control five-watt stations, why does it have
>any authority over 10KW stations?

You either are missing the point here, or are deliberately distorting it.

Few serious proponants of micro-broadcasting espouse the philosophy that
there should be a 'wild-west' approach to the question. When faced with a
slammed door in the face, many people resort to tactics that may not be the
most logical and well thought out. Such is the case here.

There is a common myth that the airwaves belong to the public. There was
once a time when that was fairly true. Modern times have seen a near-end to
any semblance of that being true. It costs a small fortune to set up or
purchace even the most minimal station *if* you can secure a frequency.
These days, the airwaves belong to the corporations.

Micro-radio proponants are <as far as I can see> trying to bring about a change in the regulations so that small, lower powered stations can be ** licensed ** and operated by those who may not have 100,000 dollars to speculate with. In short, micro-radio attempts to re-claim a small sliver of the 'public' airwaves back to 'the public'.

>So now, come to think about it, why
>do we nasty commercial broadcasters need to pay any attention to the
>FCC? What goes for a bunch of bored kids certainly goes for

>in its place, right?

Again, John, you confuse the essence of Micro-Broadcasting with the antics of a handful of practitioners and 'wannabe' practitioners who are responding, albeit, poorly, to the reality that the FCC will not offer them a legal way to go about their hobby <if you will>. If the service were licensed, type-accepted equipment were made available, courses offered, and the whole 9 yards, I believe you would see fewer and fewer of these crybaby pirates and an increase of responsible micro-broadcasters. As it is, legit people shy away from micro-broadcasting because of its illegality. What is left is predominantly inexperienced, immature children who see this as just another way to rebel against authority.

>My question is this: why is a little anarchy OK and real high-power
>anarchy not OK? What will define the power limit on MB? Will be
>determined by the limited equipment some kid can afford on his
>allowance? What if the kid is a drug dealer and can afford a
>Continental 70KW monster?

Power limits would be determined by the license agreements. When a commercial station goes way over it's power or in some other way violates its license, what happens to them? They are sited and if found liable, fined. If the violations are wanton and/or repeated, they can lose their license. The same would go for micro-broadcasting.

Some micro-broadcaster proponants feel that the main reason the FCC won't license MB, is not for technical reasons (we all know that stable, clean equipment can be manufactured at a reasonable cost) but as a protection for commercial broadcasters. Some say that micro-radio would offer programming and points-of-view that might undermine the so-called 'stranglehold' that corporate broadcasters have on news and other information. I am not sure I agree with this assessment, but it is something to ponder.

>In the SF Bay Area, 88.5 is the frequency of a mega-power
>corporate-owned NPR outlet. With the necessary separations, etc., the
>88.1 to 89.1 spectrum becomes pretty tight. Remember, MB children
>consider themselves more deserving and legitimate than licensed
>broadcasters.

John, that is hogwash and you know it. The reason <as I have belabored many times> that the current state of MB is anarchistic is because the established rule-maker (FCC) refuses to assimilate the movement into legal channels, thus keeping legitimate operators out and attracting the CB crowd like files to a cow pasture.

You know, your argument could be directed toward Usenet. Every few days I log in to read news and I am confronted with a mile-long list of 'new groups' many of which are stupid and some out-and-out jokes. But that is another discussion :-).

Wanna see the current state of MB cleaned up in a hurry? Support its legalization and then come down like a wrecking ball on those who insist on being illegal even after they have been given a legal alternative. Period!

>So if "their" band was occupied by a real broadcaster,
>they would just go somewhere else and just break the rules.
>Come to think of it, isn't that what they are doing now?

I mentioned a while back that MB *could* be licensed to 87.7 and 87.9 in areas where there is no Channel 6 TV. In other areas it could be licensed to whatever frequency was available. If there was no viable frequency in a given location, then the MB station would not be licensed, simple. But there are few places where a space could not be found for a watt or two into a simple dipole, yielding a couple of miles <maximum> coverage.

I cannot see, for the life of me, why his is such a problem. If, indeed, the argument that the FCC is merely covering the standard broadcasters' ass by keeping the lid on MB, is false, then what is the hang-up? What are we afraid of? I don't get it.

# 1247. Review: A Passion for Radio

Newsgroup: rec.radio.broadcasting
Date: 1993-08-17 02:58:23 UTC
From: amarcho@web.apc.org
Message-ID: <CBvuxB.8By@news.cso.uiuc.edu>
Source record: 42685

```
/* Ecrit 2:02 pm Aug 13, 1993 par amarcho en web:amarc.radio */
/* ---------- "Review: A Passion for Radio" ---------- */

John L. Leary reviews Bruce Girard's book "A Passion for Radio"
in the Radio Resistor's Bulletin #4 August - October 1993.

Difficult Questions, Passionate Answers
=======================================

Bruce Girard's compilation of stories about community radio
from around the world, _A Passion for Radio_, is broad but not
deep. It is an ideal overview of many possibilities for radio
that has people, not markets, as its focus. I would heartily
recommend it as a survey piece. However, those looking for in-
depth analysis of any given situation are likely to be
disappointed.

_A Passion for Radio_ is always informative, and at its best
can be terribly exciting and gripping. Unfortunately, the writing
is inconsistent., and sometimes I found myself wishing that
Girard had found better spokespeople. I recognize that some of my
frustration may be the result of cultural bias, and I'm left to
wonder how deeply I've become dependent upon the commercial level
of energy and excitement in both written and electronic media.

A theme that carries through the entire volume, that
distinguishes true community radio from other radio philosophies,
is the question raised in Francois Laureys' piece on Amsterdam's
Radio 100, "Why should a small group of people have the power to
operate this radio? How could we involve listeners...in the
actual production of programmes?" These questions, and the
various attempts to answer them, define community radio. And
there are twenty answers in _A Passion for Radio_.

Some of the answers are horribly short-lived, as in the tale
of Radio Soleil of Haiti. It existed as a community station for
barely a dozen years. A church sponsored station, it broadcast in
Creole, the daily language of Haitians, and would question the
policies of the Duvalier government. radio Soleil was under a
great deal of political pressure until it was finally shut down,
for the first time, by the army in 1985. After further turmoil,
and being knocked off the air again, it eventually became
beholden to conservative elements of the church in 1989, and in
1991 became a "propaganda tool for the dictators."
```

Other answers operate on a shoe-string outside the law. Black Liberation radio in Springfield, Illinois is an example of a one watt micro radio station that, :During the recent war in the Middle east, ...was the only station in Springfield that offered a position vigorously critical of the U.S. government, with both the commercial stations and local university based NPR station busily involved in collaborating with the process of manufacturing consent." M'banna Kantako, the primary force behind BLR, urges others to support his challenge to the FCC by going on the air themselves.

And some answers are almost inevitable tied to broad-based social and political movements. The Feminist Radio Collective of Peru is a proactive response to the fact that "women's experience continues to be silenced and manipulated by the media." And in a more militarily violent conflict, the role of radio venceremos during the war in El Salvador is compellingly described.

So read away! Get inspired, get involved, get passionate. Or, as Serguei Korzoun writes about the radio station Echo of Moscow, "[It's] more than a passion - it's a veritable drug. But not one that kills.

I don't know, mine does the same thing! I also have both models.
I keep the II at work and the III at home. I DO like the wide/
narrow AM switch. It makes the local AM station sound real good.

# 1250. Howard Stern Monthly Radio Listing - SHORT FORM

Newsgroup: rec.radio.broadcasting
Date: 1993-08-17 02:59:06 UTC
From: drchuck@kilowatt.linet.org
Message-ID: <CBvuyI.8Er@news.cso.uiuc.edu>
Source record: 42688

*** WE'VE MOVED! PLEASE NOTE NEW E-MAIL ADDRESS ***

Welcome to the Howard Stern Radio Network list - short form! Here's what we've got for this month:

Last update: August 11, 1993

New stations in the past 30 days: -None-

Possbile new markets mentioned in the past 30 days: -None-

News on current markets:

Evergreen Broadcasting, owners of Chicago's WLUP-AM-FM, have indeed bought hard rocker WWBZ ("The Blaze"). Howard's future at The Loop is very uncertain, since his ratings have been pitiful. WLUP-FM is going all personality, very likely with Steve and Gary mornings.

The long form of this radio list, which includes the stations in all markets plus phone numbers to dial Howard direct, is posted monthly to alt.fan.howard-stern. If you do not have access to the alt.* heirarchy, drop me a note at drchuck@kilowatt.linet.org and I will e-mail a copy of the list to you.

As usual, please send via e-mail any new markets or changes to old markets. Catch you next month!

Chuck

## 1251. "safe harbor"

Newsgroup: rec.radio.broadcasting
Date: 1993-08-17 02:59:16 UTC
From: Robert J Halprin <0005582789@mcimail.com>
Message-ID: <CBvuyt.8GG@news.cso.uiuc.edu>
Source record: 42689

Someone asked this recently but I don't recall
seeing a response. That it, what is the current
status of the so-called safe harbor hours that
the FCC created for "adult programming"? I
seem to recall that a federal judge knocked
out the rule. What were the specific hours
involved? Is the decision on appeal? Any
other pertinent info would be appreciated.
Thanks!

# 1252. Re: "Urban" format question

Newsgroup: rec.radio.broadcasting
Date: 1993-08-17 02:59:28 UTC
From: af660@freenet.carleton.ca
Message-ID: <CBvuz4.8HC@news.cso.uiuc.edu>
Source record: 42690

"Urban" music/format is just a name given to black music (especially rap, I think) and the stations that play it.

Perhaps, it's because most of the music originates from inner cities.

Most of the terms used to describe music/formats are pretty weak out of the
the radio programming context anyway:

Country music? Initially developed in rural areas, but today's C&W is almost indistinguishable from "pop", except for twangy singers and pedal steel guitar.

"Alternative music"? Alternative to what? At first, this term could be applied to anything from the Sex Pistols to Frank Zappa! Now, once again, its almost always applied to music having a specific instrumentation (usually synth-heavy) and vocal style.

I haven't even started on "light rock","heavy metal", etc. . .

# 1253. Re: WRMR 1620 New York

In a previous article, markson@rapnet.sanders.lockheed.com (Dave Markson 603) 885-7678) says:

>I logged a station on 1620 (extended AM band) which surprized the heck
>out of me. The signal was quite strong and was playing classic rock
>music. The quality of signal was good but sounded tinny. A guy
>IDed as "The Big One 1620 WRMR New York". He said it served the Sullivian
>County area and was playing non-commercial music. Anyone else hear it? I
>logged it at 04:10-04:30 UTC Wednesday 8/4 (and it was still playing).
>It sounded like something you would hear on 7415, but the signal was
>propogating similar to WQEW 1560 New York, so it could not
>have been local to me (Southern New Hampshire).
>
>

Hmmm...

Less'n I'm going nuts, or there was a call sign change in the last month,
W R M R is licensed to AM-850, Cleveland, Ohio.

Formerly WJW-AM 850, this is the station that Alan Freed worked at when he
coined the term, "Rock and Roll". The station changed to W R M R about
seven years ago after a lengthy wrassle with a formerly co-owned TV station
(WJW TV-8 Cleveland) was sold, sold, and sold again.

I was at the WRMR transmitter site in North Royalton, Ohio (A southwest
suburb of Cleveland ) a little over six months ago. Horribly maintained,
but still maintains the same weird multi-tower day and night patterns.

I'm sure the Embrescia brothers (owners) would be most interested in this
use of their calls.

Message-ID: <2519ni$o4k@vixen.cso.uiuc.edu>
Source record: 42692

WQSU-FM, the radio station of Susquehanna University in Selinsgrove, Pa., will be celebrating its 25th anniversary as a rock station in 1994.

The school's PR people are planning a celebration, and are looking for as many former SU students who worked for WQSU as possible.

If you or anyone you know was involved with this station, please let us know!

E-mail responses may be sent directly from this post, or send to fishbein@einstein.susqu.edu

Thanks!

Jeff Fishbein

# 1256. FM Broadcast Antennas

Newsgroup: rec.radio.broadcasting
Date: 1993-08-20 01:34:45 UTC
From: cambler@cymbal.calpoly.edu
Message-ID: <2519nl$o4m@vixen.cso.uiuc.edu>
Source record: 42694

I was looking through an old (1966) antenna handbook, and they described an interesting antenna called a DDRR (Directional Discontinuity Ring Radiator) which seems to be 2 circles, one on top of the other. It said, at the time, that this was a very experimental design.

But now, this looks like things that I see all over the place as "standard" FM antennas. Is this the case?

While I'm at it, what *is* the current theory on the best FM antenna system?

# 1257. More Questions.

Newsgroup: rec.radio.broadcasting
Date: 1993-08-20 01:34:47 UTC
From: epj2@Ra.MsState.Edu
Message-ID: <2519nn$o4n@vixen.cso.uiuc.edu>
Source record: 42695

Thank you for the answers about classes of FM broadcasting stations.

Now, if you don't mind, some more questions.

1) Are there classes of AM and TV stations (other than the obvious AM
"Clear Channel"?

2) I know the basic idea of polarization, but what is the significance of
a certain orientation for certain bands? The last FM I worked at was
50kW H&V. And I have read on this group that AM's are vertical and that
most FM's now are either Horizontal or Circular. Also, if you polarize
in more than one orientation, does the sum of your ERP's in each orientation
have to add up to your total allowed ERP, or can each be the max ERP?
(ie, the 50kW H&V mentioned was a 100kW class C)

Posts are appreciated. Thanks in advance.

> I imagine that
> keeping the other transmitters' RF out of each transmitter could be an
> adventure. Probably use circulators (a gismo that uses some sort of
> electromagnetic black magic to send RF from one port to the antenna
> port, and reflections and other stations' RF from the antenna port
> get sent to a dummy resistive load).

The combined setups I've seen use a combination of high, low, bandpass,
and band reject filters to keep everything pointed in the right direction.
They use hybrid combiners ( a 4-port widget that has 2 goesintas and
2 goesoutas ) that operate similar to the circulators you mentioned.
If one of the transmitters goes down, a lot of signal gets dumped into
the reject dummy loads on the combiners. Often the other stations
will have to drop power or go off completely to keep the combiner
system from self destructing. Of course, the systems I'm familiar with
have 4-6 20-30KW transmitters feeding it. A _lot_ of RF power to deal
with when things aren't going right. Often, the stations can fall
back to individual standby antennas and lines at a low power until
everything is ready to come back up properly. These combined setups
are generally all-or-nothing.

The ports are generally sorted by frequency in these setups.

Example:
Station KAAA 92Mhz
Station KBBB 96Mhz
Station KCCC 100Mhz
Station KDDD 104Mhz

KAAA is combined with KBBB, and then combined with KCCC.
Then KDDD is added in last and sent to the feedline and antenna.

If you care, I'll come up with a system diagram of how this
goes together. It's pretty neat, if you're into this stuff.

> Even more fun must be the political environment of keeping multiple
> stations happy. And what might go on when one of the station's program

> director gets into a pissing contest with one of the other stations' PD.
> I suppose the stations' engineering depts probably distance themselves

> after each other's throats (WPLJ said stuff like "We're putting the
> squeeze on the Zit", and WHTZ, "Z-100" said "Don't listen to the Wimp")).

Most of the time the engineers stay out of the programming politics,
but sometimes the engineering politics are almost as bad at a shared
site:

"Oh, sorry about that... I needed a 3 1/2" bullet and a 4CX250
last night to get back on the air... you weren't using your backup
transmitter at the time..."

Or having to explain why somebody elses poorly maintained transmitter
keeps dropping off the air and takes your station down with it...

Or coming up with an agreed on time that the whole system can be brought
down for maintanance or repairs...

I am also a ham radio operator, and I have been interested in broadcast stations and their antennas for many years. Don and Tom mentioned KGO's antennas on the east shore of the San Francisco Bay. 50KW day and night with a phased pair (or is it three?) of towers that pokes a null out toward the Stockton area, and presumably favors a path up and down the Pacific Coast. I can hear KGO quite well here in Salt Lake City after sunset on the coast. One of the most impressive AM transmitter towers that I have ever seen belongs to KFI in Los Angeles (actually the transmitter/ tower is located next to the Santa Ana freeway southeast of L.A. near the Orange County line). I think that it is a 5/8 wavelength on 640 KHz but I am not sure. It is big and tall. KRAK up by Sacramento has a five tower array. Also, the towers that you find out in the flatlands for the television broadcast stations can be very tall. The Sutro tower near San Francisco is an immense triple tower structure which has most of the S.F. TV broadcast antennas on it. I have been here in the Salt Lake City area a short time and have not toured any of the stations around here yet. KSL on 1160 is a 50KW station, but I do not know about their antenna system. Most of our local TV and FM transmitters are on Farnsworth Peak (named after Philo T. Farnsworth, one of the country's television pioneers) just southwest of Salt Lake City.

* Infinity's Classic Rocker WZLX-FM 100.7 has finalized its weekday
line-up :

6-10am Ken Shelton
10-3pm Tom Sheridan
3pm-7pm Chuck Nowlin
7pm-12am Ann Cody

WZLX has really softened its play-list in recent weeks. WZLX's last
rating book showed some serious dips in all parts of the day.
'ZLX is going thru an identity crisis somewhat because of what's happening
with its big AOR sistser station WBCN-FM which still plays alot of the same
'classic rock' songs you hear on 'ZLX. Supposedly, Infinity's idea's
was that with acquistion of 'ZLX in February, 'BCN would cater exclusively
to the 18-34 male crowd(addition of Howard Stern to its night-time line-up was
a perfect example) and play more modern/progressive rock. It's already
middle of August, and 'BCN still plays more Led Zepplin and Steely Dan than
it does Stone Temple Pilots or Pearl Jam. It's obvious those over 34 year-old males
still want their rock from 'BCN and not 'ZLX. 'ZLX and 'BCN competed
against each other for 7 years until earlier this year when 'ZLX became
part of the same company(Infinity). Will 'BCN drop 'classic rock' songs
from its format and try to 'force' older males in its audience to
switch to its 'classic rock' sister station? I think so. But it wouldn't
happen over-night. 'ZLX has already imported one of the ex-'BCN senior DJ's for
its morning slot. 13-year 'BCN mid-day man Ken Shelton has been doing
a morning show there as of late July. With Howard Stern most
likely shifting from night to mornings on 'BCN early this fall,'BCN
will slowly but surely become more contemporary sounding rock station
with a rock attitude.

* Boston's #1 radio station WXKS-107.9FM(KISS-108FM,CHR) added a new
personality to the highest rated morning show in the city. Lisa "Trax"
Traxler joined Matt Siegal's "Matty in the Morning" as a trafiic/feature
reporter. Most recently, Lisa was 7-11pm jock on WZLX-FM. She replaced
Judy Peppareli who quit that position a week ago.

On yesterday's show, Siegal also announced that his 7-year producer
Rich 'Rocky' Buono died of AIDS on Saturday at age 34. Buono was at WXKS
for almost 10 years. He also worked at WBCN and WFNX early in his career.
Buono was the voice behind a dozen characters on Siegel's show.

It is? Here in the Upper Valley, former CHR station WHDQ (Q-106,
106.1FM Claremont NH) changed its format from CHR to AOR because we at
WFRD were killing them in the ratings. I believe we still are -- I
don't have the rating figures handy, but I'm pretty certain we're neck
and neck with a country station for #1 in the market, while 'the Q' is
lagging behind.

> KHTN 104.7 Merced Hot 1-0-5~r
>

Besides being rare, most of these aren't even "top 40s." Sadly, most of them are dance/urban/CHR hybrids.

Also, I believe I saw a listing showing KEWB flipping to country last week.

CHR's are a dwindling off. Most markets around here are down to one or two, and often it is one of the CHR hybrids (adult top 40, rock 40, dance top 40). Some markets (Laredo and Texarkana, for example) don't really have any top 40.

A few years ago, Dallas and Houston had 3 and the Waco/Temple/Killeen area had 4.

[Bill Sez: OK, I'll bite. If CHR has split into the above sub-catagories, what IS real CHR anyway? Bill]

[From Edupage - cmk]

FAIRNESS DOCTRINE SUPPORTED. The Fairness Doctrine, which was
largely dismantled by the FCC in 1987, is the subject of
legislation introduced by Representatives Edward Markey (D-Mass)
and John Dingell (D-Mich). The draft Fairness in Broadcasting Act
would "guarantee even-handed treatment of controversial issues"
over the air. Several attempts to resurrect the Fairness Doctrine
since 1987 have been unsuccessful. (BNA Daily Report for
Executives 7/27/93 A9)

# 1269. Is there such thing as an omnidirectional antenna in 3 dimensions?

Newsgroup: rec.radio.broadcasting
Date: 1993-08-20 01:47:16 UTC
From: roberts@ishtar.med.jhu.edu
Message-ID: <251af4$olk@vixen.cso.uiuc.edu>
Source record: 42607

[I originally posted this to sci.electronics, but I thought that the device that I'm looking for might be something that is in common use by amateurs and broadcasters. Sorry if it doesn't seem relevant. dcr]

Hi all,

I'm looking for an antenna of some sort that I can use as an omnidirectional field strength indicator. We have a system that produces 3 orthogonal (at 90 degrees to one another) magnetic fields at 3 frequencies. The 'emitters' are mounted on a 40 inch cubical frame, so that at the center of the cube, you get 3 fields that are approximately orthogonal to each other. We use it to measure the gaze direction of the eyeball by placing a small coil of wire embedded in a contact lens onto the eye. A wire is run from the eyecoil to an amplifier which separates the 3 frequencies and gives us the strength of each of the fields as picked up by the (very directional) coil of wire. To get our math right, we need to detect the relative strength of the 3 fields very near the eyecoil.

>From basic Electricity and Magnetism, I think that a point is the only 'perfect' omnidirectional antenna. What I'm looking for is some real-world, practical implementation that is omnidirectional to within a small fraction of a percent. Does anyone know if such a thing exists? Ideally, it should be fairly tiny (< 2cm or so) since I'm working on a relatively small scale.

Thanks in advance,
dale, roberts@ishtar.med.jhu.edu

# 1270. Re: High School Radio FM

Another High School station to talk to would be KSRH-FM 88.1 at San Rafael High School in Marin County (my alma mater!). They have been on the air for over 12 years now, I think.

Their phone number is (415) 457-5314.

# 1273. IRRS-SW back on air

Newsgroup: rec.radio.broadcasting
Date: 1993-08-20 01:47:31 UTC
From: "Alfredo E. Cotroneo" <100020.1013@CompuServe.COM>
Message-ID: <251afj$olo@vixen.cso.uiuc.edu>
Source record: 42611

Dear listeners and friends of IRRS-Shortwave,

Thank you for the many messages and best wishes which reached us via e-mail, fax and phone after our latest unfortunate event.

IRRS-Shortwave is finally back on the air after our wonderful engineers brought our transmitter back into life. After just about five days since we were forced to leave the air, IRRS-Shortwave restarted regularly scheduled broadcasts as of Saturday Aug. 14 at 13 hrs Central European Time (11 UTC).

Our shortwave service was discontinued after a severe thunderstorm hit the area sorrounding Milano on Sunday August 8 at aproximately 22:40 CET. As our engineers found out, the lightning hit directly our power lines, started a small fire inside the transmitter, which in turn caused considerable damage to the electronic circuitry and internal cabling. No other equipment, including the antenna, suffered in the incident, but it tooks days and nights of hard work to bring the station back on the air.

This was not the first episode this year (actually the second in just about 60 days), and not the first in the four years of regular operations on Shortwave. It must be worth noting, however, that despite a series of lightning protection devices which were installed last year, such damages can hardly be avoided when lightning hits directly. The period of July-September has proved to be the most dangerous one, as all similiar incidents in the past happened during this time frame. The favourable position of the transmitting location, its extremely good ground conductivity - which makes our transmissions so effective despite our low power -, also make our equipment more vulnerable to summer lightning.

WE WANT TO CELEBRATE, and so decided to continue our new series of transmissions MON-FRI from 13 to 22:30 CET, in addition to our regular schedule on 7,125 kHz (41 metres), featuring a selection of our best Saturday and Sunday programs. And more of the best programming heard on shortwave is coming next, with the return of some old friends of ours, and some other brilliant non-religious broadcasters coming (very) soon! (Please do not ask, more on that in an official press release coming next)

Let's keep our fingers crossed, and let ourselves wish good luck for the future: we have not much money left in our pockets this year for yet another big maintenance (just in case anything happens again). Your direct support in terms of suggestions, letters, faxes, e-mail, phone calls and anything else you would like to share is very much appreciated.

Thanks again for listening, and stay tuned !

## 1274. What's up with KFRC San Francisco

Newsgroup: rec.radio.broadcasting
Date: 1993-08-20 01:47:32 UTC
From: testnet!phn@pegasus.att.com
Message-ID: <251afk$olp@vixen.cso.uiuc.edu>
Source record: 42612

I'm hearing rumblings about changes at 610/99.7 in SF; that the AM & FM are simulcasting; that the FM is playing newer oldies than they used to, etc. Any comments from that Bay area?

# 1275. Baltic Radio International - soon on the air?

Newsgroup: rec.radio.broadcasting
Date: 1993-08-20 01:47:33 UTC
From: tijoma@uta.fi
Message-ID: <251afl$olq@vixen.cso.uiuc.edu>
Source record: 42613

Baltic Radio International will be on the air "this summer", says the general manager of the radio station, Mr. Paul Rusling.

This commercial radio station broadcasts on 684 kHz with a power of 200 kW from a transmitter site in Palanga, Lithuania. The antenna is directed towards Oslo with side lobes targeted towards Helsinki, Stockholm and Copenhagen.

BRI has already started building work at its new transmitter site in Lithuania. In January, the British company signed an agreement with the Palanga local administration. In accordance with this agreement, BRI has secured a plot of land for 15 years. Every year they will pay Palanga USD 20000. General director of BRI, Mr. Paul Rusling, gave an interview in which he said that he was not afraid of rivals, but acknowledged that they exist and could hinder the intention to target advertisements in Scandinavia. BRI will build six radio masts, a transmitter building, generator and premises with a reserve studio, all costing GBP 1400000. BRI programs will consist of pop music, with several minutes of advertisements every hour. Mr. Rusling has said that the station opening this summer will feature Elton John and other rock stars.

---

That was the news, quoted from the Swedish dx-publication "MV-Eko" which has used "Lietuvos Rytas" newspaper and Lithuanian journalists as their sources. It seems that this strange radio station really will be on the air despite many doubts. However, Scandinavian dx'ers have heard nothing on 684 kHz, except Radio Baltika, which is a private radio station in St. Petersburg, Russia.

Personally I am rather suspicious about the future of this radio station. Remember that Radio Luxembourg already closed their English channel. The Scandinavian market for a commercial English language radio station is even smaller than that of Radio Luxembourg in the heart of Europe. Furthermore, listening to an AM/medium-wave station in Scandinavia is more a curiosity because everything goes on FM. Finland, Norway and Denmark already have commercial radio stations (exclusively FM stereo) with their share of advertising market. Commercial radio is launched in Sweden within coming months. And, finally, the state-owned radio companies in Scandinavia have rather good and popular rock-channels and Norway will have its own from the beginnig of October. Thus, BRI will face a hard market if they really want to have listeners and advertisements. They will have approximately the same problems as Radio Luxembourg had with their English channel on 1440 kHz. But perhaps there are so strong market forces behind BRI that they'll overcome these troubles.

It is really interesting to hear what happens on 684 kHz in the near future - if anything happens.

# 1276. Re: Micro Broadcasting

Newsgroup: rec.radio.broadcasting
Date: 1993-08-20 01:47:34 UTC
From: jherman@uhunix3.uhcc.Hawaii.Edu
Message-ID: <251afm$olr@vixen.cso.uiuc.edu>
Source record: 42614

There is available a means for someone to operate a non-comercial radio station legally, utilizing up to 1500 watts (PEP), using ANY antenna at ANY height (with respect to any local restrictions), on frequencies which provide worldwide reception. A license for this service can easily be obtained through studying a little radio theory, learning the appropriate international rules and regulations, and being able to copy Morse code at 13 words per minute.

If one wants to only transmit, say, within a 50 mile radius, the requirements are even simpler: no Morse code requirement is necessary to transmit on the VHF bands.

The equipment is not expensive; in fact the license allows you to build your own equipment from scratch.

This is called the Amateur Radio Service. That this means of owning and operating a transmitter exists might be one reason the FCC is turning a deaf ear to even considering making micro-broadcasting legal. They might fear that the AM and FM broadcast bands might turn into something similar to the earlier monster they created called Citizen's Band.

Bill, et al, why try to duplicate something that is already available to every citizen?

If a person has a desire to own and operate a transmitter, maybe we should try to channel his/her interest into this worthwhile activity.

Jeff, Amateur Radio Station NH6IL

Jeffrey Herman, University of Hawaii Mathematics, jherman@hawaii.edu

[Bill Sez: One problem, Jeff. While amateur radio is a wonderful service populated, in general, by fine people (no I am not being sarcastic) the issue is not operating a transmitter, but *broadcasting* which is specifically prohibited on amateur bands. What is being attempted, is not to duplicate the services available on amateur radio, but to provide a service by which individuals, not endowed with limitless wealth, can operate *on the standard broadcast bands* with enough power to, say, cover a neighborhood or small community, but less than their full-powered counterparts. In short, reclaiming some small sliver of the austensibly 'public' airwaves. Bill]

# 1277. Stations Playing '70s/'80s Pop Music?

Newsgroup: rec.radio.broadcasting
Date: 1993-08-20 01:47:54 UTC
From: john.simpson@sdrc.com
Message-ID: <251aga$on7@vixen.cso.uiuc.edu>
Source record: 42615

A station in Dayton, OH, WMMX-FM 107.7, airs a weekly show called "Saturday Night Mix", in which popular songs of the '70s and '80s are played. The selections range over everything from mainstream rock to new wave to disco. I enjoy this show as a refreshing change from the same old formatted programming. I'm curious as to whether any other stations out there are doing this, or are airing this type of format full time. If so, what sort of ratings do they bring in? It seems as though there would be quite a big market for this type of format, but perhaps it is a few years ahead of its time right now. Also, I suppose that after a while, this type of format would get just as stale as any of the other well-established formats.

# 1282. WRMR using Cleveland call letters

Newsgroup: rec.radio.broadcasting
Date: 1993-08-20 01:53:38 UTC
From: testnet!phn@pegasus.att.com
Message-ID: <251ar2$ov1@vixen.cso.uiuc.edu>
Source record: 42620

Paul "Amy O Toole" Philips commented about WRMR 1620 being the same call letters as 850 Cleveland; it is not uncommon for pirate stations to choose letters that are already in use (just ask WHOT Youngstown), being that the letters are often chosen for the pirate's own desires. WRMR could be "the warmer one", "Radio Monticello Radio", or even Richard M. Rothstein, if such person is operating WRMR. Surely you understood that WRMR-1620 is a pirate station...

> KY that tape delays the program for broadcast after I get off work.

Not in the evening that I know of, but if you have insomnia:

WLS Chicago 890 KHz 50 KW 12-3 AM (pretty sure of the times)
WWWE Cleveland 1100 KHz 50 KW 11 PM-2 AM (very dependable)
WHIO Dayton 1290 KHz 5 KW 1-4 AM (pretty dependable)

I think there's an Indianapolis station (WNDE - 1260 AM) that plays him
late
too, but I have trouble getting it in Cincinnati.

WABC (New York - 770 KHz, 50 KW) used to play him from 2 to 4 AM - they
routinely play their daytime stuff over but they shuffle it around quite
a bit. My best bet is always WWWE.

Good luck getting the Dayton (OH) station - you might be able to pick it
up in Lexington. If there's Reds baseball in the afternoon, they re-play
Rush after the game.

BTW, I think WLS plays the tape back at a higher speed than it was
recorded;
I assume they do this so they can cram more commercials in (as if Rush's
show needed MORE commercials!) Is this common?

# 1284. Re: "safe harbor"

Newsgroup: rec.radio.broadcasting
Date: 1993-08-20 01:53:52 UTC
From: skmurphy@phoenix.princeton.edu
Message-ID: <251arg$p0b@vixen.cso.uiuc.edu>
Source record: 42622

As of January 1993, the FCC conceded that "safe harbor" begins at 8 pm and lasts until 6 am. This means that indecent material may be broadcast during these hours, when accompanied by appropriate warnings and disclaimers. Of course, Helms & co. are still fighting for a 24 hour ban on indecency, and the last FCC report I saw (again, from Jan. 93) calls for a midnight - 6am ban (except for stations which shut down at midnight - they could use 10pm to midnight for indecent material). So, until there's a new report or other ruling, it's 8pm to 6am (but if you're running a station, play it safe...I'm the station manager at WPRB-FM in Princeton, NJ and we're trying to keep most stuff until at least 10 pm just so we don't run into hassles with the FCC...I'm just not in the mood to go to court with them, even after writing a 40 page paper on this stuff last semester.)

While on broadcast regulations, what are the current requirements for the Public Inspection File? I'm in the process of updating ours (since my predecessor never did it, it's now over 1 1/2 years out of date), and I'd just like a sumary of what has to be there. Thanks in advance.

(sort of a multiple-question posting.. :) )

Anyway.. what sort of receiving antenna would anyone recommend for best AM DXing? The receiver will be a Sony STR-AV970 digital tuner, probably not the best thing imaginable for this sort of activity, but it works. It's got a 300-ohm type connector on the back (well, two connectors, one for active and one for ground, presumably) and comes standard with some sort of twisted loop-type antenna, which never really functioned all that well. I'll be using it on the ninth floor of an apartment building in downtown St Paul, Minnesota (I assume this makes a slight difference) and have access to a window, out of which I can dangle a wire antenna for a vertical-type antenna, if anyone thinks that would work well.

Question/observation two is this.. there are two radio stations located in southern Minnesota, one in Faribault (95.9 FM) and one in Mankato (93.1 FM.) The call letters are wildly different, although mental block prevents me from remembering them right now, and they have different live DJs, different ads, and they're also around 75 miles straight-line from each other. However, they appear to be counterprogramming the hell out of each other - flipping back and forth between the stations, as you are able to do in the southern metro area here in the Twin Cities, you'll notice that they are often (probably 60% or more of the time) playing the same song. This is somewhat similar to what happened to KQRS and KLXK here in Minneapolis about a year and a half ago - anyone locally might remember that situation - but it seems strange to me that that sort of programming would take place when the stations are in different markets. Anyone have any ideas about this?

Thanks in advance,
-b.

# 1290. Re: Micro Broadcasting

Newsgroup: rec.radio.broadcasting

I've been hesitant to jump into this dialogue, especialy because I could be seen as a representative of one of the Big Evil Monolithic High-Powered Broadcasters. OTOH, I've also done my share of community and even (sshhh!) unlicensed broadcasting, so I can safely say I've seen this issue from most every side.

I am extraordinarily hesitant about the idea of allowing ANYTHING new on the standard AM or FM broadcast bands in most parts of the country. I have long advocated a complete freeze on the FM band, and I maintain that such a freeze would have prevented the financial and technical mess that has resulted from Docket 80-90. In many parts of the country (my hometown of Rochester NY for example), the FM band has rapidly filled up to the point that reliable, well-programmed stations from distant cities are now blocked out by failing stations that many times don't do any original programming. And I am unconvinced that there's any technical way to accomodate large numbers of unlicensed or minimally-licensed broadcasters, even at low power, on the FM dial in most parts of the country. I live in fear of the day some low-power broadcaster decides 96.5 is an "open" frequency in Boston, and puts up his 10 watts on there -- neatly cutting out any chance I might have of hearing the licensed full-power station on that frequency in Hartford CT. At least here, there are NO frequencies available even at 10 watts -- just ask licensed WRBB 104.9 at Northeastern U., which is desperate to move off its curren channel and can't find a new one. And don't try to tell me the FCC will quickly put anyone off the air who interferes. They alread are so short-staffed that they've been unable to respond to an interference problem with a licensed station hereabouts.

So what about all these would-be broadcasters out there? Let's remember the wording of the Communications Act. The airwaves are for the public good, right? I interpret that as meaning for the good of the millions who listen to their radios, not the relative handful who actually do the broadcasting. The public is NOT served by zillions of tiny one-person stations that pop up once every other night or so depending on what their owners feel like doing. The public is NOT served by stations that exist just because their owners want to hear their voices on the radio. The public is NOT served by interference to licensed, established operations.

Bill, you asked about the people who want to broadcast, not just do amateur radio. It's a valid question, but it's also one with an easy answer. There are a lot of community stations out there that not only want, but in many cases urgently need volunteers. Here in my area, WBRS-FM at Brandeis University is a good example. (Disclaimer: I speak as a former news director of that station). Will you always get to program exactly what you want to program? Will you always be able to go on the air at the exact moment you want to? No. But frankly, that's tough. Anyone who wants to move past that level to commercial broadcasting will find it gets more and more constricting as you move up. And in areas with no community station already, it's likely there's also enough RF space to start one.

Some other ideas: In most metro areas, there's at least one full-power AM station that leases time. Ask around, and you'll be amazed at how low the cost is. It IS possible to buy an hour of airtime on a 5000 watt station serving a top-10 market for $25. The airwaves are not expensive to get into that way. And although the number of locally-programmed AMs continues to shrink, there are still plenty of stations where people who want to get on the air can do so. One AM station south of Boston is actually looking for volunteers to do talk shows!

All it takes is a willingness to look beyond the stubborn, "I want my OWN station" philosophy...and I think you'll find there is room out there for just about anyone who's serious about broadcasting.

That leaves just one issue, and it's the one I have yet to resolve fully...the issue of broadcasting to serve a limited community. I have my doubts that many of the people advocating "community broadcasting" really want to _serve_ their community rather than themselves. But for those that really do, there should be something. 87 Mhz will never fly politically, because of the intense opposition from the channel 6 members of the well-connected Association of Maximum Service Telecasters. Perhaps a channel or two in the expanded AM band should be set aside for 25 or 50 watt broadcasters, possibly on a daytimer basis to prevent the channel from turning into hash at night? I don't know.

But what I do know, and have always believed, is this: The listening public is best served by a radio dial free from interference, with broadcasters regulated by strict public service requirements. (And yes, I do think

they should be stricter!)

And if that makes me sound like a Big Monolithic
Commercial Broadcaster, that's just too bad...

-=Scott Fybush - fybush@world.std.com=-
I speak for me.

I could not agree more with your assertion regarding the 80-90 mess. But in a strange way that makes my point. The FCC is willing to throw open the floodgates, as it were, and allow drop-in FM's; some in marginal coverage areas of existing class-B and C stations, with no regard what-so-ever as to the viability of these stations, or their intent to serve their community.

Yet, they slam the door on considering a class-of-service that, while still unproven, has the potential of bringing a fresh perspective to many areas and communities.

} And I am unconvinced that there's
> any technical way to accomodate large numbers of unlicensed
> or minimally-licensed broadcasters, even at low power, on

I never claimed to support the current and widely publicized 'willy-nilly-go-wherever-I-find-a-clear-spot-and-broadcast' approach to micro-radio. What I have said is that the '*concept* of micro-radio is viable and could become a great
thing. And I maintain that position.

Also, I have stated clearly that I believe these micro-stations should be a clearly defined 'secondary services' and should be licensed on *specific frequencies* as specrtum space permits. In Chicago, too, it would be difficult to satisfactorily locate such a station, although that problem has not stopped the Commission from licensing 100w school-based stations in such a way that their grade B+ contours seriously overlap in may areas.

Example 1: In Milwaukee Wi., class-A suburban WFMR (classical 98.3) had problems covering the desirable Northeast shore and University area of Milwaukee. They applied for, and received, a translator in that area on 104.9 (with about 5 watts). Interesting that the signal from WTKM Hartford Wi (about 25 miles N.W of Milwaukee, also on 104.9 with 6000 watts) was so strong that when you drove in the area of the translator, it picket-fenced with the classical music and if you were 3 or 4 miles west of the translator, WTKM became dominant again. The translator has since gone dark due to a combination of irate lsiteners to WTKM (the area's only all-polka staion) and the fact that WFMR received an upgrade from 3kw to 6kw, alieviateing SOME of their problems in that area.

Example 2; I enjoy WZRD fron Northeastern Il Univ. A 100 watt signal some 7 - 8 miles from me. Yet in my car, I get picket-fencing from another 100 watt signal over 25 miles South of me, (WXAV - Xavier College) that went on-the-air a year or so ago, long after WZRD . If I drive another 5 miles south, WZRD is all but gone and XAV
is right in there with full stereo. 15 miles S.W is a highschool FM with 250 directional watts and the Commission is entertaining another license on WZRD's frequency, in N.W suburban Palatine that would surely chop off WZRD's N.W coverage area.

My point? That the Commission is clearly unconcerned about interference to long-standing licensed stations, yet they are unwilling to even look at the potential viability if micro-radio which, if licensed and regulated would not create a fraction of the interference that a 8-90 drop in or even another 100 watt 'educational' station in a crowded metro. Also,
regardless of what our *opinion* of the micro-radio programming might be, it is un-likey to be Satellite Music Network .

>[...] And don't try to tell me the FCC will quickly
> put anyone off the air who interferes. They alread are so short-
> staffed that they've been unable to respond to an interference
> problem with a licensed station hereabouts.

Good point. But they seem to have plenty of staff to locate and silence a one or five watt 'unlicensed' station and sock them with a heafty $20,000 fine.

Let's not forget WCFL-FM who was tilting their directional antenna toward Chicago, from their 50 - 60 mile-away tower in an effort to snag some suburban listeners. They were sited, shut down for a few weeks and fined. They were allowed on the air on 'probation' provided proofs
of performance were maintained (and their Chicago metro coverage dropped off to fringe at best). Complaints about over-zealous micro-broadcasters would likely come from the broadcasters who they bothered. that's how WCFL got hit.

> So what about all these would-be broadcasters out there?
> Let's remember the wording of the Communications Act. The
> airwaves are for the public good, right? I interpret that
> as meaning for the good of the millions who listen to their

Quite true.

But is the public served by hundreds of 80-90 drop-ins which do a hell of a good job interfering with other licensed services? Is the public served by a station comming on-the-air with no local content other than, perhaps a weather forcast and local commercials? The commission has no trouble *serving* the public in that way.

Who is served by duopoly? The 'handful' of operators or the 'millions' of listeners? That seems painfully obvious. I know the argument about duopoly having the effect of increasing the 'coffers' of management so they can get better programming. But do they? What I see is more musical chairs, not breakthrough programming. Clearly duopoly servees the broadcasters first and the listener second, if at all.

> The public is NOT served by zillions of tiny
> one-person stations that pop up once every other night or
> so depending on what their owners feel like doing.

Why do they 'pop up once every other night'? Because they are afraid of getting caught and fined. Simple. Most pirates would gladly be on more hours if it were not for this fact. What about licensed stations (especially talk stations) that merely repeat their daytime programming on tape overnights rather than *pay for* all this cutting-edge programming that duopoly is supposed to bring to the listener's ears? Is that serving the public or the broadcaster? OK, a point can be made that those who work different hours can hear the daytime programming, but is that why the stations do it? Hell no. They do it to save money. Simple.

A legalized micro-radio class would quickly weed-out the child-pirates. It could have very similar requirements to the commercial stations. Minimum hours of operation, and those stations who couldn't/wouldn't operate the minimum hours would be (perhaps) subject to the granting of another staion on their frequency with which they would have to share time.

> The public is NOT served by stations that exist just because
> their owners want to hear their voices on the radio.

Excellent point. I agree that Rush Limbaugh and Howeird Stern do not serve the public good .

> The public is NOT served by interference to licensed,
> established operations.

True again, the public is NOT served by the vast majority of 80-90 docket stations. Yet they are licensed, more every day, most with minimal or NO local content, placed on the air for the sole purpose of generating cash, and/or maintaining a licnese for future sale.

Licensed micro-radio would likely be all locally programmed. Since they cover only a small area, their resale value is limited, if there is any at all. Also, the rules could be set up so they could not be sold, but only surrendered if and when the operators gave the thing up.

> Bill, you asked about the people who want to broadcast,
> not just do amateur radio. It's a valid question, but it's
> also one with an easy answer. There are a lot of community
> stations out there that not only want, but in many cases

> Brandeis University is a good example.

Do they allow non-students to operate there? If so, it is a rare thing. I don't know of any school-based stations that allow non-students to operate . I cannot say with authority that this is universal, but I have certainly never heard of it and there was a time when I canvased the local universities and colleges looking for just such an opening and found my previous statemenet to be true.

> [...] WILL you always get to program exactly what you want to
> program? Will you always be able to go on the air at
> the exact moment you want to? No. But frankly, that's
> tough.

Programming IS a big issue with Micro-radio. As I have said, new and innovative programming has to start somewhere. While there is likely to be a lot of garbage programming on micro-stations, there will also likely be a lot of great stuff evolve too. Siomply by virtue of the freedom allowed by such a low-risk venture.

> Anyone who wants to move past that level to
> commercial broadcasting will find it gets more and
> more constricting as you move up.

Another good reason FOR micro-radio. The 'constriction' is part of the reality that has made so many people opt for something different. Micro-radio will be like the 'open mic night' at the local club. Sure there will be some real turkeys, but there will be some gems too, and where else will they be discovered?

Same could be said for college radio. Some college radio is so formated as to be indistinguishable from commercial radio. Result: Great experience for the 'real-world', but little in the way of alternative programming. Other college radio is more 'free-form'. Result: More creative programming for the community, and less experience for 'the real world'. Micro-radio would likely run the gamut too. Some operations would be stupid and insipid and some would be facinating and cutting-edge. Still others would sound pretty much like the average commercial attempt.

Why do so many intelligent people (yourself, John Higdon and others) insist on casting micro-radio's future in the mold of it's current infantile beginings? We look back on the infintile beginings of radio's gloden years with great nostalgia, as a period of great ccreativity and beauty. This despite the fact that darned few broadcasters would risk one of their properties on that sort of thing today. Despite the fact that many original stations were set up mainly as part-time operations, often by stores wanting to sell radios and even by people who wanted to hear their voices on

the radio.

Yes, micro-radio is a disconnected pile of children and others doing hodge-podge radio on unstable splattery transmitters which interfere and are not of any great value to the community at large. But that is largely due to the simple fact that *** IT IS ILLEGAL *** and responsible operators are not likely to risk it all to operate such a station. But if the stigma were removed and th service regulated, three things would emerge.

1) Responsible operators would get interested in micro-radio and tend to drive out the idiots (who would get bored after the illegal 'thrill' was taken away).

2) Stable, type-accepted, equipment could be manufactured which would allow a clean, crystal-controlled signal to be transmitted at reasonable cost.

3) The stations could be regulated. This would accomplish many things.
A) it would establish a similar set of guidelines that commercial stations have to abide by, scaled down to fit the smaller operation.
B) It would offer a legal avenue for all this energy that is now being spenty on illegal operation
C) It would remoove any excuse for the died-in-the-wool 'pirate'

It would seperate the sandbox-children from the ones who are serious.

> And in areas with
> no community station already, it's likely there's
> also enough RF space to start one.

Sure, if one has the money to invest in all the riga-marole of licensing, building, and such. Plus if there is enough bandwidth for ONE community station, there sure would be enough for at least one (or more) micro-station(s) as well.

But we cant have that. Let's just license another 80-90 dropin.

> Some other ideas: In most metro areas, there's at least
> one full-power AM station that leases time. Ask around,
> and you'll be amazed at how low the cost is.

I have. The only station in the Chicago Metro which brokers time (other than foriegn or religious stations) is a class-A mono FM in a North Suburb which is sandwiched between two high-powered stations. They charged (a few years ago) over $100.00 an hour for overnights and over $200. an hour daytime BUT are sold out and have a waiting list for every daypart.

> It IS possible to buy an hour of airtime on a 5000 watt
> station serving a top-10 market for $25.

Really? Wow, you are really lucky. That *and* Walden radio. Cool! .

> The airwaves
> are not expensive to get into that way. And although
> the number of locally-programmed AMs continues to

> shrink, there are still plenty of stations where
> people who want to get on the air can do so.

Not around here. Besides, being on-the-air is only part of operating a station.

> One AM station south of Boston is actually looking for
> volunteers to do talk shows!

Again, although I do not doubt your word one bit, I have never seen such opportunities.

> All it takes is a willingness to look beyond the stubborn,
> "I want my OWN station" philosophy...and I think you'll
> find there is room out there for just about anyone
> who's serious about broadcasting.

Somehow I doubt this, Scott. While universities churn out arguably qualified applicants every year, the number of smaller market stations (where newbies go to cut their teeth and get over the culture shock from college radio to 'real' radio) continues to decline and fall victim to satellite programming. I personally know three good air talents in this area who are relegated to board-opping a satellite feed because that is all that is around.

I went to a 500 watt daytimer a few years back, some 70 miles northwest of Chicago, and the PD there showed me a stack of applications that filled a file cabinet drawer from front to back. A random sampling of these apps showed markets like Des Moines, St Paul, Madison and Milwaukee. All applying for work at a 500 watt daytimer in the middle of farm country. And that was probably ten years ago. Sure, people do find work, but it just is not as simple as "If you are dedicated, you will find work'.

> That leaves just one issue, and it's the one I have
> yet to resolve fully...the issue of broadcasting to
> serve a limited community. I have my doubts that
> many of the people advocating "community broadcasting"
> really want to _serve_ their community rather than
> themselves.

Why do you say that? Just because the current crop of outlaws are less than shining examples of community service does not mean that the service is to blame (see above comments on the effects of keeping micro radio illegal).

Plus, how much community service is there in a 80-90 drop in running Unistar or SMN all day? Yet nobody is calling for the revocation of their licenses, or condemning them as self-serving squanderers of the public trust.

> But for those that really do, there should be something.

Yes, there *should* be something. Here is a point that you, I, and the micro-radio movement have in common. But what *IS* there? Since the FCC seems to think that Home Shopping Channel serves the public good, I guess there is no need for micro-radio . Let's face it. Public service in broadcasting has eroded into fairly hollow words over time. The

Commission, once the protector of that public good, as sold it out to the highest bidder, yet hides behind those words when it comes time to silence some little idiot with a watt or two.

> 87 Mhz will never fly politically,
> because of the intense opposition from the channel 6
> members of the well-connected Association of Maximum
> Service Telecasters.

You have hit it right on the head, Scott. It is political. Pure and simple.

If UHF channel 14 can be reclaimed by land-mobile services in non-channel-14 areas, if the upper UHF channels (70 something to 83) can be taken over by cellular providers regardless of allocations, then I can't see a logical reason why non-channel-6 areas (like Chicago) cant operate a watt or two.

But I *can* see a political reason. Cellular is *mega* bucks and politically connected. Land mobile is also politically connected, usually. Micro-radio, by it's very nature is NOT politically connected and therefore, well... you know the rest.

> Perhaps a channel or two
> in the expanded AM band should be set aside for
> 25 or 50 watt broadcasters, possibly on a daytimer
> basis to prevent the channel from turning into hash
> at night? I don't know.

OK, sounds good to me. It's a start. Glad you are willing to concede that this service *could* be viable enough to license *somewhere*.

> But what I do know, and have always believed, is this:
> The listening public is best served by a radio dial free
> from interference, with broadcasters regulated by strict
> public service requirements. (And yes, I do think
> they should be stricter!)

Absolutely! No argument from me here.

However, we all know what a fine job the Commission has done to insure interference free, public-service oriented, community involved radio broadcasting for the citizens of these United States. Every protection, requirement, and suggestion for community service has been watered down over the years so by now the airwaves belong to whomever can buy the largest number and highest powered radio signals in a given market, and sell cheap, satellite programming to the ones deemed too small or remote to be worth buying outright.

> And if that makes me sound like a Big Monolithic
> Commercial Broadcaster, that's just too bad...

No, Scott. You sound like an intelligent, concerned broadcaster and someone whom I hold in great respect. I disagree with some of your opinions on what is best for radio, but that is fine. You truly want radio to succede and get better with age. You have worked very hard to attain what you have attained

in the industry and I admire you for that. You are among this newsgroup's most informed and involved people and despite those differences in opinion, I consider you a friend and collegue who I am most proud to know.

BTW, No, I am not being sarcastic!

> -=Scott Fybush - fybush@world.std.com=-

# 1292. EL SALVADOR: Action Alert

Newsgroup: rec.radio.broadcasting
Date: 1993-08-25 05:26:41 UTC
From: resystom
Message-ID: <25et6h$2f@vixen.cso.uiuc.edu>
Source record: 42630

ACTION ALERT

EL SALVADOR'S RADIO SUMPUL DEMANDS LICENCE
==========

Although freedom of expression and freedom of the press have
been recognized in the Salvadorean peace accords, the government
of El Salvador is not taking concrete steps towards granting
legal status and frequencies to the community radio stations that
have submitted requests, including Radio Sumpul.

In February 1992 the Salvadorean government and the
Farabundo Marti National Liberation Front (FMLN) signed several
accords to end the country's 12 year civil war and to begin the
building of a democratic society. The United Nations mission in
El Salvador (ONUSAL) is charged, until elections in March 1994,
with verifying that these accords are implemented and respected.

Radio Sumpul's situation
==========
Radio Sumpul is one of several community radio projects
being developed by grassroots organizations in rural El Salvador.
Located in the province of Chalatenango, Radio Sumpul will serve
the communities of ex-refugees and displaced persons in
Cuscatlan, Cabanas and Chalatenango provinces. These communities
are made up of people who have chosen to return to, and rebuild
their abandoned villages despite the lack of support or approval
of the government.

The request for a broadcast licence and a frequency for
Radio Sumpul was made by the CCR, the coordinating committee of
the resettled communities of Chalatenango (Coordinadora de
Comunidades y Repoblaciones de Chalatenango) to ANTEL
(Administracion Nacional de Telecomunicaciones), the national
body responsible for regulating broadcasting and
telecommunications. A similar request has been made by Radio
Segundo Montes, a community radio project in the northern
province of Morazan.

Following Radio Sumpul's application, a survey by ANTEL
found no technical reason for denying the licence. However, ANTEL
has not yet given an official response and the CCR's weekly
attempts to meet with the president of ANTEL are met with
silence.

The communities affected by this situation are concerned about ANTEL's stalling. Their concerns are heightened by the fact that they are isolated from the rest of the country, without telephones, roads or other adequate means of transportation, and without local media services which respond to their needs.

Action requested
==========

Radio Sumpul requests individuals, radio stations and organizations to send a fax or letter to ANTEL's president making mention of the following points:

1. You are aware of the situation faced by Radio Sumpul, and other Salvadorean community radio stations.

2. You request that ANTEL give an immediate and positive response to Radio Sumpul's application for a licence and frequency.

3. You believe that the granting of licences and frequencies to community radio stations will be an important way to demonstrate the government's commitment to the right to freedom of expression as set out in the peace accords.

Send your message to:
Ingeniero Saul Suster, Presidente de ANTEL
Centro de Gobierno
San Salvador, El Salvador
Fax: +(503) 81-00-17

You can communicate with Radio Sumpul at:

> on it.

yeah. it's too bad that most of San Francisco isn't able to get a good
signal from Mt. Sutro, I know folks that are in the line of sight for
it, but I guess the signal is too strong.. I lived up on Twin Peaks and
I had to get cable since I couldn't get anything from the antenna. It's
great for the outlying areas I would guess.

Source record: 42632

KSL uses a single omnidirectional tower on the southwestern shore of the Great Salt Lake (great for soil conductivity, especially in wet years). They have a smaller tower on-site, which I believe is a backup. It's a half-wave tower, which means it's huge -- about 500 feet, I think.

KSL also owns the Farnsworth Peak site, where many of Salt Lake City's FM stations share a common antenna. It's 9000+ feet high and commands the entire Wasatch Front, the most heavily populated area of Utah. Several other TV and radio stations have transmitter sites on Mount Vision and another peak a few miles south of Farnsworth along the top ridge of the Oquirrh Mountains. KLZX (the station I work for) is on KSL's common antenna system. Our signal easily reaches from Wendover, on the Nevada state line, to Evanston, Wyoming. That's about 250 miles or so. It's a great place for an antenna.

It's also snowbound in the winter. The only access to the site for about six months of the year is by helicopter. KSL keeps staff up there all the time, and if you want them to work on your stuff rather than flying your own engineer up there, you pay through the old schnozola. But then again... it's their mountain.

KALL-AM has an interesting four-tower directional array in the southern end of the Salt Lake Valley by Herriman. It's relatively new, and I understand from the engineer who designed it that finding a new site for an AM array these days is all but impossible.

I was also up in the Empire State building in New York City recently... and saw the FM antennas sticking out from the 102nd floor. It's even more interesting when you realize that Edwin Armstrong developed FM radio right there. Almost a shrine, really...

A member of the sales staff here at WFRD showed me a cartoon that I thought some of you involved with radio might like. I hope that any of you who advertise on radio don't find this offensive! :-)

The cartoon has Charlie Brown and Lucy at Lucy's "Psychiatric Help" booth, but instead, the booth says "Advertising Office. The Media Buyer Is _IN_"

Charlie Brown: Do you want to buy my radio station?
Lucy: Sure, but there are a few simple rules.... You will sell us your commercials based solely upon _our_ buying criteria. You give us the lowest rate for all spots, plus no charge bonus spots.... We want an on-air giveaway promotion with two promos for every one spot we buy. Promotional merchandise is _traded_ for more spots. You agree to one free remote broadcast at our business every month. We get to use yuor studios and announcers at no extra cost. Dubs are your responsibility. And we pay at 90 days. Not a day sooner. No finance charges apply.
[Panel showing Charlie Brown thinking about Lucy's offer]
Charlie Brown: F--- you.

:-)

TOP 40 STATION LIST FOR NORTHERN CALIFORNIA

AUGUST 20, 1993

Another casualty has been reported, it has been posted that KEWB
in Chico has gone country. If someone knows of another Top40, CHR,
Top40/Urban, Top40/Rock, or Top40/Adult Contempory in the Chico
Area, please post it.
There are reports coming out of San Francisco that KFRC could switch
to a Hot AC (Top40/Adult Contemporary) format fairly soon. Stay Tuned
for any further news on this.

CALLS FREQ CITY NAME
KWNZ 97.1 Reno Z-97
KHQT 97.7 San Jose Hot 97-7
KWNN 97.7 Elk Grove/Lodi 97-7 K-WIN
KDON 102.5 Monterey K-DON 102-5
KHTN 104.7 Merced Hot 1-0-5
KSOL 107.7 San Mateo Wild Weasal 1-0-7

You can hear the weekly Top-40 with Rick Dees on KOSO in Patterson, even
though KOSO iis not any kind of CHR/Top 40 station from 8pm-12am
on Saturdays. They are at 93.1 on the FM dial

Source record: 42636

Well, almost every night in between 12 and 1 AM, the nearby signal of AM 700 KSEV in Houston fades out and I pick up "The Big One" 700 WLW out of Cincinnati.
But I've had wierder things happen on FM. On one night, the blaring signal of our local CHR, KKYS 104.7 faded out and left me with the signal of "Bayou 104" somewhere near Baton Rouge, Louisiana! I also every once in a while pick up Dallas FM stations at night and Dallas is around 300 miles from me, so it's not as unlikely as "Bayou 104" but still amazing especially considering I live in a radio hole--the Brazos Valley--just think what I could probably pick up if College Station was at a higher altitude!

## 1299. Radio vs. TV

Newsgroup: rec.radio.broadcasting
Date: 1993-08-25 05:26:59 UTC
From: at067@cleveland.freenet.edu
Message-ID: <25et73$2q@vixen.cso.uiuc.edu>
Source record: 42637

Radio is loosing the broadcast battle, to its young rival, and if radio isn't careful it will become a quick has-been!

Back in the 50's, 60's and 70's....radio was quick to create a lot of innovated broadcast formats. But in the 80's radio lost its innovation.

TV came up with channels aimed at children (Nick). MTV began playing fresh music radio wouldn't touch. CNN provided news around the clock, while radio still doesn't have its own 24 hour news network!

Cable is creating new personalities every day...radio is only concerned with playing endless streams of oldies, mixed with taped liners, and boring slogans.

The future looks pretty bleak for radio, unless innovation returns to the medium.

CFN at067
MFN ad423
YFN ag199

[Bill Sez: As long as people want to c0onsume media while doing other things, such as driving, working, or whatever, radio will never be obsolete. Radio has long ago lost the role of primary household entertainment media to television (like forty plus years ago), and radio as we know it is certainly changing (in amny ways not-for-the-better), but to say that radio, per-se, is going to go away is as likely as the Chicago Cubs winning the World Series :-). BTW, what do the abbreviations in your .sig mean? Bill]

## 1300. Dr. Demento/ San Francisco?

In rec.radio.broadcasting I wrote:

>In true radio nut form, Sid Whitaker (sid@acs.bu.edu) and I are
>planning a trip this Saturday to Rhode Island; more specifically
>to every broadcast facility in the state -- studios and
>transmitter sites.

And we tried...but it turned out 13 hours just wasn't enough.
In any case, here's the annotated list of what we did and
did not do.

>AM: 550 WICE - at studios, 90 John St. Cumberland
Didn't make it.

> 630 WPRO - studios, 1502 Wampanoag Trail, E. Prov
> transmitter - somewhere in Seekonk MA?
Next to the studio, actually.

> 790 WLKW - studios, Oxford St. Providence
> transmitter - E. Providence?
end of Dexter Rd, actually.

> 920 WHJJ - studios, Eastern Ave. E. Prov
> transmitter - somewhere in Seekonk?
Wampanoag Trail, E. Providence (just up the street from WPRO).

> 990 WALE - studios, 311 Westminster, Prov.
> transmitter - Log Rd, Burrillville RI
Didn't make it to the transmitter. The studio is in a storefront
(the talk host sits in a window facing the street) on the
city's main shopping drag.

> 1110 WHIM -studios at WICE facility these days?
> transmitter - at WHJJ bldg, E. Prov.

The WHIM antenna is two towers. One is a standard tower...the
other is wires strung from the WHJY-FM stick.

> 1180 WJJF -studios and tx, Woody Hill Rd, Hope Vly

Didn't make it.

> 1220 WRIB -studios and tx?, 1110 Douglas Av, Prov.

The studios are a real pit, right on the river on Water St.,
East Providence. The transmitter tower sits right in the
river on a little peninsula.

> 1230 WERI -studios, 19 Railroad St. Westerly
> transmitter - somewhere in Westerly
> 1240 WOON -studios, 1 Social St. Woonsocket
> transmitter, ?

Didn't make it to either. I think I saw the WOON
transmitter near where I-295 meets Rt. 146.

> 1290 WRCP -studios and tx?, Water St. E. Prov

I got this mixed up with WRIB. WRCP is on Douglas Ave, Prov...
with 3 towers out back and a very friendly Portuguese
broadcaster who invited us inside for a visit...and
started talking about us on the air...in Portuguese!

> 1380 WNRI -studios and tx, Diamond Hill Rd, Woonsocket
> 1450 WKRI -studios and tx?, 1585 Centreville Rd, Warwick

Didn't make it to WNRI. WKRI's studios are an old house,
and we did not find the tx.

> 1540 WADK -studios, Thames St. Newport
> tx near Newport Daily News, Kalbfus Rd, Newport

Drove by the studios...and found the tx behind a fence in a
field off Garfield Street, Newport, behind the jai-alai
court.

> 1590 WARV -studios and tx?, 19 Luther Av, Warwick

Studios are there...transmitter is on the other side
of town, off Knight St.

> FM:

> 88.1 New FM-studios and tx unknown
> 88.3 WQRI-studios at Roger Williams Coll, Bristol
> transmitter ?

Tower's there too.

> 88.7 WJMF-studios and tx at Bryant College, Smithfield
> 90.3 WRIU-studios at U of RI, Kingston
> -tx ?
> 90.7 WJHD-studios and tx at Portsmouth Abbey, Cory's Ln, Ports.

Didn't make it to WJMF or WRIU. WJHD's antenna is an old, rusting
tangle of X-shaped metal atop the chapel building. WQRI and
WJHD were dark when we visited.

> 91.3 WDOM-studios at Providence Coll.
> -tx ?

Tx is there too...on a tall dorm.

> 91.5 WCVY-studios and tx somewhere in Coventry?

Didn't make it.

> 92.3 WPRO-studios at 1502 Wampanoag Tr., E. Prov
> -tx Neuticoncanut Hill, Johnston

Neuticoncanut Hill is covered with residences, all the way to the
summit! The WPRO tx building is just off Ipswich Street.

> 93.3 WSNE-studios at 100 Boyd Av, E. Prov.
> -tx Pine St., Rehoboth MA

TX is on the WJAR-TV tower, actually on the lower of the
two sticks there, which I think was the original WJAR
tower.

> 94.1 WHJY-studios and tx at 115 Eastern Av., E. Prov
> 95.5 WBRU-studios at 88 Benevolent St, Prov
> -tx on WHJY tower, 115 Eastern Av, E. Prov.

As described. The WHJY and WBRU antennas are on opposite
sides of the tower, at the same height.

> 95.9 WVBI-construction permit, Block Island
> 99.3 WBLQ-studios 140 Point Judith Rd., Narragansett
> -tx on Block Island
> 99.7 WUAE-construction permit, Wakefield

Didn't make it to any of these.

> 100.3 WOTB-studios on Thames St, newport
> -tx on an apartment building on Rt.114 Middletown

Actually just north of Middletown, in Portsmouth. on Bay View
Estates.

> 101.5 WWBB-studios, 1445 Wampanoag Trail, E. Prov
> -tx on Pine St, Rehoboth MA

On the WNAC-TV 64 stick, 33 Pine St.

> 102.7 WPJB-studios, 311 Main St S. Kingstown
> -tx ??? Narragansett
> 103.7 WWRX-studios 55 Access Rd, Warwick
> -tx ??? (somewhere near Warwick)

Didn't make it to WPJB. WWRX's antenna is somewhere due just
west of Warwick...the STL dish out front of WWRX was pointed
west.

> 105.1 WWLI-studios 75 Oxford St, Providence
> -tx Neuticoncanut Hill, Johnston

On a separate stick a block away from WPRO-FM and TV-36...off
Heath Street. There's a HUGE ham array up there too.

> 106.3 WWKX-studios with WARA, 8 S. Main Attleboro MA
> -tx ??? Woonsocket

I think I saw the stick off I-295 in Cumberland.

>
> TV:

> 6 WLNE-studios on County Rd, New Bedford MA and 10 Orms St,Prov
> -tx ??? Tiverton RI

off Seapowet Lane...a big thousand-footer!

> 10 WJAR-studios Cranston RI
> -tx Pine St, Rehoboth MA

Just south of Channel 64. Two towers...the thousand-footer with
the current ch.10 and the original 500-foot jobbie with a backup
channel 10 and WSNE-FM.

> 12 WPRI-studios 25 Catamore Blvd, E. Prov
> -tx Pine St, Rehoboth MA

Actually around the corner on Homestead Street in Rehoboth.

> 36 WSBE-studios Bald Hill Rd, Warwick
> -tx on WPRO-FM tower, Neuticoncanut Hill, Johnston
Drove up and down Bald Hill Rd looking for ch.36 but no luck.
Any ideas?

> 62 W62AB (tr WSBE)-tx on old WERI-FM tower, ??? Westerly
> 64 WNAC-studios and tx 33 Pine St, Rehoboth MA

Didn't make it to Westerly...but found ch.64 just as described.

> 69 WOST-construction permit, Block Island

Didn't make it there either. Needless to say there's another
day of DX-peditioning ahead. We got every site we visited
on video..and I'd be happy to trade for airchecks from
YOUR market!

Oh and BTW...we also found the boarded-up studios of the now-
defunct WKFD, 1370 AM, at 19 Updyke Avenue, Wickford. This
500 watt daytimer served a VERY quaint little upscale
community, and could have done marginally well with VERY
localized programming, I think. I think WKFD's stick
was out behind the studio, but has been dismantled.

Thanks to everyone who e-mailed me with hints...

Message-ID: <25etqi$fk@vixen.cso.uiuc.edu>
Source record: 42643

This is a question mainly for listeners at the border of Germany and the Netherlands.
Who knows when the bilingual regional news are broadcast by NDR, WDR, Radio Oost and Omroep Gelderland?
The five or ten minutes news are produced in Hengelo, as far as I know.
The WDR is totally unable to help me. Nobody knows details, even not in the press office.

Please send mail answers to he230pu@unidui.uni-duisburg.de
I'll sum up the results.
Thanks in advance!

There's a small company called Kiwa who have earned fame among radio
hobbyists for their replacement IF filters for the SONY ICF-2010.
They also make a ~$300 amplified tuned loop antenna for medium wave.
I don't own one, but have read a couple of extremely positive commments
from owners of this device. Apparently it features a gear-driven
positioning mechanism, low-noise amplifier, solid construction, etc. etc.

In article <CBn1J1.qv@news.cso.uiuc.edu> Pete Jernakoff <JERNAKP AT A1 AT JLCL01> writes:
>... and some mildly interesting DX sometimes fades in.
>Last Tuesday night (8/10), about 23:45 east coast time (I live in Wilmington,
>DE)... I happened to tune into WGN, Chicago, 720 khz. ... Instead of WGN,
>whose signal usually screams in here at night, I was surprised to hear CHTN,
>Charlottetown, Prince Edward Island.
I was driving about in Lexington, Kentucky a few years ago in a 1988
Ford Festiva with the standard built-in AM-FM radio, and was quite surprised
to hear a hockey score while I was flipping through the FM band. I went back,
and it was an FM station opearating out of Hamilton, Ontario, Canada. Coming in
very clearly in full stereo, a little weak but with pretty good separation as
far as I could tell. I got the hockey scores and most of Stevie Winwood's
"While You See a Chance" before it faded out as I got on the freeway. I
have no idea what station it was, as it went away before they gave their
call letters.
I thought it was _really_ cool. :-) I wish I knew what that signal was
bouncing off of to reach me...

# 1306. Re: Empire State Master Antenna

Newsgroup: rec.radio.broadcasting
Date: 1993-08-25 05:37:25 UTC
From: JOHN SCHMIDT <schmidt@auvax1.adelphi.edu>
Message-ID: <25etql$fn@vixen.cso.uiuc.edu>
Source record: 42644

(long)

I was the Chief Engineer of WBAI in 1977, and they are a customer of that antenna. Actually, there are two multi-user antennas on Empire, one is (was) shared by WYNY (was NBC, this is now WFAN???), I can't keep track of all the changes! WCBS-FM, and WPLJ (ABC). The other one is owned by by the Empire State Building, This is the one you saw. They lease it to the FM stations, I think 11 or 12 now. There are two bays, one above and one below the 102nd floor observation deck. It is "oval" polarization, vertical gain is less than horizontal. It's been there quite a while, and will soon be replaced, as it dosn't comply with the new RF exposure rules, for those in the observation deck. I don't know what good the wire meshin the windows does, I always assumed it was to keep broken glass off of 5th avenue and 34th street :-)

Each station owns it's own notch diplexer, they are quite big, with cavity filters, blowers to cool the cavities, etc. About 6 feet high and 4 feet square. They are stacked in the "E" levels of the building, inside the mooring mast, around the elevator shaft and stairwell to 102. That's the part inside the vertical windows which are lit up at night. The transmission line is, as I recall 6 1/8 " rigid line, with most stations feeds being 3 1/8 "

Each diplexer has a "broadband" input, with the signal from all the stations before it, a tuned input for the transmitter for that station, a combined output to feed the next diplexer (or the antenna, for the first station, WQXR), and an ouput that feeds the "reject" load, a 1 or 2 KW air cooled dummy load (normally there is notthat much reject power, but... The "through" path contains a filter with a "notch" at your frequency, reflecting any energy on your frequency back at the diplexer(s) before it in the chain,. Your path has a bandpass filter tuned to your frequency connected as a hybrid, so your signal gets inserted into the chain, any off-frequency signal from your transmitter goes nto your reject load, and any reflected signal coming back from the diplexers or antenna in front of you on your frequency ends up in your dump load. The operation or non-operation of other stations has no effect on your signal. Most failures, other than the diplexer itself, only mess up the station experiencing the failure. It is possible to burn up your diplexer, I guess, if you tried, although the diplexer failures to date (there have been a few) appear to have been mechanical in nature. Burning up your reject load is easy, (try overmodulation outside your notch bandwidth or off-frequency operation), but there are over power shutdowns built in to shut down your transmitter if you put too much power into the reject load.

Most of the stations run about 9. something KW out of their transmitters for the 5.4 KW (H), 3.8 KW (V) ERP at 1220 feet above average terrain. This used to be full class "B" operation (equal to 50 KW at 500 feet) until the derating curves for height above 500 feet were "liberalized" about 20 years ago. Now

some stations increased their ERP to 7.8 KW (H) 5.6 KW (V) or something like that, by increasing transmitter power proportionately. The antenna and diplexers had enough safety margin in power rating to allow this. The new antenna system is designed for these power levels, obviously.

The order of the diplexers is the order the stations bought into the system, the order of frequencies is not important. WQXR is first. When I was there, I think WRVR (I don't remember the current calls) was last. WBAI, as I recall was number 4. I think someone left, and someone new joined since I was there. When I was there, I recall that the "broadband" input to the WRVR diplexer was just sitting there, an open end of 6" rigid transmission line sitting there waiting to be connected to anyone else who might join, no cover, nothing. Theoretically, there should be no power there, if all the diplexers were working right, but I don't know anyone willing to grab onto the center conductor to find out!

An interesting sidelight, severa times when the whole thing has shut down, there have been articles in the papers. Most recently I recall the day of the fire there a few years ago. Anyway, the list of stations in the article that day in the _Times_ must have come from one of the Chief Engineers, it was in DIPLEXER order. Only another chief would know....

The antenna and most of the diplexers were made by the Alford corporation in Massachusetts. I don't think they got the contract for the new one.

The antenna heaters (deicers) take more power than all the stations together (at least before the increase from 5.4 to 7.8 KW ERP, as I recall well over 100 KW! When I was there, the Empire State people were too cheap to hire a rigger to change the thermostat for the deicer control, and the thing stayed in bypass mode all one summer. Lets see 100 KW X 24 hours X 20 cents per kilowatt hour, how few days wuld have paid for the rigger, even 102 stories up... In fact that resulted in a story about the stupid electrician there who pulled the wrong circuit breaker and shut all the stations down one morning but the reasons are too technical and long for here, but when it happened, those of us who had called the electrician immediately knew what happened. The GM's weren't too happy to go off in the middle of morning drive :-(

There was (I believe still is) a committee of all the Chiefs, which meets from time to time, deals with problems with ESB managers (and electricians who open the wrong breakers), and work on maintenance and improvements to the system. For the most part, very cooperative and non-competetive, not like the Program Directors?? Actually very much in all their best interest to co-operate.

BTW, the fire was apparently caused by a failure in Channel 68's waveguide that turned the entire waveguide from the transmitter on the 85th floor to the antenna on the mast above 102 into one giant 30 KW radiant heater. Anyway, it got VERY hot, and me lted anything that would melt within a couple of feet of it. Paper trash behind it on 86 and 103 (yes there is a 103, one floor above the 102nd floor observation deck, in the 102 floor building) caught fire, and was hard to get to to extinguish. No damage was done to the antenna/diplexers, but the control wiring (reject load overpower trips, etc) was melted in several places, several diplexer fan motors failed, etc, and of course, the Fire Dept.

shut off the power for quite a while. As I recall the fire started around noon, and everyone got back on (at 1/4 power until the interlock was repaired) a little after 6. WRKS (?) lost their transmission line, a section of Heliax next to the ch 68 waveguide melted. Needless to say, Ch 68 was off for several weeks, until they replaced the entire length of waveguide. I bet they fixed their VSWR overload trip also....

I can probably get more current info on the new system, if anyone is interested, as I know a few of the Chiefs.

John

In response to public files: there are checklists availble from the FCC
and other industry sources, including the NAB. WHile the requirements differ
slightly, most public files for both commercial and non-commercial stations
must contain recent rewnewal or other major change applications, Ownership
reports for the license term, employment reports, Issues and programs lists
filed quarterly, for the license term (7 years), FCC correspondence in
relation to fines, inquiries or other fun stuff or stuff they tell you to keep,
the book public and broadcasting, though it is out of date and they are not ,
enforcing this, DOnor lists, andy contracts relating to ownership. Non-
commercial station DO NOT have to keep letters from the public.
A polical file , ie request for air time, etc, must also be kept.
Commercial stations, such as WPRB, have much more strict requirements, and
the FCC is more likly to be upset at ommissions than with a non-commercial
station. These requirements are also in the FCC rules.

## 1308. Rabbit Ears/UHF with good amplifier

Newsgroup: rec.radio.broadcasting
Date: 1993-08-25 05:37:38 UTC
From: newman@netcom.com
Message-ID: <25etr2$fr@vixen.cso.uiuc.edu>
Source record: 42646

Does anyone know of a good FM/TV/UHF antenna with a built in amplifier. THe cable company here iin Sacramento may have to drop a lot of broadcast stations and I may have to get one of these to continue receiving some stations, I also want want to improve reception of some of my favorite Top-40 stations (See my posting on Top 40/CHR stations for list).

[Bill Sez: Forget the rabitears w/amp, get an antenna specifically for FM. If you can mount outside and are willing to put up a rotor, get an FM yagi (NOT a TV antenna, but one just for FM) the more elements the better. Radio Shaft has a decent one for well under $20.00. If you dont need directifity or cannot use a rotor, there are several decent omni FM antennas available for about $10.00. Any other ideas? Bill]

# 1309. IRRS-SW sche update 8/93

Newsgroup: rec.radio.broadcasting
Date: 1993-08-25 05:37:39 UTC

DATE: August 9, 1993 FOR IMMEDIATE DELIVERY
Our. Ref.: NEXUS/SCHE0893 (replaces IRRS/SW/SCHE0993)
AUGUST 1993 UPDATE ON IRRS-SHORTWAVE SCHEDULE:
FOR MORE INFO CONTACT:

NEXUS-IBA Frequency Planning
phone: +39-337 29 77 88
+39-2-266 69 71 fax:+39-2-706 38 151
email: 100020.1013@compuserve.com
Compuserve: 100020,1013
X400: c=US, a=Compuserve,
p=CSMAIL, d=id:100020.1013

Main topics this month :

* New extended times of operation during the week from 13:00 CET
* Special programmes on the situation in Yugoslavia and Somalia aired on behalf of United Nations Radio
* The Hello There programme is discontinued between July 25 and August 22.
* Check new times accoding to UTC effective Sept. 9 when we change from summer to winter-time.

Frequency schedule effective August 1, 1993
on IRRS-Shortwave, and valid until further notice:

| FREQ | DAY(s) | CEST | UTC (summ) | UTC (winter) |
|---|---|---|---|---|
| 7,125 kHz | DAILY | 04:00-05:00 | 02:00-03:00 | 02:00-03:00 |
| 7,125 kHz | MON THRU FRI | 07:00-10:00 | 05:00-08:00 | 06:00-07:00 |
| 7,125 kHz | MON THRU FRI | 10:00-13:00 | 08:00-11:00 | 09:00-12:00 (irreg) |
| 7,125 kHz | MON THRU FRI | 11:00-22:00 | 09:00-22:00 | 10:00-21:00 |
| 7,125 kHz | SAT and SUN | 07:00-23:30 | 05:00-21:30 | 06:00-22:30 |

Target Areas: Europe, North Africa and Middle East.
(From 02:00-03:00 UTC and 07:00-09:00 CET also N America and Australasia)
Target Zones: 18, 19, 20, 27, 28, 29, 37, 38 (ITU)
Languages: English, French, Spanish, Russian, German, Italian
Beams: Omnidirectional from Milano, Italy
Output Power: 10 KW PEP (A3A/USB, -6db carrier, per CCIR)
[30 kW equivalent conventional AM]

To convert from CET/CEST to UTC and vice versa:

*** UTC = CEST-2 during summertime (until Sept. 25, 1993) ***
**** UTC = CET-1 during wintertime (from Sept. 26, 1993) ***
CEST = Central European Summer Time (summer)

CET = Central European Time (winter)

Programme schedule effective August 1, 1993
on "IRRS-Shortwave" and valid until further notice:

>

KFRC AM & FM are simulcasting. They are playing different oldies.. better
cuts of the same songs, and they're making a big fuss that they're playing
CD's which really makes them sound better... plus they're reminding us
that "when you first heard this song, chances are it was on KFRC" and
they've dusted off the old "the Big Six Ten, KFRC" jingle, along with a new
"Ladies and Gentlemen, you're listening to KFRC, AM and FM, San Francisco"
I like it, but then again, I liked KFRC-FM anyway. :)

Sad but true for Magic 61 listeners. Once of the best (imo) formatted
big band stations was uncermoniously unplugged at 4pm on Thursday 8/12/93.
The station is now simulcasting oldies on AM and FM. The FM format was
modified .. gone are references to KFRC-FM, most of the personalities have
been replaced and they're using a few of the 1960's Drake jingles, featuring
the Johnny Mann Singers. It is a kick to hear them again. Still Magic 61
will be sorely missed by those of us who liked to hear Basie or Sinatra
once in a while.

Evidently, there was trouble in selling the numbers of KFRC Magic 61 even
though the station was in the top 5 consistently. KKHI-AM 1550 is thinking
of picking up the Magic 61 format, but so far nothing definite.

They should have dubbed the new format Magic Sixty None. The bay area now
has five oldies stations, all of which play the same music. KSFO, KYA-FM,
KFRC-AM, KFRC-FM, KARA (south bay).

regards,
mark

# 1312. Re: What's up with KFRC San Francisco

Newsgroup: rec.radio.broadcasting
Date: 1993-08-25 05:45:21 UTC
From: andy@s50.es.llnl.gov
Message-ID: <25eu9h$sq@vixen.cso.uiuc.edu>
Source record: 42553

>From what I understand, the two stations (KFRC am and fm) were sold a few months ago. The AM (610) side had a very popular big band/standards format instituted about 7 years (and 2 owners) ago to replace it's once-dominating top 40 format. The FM (99.7) side had a pop-oriented oldies format for the last couple of years, starting with the previous owner. The flow echoed, in some sense, the "old KFRC" AM of the 1970's. The station had at least one jock from that station, and another popular oldies jock from KYA down the dial. NOW, as of last Friday, both are simulcasting under a single oldies format, and are just known as KFRC am and fm. At first, there were no jocks, just music and a few spots. Earlier this week some new voices popped in, and although I have not scrutinzed the schedule, all the old jocks seem gone. The sound is still very pop orinted with fast jingles and such. So there you have it. I had a hard time understanding this, as I thought the AM side was doing very well in the ratings, especially in SF where AM has a little more influence than in other places. The rumors in the paper are that the former standards format may be adopted over at KKHI am (1550) that has been simulcasting classical with its sister FM for ages. Rumor has it that the same dj's etc will move right over and keep going as soon as the owners give the final word.

>
KFRC-AM (610, Magic 61) had been sold a few months ago. Last week the
new owners fired most of the staff. On 8/19 about 3 PM they were still
playing their big band format; the next time I listened (8 PM) they
had switched to simulcasting using the KFRC-FM as a source. I haven't
been listening since so I don't know if the FM format has changed or not.

In today's SF Chronicle, Herb Caen says that KKHI-AM (1550) is "95% sure
that they will switch to the Magic 61 format, but that it will not
happen for a few days." KKHI-AM currently simulcasts with KKHI-FM (95.7)
using a classical format.

---
Recently there has been a discussion about antenna being located on or near
water. KIQI and KGO were mentioned as two such SF Bay area stations.

To the list add:

KKHI-AMs transmitter and antenna are located near SF bay
(on the Belmont slough between San Mateo and Foster City).

On the bay just south of Foster City are KNBR (640) and KGEI (shortwave,
frequency unknown) Friendship station.

KFRC AM has gone back to the old Drake format that served them so well in the 60's and early 70's. They have even dusted off the old "BIG Six-Ten" jingle package, as well as Steve O'Shay, one of the original Drakers from the days when RKO owned the station.

KFRC FM has been doing late 50's 60's & 70's music for some time competing with their one-time Top 40 rival "The Rock Of The Bay - KYA AM & FM."

Several "groups" of "concerned" listeners expressed their "disappointment" to the local press [translation: a few Big Band fans were ticked and called the Comical & Examiner]. According to the "moning fish wrap" a couple of other local stations have expressed an interest in the format.

# 1317. NORM NATHAN THE GREATEST!

Newsgroup: rec.radio.broadcasting
Date: 1993-08-25 05:45:44 UTC
From: fbaker@jade.tufts.edu
Message-ID: <25eua8$t2@vixen.cso.uiuc.edu>
Source record: 42551

I'd just like to applaud right now a man who has spent 49 years in radio as of this year: NORM NATHAN. He is right now on WBZ in Boston at AM 1030 kHz. His show is on from Friday night/Saturday Morning 12 to 5 AM, Saturday night/Sunday Morning 11 PM to 5 AM, and Sunday Night/Monday Morning 11 PM to 1 AM. His interesting cast of callers (including yours truly, "Fred in Medford") from the elusive "Monadnock" to the crazy "Robert From Everett" and eccentric "Wolfie", combined with the out-of-the-ordinary guests (e.g., the man who started a lawnmower museum and several board game inventors) and his original presentation style with catchy sayings and a range of celebrity impressions (e.g., Arthur Godfrey and Jack "39" Benny) make for a light and entertaining program that provides a much-needed break from heavy politically-oriented programs (e.g., David Brudnoy) and wide-ranging shows that feature know-nothings as hosts who pretend they have a modicum of knowledge beyond the Trivial Pursuit level (Bob Raleigh). His "Dumb Birthday Game" and "Dumb Music Trivia Quiz" provide a chance for listeners to win prizes on radio games shows that feature admittedly tacky prizes and admittedly lighthearted topics. Norm Nathan, unlike Bob Raleigh, does not try to pretend he's something that he's not. And he doesn't have an ego the size of Alaska. As well, the humorous producer Tony Nesbitt ("That's The Spirit!") and the King of Bad Jokes Traffic Reporter Jack Harte ("Omar Sharif used to tell jokes at parties while he was knitting and he was known as 'Sharif the Knotting Ham') and newcomer Traffic Reporter Bruce Connally ("I'm a HUGE fan of so-and-so") add to the merriment. Jeekers! Norm Nathan has a great show and you ought to catch it soon as he admits he "doesn't have a lot of years left" in radio. Those of you outside of Massachusetts ought to note that at the times Norm is on the air, the signal from 50,000 Watt WBZ reaches into 38 states and a lot of Canada and sometimes as far as Greenland as well.
Catch him at his best NOW! He has never been better.
Thanks for reading this post.

-Fred Baker fbaker@jade.tufts.edu

Does anyone here collect or enjoy old radio shows. I have been collecting them for at least 5 years. I like to listen to the old radio shows because it allows you to use your imaganation and you're not watching what some other person perceives of the situation. Like the old "Fibber McGee and Molly" and that old closet routine.

Any responses???

ellen

Not just the pirates rip these guys off ... a station in Williamsport, Pa.,
which I believe is licensed as WHTO, always calls itself W-H-O-T on the air,
except at ID time. I've always wondered why they get away with it.

Yep, I heard it too on the same evening, in Somerville (central) NJ. The signal was good, and I also logged it as WRMR.
I heard the location given as the Catskill Mountains of New York. I thought I must have gotten the call wrong because when
I looked it up, I found the Ohio entry, but I'm glad to see someone else heard the same call letters. Haven't heard it since.

# 1323. Review of Kid-Star radio in Seattle

Newsgroup: rec.radio.broadcasting
Date: 1993-08-26 17:33:19 UTC
From: wdp@airwaves.chi.il.us
Message-ID: <25is4v$k44@vixen.cso.uiuc.edu>
Source record: 42561

I recently received a 40 minute aircheck of 'KidStar' a locally produced kids station in Seattle Washington, similar to Radio AAHS.

Well at least I thought it would be similar. Here are my impressions of that station. Keep in mind I only heard about 40 minutes (the aircheck came on what was a pre-recorded tape of some album) but unless this 40 minutes was grossly un-indicitive of the station format, then Kidstar is not very much like AHHS at all.

I first heard of KidStar while on my trip to S.W. Missourri recently. I heard a 10 minute 'montage' tape that was produced by the KidStar folks *before* they even had a staion, as a demo/promo of their concept. I was quite impressed with that demo, so when I received the aircheck, I expected the best.

What I heard was a total shock.

The station production pieces <liners, promos, even commercials> were truly excellent. Blew AAHS away. Thios seemed to be the high point in kids radio. Lots of involvement with the audience, they have a voice-mail setup where kids can call in and hear (and tell) jokes, stories and other messages and the sponsors seem integrally involved in the production too.

But...

I was not impressed with the musical programming. of the 6 or so songs on the tape. all but one was what you might expect on straight AC and hot AC stations.

Stay Connected Stereo M.C's
Land Down Under Men At Work
Can't Buy Me Love Beatles

The one which was remotely like a kids station was 'Monster Mash' by Bobby Boris Pickett. Certainly not the imaginative, creative and fun stuff that is played by a radio AAHS. Basically the station seems to play almost entirely mainstream AC/CHR with a strong and good 'kids' slant to the personality and production.

I wonder what the intention is here. Is it to create a kid's station which is nearly indistinguishable from the other AC/pop stations? Is it an attempt to be more commercially successful by formating familiar music and still calling it a 'kid's' station?

I wonder. I was not really impressed, though and hope that KidStar is not the future of kids radio. One of the great things about kids

radio is the different music, the fun and imagination. Perhaps my great expectations from the pre-demo had an effect. But I dont think so.

I would say that if radio AAHS souped up their on-air production to a KidStar ,level, and kept the basic style of music they now play, there would be a killer format.

Other opinions on KidStar? Fire away.

Bill

# 1325. It Just Won't Work

Newsgroup: rec.radio.broadcasting
Date: 1993-08-26 17:33:38 UTC
From: john@zygot.ati.com
Message-ID: <25is5i$k5t@vixen.cso.uiuc.edu>
Source record: 42563

Bill:

I won't give a blow-by-blow answer to your Scott Fybush reply. But there are several salient points that you seem to be unwilling to face head on.

Two wrongs do not make a right. You use example after example of how current FCC regulations do not adequately protect stations and listeners from interference. I agree completely. Drop-ins have caused a significant portion of the current decline of commercial broadcasting. And the commercial band is awash with over-lapping low-power stations. But that does not justify making the situation even worse by trying to shoehorn a bunch more flea-power entities. Interference is bad now. How does making it worse make it "better"?

What you seem to be advocating is a return of the "Class D" radio service that included 10-watt stations. What the pirates want is no rules. You are talking in different meeting halls. If what you promote is, indeed, a low-power service with licensing requirements, equipment performance standards, and spacing requirements, then why is your proposal even necessary? We already have those things. If you (or the kids) disagree with the parameters, then go through the Proposed Rule Making procedures. I haven't noticed any intention on the part of the Power-to-the-People crowd to actually go through regulatory channels to create this band. Again, they don't want licensing at all. That requires responsibility.

Excuse me, but I need to quote you:

"A legalized micro-radio class would quickly weed-out the child-pirates. It could have very similar requirements to the commercial stations. Minimum hours of operation, and those stations who couldn't/wouldn't operate the minimum hours would be (perhaps) subject to the granting of another staion on their frequency with which they would have to share time."

Bill, that is what the current licensing system is designed to do. The kids say, "The FCC lacks authority to make us get a license." If your proposed system would "weed-out the child-pirates", then they would remain just that: child-pirates. What is the difference between operating without a license under the current system and operating without a license under your "low-power system"?

As you pointed out, part of the "thrill" is being illegal. If you make them get a license, show responsibility, commit to hours of operation, and all those other evil things that "real" broadcasters have to do, then they will bypass YOUR system and bootleg anyway. So then what have

we gained? (Hint: yet another layer of stations all interfering with each other even more than now, in addition to the bootleggers who will still be with us.)

No matter what kind of "legal alternative" you provide these brats, they will whine that it is too restrictive and ignore the rules anyway. As a matter of fact, most of your arguments drive home the need for regulation in the first place. As I mentioned, there are vehicles for changing the details of those regulations. And again, are any of the kids getting behind THAT idea?

Another of your arguments is that there is not enough room in the industry for everyone that wants to participate. Maybe. But there is certainly not enough room on the dial for everyone who casually wants to broadcast, either. There must be a process of selection. On the airwaves, we have put the FCC in charge--for better or for worse. In the industry, you have to prove yourself.

Actually, we may be talking about two different things here. You seem to be advocating the creation of a new radio service. If you can make a good enough case for it through the proper channels, it will happen. What the brats want is to do "their thing" anytime, anywhere, anyhow they damn please. Our disagreement comes from the predicted result. You say it would give an outlet to these people so that they could operate within the framework of regulation. I claim that they could not care less about any radio service--they are bootleggers first and last.

So how is this resolved? Why don't you contact one of these "free radio" organizations and see what they think of your idea of a low-power, licensed radio service? I think all of us would be interested in the reply.

> reclaiming some small sliver of the austensibly 'public' airwaves. Bill]

Pardon me for being thick-headed on this. What is it exactly that these people want to do? You say operating a transmitter is not at issue. Then exactly what IS the issue? Do they want to influence public opinion? Become a news anchor or commentator. Do they want to play DJ? Become a DJ. Do they want to OWN the radio station? Then buy into an existing station or put a new one on the air. No money? There are unlimited ways to worm one's way into station ownership. Any lame excuse you can offer to put an illegal station on the air can be countered with an alternative in the real broadcast world.

So what it seems to boil down to is that these kids want to put a bootleg station on the air, period. Setting aside a band for the purpose or allowing additional weenie licenses would be a waste of time; that is not what these people want. In fact, read the propaganda. It is full of power-to-the-people garbage. They are not interested in a change in the law--they just want to break it and get some public sympathy in doing so.

I have been a DJ. I have prepared and delivered the news. I have programmed a classical music station. I have sold time. I have acted as manager. I have been a station owner. And my first love is broadcast engineering. What else is there to do in radio? And not once was it necessary for me to bootleg. You want a rush? Fire up a 50KW transmitter that you have just spent the last few weeks installing. And the fact that you have a Construction Permit and Program Test Authority does not diminish the effect one little bit.

These kids are lazy as hell. They want to short circuit the normal channels to participate in the public airwaves, no doubt because it is too HARD. So they do the predictable: they make a political agenda out of it. Suddenly it is a matter of "rights" and "freedoms". Some may buy that crap, but I never will. If one is clever, he can do anything he wants in broadcasting--legally. If he is not clever, I don't think I want him on the air--period.

If thee FCC did decide to license low-power 'Micro' stations, what would the cost most likely be to start a station? It has been my dream for years to own my own CHR/Top 40 station, And I might just like to do that if Micro Radio is ever approved and licensed by the FCC. I do remeber the FCC doing this for a brief time with TV, but theree werent many takers because the equipment to run such a 'Micro' TV station was about $300,000, money a lot of people including me DONT HAVE!!!.

# 1328. NORM NATHAN THE GREATEST!

Newsgroup: rec.radio.broadcasting

From: fbaker@jade.tufts.edu
Message-ID: <25is74$k9t@vixen.cso.uiuc.edu>
Source record: 42566

I'd just like to applaud right now a man who has spent 49 years in radio as of this year: NORM NATHAN. He is right now on WBZ in Boston at AM 1030 kHz. His show is on from Friday night/Saturday Morning 12 to 5 AM, Saturday night/Sunday Morning 11 PM to 5 AM, and Sunday Night/Monday Morning 11 PM to 1 AM. His interesting cast of callers (including yours truly, "Fred in Medford") from the elusive "Monadnock" to the crazy "Robert From Everett" and eccentric "Wolfie", combined with the out-of-the-ordinary guests (e.g., the man who started a lawnmower museum and several board game inventors) and his original presentation style with catchy sayings and a range of celebrity impressions (e.g., Arthur Godfrey and Jack "39" Benny) make for a light and entertaining program that provides a much-needed break from heavy politically-oriented programs (e.g., David Brudnoy) and wide-ranging shows that feature know-nothings as hosts who pretend they have a modicum of knowledge beyond the Trivial Pursuit level (Bob Raleigh). His "Dumb Birthday Game" and "Dumb Music Trivia Quiz" provide a chance for listeners to win prizes on radio games shows that feature admittedly tacky prizes and admittedly lighthearted topics. Norm Nathan, unlike Bob Raleigh, does not try to pretend he's something that he's not. And he doesn't have an ego the size of Alaska. As well, the humorous producer Tony Nesbitt ("That's The Spirit!") and the King of Bad Jokes Traffic Reporter Jack Harte ("Omar Sharif used to tell jokes at parties while he was knitting and he was known as 'Sharif the Knotting Ham') and newcomer Traffic Reporter Bruce Connally ("I'm a HUGE fan of so-and-so") add to the merriment. Jeekers! Norm Nathan has a great show and you ought to catch it soon as he admits he "doesn't have a lot of years left" in radio. Those of you outside of Massachusetts ought to note that at the times Norm is on the air, the signal from 50,000 Watt WBZ reaches into 38 states and a lot of Canada and sometimes as far as Greenland as well.
Catch him at his best NOW! He has never been better.
Thanks for reading this post.

Does anyone here collect or enjoy old radio shows. I have been collecting them for at least 5 years. I like to listen to the old radio shows because it allows you to use your imaganation and you're not watching what some other person perceives of the situation. Like the old "Fibber McGee and Molly" and that old closet routine.

Any responses???

ellen

"Chris Gay" <KU4A@LEXVMK.VNET.IBM.COM> said the following:
>Is there anybody out there actually running Limbaugh in the evening
>hours? I would like to find a station that I can hear here in Lexington
>KY that tape delays the program for broadcast after I get off work.

KSTP, AM 1500 in St. Paul runs Rush from I believe 1:00 AM - 4:00 AM CST.
I don't know about Lexington, KY but it comes in very nicely in the Boulder, CO
area.

KNBR AM 680 in San Francisco does as well (I believe at the same times), but I
can barely get them here so I doubt their signal makes it to Kentucky...

<deletia>

I think there's an Indianapolis station (WNDE - 1260 AM) that plays him
late too, but I have trouble getting it in Cincinnati.

Rush is now on 1070 WIBC/Indianapolis, no longer on WNDE. WIBC, a longtime
full-service MOR, changed format to news-talk not long ago, and snapped
up Rush from WNDE. I don't know whether WIBC runs Rush overnight, but I
do know that one recent Saturday afternoon whilst driving to Lafayette, I
heard WIBC rebroadcast the previous day's program. I'm still baffled over
that one.

BTW, I think WLS plays the tape back at a higher speed than it was
recorded;
I assume they do this so they can cram more commercials in (as if Rush's
show needed MORE commercials!) Is this common?

??? WLS runs the program live, I thought. At any rate, when Rush starts
speaking in New York, people hear his words in Chicago. I'm curious to
know how they'd speed it up.

Some stations here in Indiana, which in most places does not have a time
change come April and October, tape-delay his program in the April to
October period. That half of the year, it's noon in New York when it's
11 AM here. The other half of the year, we're even. This way, Rush is
always on from noon to 3. I wonder if any Indiana stations *do* try
to enhance their revenue by speeding the tape during the tape-delay
months.

Here in Terre Haute, where Rush is on 640 WBOW, the aging Ampexes sometimes
aren't true to speed. So sometimes there's a little chaos, and maybe
even a bit of dead air, between the end of an hour of Rush and ABC news
at the top of the hour. How exactly *do* you fill, say, eleven seconds when
you're just a board-op, and the PD told you not to ever crack the mike,
not even to read the weather?

# 1333. Stern cancelled / Sports Radio in Chicago

Newsgroup: rec.radio.broadcasting
Date: 1993-08-26 17:35:50 UTC
From: testnet!pr@pegasus.att.com
Message-ID: <25is9m$kf4@vixen.cso.uiuc.edu>
Source record: 42571

Lotta discussion going on about WLUP dropping Howard Stern after only 10 months on the air in Chicago. (It took him 3.5 years to be #1 in Phily). Like someone else said, they made him look bad so maybe no other station will take him, despite their saying anyone's free to have them. Gee he was only up against Chicago radio "legends" Steve & Garry. Someone else said Brandmeier had a 7 share in the morning to Howard's 1.9.

I heard that Howard had a 3 year contract...lawsuit time? But by now he's po'ed at WLUP he probably wouldn't want to win AND be reinstated.

What about going to album rocker WCKG-105.9 - they can't have much of a morning show, can they? (WCKG hired Steve Cochrane in from Minneapolis and then after he quit in MN and came on down, they told him 'oh by the way we'd like to have a sports focus in the morning' and Steve said "I don't think so..see ya!")

The only consolation I can think of is that if WLUP-1000 does go all-sports, as rumored, then there's not really a place for Howard at the station, and in that case he was DOOMED anyway. In which case, anything about "FCC fines" (which they rarely collect) and "low ratings" are handy excuses, because WLUP doesn't seem to want to confirm if they are actually going all sports or not. (The FCC fined WLUP years ago for Dahl's describing what Vanessa Williams was doing in the nude photo layout that cost her crown (dahl used the v-word) and while that fine was only $6k, isn't it still being fought?

A side note about the sports format, it would make sense for Chicago to have a fulltime all-sports station. Many LARGE markets do have them (660 in NY, 710 in LA, 680 in SF, 590 in Boston) and Chicago only has a daytimer on 820, which was recently DENIED in their petition to the FCC to get night power!

(Not sure why it is that 820 was on at night when they were at the old tower site by the expressway, but aren't now. At that time ('90) the signal to the Southwest was necessarily horrible, I wasn't to Joliet yet and already was listening to Dallas)
A sports station not on at night isn't going to serve its core audience well. For example, How many weekday NBA games are there to broadcast?
Before there was a fulltime sport station in NY, the very time that stations (such as WABC) had sports talk was in the evening.

But I guess "Howard Stern all morning, all sports all day" wasn't to be in Chicago. If all sports all day is to be at all in Chicago.

(NY can get away with having a "major personality" on its sports station because Imus is a fixture at 660 and they are the flagship for his syndication. That show is so information heavy that talking about sports

isn't too difficult).

[Bill Sez: Actually sagging ratings were dismissed by WLUP brass as reason for ditching Stern. They sited his brash style as being inconsistant with what they are trying to do at 'LUP. I am no Stern fan, but I say that is hogwash. They were losing their asses with Stern so they dumped him. The fines and such (although they ARE outrageous) are just a legal smoke screen to get out of the contract. No, I doubt there will be lawsuits. Stern is in no position to enforce that contract in the light of all the fines against *affilliates* for carrying the Stern feed. If there is a suit, LUP will win. All they have to do is say that they don't want to be at risk for that kind of fine levy. I don't see too many stations scrambling to pick Stern up, either. He may land somewhere, but not at WCKG. Mornings there are with Patti Haze who was just promoted from mid-days and is a well loved Chicago rock radio veteran. Since Evergreen owns The Blaze, Stern is unlikely to wind up there, WLS is not interested and there are not too many other potential outlets here. Besides, I think Stern has reached and passed his peak. He needs new material, or a new image or something. Mornings at WLUP-AM are now by ex-Partridge family Danny Bonnaducci who also is doing early evenings for now. He is very entertaining. I think when the AM goes sports, and the FM goes to the current AM format, that the lineup will be (on FM-97.9) ... Steve & Garry morning drive, Kevin Mathews mid-days, Jonathon Brandmeier PM drive, Danny Bonnaducci early eve and Eddie Schwartz latenight. They may continue their 'best of' compilation overnights. Bill]

# 1334. Howard Stern prepares to sue WLUP

Newsgroup: rec.radio.broadcasting
Date: 1993-08-26 17:35:52 UTC
From: wdp@airwaves.chi.il.us
Message-ID: <25is9o$kf7@vixen.cso.uiuc.edu>
Source record: 42572

Recently an r.r.b article suggested that Howard Stern might sue Evergreen Media and/or WLUP for early cancellation of his contract. I stated that I didnt think that would happen.

Well it appears that it just might happen after all.

In today's Robert Feder column in the Chicago Sun-Times, there is serious talk of the Stern camp suing LUP and Evergreen for brech of contract. Stern's Lawyer is paraphrased to have said that ... before this is over, Stern might very well *own* an AM station in Chicago.

Well there may be a first time for *ME* to be wrong <big grin>, but I still doubt that Stern will win such a suit, given the excessive fines and such. I would imagine that Evergreen need only say "We pulled him because we didn't want to be libel for such large fines, especially for airing a show that we have no creative control over".

In any event, the upcoming days should be interesting, from a Chicago radio and Howeird Stern perspective.

Bill

HOWARD STERN

(Chicago) -- ``The Howard Stern Show'' has been dropped by a Chicago radio station. W-L-U-P's general manager says the show's not compatible with the station. Stern's show was doing poorly in the Chicago market, and its ratings have slipped in other major cities. The F-C-C has slapped fines on several radio stations because of the nature of Stern's show.

In his article of 20 Aug 1993 01:54:07 GMT, Daiv Stoner wonders what a job of "traffic assistant" might entrail.

Commercial radio stations traffic in commercials: your friend would be assisting someone with scheduling and accounting for spots of commercial airtime.

The term "Traffic" - aside from talking about roads and cars - refers as well to scheduling and logging of station business. The "Traffic Manager" takes care of preparing and reviewing program logs and preparing airplay reports for the Business dept. to bill from.

>> really functioned all that well. I'll be using it on the ninth floor
>> of an apartment building in downtown St Paul, Minnesota (I assume
>> this makes a slight difference) and have access to a window, out of
>> which I can dangle a wire antenna for a vertical-type antenna, if
>> anyone thinks that would work well.

Bryen, I'm no antenna expert, but my experience with mediumwave (AM
broadcast) is that when you're unable to do the serious DX routine of
matching antenna to wavelength, you're best off with some sort of
HORIZONTAL antenna, the higher the better. I've even used alligator clips
to latch on to curtain rods in an apartment with some success.

Radio Shack also has had a portable DX antenna available for about a year
now that basically looks like a long metal tape measure with a clamp on one
end. You're supposed to clamp it onto your metal whip antenna (if you have
one), then extend the thing and use the hanger (supplied) to put the other
end as high as possible.

I have to ask: Just WHICH downtown apartment are you living in? Could you
be right next door to me here at MPR? Just curious...

>> Question/observation two is this.. there are two radio stations
>> located in southern Minnesota, one in Faribault (95.9 FM) and one

>> about a year and a half ago - anyone locally might remember that
>> situation - but it seems strange to me that that sort of programming
>> would take place when the stations are in different markets. Anyone
>> have any ideas about this?

Faribault is KQCL; Mankato is KXLP (New Ulm is actual city of license). I guess I don't find it too surprising that there's a lot of duplication in the music on two stations, especially when you look at what's going on in the 'Cities. For a large market, we've gotta be the CHAMPS when it comes to limited-playlist anti-creative radio.

Your reference to KQRS and KLXK is confusing: Do you mean to say that you think their use of similar music (after KLXK "hardened" its sound) means they were consciously counter-programming? No sale. If anything, KLXK changed because it was getting nowhere with its "classics" (read: the same 100 oldies everyone else plays) format, and KQRS was adding gold to differentiate itself from the metalheads/CHRs in town.

My two cents, anyway.

rec.audio, rec.video,alt.cable-tv.re-regulate

Hi all,

Thought I saw some people talking about this subject a month or two ago.
Cable radio with digital quality broadcast ? Can anyone provide more
information, references, etc ?

A radio station manager in Chicago is getting interested.

Thanks in advance,

Geoff

I managed to catch a station called KEY(?) - a rock station featuring best of 80s and 90s on 103.5 FM. It was coming from Austin. Unfortunately not that clear. Also there are atleast 3 other stations from Houston in the neighbourhood -104.1(KRBE), 102.9(KQUE) and some other religious station. I used a plain Pansonic RXCT840 stereo system with its telescoping antenna. However my car radio (which is digital) picks up this station a lot better. That one is nothing fancy either --> just a vanilla clarion receiver.
This has been one of my first interesting catches on FM.

Later,
Dawn

Changing atmospheric conditions will change the reception of AM. AM radio is bounced off the atmosphere, and back down at the earth. Signal can easily travel at an angle rather than back to the origin community. Most AM stations use a lower power at night becuase their signals Propagate better (travel further) at night. Most AM dx'ing (distance listening) is done at night.

: But I've had wierder things happen on FM. On one night, the
: blaring signal of our local CHR, KKYS 104.7 faded out and left me
: with the signal of "Bayou 104" somewhere near Baton Rouge,

FM signal is largely line of site (if you can't see the transmitter without having to look through a mountain you can listen). The antenna height and your location are crucial to your listening ability. In a valley you may have signals bouncing off the walls of the valley. This may allow you to hear non-line of site stations.

Finally the radio you listen to is very important. Most radios will give you the most powerful station which is close (ie. AM 1220 is louder than AM 1240, so you radio gives you AM 1220 when your dial sez 1240). Many radios with digital tuning (those LEDs or LCDs displays) may actually have analogue (non-digital) tuners inside. If you go to a shop which sells radios to those who DX they will be able to help you select a good radio for DXing. Department and stereo stores usually can't.

There are many magazines devoted to DXing. "Listening Times" comes to mind. Also you local library will probably have a book which contains the broadcast frequencies and call letters for every licenced station in North America (if not the world). The local amateur radio club (ShortWavers) will be able to help you as well.

john@zygot.ati.com <Jon=hn Higdon> quotes me as saying...

> [Bill Sez: One problem, Jeff. While amateur radio is a wonderful service
> populated, in general, by fine people (no I am not being sarcastic) the issue
> is not operating a transmitter, but *broadcasting* which is specifically
> prohibited on amateur bands.

... and then responds <indented> thusly...

Pardon me for being thick-headed on this. What is it exactly that these
people want to do? You say operating a transmitter is not at issue.
Then exactly what IS the issue?

OK, John, I will pardon the thickness of your head <big grin>.

What the issue is (and has been stated many many times) is not merely
the operation of a transmitter. That can easily be done on CB and
with a little more effort on amateur bands. What is involved here is
*broadcasting*, meaning to transmit material from point to
multi-point. That is prohibited on amateur and CB bands and must be
licensed elsewhere. Unfortunately that licensing procedure has been
set up to favor (read: exclude all but...) those with very large
capital reserves. This excludes a vast amount of people from even
coming close to station ownership and operation.

(John Continues)

Do they want to influence public opinion?

Yes, some do.

Become a news anchor or commentator. Do they want to play DJ?

Yes, some want to do that too.

Do they want to OWN the radio station? Then buy into an
existing station or put a new one on the air.

Sure, for those with multi-hundreds-of-thousands or millions of
dollars, no problem. But, hey, if they dont have the cash, what good
are they anyway.

No money? There are
unlimited ways to worm one's way into station ownership.

*Really?!?!?*

Unlimited ways?

Wow, that's great news. Care to elaborate on these unlimited ways to worm one's self into station ownership with no money?

Any lame excuse you can offer to put an illegal station on the air can be countered with an alternative in the real broadcast world.

ARRGHH!! Are the net-lines to San Jose defective or what?

I am not advocating illegal stations, I am advocating creation of a **** LEGAL **** (did you read that?) broadcast license that could co-opt many (certainly not all) of those who are currently illegal, or contemplating such an action, and turn that energy into something constructive.

PLUS, if such a legal service were to be offered, it would take a lot of wind out of the sails of the crybaby pirates who whine that they have no legal alternative.

So what it seems to boil down to is that these kids want to put a bootleg station on the air, period. Setting aside a band for the purpose or allowing additional weenie licenses would be a waste of time; that is not what these people want.

John, why is it that you insist on using the pajorative "Those People" blanket references as though there is no difference between the individuals involved. How different is that from the pirates who say "Those Big Broadcasters"? Geez, I seem to remember a lot of that same talk about Black people not too long ago :-(.

In fact, read the propaganda. It is full of power-to-the-people garbage.

Well, perhaps, but they are only asking for 5 watts of power to the people, not much when you consider the killowatts that are controlled by the coroporations. Besides, what's wrong with people having power? Isn't that what the American system is *supposed* to be about?

They are not interested in a
change in the law--they just want to break it and get some public sympathy in doing so.

Again you say *THEY ARE NOT...* I guess it is easier to lump everyone into one pile and burn the lot of them, than it is to actually take the time to understand the differnces in them. Actually, Dunnifer and his lawyers are *indeed* seeking a change to allow such a class of service.

Sure there are those in the movement who are in it for the thrill of being an outlaw. That sort of person will be an outlaw some way or other anyway. When I add up all the ways that person *could* vent his/her need to be an outlaw, illegal broadcasting seems like a rather harmless way, IMHO.

[list of John Higdon's accomplishments in radio deleted]

These kids are lazy as hell.

Again, I seem to remember the same sort of talk directed at Blacks, not-so-long-ago.

They want to short circuit the normal
channels to participate in the public airwaves, no doubt because it is too HARD.

In many cases, nearly impossible.

So they do the predictable: they make a political agenda out of it. Suddenly it is a matter of "rights" and "freedoms". Some may buy that crap, but I never will.

Clearly not, John. It is quite apparent that your mind is totally closed on this matter. You have the micro-radio people packaged and placed on a shelf where you can attribute any manner of evilness to *them* as a group. I have said before, John, that you have accomplished much in your many years in broadcasting. I salute that. But you sound more and more like the cratchety old man who tells the younster... " When I was your age, I walked 20 miles to school in bare feet through the snow... and loved it!"

I, personally, think you are wrong. But I will not try to influence you. You have your opinion and it is locked in. I seem to remember a lot of similarly-minded people telling Orville and Wilbur Wright that it would never get off the ground, and to Henry Ford that it would never replace the horse and buggy.

I also remember a fellow named Armstrong, who's new service, called FM, was fought and fought by RCA and the existing vested interests in AM radio. Could there be a paralell here? Hmmmm.

Personally I choose side with the innovators.

Bill

Source record: 42583

Recently john@zygot.ati.com (John Higdon) wrote:

Bill:

There are several salient points that you seem to be unwilling to face head on.

Two wrongs do not make a right. You use example after example of how current FCC regulations do not adequately protect stations and listeners from interference.

More than that. While preaching *protection*, the commission has repeatedly sold the public out in the name of serving the public. Duopoly is the biggest offender. How the commission can allow a handful of corporate conglomerates to, essentially, eat up all desirable radio properties while at the same time crying about the 'scarcity' of available signals (as a selling point on how there should be more content control in broadcasting) just shows that it has absolutely no concern for the listening public.

Scott mentioned that he felt the 'public good' of the airwaves meant the millions of radio listeners and not the handful of broadcasters (paraphrased). I could not agree more. But look what has been happenning.

Gone is the fairness doctrine, which forced broadcsters to offer time to opposing or diverging views.

Gone is the requiremnet of stations who move their facilities to a larger city, to do a percentage of their broadcasting from the original city of license. In fact, many do no local programming at all! So much for serving the community. Unless you say that local commercials are in the public service.

Gone is the protection that forbade an entity from owning more than one signal per service, per market. This was a big one. It did something, at least, to assure that the airwaves, news sources and such would not fall into one set of hands. Now in the interests of corporate profits, that protection is gone. I could have understood the value in Duopoly, if it meant the purchace of a troubled signal that was in danger of going dark. In that case, sure, let someone buy the signal and save it. But, of course, there were no such provisions. Basically, now, the biggest bank account can but the pot in most places. In many, that has already occurred.

When docket 8090 came in, there was absolutely no mandate that these new signals would originate programming to meet the needs of the

community. Nobody cared if these drop-ins were little more than a satellite dish and a tower (and let's not forget a sales office). In fact, I am not aware of *any* FCC mandate for public service programming anymore.

So you have a commission which cares not one bit about public service, interference or local programming. They are serving one interest and one intersest only... more profits for Big Buisiness Broadcasting.

What you seem to be advocating is a return of the "Class D" radio service that included 10-watt stations. What the pirates want is no rules. You are talking in different meeting halls.

What I am advocating is returning some portion of the band to interests other than those served by the current situation. I would not feel so strongly if there was not such an arrogant disregard for the *public* airwaves by the FCC. The FCC is big on fining those who dare to go beyond arbitrary programming limits, under the guise of public protection, while at the same time knocking down existing protections that actually did some good, such as the Fairness Doctrine, mandatory public service and limits on multi-ownership (see above). This gross and obvious hipocrocy is what has fueled the current micro-radio/pirate movement.

If what you promote
is, indeed, a low-power service with licensing requirements, equipment performance standards, and spacing requirements, then why is your proposal even necessary?

I think that point has been made and made again. There are large communities that are just-plain unserved by currnet media trends. Yet there seems to be plenty of space to licnese more mainstream, remotely programmed signals with powers in the thousands of watts, while none is said to be avbailable for small stations whith powers in the single-digit watts to serve those who just are not served by the current status-quo.

Making procedures. I haven't noticed any intention on the part of the Power-to-the-People crowd to actually go through regulatory channels to create this band. Again, they don't want licensing at all. That requires responsibility.

I see that you are not only an expert on broadcasting, but an expert on the needs, desires and agendas of people you have never met, but instead lump into pajorative catch-all catagories. You lose a great amount of your credibility when you continually insist on doing this, as does the racist who insists on talking in terms such as 'those people'. I expect this from the ignorant, but from you, John, I expect more.

Excuse me, but I need to quote you:

"A legalized micro-radio class would quickly weed-out the child-pirates.
It could have very similar requirements to the commercial stations.
Minimum hours of operation, and those stations who couldn't/wouldn't operate
the minimum hours would be (perhaps) subject to the granting of another
staion on their frequency with which they would have to share time."

Bill, that is what the current licensing system is designed to do.

Perhaps that is what it is designed to do, but what id is really doing
is excluding those with non-TOP 40 views and limited money.

The
kids say, "The FCC lacks authority to make us get a license." If your
proposed system would "weed-out the child-pirates", then they would
remain just that: child-pirates. What is the difference between
operating without a license under the current system and operating without
a license under your "low-power system"?

Well for one thing, it would allow serious operators the chance to do
so without risking prosecution. For another, it would say to the
pirates.. "Look, now you have no rationalle for blaming your activity
on lack of an available service...". The benefits are too many to
repeat again here, it has already been said.

No matter what kind of "legal alternative" you provide these brats,
they will whine that it is too restrictive and ignore the rules anyway.

More of the same pre-judging those you know nothing about.

As a matter of fact, most of your arguments drive home the need for
regulation in the first place. As I mentioned, there are vehicles for
changing the details of those regulations. And again, are any of the
kids getting behind THAT idea?

Yeah, Dunnifer is going to court on that very issue now. But as a
self-appointed expert, you MUST know that already.

Another of your arguments is that there is not enough room in the
industry for everyone that wants to participate. Maybe. But there is
certainly not enough room on the dial for everyone who casually wants
to broadcast, either.

But there seems to be enough room for another 8090 Satellite Music
Network affilate.

... we have put the FCC in charge--for better or for worse. In
the industry, you have to prove yourself.

It would be nice if the FCC would allow that to happen. Also, it'd
be nice if the Commission had that attitude toward higher power licenses.

Actually, we may be talking about two different things here. You seem
to be advocating the creation of a new radio service.

Uh, yeah. Did that just dawn on you? Glad to have you on the same
wavelength ;-).

If you can make a
good enough case for it through the proper channels, it will happen.

Well there are plenty of people who are trying. But the proper
channels are so full of static that the message seems to be lost
somewhere along the way.

What the brats want is to do "their thing" anytime, anywhere, anyhow they
damn please. Our disagreement comes from the predicted result.

[Sound of moderator beating head against wall] John, our disagreement
comes from that and the fact that while you lump everyone with a
micro-radio leaning into a sub-human catagory, I am listening to what
they are actually saying and I get a whole different message.

So how is this resolved? Why don't you contact one of these "free
radio" organizations and see what they think of your idea of a
low-power, licensed radio service? I think all of us would be
interested in the reply.

Well it seems that this discussion has been reprinted in may forums.
I am sure that others will come forth, in fact some already have.

Bill

# 1346. Why micro broadcasting

Newsgroup: rec.radio.broadcasting
Date: 1993-08-29 03:45:38 UTC
From: "Frank C. Haulgren" <haulgren@henson.cc.wwu.edu>
Message-ID: <25p8p2$akh@vixen.cso.uiuc.edu>
Source record: 42585

The whole issue of micro-broadcasting may be one of those issues that is totally unresolvable. Who knows? But here are my thoughts about why the time has come for micro-broadcasting.

I write not as a professional who has filled every imaginable position in broadcasting like John Higdon nor a someone as knowledgeable about the many technical and legal aspects of the medium like Scott Fybush, Bill Pfieffer or Mike Black. I write as a volunteer - or rather ex-volunteer - at a community radio station and as someone who has been an avid listener to creative radio for well over 30 years.

First, I resent the characterization of folks who believe the time is right for micro-broadcasting and actively advocate it as "kids" whose interest in broadcasting is fleeting and eclipsed by a desire to break the law and play at high tech cat and mouse with the FCC or other authorities. (There may be some but it sure ain't all of us.) While I will say that I have found it a bit frustrating getting information from Free Radio Berkeley's Stephen Dunifer about his case (I recognize the demands of a small staff or no staff gig however) I do believe that his interest and desire to legitimize low-power broadcasting is born from circumstances akin to my own. Seems like there was a post about this ages ago. Anyway, perhaps he'll read this and let us know.

My involvement with my local college/community station came to a slow and agonizing end over 18 months as the station abandoned its 15 year commitment to freeform eclectic programming in favor of a structured and focused format of "alternative" rock with weekend specialty ghettos. The fact that many of us worked incredibly hard to dissuade the student government and station management from what we perceived as a wrong headed move (only to fail) is irrelevant to this discussion. What is relevant is that research I and others did over the las t year and a half indicate that the attitudes that lead our Bellingham station in that direction (professionalization, audience building, decreasing local creative cont ent) are rampant across the country. Whether this is good, bad or defensible is also not relevant at this point - it *is* going on, it *can* be documented, and it *is * displacing many loyal volunteers as well as loyal listeners. Which brings us to this...

Fybush and Higdon suggest that there *are* places for these volunteers. IF they really want to be on the air legitimately. They suggest that stations are desperately seeking volunteers all over the country. While the second statement may be true I doubt the first. People who volunteer at what we used to call community radio stations do so for very differe nt reasons than the broadcast major who volunteers at the local news and informat ion AM or the intern working at the local NPR outlet. The

displaced community radio volunteers probably first came to it so that they could indulge their passion and share that particular knowledge and enthusiasm with others. (Yes, perhaps often a small and specialized audience.) The displaced volunteer who ran an avant-garde jazz show for 9 years is not going to be happy (even if he or she is interested) being the *announcer* for a yuppie jazz shift. And the volunteer who programmed a vintage 70Us Euro-rock show won't even get considered by the local jazz and classical station or the new sounding community station with a now-contemporary-urban-edge sound. And *this* is important too, their former audiences (small and loyal as they might have been) wontU be happy with those so called alternatives either. It is easy to flip out this idea that stations are hungry for volunteers, but also consider the make up of people who really volunteer at community stations.

I know, I see heads bobbing all across america now. Readers muttering, Sandboxers , radio club... but, we'll get to that later.

So, what should these increasingly displaced volunteers and listeners do?? Some may say "start your own station within the existing structure like many before you." Well, first let me suggest that this is cousin to the kind of reactionary attitude one hears elsewhere (Oh, If you donUt want me building a shopping center across that wetland BUY IT!) Second, I'll say that a group of us displaced radio folks here in Bellingham did some research, asked a lot of questions, decided to take it one step at a time and wanted to get a frequency search done. The good people at Everett's KSER referred us to a broadcast engineer in Oregon who was sympathetic to our plight and had done some work recently for them. We rang him up and talked about it. His response was that because of work heUd done for stations in the upper Puget Sound area he'd hate to take our money just to tell us what he could tell us right then and there: No chance in hell of getting a frequency assignment.

So, some of the suggested avenues now explored where does this leave us? Where does this leave the Lummi Nation (neighboring Bellingham) who are interested in a tribal station? Our situation is not unique it is similar to what may be encountered by anyone wanting to start a station anywhere in the country - especially in urban or metro areas. And I have not even mentioned the monetary hurdles encountered.

Many of us see micro-broadcasting as a way to give access to the airwaves back to the disenfranchised. Maybe we should wait for DAB, maybe we move on to public access TV I don't know. But, I do know that there are a lot of listeners and volunteers all over who feel increasingly abandoned as the concerns of commercial broadcasting become the concerns of non-comm broadcasting. In Bellingham a lot of people feel that the local NPR station offers no alternati ve to the new face of our college station because it has so rigidly defined itself. It is lusting after the same upscale audience with essentially the same kind of unrooted programming that the 2 big city NPR's serving our area do. (And they are hogging up a considerable chunk of our dial with no local content what so ever!) A lot of us, listeners *and* volunteers have been muscled out by an increasingly

*narrow* vision of *broad*casting.

Micro-broadcasting is seeking to re-localize radio using a technology and a small vision that should - for a time - be impervious to co-opting. It appears, in a world where every thing grows and grows and grows, to be the one chance for local voice.

And oh yeah, those epithets *sandbox radio* and* radio club*, they get dragged out and tossed around like the pat conference buzzwords they are. But, who is really running a m ore exclusive club? The folks with all the rules, hurdles, categories and numbers on charts and spreadsheetsand target audiences??? Or the folks that just want a little piece of the air where *anybody* can stop by and put their passion, dream, vision on the air for a short while or a long while and listeners can happen occasionally upon stunning beauty and outrageous originality? Some call that kind of radio a radio club, irresponsible and not *serving the audience*, but I call it the community broadcaster's responsibility.

Some of the airwaves for all of the people,
not all of the airwaves for most of the people!

No need to apologize, John. It *is* a complex issue ;-).

In an earlier posting on this subject I mentioned the following:

> One of the things that is clear in the brief is that we are
> not talking about a "right to broadcast", but a "right to
> communicate".
>
> The difference between the two is that the right to
> broadcast would rest with the broadcaster, while the right to
> communicate is shared by the broadcasters *and* the listeners
> (hence the plaintiffs in the case against the FCC include both
> the micro radio practitioners and the communities).
>
> The National Lawyers Guild brief argues that by arbitrarily
> disallowing micro radio, even when there are available
> frequencies and the signals do not interfere with other
> linenced operations, the FCC is not only interfering with the
> First Amendment Rights of the broadcasters, but of the
> listening communities. It is a compelling legal argument with
> lots of legal precedent to support it.

Many people feel that they are not adequately served by radio as it is currently structured. They certainly don't care about pop music, "easy listening" newscasts, endless advertising and the annoying banter of talk show hosts who confuse content with conflict.

They also don't care about mainstream politics, traffic reports (when you haven't got a car or a job to go to...), or stock market reports (need I say why?).

But they do have things to say. They want to be able to express their cultures. They want to be able to talk about what it is like to be unemployed and about how they, as a community, might organize

themselves to change the way city hall or the federal government either ignore them or act outright against their interests.

It's not good enough to say that these people should "worm their way" into mainstream radio. Sure, some of the people who run micro radio stations are highly qualified and could perhaps get a job in radio -- but only if they agreed to ignore the concerns of their marginalized communities.

For example, Zoom Black Magic Liberation Radio is a station that has taken on Springfield IL city hall and the Sprinfield police force on issues of police brutality and electoral reform. The rest of Springfield's media ignored the issues. M'banna Kantako, the station's "deprogramming director" is a qualified radio producer. But there isn't a radio station in town that would let him on the air unless he agreed not to talk about the issues of interest to the residents of Springfield's inner-city African-American ghetto.

As Kantako said:

If you are saying, "Don't give a damn about nobody. get you a house. Get you a dog. get you a swimming pool, and the hell with everybody else", then they will not only leave you on the air, they'll give you a bigger transmitter! But if you start talking about people coming together to fight against the system that's oppressing all of humanity, all across the planet, then they will find you.

Micro broadcasters don't want to "worm their way" or beg their way into mainstream radio. They believe that they have something to say and that it is important for their communities to have a voice. And they believe that the FCC regulations prevent them from having that voice. As Kantako said, "It's kind of like those black tie dinners at $25,000 a plate. You can cme, if you've got $25,000. Anything you need to survive, they put a price tag on, and if you don't have it, you don't survive. They call our broadcasting controversial. We call it survival material."

> In fact, read the propaganda. It is full of power-to-the-people
> garbage. They are not interested in a change in the law--they just
> want to break it and get some public sympathy in doing so.
>
> I have been a DJ. I have prepared and delivered the news. I have
> programmed a classical music station. I have sold time. I have acted
> as manager. I have been a station owner. And my first love is
> broadcast engineering. What else is there to do in radio? And not
> once was it necessary for me to bootleg. You want a rush? Fire up a
> 50KW transmitter that you have just spent the last few weeks
> installing. And the fact that you have a Construction Permit and
> Program Test Authority does not diminish the effect one little bit.

My point exactly. People who are serious about bringing about radical change do not get access. But radio stations will give jobs to people who are upset by "power-to-the- people garbage".

Please don't misunderstand me. I am not saying that you or anyone else thinks that power to the people is crap should not be allowed on the airwaves. I just think that the radio system should be more pluralist and that people who want power should have access -- not just people who already have power.

Micro radio isn't much, but a proposal like the one Bill has made could be an important step.

Source record: 42577

I was just thinking . . .

Here in Los Angeles (ignore the .ca on my e-mail address), our FM band is pretty full. Not much chance for micro radio there (we could use those low-band FM channels on TV channel 6, but that's about it)

How about AM?

On most of the channels above 1200 kHz or so, we just get jumbled local stations from all over the country . . . . a few during the day, many more at night (of course)

We also have a few Travelers Information stations. LAX is on 530, various freeway stations are on 1610, and the Hollywood Bowl runs a station on 820.

This station (Hollywood Bowl) puts out good signals for about a 3-4 mile radius. With a good radio, I can hear it almost nine miles away.

Of course, TIS stations are currently limited in programming content (no music, although the LAX station does use a few 'bumper' tunes now and then). But would the range of a station like that at the Bowl be of interest for the "micro radio" hounds out there?

Might be just the thing to get people interested in AM again . . .

# 1349. HEADER MISTAKE ON MICRO RADIO ARTICLE

Newsgroup: rec.radio.broadcasting
Date: 1993-08-29 03:56:51 UTC
From: rrb@deja-vu.aiss.uiuc.edu
Message-ID: <25p9e3$b2a@vixen.cso.uiuc.edu>

I just posted a reply article on the subject of micro-radio. Actually i just posted 2, but on one I neglected to change the header from the original article after adding response.

That article still bears the name, address and such from John Higdon, even though the content is obviously a reply to him and not his article.

I appologize for the inconvenience.

# 1350. Micro Broadcasting and Money

Newsgroup: rec.radio.broadcasting
Date: 1993-08-30 01:52:21 UTC
From: john@zygot.ati.com
Message-ID: <25rmgl$8rt@vixen.cso.uiuc.edu>
Source record: 42588

So I have lumped together all micro broadcasting proponents as lazy, lawless kids. That is wrong and I admit it. However, just as wrong is a characterization of myself as some sort of crotchity rich radio fat cat who has no feeling for the concept of "community radio".

I cut my teeth on community radio. My very first broadcasting involvement was with a friend of the family, a Lockheed engineer, who struggled to put a local classical music station on the air. You have never seen a more jury-rigged dumpy excuse for a radio station. Any average bootleg operation would look like ABC, New York compared to this place. There was no money, but there was lots of raw talent and enthusiasm. And there was one other thing: a license.

At the same time, I engineered a class A station in Los Gatos. Format? Whatever you brought with you. You see, it was the epitome of a community station owned by the previously mentioned (a few months back) eccentric, Lorenzo Milam. The station ran on 100% volunteer help. Except for me; Milam always insisted upon paying the engineer at his stations. I got a whole $250 a month. It was a GREAT station. And an awful lot of people got radio careers launched there. It had a license.

On several occasions I have been offered pieces of stations in exchange for engineering talents. Others have been offered partner status for management and programming talents. Does that answer your question about how people become owners without mounds of cash? Yes, you do have to network. You need to hang around stations, be willing to do a lot of work for free, and pay your dues as it were. And everyone that I know who has done that has had it pay off.

Power to the people? I believe in it. Unfortunately, my experience is that the term (or its many variations) is code for "power to us and our selfish little agenda". I have been involved with countless college stations, NPR outlets, and even the infamous Pacifica web. Did I ever mention the time that Lorenzo Milam put a community station on the air in San Francisco? One of the "power to the people" media activist groups ranted and raved that it was not getting enough time on the station and vowed to make trouble at licence renewal time.

Lorenzo's response was to give the group the radio station. That's right, he GAVE them the radio station, lock, stock, and barrel. After the license was transfered and they assumed control, the whole thing went down the drain in less than a year. Apparently, they discovered that owning and running a radio station was not all it was cracked up to be. (The station was KPOO for you historians.) Yet another station that I helped put on the air. You have not lived until you have crawled around in the elevator equipment room of a Nob Hill apartment building

trying to tune a cranky transmitter.

But, since no one seems to agree that there are opportunities that exist within the legal framework of radio broadcasting, I will say no more on the matter. If people think that the be all and end all of the radio experience is to put a junk five watt transmitter on the air from his bedroom, who am I to argue? What would "Mr. Establishment" (oh, if you only knew!!) know about the struggle of the common man to have his voice heard on the airwaves?

Just because someone does not fall in lockstep with a "popular" cause (e.g. Micro Broadcasting) does not mean that he may be summarily categorized as some kind of reactionary. There are many who accuse me of being some kind of crusader, being a card carrying member of the EFF and the ACLU. So as it may be wrong for me to lump proponents of micro broadcasting into one bag, it is just as wrong to do the reverse. It is entirely possible for an "alternative" person such as myself to be a non-supporter of bootleg radio.

john@ati.com | San Jose, CA 95150 | 10288 0 700 FOR-A-MOO | +1 408 264 4407

[Moderator's Note: I didn't know that you were involved with KPOO! I listened to that thing in the late seventies while living near Golden Gate Park. On the other point, thank you for realizing the mistake in lumping everyone together into a negative stereotype. I see that you did not enjoy being the *target* of such negative generalizations very much :-). It is much easier to respect your views, although different than mine, when it appears that you are actually listening to what is being said instead of just reacting in a knee-jerk fashion. Notice, that I did not *call* you a crotchety old man, but merely said that you are beginning to *sound* like one the way you were carrying on about "*those kids today*" As I have repeatedly said, I expected more from a person such as you, who *has* worked his way through the ranks in the industry and has acheived much in doing so. I have seen you crusade against censorship many times in this group. I know that you are aware of things. Now, perhaps I am seeing more of that person whom I can respect, a person who can disagree without indulging is smear-campaign tactics and pajorative generalizations. Thank you for restoring my faith in you. Bill]

# 1351. Re micro radio on AM

Newsgroup: rec.radio.broadcasting

>We also have a few Travelers Information stations. LAX is on
>530, various freeway stations are on 1610, and the Hollywood
>Bowl runs a station on 820.

That's even a doable thing, especially as there is a new hunk
of the AM band being opened up. Since the TIS's so far are only
authorized for 535 and 1610 kHz (the Hollywood Bowl station
must be on a waiver), why not designate 1620 as a Community
Information Station frequency (it always worked fine for me,
broadcasting in Berkeley in the late 60's ;-)). The rules
for TIS's would be a good starting place: 10 watts into a
vertically polarized antenna no more than 15 meters high,
producing no more than 2 mV/m at 1.5 km away. Good, stable
and spectrally well behaved transmitters are already available.
and not too expensive. There might be room for some improvement
in the audio specs, the TIS regs specify 6K00A3E emission
with an 18 dB/octave audio lowpass filter starting at 3 kHz!
Anyway, start with that -- the rules are in 90.242, found at
your local library in Part 47 of the Code of Federal Regulations.

>This station (Hollywood Bowl) puts out good signals for about
>a 3-4 mile radius. With a good radio, I can hear it almost
>nine miles away.

Same is true of the Monterey Bay and Berkeley stations.

--
David Josephson <david@josephson.com>

[Moderator's Note: In Chicagoland we have a TIS stype signal for the World
Music Theatre on 970khz. Never heard it (it is 25 or more miles S.W. of
me). I would say that the 1620 idea would be good, except that AM signals
are notoriously more prone to unexpected interference than a similar FM
setup, especially at night. While I would support *any* reasonable
micro-radio proposal, I would NOT be real happy seeing the thing licensed
above 1620, since the vast majority of existing radios dont tune the extended
band at this time. Most *do* however reach to 1620 with no trouble. I agree

that the TIS high frequency rolloff would have to go. That is fine for TIS, but for entertainment, fergetit! BTW, what is 6K00A3E emmission? Bill]

# 1352. More Micro Radio Ideas

Newsgroup: rec.radio.broadcasting
Date: 1993-08-30 01:52:25 UTC
From: af660@freenet.carleton.ca
Message-ID: <25rmgp$8s2@vixen.cso.uiuc.edu>
Source record: 42590

As I mentioned in an earlier message, an expanded form of the Travelers Information Radio service (on AM) may be a better route to "micro radio", then a profileration of cheap FM equipment.

These low-power AM stations could serve up to a 3-4 mile range, making them attractive for small communities or portions of larger cities.

I'm not quite sure how much a TIS transmitter costs, although it must cost less than even a 250 watt regular AM transmitter

Antennas would be limited to those used in TIS (including leaky coax setups for "linear" communities

Remember that this is to be a COMMUNITY SERVICE, not a "hobby radio service", so I propose a few conditions:

a. at least 12-18 hours of programming per day (some amount of which should be locally originated

b. A substantial, but not overly-unattainable filing fee ($250-500) for the licenses to help pay for administration and enforcement. (it's not *that* difficult to raise that much if you're *really* interested)

c. There may need to be some type of lottery system at some point, if the band gets too overcrowded.

d. These micro stations would operate on a non-interference basis (I think TIS operates like that now)

e. Programming content: Outside of a minimum "local content" requirement, the same rules would apply to these stations as do apply to regular commercial broadcasters ("obscenity", libel, etc.)

f. Licenses/frequency allocations would be subject to forfeiture if the commitments are not adhered to.

I'm not sure what Dunifer, et. al. are up to or how their court cases are proceeding. But, I believe that the expanded definition of TIS that I am proposing would provide various groups access to the airwaves without providing excessive interference to established stations.

Oh, one other thing . .. I propose that limited commercial advertising be allowed, so that stations could support themselves that way, if desired. That would also allow advertisers

with limited incomes access to the air.

# 1353. Re: More Micro Radio Ideas

>route to "micro radio", then a profileration of cheap FM equipment.

>These low-power AM stations could serve up to a 3-4 mile range,
>making them attractive for small communities or portions of
>larger cities.

Interesting idea. Problem with AM is it's inherent skip potential, hetrodynes between transmitters operating slightly off frequency of one-another, and the hash caused by marginal reception of two co-channel stations. FM has no skip problems, and the capture ratio of FM receivers will eliminate the co-channel noise problem.

Also, if you are talking TIS gear, as another poster mentioned, TIS uses a 'brick wall' low-pass filter that essentially eliminates anything above 3hkz audio. Fine for travellers information, not very good for entertainment purposes. Similar power would be good, but that low-pass filter has to go. It can be replaced by integral modulation limiting to control splatter.

>I'm not quite sure how much a TIS transmitter costs, although
>it must cost less than even a 250 watt regular AM transmitter

Oh, yeah. Lots less. But again, TIS gear is not very well suited to entertainment broadcasting.

>Antennas would be limited to those used in TIS (including leaky
>coax setups for "linear" communities

I disagree about 'leaky coax' antennas. They do not work well outside of a few hundred feet from the element and would be difficult or impossible to construct and operate (where would you string the coax?). Leaky systems work for highways because the right-of-way is controled by the same entity that controls the transmitter, usually the highway department. Ask any college with a 'carrier-current' radio staton how much fun it is to maintain thousands of feet of cable and many transmitters.

Also, you seem to be defining 'community' as a geographical area. Most micro-radio proponants seem to be defining the term not only as a geographical area, but as a cultural thing as well. Essentially, free-radiation is the only realistic alternative for micro-radio.

>Remember that this is to be a COMMUNITY SERVICE, not a "hobby
>radio service", so I propose a few conditions:

>a. at least 12-18 hours of programming per day (some amount
>of which should be locally originated

I submit that virtually ALL programming should be locally originated. Who needs a 5 watt satellite affiliate. By local, though, I would not rule out the playing of a tape that happenned to be made by someone out of the area/state or even nation. For instance, news and information from other localities would be fine. Even rebroadcasts of other micro-programming (with appropriate permissions) would be good. Local (in this case) means to me that the local owner/operator(s) are responsible for creating programming at the station and not subscribing to a programming service. I'd like to see a minimum of 75% local origination. 100% would be great!

>b. A substantial, but not overly-unattainable filing fee
>($250-500) for the licenses to help pay for administration
>and enforcement. (it's not *that* difficult to raise that
>much if you're *really* interested)

I agree! there has to be some selection process. Would your fee be refundable if the license could not be granted for whatever reason? I'd like to see that (or maybe all but 10% refunded... like a bail-bond situation).

I mwould also like to see micro-radio licenses be *non-transerable* except to (perhaps) family members or other members of the original licensing entity. This would eleiminate 'speculation' in micro-radio (the buying up of licneses for profit) and assure a fair chance for everybody.

>c. There may need to be some type of lottery system at some
>point, if the band gets too overcrowded.

Perhaps, but not at first. It might get bogged down in politics.

>d. These micro stations would operate on a non-interference
>basis (I think TIS operates like that now)

Absolutely! This is a must. Without it, Micro-radio has not got a chance.

>e. Programming content: Outside of a minimum "local content"
>requirement, the same rules would apply to these stations as
>do apply to regular commercial broadcasters ("obscenity",
>libel, etc.)

Hmmm. Obscenity? Well, I personally feel that the obscenity laws even for 'major' broadcasters are too imposing and vague. They are, no more than, limitations on freedom of speech and unfairly target electronic media. There is no law against obscenity in print media. I would be very reluctant to impose content restrictions on micro-radio, at least at first. But, to be fair about it, I would support a lessening or elimination of the same laws that govern major broadcasters. I suppose, though, barring that from happenning, micro-radio will probably have to be governed by the same rules as, at least, college radio.

>f. Licenses/frequency allocations would be subject to
>forfeiture if the commitments are not adhered to.

Of course, that is only right. Provided that they are given opportunities to correct situations before that measure is taken. Forfieture should be a *last* resort. Keeping in mind that micro-radio stations will probably

operate with little or no 'staff' in may cases, I think a bit more rope is in order. Of copurse, wanton violations should not be acceptable.

>I'm not sure what Dunifer, et. al. are up to or how their
>court cases are proceeding. But, I believe that the
>expanded definition of TIS that I am proposing would provide
>various groups access to the airwaves without providing
>excessive interference to established stations.

I would love to hear from Dunnifer on this. If anyone knows how to contact him, feel free to send him any of this discussion and invite him to speak to us directly. the email address for the journal and newsgroup is ...

rrb@airwaves.chi.il.us

>Oh, one other thing . .. I propose that limited commercial
>advertising be allowed, so that stations could support themselves
>that way, if desired. That would also allow advertisers
>with limited incomes access to the air.

Excellent point. I agree. Except that I would not place any 'limits' on that commercial traffic. It would be up to the operator, just like it is up to commercial stations how to handle commercial traffic. I suppose tax and licensing (business licensing) issues might be raised by that, but such is another discussion and another newsgroup :-).

Bill

# 1355. New Mexico radio update -- some notes to pass along! (surprise ahead!)

Newsgroup: rec.radio.broadcasting
Date: 1993-08-30 01:52:39 UTC
From: Robert Smathers <roberts@triton.unm.edu>
Message-ID: <25rmh7$8sc@vixen.cso.uiuc.edu>
Source record: 42593

o.k. time to catch up on N.M. news -- I'm already late enough.

First, let's start with what would seem to be a surprise. After a short 4 week stint on 770 KKOB-AM, it was announced Monday Aug 23 that the G. Gordon Liddy show was being dropped and the Gene Burns show would replace it. I am glad about this move -- I think Liddy was so boring! Burns, from the few hours I've listened, has an excellent talk show and I am looking forward to many hours of listening enjoyment.

The management of KKOB-AM gave a few comments during a 30 minute show that followed the Rush Limbaugh show and preceeded the inaugural Gene Burns show (the first show in the Albuquerque market).

They said that Liddy's show immediately follows Howard Stern's on the New York City flagship station and the management felt (and they said listeners supported this idea) that Liddy seemed to be fascinated with sex and killing and that it seemed he was headed in the direction of "Howard Stern"-type radio. The management doesn't want the show to head in that direction -- after all, KKOB is a family oriented radio station -- so they just dropped Liddy. The management also talked about the time of the shows. Burns is heard live on KKOB -- Liddy was tape delayed. KKOB management felt like it was harder for Albuquerque callers to call into the Liddy show because the show wasn't live in the Albuquerque market.

Now for a little bit older news (like the winter ratings!) 8^)

RUSH LIMBAUGH has lost about one-fifth of his age 12-plus audience on KKOB radio (comparison done with the recently released Spring '93 Aribtron book and the previous winter book). Limbaugh's 17.3 winter share dropped to a 13.8 share in the spring. In listener terms, that works out to approximately 20,000 people in the winter and 16,000 in the spring.

Spring Arbitron ratings for the Albuqurque market:

Overall
=======

Rankings are based on the average number of listeners age 12-plus, tuned to any given radio station during any given quarter-hour between 6am and midnight, Monday through Sunday.

Top 10:

1)KRST-FM (92.3) and KRZY-AM (1450) simulcast stations (country music)
14.7 share
2) KKOB-AM (talk) 9.6 share
3) KKSS-FM (97.3) (rock) 8.2
4) KZRR-FM (94.1) KZSS-AM (610) simulcast stations (rock) 6.3
5) KKOB-FM (93.3) (adult contemporary) 5.7
6) KLSK-FM (104.1) (who knows 8^) they have undergone many format
changes, I don't know anymore what they have 4.4
KHFM-FM (96.3) (classical) 4.4 (tied with KLSK)
7. KZRQ-FM (105.1) (don't know format) 4.1
8. KMGA-FM (99.5) (adult contemporary/favorites) 3.9
9. KASY-FM (103.5) (country music) 3.5
10. KKJY-FM (100.3) (easy listening) 3.4

MORNING DRIVE
==========

12-plus morning drive numbers are quarter hour averages, Monday through
Friday.

Top 10:

1) KKOB-AM (770) not stated
2) KRST-AM/KRZY-AM simulcast 14.2 share
3) KKOB-FM (93.3) 8.0
4) KKSS-FM (610) 7.4
5) KZRR-FM/KZSS-AM simulcast 6.2
6) KZKL-FM(101.7) and KZKL-AM (1580) (great oldies) 5.1
7) KKJY-FM (100.3) 3.8
KMGA-FM (99.5) 3.8 (tie)
8) KLSK-FM (104.1) 3.4
9) KHFM-FM (96.3) 3.1
10) KOLT-FM (105.9) (country music) 2.7

KOLT-FM and KZKL AM/FM were the only stations that did not
appear in the overall top 10 rankings but appeared in the top
10 morning drive rankings.

## 1356. national public radio scripts

Newsgroup: rec.radio.broadcasting
Date: 1993-08-30 01:52:40 UTC
From: faith@mit.edu
Message-ID: <25rmh8$8sd@vixen.cso.uiuc.edu>
Source record: 42594

Does anyone know of a place where one can obtain scripts from National Public Radio? I am especially interested to locate the brief commentaries told by Bailey White, who I consider to be a very entertaining story teller with a delightful talent for the bizarre. Please respond via email to keep down the bandwidth. Thanks!

If you're ever in Los Angeles, KNX 1070 plays them everyday, at
9 p.m.

Most of these are the radio dramas (Lone Ranger, Dragnet, Lights Out,
etc.), but Saturday night is Comedy night, with Jack Benny and
either George Burns/Gracie Allen or Ed Bergen and Charlie McCarthy

# 1358. Re: Old Radio Shows

Message-ID: <25s41h$k2m@vixen.cso.uiuc.edu>
Source record: 42596

There are two sources of oldtime radio programs -- one is the limited number of stations that have regular broadcasts of such programs. As an example, I listen to WBBM (780 kHz, Chicago)'s oldtime radio now and then; they are on at midnight Central Time during the week for an hour, and on weekends usually are on at 8 PM for two hours (other times are preempted by sports). Here in St. Louis, they are normally listenable after dark on an SRII or a variety of other radios. (I'd like to see a list of other sources to try to pick up during the evening or night hours.)

The other source is the firms and individuals who compile and tell old-radio programming recordings. One such I can recommend is this person, from whom we have bought old radio program tapes for some years now. The tapes are good quality and the service is slow but sure. If you have 4-track reel-to-reel capability, getting tapes in that format is the most economical choice, and he uses good quality reel tapes:

Carl Froelich Jr.
#2 Heritage Farm Dr.
New Freedom, PA 17349

I suggest that anyone interested in old radio programs write Froelich for a catalog; also mention your specific wants, as he adds things to his list based on demand. He also sells cassettes, of course, and has coupons for special prices on cassettes; what we usually do is order some sale-priced cassettes with the coupons, plus a few reel tapes.

Regards, Will

EMB writes:

>Does anyone here collect or enjoy old radio shows. I have been collecting
>them for at least 5 years. I like to listen to the old radio shows because
>it allows you to use your imaganation and you're not watching what some
>other person perceives of the situation. Like the old "Fibber McGee and
> ....

I enjoy the old radio shows, too. In the Chicago area, we have
the good fortune of having an old-time radio aficionado living
among us who plays these shows over the air nightly: Chuck
Schaden's "Old Time Radio Classics" is heard at midnight Monday-Friday
and on the weekends at 8:00 pm (Central time) on WBBM-780 kHz.

Mr. Schaden also produces a four-hour program on the weekends,
called "Those Were The Days" which is broadcast from 1:00 to 5:00 pm
every Saturday on WNIB-FM (97.1 MHz, Chicago) and WNIZ-FM (96.9 MHz,
Zion, IL - Kenosha, WI).

Great stuff.

Your posting reminded me of a line quoted in an interview in the
documentary _Empire of the Air_: "Someone asked a child which he
liked better, TV or radio-- the child responded, 'radio.' When
asked why, he said, 'Because the pictures are better." (I'll have
to watch the film again to get the quote and the attribution right.)

(By the way, Bill the moderator: I agree with your response to
the poster from CWRU that radio will be around for a long, long, time.
I (and the others on this list, I'm sure) just didn't bother with a
followup because it smelled too much like flame-bait.)

## 1360. OLDRADIO

Newsgroup: rec.radio.broadcasting
Date: 1993-08-30 05:43:16 UTC
From: barry@jab.tucson.az.us
Message-ID: <25s41k$k2r@vixen.cso.uiuc.edu>
Source record: 42598

Well, Version 1 of OLDRADIO is ready to be loosed on the world.

This is a listing of the Pioneer stations on the air as of
November 11, 1928, with their successor frequencies and calls listed,
as far as known (there are still some that died in the early 30's
that we don't have deletion dates for as yet).

Did you know one station was sold by a Republican Club in NYC to a Ku
Klux Klan publication in VA? It's now a 50 kW station in DC.

Another station started as a way for a bootlegger to communicate with
his ships off the west coast.

Still another was under a "mobile" license and operated in at least five
states before "landing".

Some stations moved frequency three to five times before settling down.

Many stations that shared a frequency either combined, or bought someone
else out and moved.

Version 1 of OLDRADIO is available as shareware ... just to cover the
cost of diskette and shipping and handling. Registered users will receive
the next version - as we are even now continuing to gather more
information on the stations listed - as well as information on broadcast
history, call letter origins, frequently asked questions and more.

Send $7.50 to:
Barry Mishkind
2033 S. Augusta Place
Tucson, AZ 85710

You may also FREQ this file on FidoNet at 1:300/11 outside of ZMH.

## 1361. This Way Out & Pacifica

Newsgroup: rec.radio.broadcasting
Date: 1993-08-30 05:43:28 UTC
From: WEOS-FM <BLACK%HWS1%HWS.bitnet@CUNYVM.CUNY.EDU>
Message-ID: <25s420$k48@vixen.cso.uiuc.edu>
Source record: 42599

Ron Buckmire was not correct in stating that the Pacifica Network distributes This Way Out. This Way Out is fed on the Public Radio Satellite on channel 11 (64.9 MHz), but this is not a Pacifica program nor does Pacifica "own" this channel. This Way Out is produced independently. Pacifica does use this channel and others to feed its programs, including its daily news feeds, but it is in no way exclusive. This Way Out is distributed free of charge to stations that have a valid and current D/I aggreement with NPR Distribution. In case you have not heard, they have lowered this fee substantially and have included many benefits for registered users. Pirates (non-registered) users will be left out in the cold when the system goes digital in about a year.

Also, most FCC attorneys have handouts for client stations. They are
normally more up to date than the other sources. I got one from one of
the DC attorneys at the last NAB, and found it to be excellent.

If your station doesn't have an FCC attorney on retainer, ask around,
someone in the market is likely to have one, and a phone call can get
this (normally) excellent freebie.

> while radio still doesn't have its own 24 hour news network!

I think you will find that all of these formats exist on a local level. WCBS (New York) is a good example of an all news station, AAHS radio exists for children, and college radio stations such as WBGU-FM (Bowling Green State University, Bowling Green, OH) play new music that even MTV won't touch!! The future of radio lies in localization, just as the invention of the magazine format of periodicals didn't replace newspapers because newspapers turned to covering local events.

> [Bill Sez: As long as people want to c0onsume media while doing other

> things, such as driving, working, or whatever, radio will never be
> obsolete. Radio has long ago lost the role of primary household
> entertainment media to television (like forty plus years ago), and
> radio as we know it is certainly changing...

Absolutely. The biggest change ever in radio was its displacement from the living room, and the subsequent development of the portable transistor radio. Radio goes where TV doesn't, and it has become much more a medium that is consumed alone, rather than in groups. Radio formats have more and more come to reflect this change.

An excellent book on the subject is available, called "Radio in the Television Age" (or is it "Radio in the Age of Television").

# 1365. WRMR-Cleveland

Newsgroup: rec.radio.broadcasting
Date: 1993-08-30 05:43:43 UTC
From: ai629@cleveland.Freenet.Edu
Message-ID: <25s42f$k5o@vixen.cso.uiuc.edu>
Source record: 42503

There's been a lot of interesting talk recently about WRMR and how someone may be pirating our calls in New York.

Since I'm from the station, thought I might contribute an interesting little story.

WRMR is in the process now of moving its towers out of the North Royalton location in Cleveland...We are taking advantage of the new FCC rules which allow stations like us to increase our power. Right now, plans are underway to boost our daytime coverage to at least 23,000 watts - 50,000 possible.

Nighttime would remain where we are at 5,000. Sucky for sure!

Also, of interest, during the $11 million storm a couple of weeks ago, all of us jockeys broadcast live from that old, ruined and run-downed transmitter for 26 hours.

The night of the storm, the power was knocked out to our studios downtown. The transmitter locations substained no damage though or loss of power. So, we moved the studios to the transmitter on the AM...inside temp 98 degrees..humidity 1,000%.

WDOK was broadcast live from the engineer's home living room. And the signalled marti'ed to the Parma tower.

I physically took my home equipment (a Radio Shack mixer, a mic and a cd player with my cd's) and got us back on the air doing a live show 6 hours before they were able to resume regular programming on the FM.

Don't want to have to do that again for quite some time...16 hours on-air with no sleep...that after working a full day at the office.

:-)

Frank Macek
Ass't Program Director/Announcer--WRMR, Cleveland

Here in Silicon Valley, I saw bumper stickers "WILD 106.7". (or was it 107.7?). Anyway, when I first saw one of these, I thought that the owner of the car it was on must have just moved from somewheres east of the Mississippi (in "W" land) to California. Saw more stickers in a software shop (of all places!) on a box for submitting contest forms. Station plays rap and such (not my favorite music). So, I never listen to that station, so I don't know the real callsign. Probably the ordinary listener here doens't notice anything funny about using "WILD" on the west coast, only us techinal nerds would! As I haven't listened, they probably don't actually spell out w-i-l-d, but just say it as a word.
Where is the real WILD?

# 1367. Introduction to rec.radio.boadcasting (7-29-93)

Newsgroup: rec.radio.broadcasting
Date: 1993-08-30 18:26:05 UTC
From: wdp@airwaves.chi.il.us
Message-ID: <25tgnt$sdm@vixen.cso.uiuc.edu>
Source record: 42505
Cross-posted to: rec.radio.broadcasting,rec.radio.info

Greetings:

Rec.radio.broadcasting (r.r.b) is a Usenet newsgroup which
was founded in April of 1992, in order to provide a forum for
discussion of topics pertaining to 'domestic broadcast radio'.
Already in existance was rec.radio.shortwave, which centers around the
International radio scene, and rec.radio.noncom who's focus is,
obviously, non-commercial radio. Rec.radio.broadcasting was intended
to 'fill the gap' between these groups.

The Internet Radio Journal is a periodic email digest consisting,
mainly, of articles found in the newsgroup. It is intended for people
who either cannot access the newsgroup from their system or for some
reason perfer a digestified format for reading. Subscriptions to IRJ
are free, and available to anyone who wants one, and who is equiped
with some form of email service.

-=*=- DOMESTIC BROADCAST RADIO -=*=-

By domestic, we mean broadcasts which are intended, primarily,for
reception in the same country/nation in which they originate. R.r.b
is an international newsgroup, though, and the term 'domestic' should
not be taken to imply 'USA' or even North American. Readers in other
nations are encouraged to participate.

-=*=- SUBJECTS -=*=-

If it has to do with broadcast radio, and not _specifically_ international
shortwave, it is welcome here. Occasionally an article which IS
primarily about shortwave will be posted if the subject seems broad
enough that the readership of r.r.b might be interested, or be able
to assist the poster in some way.

Generally, if a subject 'seems' like it would be of interest to the
broadcasting community (which includes those involved in creating,
transmitting or listening to broadcast radio) will be published.
These subjects include (but are not limited to)..

1) Formats and programming.
2) Engineering & technical matters and interests.
3) DXing (long distance reception) on the standard broadcast bands
4) Community broadcasting (including non-commercial and clandestine stations).
5) Pirate broadcasting (especially non-shortwave, domestic pirates).
6) Legislation affecting the industry, and its 'offspring' industries.
7) Technologies affecting the industry, and its 'offspring' industries.
8) General station information. Who is going on and off the air, and why.

9) Radio's historical and cultural significance.
10) Radio's current and future trends.
11) Political and news coverage and its impact.
12) Job openings and help to those seeking work in the industry.
13) Information on equipment and techniques involved in transmission and reception of broadcast radio signals.
14) The International Scene and how broadcast radio is shaping up in the various nations of the world.
15) Gabfesting and all matters of general interest to those involved in, or interested in, the general subject of domestic radio broadcasting.

-=*=- POSTING -=*=-

1) Post to rrb as you would any other Usenet group. The software does the rest.

2) Email your article directly to rrb@airwaves.chi.il.us. Using other addresses to post will needlessly delay your article. You might consider installing an alias in your mailer for emailed articles, especially if you post a lot of stuff. See the end of this file for all applicable addresses.

-=*=- POSTING GUIDELINES -=*=-

* If you post a question that is of potential interest to others in the group, ask that replies be posted, instead of emailed to you. We all would like access to the answers If you do receive email replies, post a summary to the group. This forum is only as good as it's posters and readers. Keep the info flowing.

* If you email an answer to a question, send a Cc: to the group's submission address, rrb@airwaves.chi.il.us, so we can all learn from your knowledge. When id doubt... POST POST POST! :-).

* PLEASE edit quoted text to a minimum! Most users of this group are fairly regular readers and do not need, or want, to read the entire text of a recent article in every reply. Of course, if the thread is less current, more quoted text may be appropriate. Use your brains (and your editor :->).

* If your message is basically a one or two line "Me Too" or "I disagree" post, consider emailing it to the poster. However if you go into some details as to WHY you agree or disagree, then please post it.

* If you are replying to an article in the Internet Radio Journal, simply use your mailer's reply feature, and again, edit the text to ONLY the article you are replying to, and include the article's name in the Subject field. Subjects of "Re: Internet Radio Journal" are confusing and may result in needless delays.

* If you post about a local radio station or personality, realize that 95% or more of the readers will know little or nothing about it. Offer a little background, like location, station format, type of

music played etc.

* Last but not least, avoid flames and personal insults. R.r.b has a high percentage of broadcast professionals among it's readers. We try to maintain a reasonably high brain to bulls*it ratio here. It is perfectly fine to say "I think that what you said is the stupidest bunch of crap I have ever heard", instead of "YOU are the stupidest jerk I have ever heard". If you *must* make personal attacks, do it in email.

-=*=- MODERATION -=*=-

R.r.b is a _very_ loosely moderated group. Normally, all legitimate articles will be posted to the group. Matters that may cause an article to be rejected by the moderator include...

---

* Articles which are not on (or reasonably near) the stated charter and scope of the group (domestic radio broadcasting) or pertain to 'non-broadcast' radio services, such as cellular, two-way, ham, citzens-band, and such.

* Articles that are too long for submission as-is. If your article is longer than 10k (10,000 bytes), consider splitting it into two parts, or better yet, edit it down to a more reasonable size. Check to see if you can eliminate any quoted text. If you believe that your article is of an especially urgent or inforamative nature, and you also feel that you cannot reduce the size without damaging the content, let me know and I will try to work with you.

* Articles which are merely multiple repetitions of an identical answer which has already been offered several times. Often these will be bundled together into a single article to conserve bandwidth and increase readability.

* Articles which contain 'miles' of quoted and multiple quoted text followed by a few lines or less of original text. Please edit quoted text to a minimum and try to adhere to the *50% rule*, that is 51 (or more) percent of original text to 49 (or less) of quoted text. If the thread is not curent, more quoted text is appropriate. Only the worst offenders are omited, usually I will edit quoted text myself, when I have time.

* Articles that solicit for funds or contain blatant commercial content. (see next section on this)

* Articles which are unwarrantedly offensive, abusive or contentious for the sake of contention. Personal attacks and ridicule are considered such. Discussion, even argument, of issues and opinions are welcomed and encouraged. Flame-wars and such are not. We have discussions here, not shouting matches.

Note: Since most articles are used, we do not send out confirmations. If your article *is* rejected, you WILL receive a note explaining why the action was taken. If you do not receive such a note, and you do

not see your article in the group, notify the moderator at once and include a backup copy if you have one.

-=*=- NO SOLICITATION POLICY -=*=-

Rec.radio.broadcasting and the Internet Radio Journal maintain a non-solicitation policy. Articles which appear to contain substantial 'commercial content' or which appear to blatently solicit funds from readers for a 'cause' or a 'project' are generally rejected. I generally do accept..

Product reviews: ... provided they are objective and informative and contain little or no 'motivational' language. Prices should be reduced to a price 'range' and all inqiries must be directed to the poster -or- an address of the manufacturer/distributor.

Personal items: Such as old time radio tapes, a specific piece or two of equipment etc. sold at a low, hobbiest price.

Radio-related items for barter/trade: Self explanatory.

Announcements for non-commercial workshops, conventions, radio related flea-markets, etc. Pricing <other than small admission charge> and other specifics (like 'we take your credit card') are considered commercial content. If you want to publicize here, then you must deal with the followup mail/calls yourself.

Personal recomendations of a product/company that appear legitimate. Especially when it is in response to another poster's inquiry.

---

In general I will take an 'err on the side of permissiveness' approach to this. In other words, if you are credible, informative, reasonably intelligent, broadcast related, and have something to offer, I will do what I can to pass it along to the readers. I will only reject the worst of the lot. the rest I'll try to edit as necessary.

-=*=- ARCHIVES -=*=-

Archives of past Internet Radio Journals are kept for anonymous FTP at deja-vu.aiss.uiuc.edu . They can be found in the directory /misc/rec.radio.b-cast. In that directory you will find a file called INDEX, which contains the issue numbers of all Journals, and the title of each article contained within. The archives are updated every week or so. To determine when the last update was, look at the date on the file called "<-Archive Last Updated At".
If you need help with FTP, write me.

The Journals are arranged in sub-directories of about 100 issues each, and are in compressed (.Z) format. Remember that compressed files should always be sent using the "binary" mode. If you have trouble accessing anything, or if you have any questions about the archives, send email to rrb@deja-vu.aiss.uiuc.edu. If you appreciate the archives, send your notes of appreciation to the site admin, C. Lance Moxley

<lance@deja-vu.aiss.uiuc.edu>. He has been very gracious in his willingness to store our archives on his machine.

* Please do not bother the system admin with problems, direct those to me. *

-=*=- ENJOY THE GROUP! -=*=-

I hope you enjoy the group. Remember, it is only as good as it's contributors. So don't be shy :-). If you have a question, or answer, even if you are not sure, post - post - post.

I am open to suggestions on how to improve this group. Send them via e-mail to wdp@airwaves.chi.il.us -or- rrb@deja-vu.aiss.uiuc.edu.

Thanks to all who have, and continue to, participate.

We now return you to your regularly scheduled newsgroup :-).

William Pfeiffer
Moderator - rec.radio.broadcasting - Internet Radio Journal

# 1368. Introduction to rec.radio.boadcasting (7-29-93)

Newsgroup: rec.radio.broadcasting
Date: 1993-08-30 18:28:05 UTC
From: wdp@airwaves.chi.il.us
Message-ID: <25tgrl$sj9@vixen.cso.uiuc.edu>
Source record: 42506
Cross-posted to: rec.radio.broadcasting,rec.radio.info

Greetings:

Rec.radio.broadcasting (r.r.b) is a Usenet newsgroup which
was founded in April of 1992, in order to provide a forum for
discussion of topics pertaining to 'domestic broadcast radio'.
Already in existance was rec.radio.shortwave, which centers around the
International radio scene, and rec.radio.noncom who's focus is,
obviously, non-commercial radio. Rec.radio.broadcasting was intended
to 'fill the gap' between these groups.

The Internet Radio Journal is a periodic email digest consisting,
mainly, of articles found in the newsgroup. It is intended for people
who either cannot access the newsgroup from their system or for some
reason perfer a digestified format for reading. Subscriptions to IRJ
are free, and available to anyone who wants one, and who is equiped
with some form of email service.

-=*=- DOMESTIC BROADCAST RADIO -=*=-

By domestic, we mean broadcasts which are intended, primarily,for
reception in the same country/nation in which they originate. R.r.b
is an international newsgroup, though, and the term 'domestic' should
not be taken to imply 'USA' or even North American. Readers in other
nations are encouraged to participate.

-=*=- SUBJECTS -=*=-

If it has to do with broadcast radio, and not _specifically_ international
shortwave, it is welcome here. Occasionally an article which IS
primarily about shortwave will be posted if the subject seems broad
enough that the readership of r.r.b might be interested, or be able
to assist the poster in some way.

Generally, if a subject 'seems' like it would be of interest to the
broadcasting community (which includes those involved in creating,
transmitting or listening to broadcast radio) will be published.
These subjects include (but are not limited to)..

1) Formats and programming.
2) Engineering & technical matters and interests.
3) DXing (long distance reception) on the standard broadcast bands
4) Community broadcasting (including non-commercial and clandestine stations).
5) Pirate broadcasting (especially non-shortwave, domestic pirates).
6) Legislation affecting the industry, and its 'offspring' industries.
7) Technologies affecting the industry, and its 'offspring' industries.
8) General station information. Who is going on and off the air, and why.

9) Radio's historical and cultural significance.
10) Radio's current and future trends.
11) Political and news coverage and its impact.
12) Job openings and help to those seeking work in the industry.
13) Information on equipment and techniques involved in transmission and reception of broadcast radio signals.
14) The International Scene and how broadcast radio is shaping up in the various nations of the world.
15) Gabfesting and all matters of general interest to those involved in, or interested in, the general subject of domestic radio broadcasting.

-=*=- POSTING -=*=-

1) Post to rrb as you would any other Usenet group. The software does the rest.

2) Email your article directly to rrb@airwaves.chi.il.us. Using other addresses to post will needlessly delay your article. You might consider installing an alias in your mailer for emailed articles, especially if you post a lot of stuff. See the end of this file for all applicable addresses.

-=*=- POSTING GUIDELINES -=*=-

* If you post a question that is of potential interest to others in the group, ask that replies be posted, instead of emailed to you. We all would like access to the answers If you do receive email replies, post a summary to the group. This forum is only as good as it's posters and readers. Keep the info flowing.

* If you email an answer to a question, send a Cc: to the group's submission address, rrb@airwaves.chi.il.us, so we can all learn from your knowledge. When id doubt... POST POST POST! :-).

* PLEASE edit quoted text to a minimum! Most users of this group are fairly regular readers and do not need, or want, to read the entire text of a recent article in every reply. Of course, if the thread is less current, more quoted text may be appropriate. Use your brains (and your editor :->).

* If your message is basically a one or two line "Me Too" or "I disagree" post, consider emailing it to the poster. However if you go into some details as to WHY you agree or disagree, then please post it.

* If you are replying to an article in the Internet Radio Journal, simply use your mailer's reply feature, and again, edit the text to ONLY the article you are replying to, and include the article's name in the Subject field. Subjects of "Re: Internet Radio Journal" are confusing and may result in needless delays.

* If you post about a local radio station or personality, realize that 95% or more of the readers will know little or nothing about it. Offer a little background, like location, station format, type of

music played etc.

* Last but not least, avoid flames and personal insults. R.r.b has a high percentage of broadcast professionals among it's readers. We try to maintain a reasonably high brain to bulls*it ratio here. It is perfectly fine to say "I think that what you said is the stupidest bunch of crap I have ever heard", instead of "YOU are the stupidest jerk I have ever heard". If you *must* make personal attacks, do it in email.

-=*=- MODERATION -=*=-

R.r.b is a _very_ loosely moderated group. Normally, all legitimate articles will be posted to the group. Matters that may cause an article to be rejected by the moderator include...

---

* Articles which are not on (or reasonably near) the stated charter and scope of the group (domestic radio broadcasting) or pertain to 'non-broadcast' radio services, such as cellular, two-way, ham, citzens-band, and such.

* Articles that are too long for submission as-is. If your article is longer than 10k (10,000 bytes), consider splitting it into two parts, or better yet, edit it down to a more reasonable size. Check to see if you can eliminate any quoted text. If you believe that your article is of an especially urgent or inforamative nature, and you also feel that you cannot reduce the size without damaging the content, let me know and I will try to work with you.

* Articles which are merely multiple repetitions of an identical answer which has already been offered several times. Often these will be bundled together into a single article to conserve bandwidth and increase readability.

* Articles which contain 'miles' of quoted and multiple quoted text followed by a few lines or less of original text. Please edit quoted text to a minimum and try to adhere to the *50% rule*, that is 51 (or more) percent of original text to 49 (or less) of quoted text. If the thread is not curent, more quoted text is appropriate. Only the worst offenders are omited, usually I will edit quoted text myself, when I have time.

* Articles that solicit for funds or contain blatant commercial content. (see next section on this)

* Articles which are unwarrantedly offensive, abusive or contentious for the sake of contention. Personal attacks and ridicule are considered such. Discussion, even argument, of issues and opinions are welcomed and encouraged. Flame-wars and such are not. We have discussions here, not shouting matches.

Note: Since most articles are used, we do not send out confirmations. If your article *is* rejected, you WILL receive a note explaining why the action was taken. If you do not receive such a note, and you do

not see your article in the group, notify the moderator at once and include a backup copy if you have one.

-=*=- NO SOLICITATION POLICY -=*=-

Rec.radio.broadcasting and the Internet Radio Journal maintain a non-solicitation policy. Articles which appear to contain substantial 'commercial content' or which appear to blatently solicit funds from readers for a 'cause' or a 'project' are generally rejected. I generally do accept..

Product reviews: ... provided they are objective and informative and contain little or no 'motivational' language. Prices should be reduced to a price 'range' and all inqiries must be directed to the poster -or- an address of the manufacturer/distributor.

Personal items: Such as old time radio tapes, a specific piece or two of equipment etc. sold at a low, hobbiest price.

Radio-related items for barter/trade: Self explanatory.

Announcements for non-commercial workshops, conventions, radio related flea-markets, etc. Pricing <other than small admission charge> and other specifics (like 'we take your credit card') are considered commercial content. If you want to publicize here, then you must deal with the followup mail/calls yourself.

Personal recomendations of a product/company that appear legitimate. Especially when it is in response to another poster's inquiry.

---

In general I will take an 'err on the side of permissiveness' approach to this. In other words, if you are credible, informative, reasonably intelligent, broadcast related, and have something to offer, I will do what I can to pass it along to the readers. I will only reject the worst of the lot. the rest I'll try to edit as necessary.

-=*=- ARCHIVES -=*=-

Archives of past Internet Radio Journals are kept for anonymous FTP at deja-vu.aiss.uiuc.edu . They can be found in the directory /misc/rec.radio.b-cast. In that directory you will find a file called INDEX, which contains the issue numbers of all Journals, and the title of each article contained within. The archives are updated every week or so. To determine when the last update was, look at the date on the file called "<-Archive Last Updated At".
If you need help with FTP, write me.

The Journals are arranged in sub-directories of about 100 issues each, and are in compressed (.Z) format. Remember that compressed files should always be sent using the "binary" mode. If you have trouble accessing anything, or if you have any questions about the archives, send email to rrb@deja-vu.aiss.uiuc.edu. If you appreciate the archives, send your notes of appreciation to the site admin, C. Lance Moxley

<lance@deja-vu.aiss.uiuc.edu>. He has been very gracious in his willingness to store our archives on his machine.

* Please do not bother the system admin with problems, direct those to me. *

-=*=- ENJOY THE GROUP! -=*=-

I hope you enjoy the group. Remember, it is only as good as it's contributors. So don't be shy :-). If you have a question, or answer, even if you are not sure, post - post - post.

I am open to suggestions on how to improve this group. Send them via e-mail to wdp@airwaves.chi.il.us -or- rrb@deja-vu.aiss.uiuc.edu.

Thanks to all who have, and continue to, participate.

We now return you to your regularly scheduled newsgroup :-).

Whoa. Didn't know MPR had net access over there. I'm a little ways
down West 7th, maybe 2 blocks from the Civic Center.. I walk past
the MPR building every day on my way into work :)

> Faribault is KQCL; Mankato is KXLP (New Ulm is actual city of license). I

> to limited-playlist anti-creative radio.

You aren't kidding, there. When I moved into town a couple years ago
from the Baltimore/Washington area, I noticed a definite lack of good,
different radio programming in town. Of course it hasn't gotten any
better :)

> Your reference to KQRS and KLXK is confusing: Do you mean to
> say that you think their use of similar music (after KLXK "hardened" its

> adding gold to differentiate itself from the metalheads/CHRs in town.

Right before KLXK changed their format, I noticed that if they played
one song, then KQRS would turn around and play three by the same artist
shortly thereafter. So for example, any Pink Floyd fan who wanted to
hear tons of Floyd music could wait for KLXK to play a Floyd song, then
flip over and listen to three of them on KQRS..

# 1370. Re: Cable Radio

Newsgroup: rec.radio.broadcasting
Date: 1993-09-02 00:41:33 UTC
From: jtl@genesis.MCS.COM
Message-ID: <263fft$kit@vixen.cso.uiuc.edu>
Source record: 42508

(Geoffrey L Yuen) writes:
>
>Thought I saw some people talking about this subject a month or two ago.
>Cable radio with digital quality broadcast ? Can anyone provide more
>information, references, etc ?

Late last year, our local cable operator (TCI of Illinois) was
offering a "buy one month, get one free" deal on their digital
music service, DMX.

This is a service that "rides along" with the regular video
cable service. The incoming cable is split, with one output
running to your video equipment, and the other run to a special
DMX cable box (made by General Instrument). The DMX box has
two methods of output: (1) analog RCA jacks, in the standard L/R
pair; and (2) a direct-digital output jack. You connect the box
to either the AUX-IN or direct digital input on your receiver/amplifier.
An advanced feature (read: extra $$) is a remote with an LCD panel
that displays the song title, artist, and label information while
the song is playing. There is no way of telling what's coming up, though.
There are no DJs.

I had the service for about three months before I dropped it. The
quality was okay (closer to a real good FM signal than CDs, IMHO),
but the programming left a bit to be desired. It seemed the same
stuff was in rotation on each of the 30 channels (i.e., 30 channels =
30 formats), and I found I was using the service more and more
as "background noise" instead of really listening to it.
(This came in handy during Christmas, but after the holidays
I couldn't justify the cost, so I dropped the service.)

In my opinion the concept of "cable radio" is good, but I think
it needs a little work.

CHR KBIU Lake Charles calls itself "Bayou 104" but is at 103.7. The only 104.7 in Louisiana on the air I can think of is KNEK-FM Washington (north of Lafayette). Last time I heard them, they were urban.

> I managed to catch a station called KEY(?) - a rock station featuring best of
> 80s and 90s on 103.5 FM. It was coming from Austin. Unfortunately not that

AC KEYI-103.5 San Marcos-Austin "Key 103"

Some Texas changes....KUOL-1470 San Marcos becomes the latest to simulcast Spanish religious KUBR-1210 San Juan-McAllen (joins KVOZ-890 Laredo, KMFM- 104.9 Premont, KCZO-92.1 Carrizo Springs). Spanish Tejano KMIA-104.9 Rosenberg-Houston becomes KMPQ-FM, Spanish Tropical // KMPQ-980 "Radio Impacto." The change was due to Tejano now on two stronger Houston area FMs (KQQK-106.5 Galveston-Houston and KXTJ-107.9 Beaumount-Houston).

According to their ID, news KRLD-1080 Dallas is now "serving America via satellite" from a new location: Galaxy IV Transponder 3 Channel 61.7. KRLD, the flagship of the Texas State Network, uses satellite to distribute TSN's latenight "Texas USA" and "Texas Overnight" talk shows.

Changes to come ... religious KNRB-1360 Fort Worth-Dallas to Children's Satellite Network "Radio AAHS." And there are rumors of changes to come at soft AC KLRX-97.9 Dallas-Fort Worth now that CBS has taken over as part of the KLRX/WYNF Tampa Bay swap with Cox. Cox has wasted no time in dropping WYNF's AOR format temporarily for simulcasting news/talk WSUN there.

Chip
chipk@bnr.ca

My opinion's, not BNR's....

Bandwidth can be treated like real estate, and property rights
enforced. There are no reasons, other than our instinct for
central-planning solutions and governments' desire to censor,
for governments to claim ownership of the airwaves.

[Moderator's Note: Sure wish I could figger out what this thread was about.
Anyone wanna fill me/us in? What does this post have to do with the subject?

# 1374. AM stereo programming successful in Japan? and copy success here?

Newsgroup: rec.radio.broadcasting
Date: 1993-09-02 00:44:09 UTC
From: wa2ise@netcom.com
Message-ID: <263fkp$kmh@vixen.cso.uiuc.edu>
Source record: 42512

this posting found in rec.radio.shortwave
frede@microsoft.com (Frederick Einstein) writes...

AM Stereo is EXTREMELY popular in Japan, in fact, the largest selling
^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^
consumer product of 1992 was an AM Stereo/FM Stereo micro-radio made
^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^
by Aiwa (the Aiwa model CR-D60). Sony makes both walkman and table
models and builds AM Stereo tuners into most of their Japaneese stereo
components as do JVC, Kenwood, Panasonic, and Aiwa. The only ones
that are compatible with North American 10 kHz channel spacings are
the Aiwas (including the above-mentioned CR-D60) and one Sony model
built into a portable CD player. The Aiwa performs superbly, is
compatible with all AM and FM bands around the world, and is
EXTREMELY small. I'm very happy with mine and would encourage them
to start importing these into the U.S. They sell for about $70.00 US
in Japan so could probably go for about $50.00 if they were to be
"officially" imported. So... If you want to try AM stereo, just
get a radio from Japan.
(end of crossposting, the ^^^^'s are my fault)

If this is true of AM radio in Japan, then maybe there is hope for AM
in the USA. What are the programmers of Japan's AM stations doing
right? And would it be usable here in the USA?

---
Note to our moderator: Bill, sent this posting last week, but haven't
seen it posted or recieved a reject notice, so I assume it got lost.

to what extent could the fines (regardless of their merit) be considered
grounds for violating a contract? especially since the station incurred
the fine & not the stern organization.

>

The "no creative control" phrase caught my attention. A quick look through the Rules did not reveal the rule section, but, as I recall, a station licensee MUST retain control over its programming. It cannot merely turn that responsibility over to someone else. If a station enters into an agreement where it does turn over control, I don't think that would necessarily make the contract unenforceable, though the enforcement would probably involve paying some penalty determined by the court or the contract (if the penalty is reasonable) instead of forcing a station to air a program it doesn't want to (a form of specific performance), which would then be violating the FCC rule I cannot find. As I recall, if a contract lists a "penalty" for lack of performance, the court will review its reasonablness. If, instead, a contract lists an "alternate performance", the reasonablness of the alternate performance would not be questioned, since the contract signers agreed to it. Tricky stuff! It'll be interesting to see how it all turns out.

Harold

# 1377. Re : Howard Stern prepares to sue WLUP

> Media and/or WLUP for early cancellation of his contract. I stated
> that I didnt think that would happen.
> Well it appears that it just might happen after all.

Why shouldn't it happen? They('LUP management) breached a biding
legal contract without mutual agreement from both parties.

> In today's Robert Feder column in the Chicago Sun-Times, there is
> serious talk of the Stern camp suing LUP and Evergreen for brech of
> contract. Stern's Lawyer is paraphrased to have said that ... before
> this is over, Stern might very well *own* an AM station in Chicago.

A first-year law student should be able to handle Stern's case and win
it...easily. However, I don't see Stern winning a mega amount of money
(probably remamining affil payment of his salary and a large portion of
potential ad revenue based on his Chicago ratings for the past 18 months
which weren't that high).

I'm really surprised by 'LUP's move. It's very rare when a station
releases a legally contracted air-talent without paying off the remainder
of employee's salary/bonuses. In cases like that,stations don't like to
the courtroom of law since more often than not they'll end up on a losing side...
Unless, there are loopholes, and I don't really there are any,
in the 'LUP-Stern deal which would allow them to get out of it
after some amount of time, 'LUP shall lose...and lose bad...

> Well there may be a first time for *ME* to be wrong <big grin>, but I
> still doubt that Stern will win such a suit, given the excessive fines
> and such. I would imagine that Evergreen need only say "We pulled him
> because we didn't want to be libel for such large fines, especially
> for airing a show that we have no creative control over".

'LUP could've tape-delayed Stern's till later hours of the night if they
really feared the out-of-control FCC lawnmower cutting their grassy behinds...
To use FCC fines as the excuse is alot of bull...For 'LUP it basically
came down to dollars&cents(a common virus behind the frequently changing
radio formats in this country)...They think that by dumping Stern,introducing
a new format and getting tons of 'free' media publicity as the result,
they'll get better ratings,more listeners, more revenue...
Well, they better come up with a great sports radio formula
because this truly boring format which attracts alot of semi-intelligent
listeners/callers is yet to work for any sports radio station across
the country.

-Mark

# 1379. Wanted: Sources for '60s air check tapes

Newsgroup: rec.radio.broadcasting
Date: 1993-09-02 01:04:45 UTC
From: herren@fnalo.fnal.gov
Message-ID: <263grd$mbe@vixen.cso.uiuc.edu>
Source record: 42517

Hello!
I hope this is the right group to ask.
I'm looking for a source of air check tapes of the early to
mid-'60s WLS or WCFL personalities.
I thought there was an outfit in Wisconsin - Wild Rose? -
but I can't seem to locate their address.
Any help or pointers would be appreciated.
Thanks!

Whoa. Didn't know MPR had net access over there. I'm a little ways
down West 7th, maybe 2 blocks from the Civic Center.. I walk past
the MPR building every day on my way into work :)

> Faribault is KQCL; Mankato is KXLP (New Ulm is actual city of license). I

You aren't kidding, there. When I moved into town a couple years ago
from the Baltimore/Washington area, I noticed a definite lack of good,
different radio programming in town. Of course it hasn't gotten any
better :)

> Your reference to KQRS and KLXK is confusing: Do you mean to

Right before KLXK changed their format, I noticed that if they played
one song, then KQRS would turn around and play three by the same artist
shortly thereafter. So for example, any Pink Floyd fan who wanted to
hear tons of Floyd music could wait for KLXK to play a Floyd song, then
flip over and listen to three of them on KQRS..

>
>Thought I saw some people talking about this subject a month or two ago.
>Cable radio with digital quality broadcast ? Can anyone provide more
>information, references, etc ?

Late last year, our local cable operator (TCI of Illinois) was
offering a "buy one month, get one free" deal on their digital
music service, DMX.

This is a service that "rides along" with the regular video
cable service. The incoming cable is split, with one output
running to your video equipment, and the other run to a special
DMX cable box (made by General Instrument). The DMX box has
two methods of output: (1) analog RCA jacks, in the standard L/R
pair; and (2) a direct-digital output jack. You connect the box
to either the AUX-IN or direct digital input on your receiver/amplifier.
An advanced feature (read: extra $$) is a remote with an LCD panel
that displays the song title, artist, and label information while
the song is playing. There is no way of telling what's coming up, though.
There are no DJs.

I had the service for about three months before I dropped it. The
quality was okay (closer to a real good FM signal than CDs, IMHO),
but the programming left a bit to be desired. It seemed the same
stuff was in rotation on each of the 30 channels (i.e., 30 channels =
30 formats), and I found I was using the service more and more
as "background noise" instead of really listening to it.
(This came in handy during Christmas, but after the holidays
I couldn't justify the cost, so I dropped the service.)

In my opinion the concept of "cable radio" is good, but I think
it needs a little work.

I'd like to get a list of contacts of those involved in
micro-radio, especially those fighting the FCC and going to the courts.
I might do a Radio World article on this, if I get sufficient info.
Please email me with names, email addresses and phone numbers.

Thanks!

Harold

> listeners from interference.

I don't think docket 80-90 relaxed interference standards. It
did allow new stations to be "dropped in" where they would fit within
the existing interference standards by running at lower power (hence the
multitude of station classes) and without regard to "first service" ,
"second service", etc., which had been part of the allocation system.

>More than that. While preaching *protection*, the commission has
>repeatedly sold the public out in the name of serving the public.

>should be more content control in broadcasting) just shows that it has
>absolutely no concern for the listening public.
>

Duopoly allows more types of programming to be available at
lower cost. While some duopolies in large markets are run by "corporate
conglomerates", many in the smaller markets are run by very small
businesses. These duopolies, again, provide more channels of
programming to the public than would be financially possible otherwise.

>Gone is the fairness doctrine, which forced broadcsters to offer time
>to opposing or diverging views.

The fairness doctrine is content regulation. For the "press",
this is clearly prohibited by the first amendment. I recall reading of
a case in Florida where an "equal space" requirement was imposed on
newspapers. It was quickly thrown out. I believe the broadcast
industry should be moving towards the "print model" on content
regulation. Many argue against this based on spectrum scarcity, yet
newspapers appear more scarce than radio stations. Many argue against
this on the basis of broadcasters using a public resource (a slice of
the electromagnetic spectrum). Here, I agree. This problem could be
easily solved by introducing spectrum leasing and auctions. The public
would then be paid for the use of the public resource.

>Gone is the requiremnet of stations who move their facilities to a
>larger city, to do a percentage of their broadcasting from the
>original city of license. In fact, many do no local programming at

>all! So much for serving the community. Unless you say that local
>commercials are in the public service.

Determining what "serves" the community could be determined by a committee with content regulation powers, or it could be done through economics. Again, comparing broadcast to print, our local newspaper carries a lot of wire service copy along with its local coverage. The government does not tell the newspaper that it must devote a certain percentage of its space to local news. That is the editor's job. If the editor does a poor job, the paper doesn't sell (to subscribers or advertisers).

>Gone is the protection that forbade an entity from owning more than

>Basically, now, the biggest bank account can but the pot in most
>places. In many, that has already occurred.
>

Again, there is no such "rule" on print, though the Justice Department does look into joint operating agreements among newspapers. The FCC does not allow all stations in one market to "fall into one set of hands". 73.3555 allows one owner in markets with 14 or fewer stations to own up to three stations with no more than two in one service, provided that those three stations represent less than 50% of the stations in that market (meaning, I guess, the market must have more than six stations). In markets with 15 or more commercial stations, one owner may own up to two AM and FM commercial stations (which I read as a maximum of four stations) if the combined audience share is 25% or less.

>When docket 8090 came in, there was absolutely no mandate that these

>community. Nobody cared if these drop-ins were little more than a
>satellite dish and a tower (and let's not forget a sales office).
>In fact, I am not aware of *any* FCC mandate for public service
>programming anymore.

Other than, if the station doesn't serve the public, no one will listen and no one will advertise. Again, let's look at the print model!

>
>So you have a commission which cares not one bit about public service,
>interference or local programming. They are serving one interest and
>one intersest only... more profits for Big Buisiness Broadcasting.

The Commission is saying the public is best at determining their needs, and the public votes with their pocketbooks (or tuning dials).

Interference protection has not (to my knowledge) been relaxed. I don't believe most broadcast stations are owned by Big Business Broadcasting.

The microbroadcasting area was considered by the FCC a few years ago when they rewrote the rules on FM translators. At that time, they CONSIDERED allowing program origination by FM translators, just as they had previously done for TV translators in forming Low Power Television. It is interesting to me how the FCC could see the need for LPTV but not LPFM. The strongest opponent of LPFM was the NAB, whose members would face considerable competition for advertising. To allow existing broadcasters adequate warning of increased competition and to avoid "changing the rules in the middle of the game", it might be interesting to adopt some LPFM rules with implementation a few years down the road. So, I don't think all existing broadcasters are bad people or that they are not making an effort at serving the needs of their communities as they see them. I believe we should have LESS government content regulation, but that broadcasters should lease their piece of the spectrum.

Microbroadcasting or LPFM seems like a good idea. It may not be economically viable, but that is for the station owner to determine, not the FCC. I see a couple ways it could be implemented. One would be to not require station licenses at all, but to require the use of FCC approved equipment. This equipment would have limited power and possibly only be authorized to be used with certain antennae. The equipment would operate only on a few channels set aside for license free microbroadcasting. Ideally, these channels would be set aside on a nationwide basis. With several years notice, it seems possible to move some of the aviation users immediately above the FM broadcast band. This seems easier than moving the channel 6 TV broadcasters or clearing some existing FM frequency nationwide. Unlicensed microbroadcasters would get no interference protection EXCEPT against those running unauthorized equipment (over power, etc.).

A second approach would be to just allow FM translators to originate programming, forming an LPFM service just like the LPTV service. These stations would be licensed, afforded interference protection, etc. Also, these stations should PAY for the use of the spectrum under a spectrum lease auction, just as full power stations would.

I think those interested in one of these approaches (or another!) should file a petition for rulemaking with the FCC. It will be interesting to see how the court case(s) on microbroadcasting go. The courts may indeed order the FCC to establish such a service, but I doubt they'd do that since I don't believe those seeking such a service have petitioned the FCC for such a service, so they have not exhausted their administrative remedies.

Harold

It may not have changed the 'standards' by which things are judged, but it darned sure changed the face of radio listening in many areas. Stations that once had marginal coverage now are obliterated by the drop-ins.

> >More than that. While preaching *protection*, the commission has

So goes the theory. Unfortunately, I have yet to see it happen. What I see is more musical chairs (same old formats) shuffled around. Where is all this cutting edge programming? When I hear of a duopoly buyout, all I hear is "Station XXXX will be bought by YYY and will take over YYY's classic rock format while xxx will program hot country or syndicated news-talk". I know that this duopoly thing is SUPPOSED to do as you say, but I have not seen it.

All the innovative stations I know of are NOT members of duoploy. The Loop-AM <although they did just buy a second FM, that had no bearing on their great programming previously>, WADN near Boston <all folk>, Radio AAHS <now a network, but NOT a duopoly and again, their programming came before the expansion>. Personally I do not believe that 'cutting edge' or innovative programming is the philosophy of conglomerates. I believe that *safe* status-quo is their main philosophy.

> >Gone is the fairness doctrine,
>

> The fairness doctrine is content regulation. For the "press",
> this is clearly prohibited by the first amendment.

Quite true. But it was a regulation that made some sense. But while the Commission is dropping *those kinds* of content regulation (the kind that might allow a minority view some air time) they are aggressively enforcing content restrictions in obscenity cases. Cases that are so vague and nebulous as to be nearly meaningless. If we are to eliminate regulations that enforce some 'balance', out of first amendment protections, then let's not hypocritically enforce content restrictions based upon the shifting sands of a federally interpreted 'contemporary community standards' ruse.

> I believe the broadcast industry should be moving towards the "print model"

> advertisers).

OK, but people read a paper and throw it away. Radio is on all day and is more than a news service (except for all-news station, of course). If economics is the only determiner, then let's get rid of all local DJ's (hell they cost big money) and plug into Unistar. A couple grand a month and you have a slick programming package with no turnover and personell headaches.

[Another paragraph on duopoly deleted]

[...]

Thanks for the details on this. While I still think duopoly is a bad idea (except in cases where a troubled station is purchased to inject life into it) I see more clearly that (at least at this juncture) it is not as bad as I thought. I do think that if a station buys into another same-service

same-market station that it should be required to do more with it than plug it into Unistar or SMN.

> >When docket 8090 came in, there was absolutely no mandate that these

I believe that there is more to 'serving the public' than to program a satellite format and sell local spots. But all that has been said already.

> >So you have a commission which cares not one bit about public service,

** HUH? ***

Oh, if only you were right about that.

If that were the case, there would be no Howard Stern witch hunt. None of these silly federal interpretations of 'contemporary community standards'. Stern (although i have no use for him personally) commands a very big market share (often #1) almost everywhere he goes. WLUP-AM's Steve Dahl - Garry Meier, and others are EXTREAMLY popular, scoring in the top 5 consistantly. If the Commission's opinion really *was* to let people vote with their pocketbooks and tuning dials, these stations would be left totally alone.

> Interference protection has not (to my knowledge) been relaxed. I don't
> believe most broadcast stations are owned by Big Business Broadcasting.

Actually, I retract the use of the term Big Business Broadcasting. I sometimes get a bit carried away (Naw, not *you* Bill). But I do believe that the face of radio IS more the face of corprorate America. While it is undoubtedly true that most radio stations are NOT owned by Big Business, satellite formats have made the point almost mute. So the desireable properties are bought up with duopoly and the others are sold cheap satellite programming. Same result, less variety more concentrated profits.

It would not bother me if the createve programming touted by the proponants of Duopoly actually came to pass, but as I said above, I just don't see it.

> It is interesting to me how the FCC could see the need for LPTV but not
> LPFM. The strongest opponent of LPFM was the NAB, whose members would

#  #  #  #  #  #  #  #  #  #  #  #  #
#  #  #  #  ###  #  #  #  #
#######  ####  #  #  #####  #######  (*)

Now there's the definitive answer. Competition. The NAB knows that creative original programming will win listeners. I am glad to hear this from such an authoritative source. Thank you Harold!

I don't know enough about spectrum leasing or where that money should go.

Perhaps you could write a piece on what that entails. It should be interesting.

I also do not think broadcasters are *bad people* at all. I *love* radio broadcasting. I wish there was more 'broadcaster-boogie' and less bean-counter-blues on the air. Also if LPFM follows the LPTV model, it will be prohibitivly expensive for most proponants of the service. I think my last look at LPTV station costs was in the 100 - 300 thousand range for transmitter, antenna and equipment. Not counting tower space. Plus producing a viable TV program is far more expensive than doing the same on radio. I would look for something in the (under) $1000.00 range for licence, transmitter, antenna.

> Microbroadcasting or LPFM seems like a good idea. It may not be

For the record, I never suggested that channel 6 stations should be moved. Only that the possibility exists for MB to use the 87.7 - 87.9 frequencies in areas NOT served by channel 6.

> would.

Only problem with your second approach is, as Bruce Girard and others have said, many MB proponants are not 'radio junkies' but are justpeople wanting a voice in their communities. Allowing translators to originate would be great, but I dont see it fulfiling the needs of the vast majority of those who seek MB approval.

A third approach <actually a variation on the first one you mentioned> would be to license MB stations *AND* create a FCC type acceptance for equipment. Still the MB service would be secondary (no protection, but must protect other signals). Make the licensing easy and relatively cheap (under $500.00, perhaps ~$100.00) but with a basic test to insure some knowledge of what the person is undertaking.

Interesting indeed, Harold. As are your comments. Thank you for adding a sane and sober voice of reason to this topic.

Any other interested people?

Bill

>enthusiasm. And there was one other thing: a license.

Let's see. That would be sometime during the 50s, when anyone with
the willingness to do so could get a Class B FM license in a major
metro area, right?

>At the same time, I engineered a class A station in Los Gatos. Format?
>Whatever you brought with you. You see, it was the epitome of a
>community station owned by the previously mentioned (a few months back)
>eccentric, Lorenzo Milam. The station ran on 100% volunteer help.
>Except for me; Milam always insisted upon paying the engineer at his
>stations. I got a whole $250 a month. It was a GREAT station. And an
>awful lot of people got radio careers launched there. It had a license.

Now we're talking mid 60s.

John, you surely must realize that it is a whole different world out there
now. The little family-run community classical station is now a mega-buck
property recently sold to a broadcasting chain. The little community Class-
A station is a formulaic "Hot Country Hits" clone. Nobody is going to get
the chance to realize their dreams in the way you did at either of those
two spots on the dial.

Even when I first got into this business, some years later than you, there
were still more broadcasters than beancounters in charge of radio stations.
There was still room for expwerimentation, for taking a chance on something
out of the ordinary. I was able to realize many of my dreams as well, and
to share them with thousands of others over the air.

But to pretend that things have not changed, that the same opportunities
you and I enjoyed are still out there, that if they are failing to realize
their dreams within the confines of the system that it must be *their*
fault - well, that strikes me as cruel and heartless.

All that the *responsible* micro-radio advocates are asking for is some-
thing resembling the kind of opportunities that were available to you and
I. And I, for one, see it as my responsibility to the profession that I
love to help them to find those opportunities.

As far as the *irresponsible* folks - the ones with the splattery little transmitters in their attics - if you ignore them most of the time, and let the FCC deal with them if they get out of hand, they'll eventually either lose interest or evolve into a more responsible attitude. I happen to be one who did the latter, many years ago.

While I don't know you personally, John, I have the utmost respect for your talents and accomplishments. I know from reading your posts here that you are a *broadcaster* in the best sense of the word. What I would love to see more than anything else is for a coalition of old-timers such as yourself, younger semi-mainstream broadcasters such as myself, and some of the bright young minds in search of direction, to work *together* to find a way to preserve some of the diversity, innovation, and community involvement that have been such an important part of radio in the past.

How about, rather than just have one frequency countrywide, we assign frequencies based on which frequencies are empty on both AM and FM. Thee TIS frequencies could be allocated to Micro-Radio in markets where no such services exist. Here in Sacramento, there IS an airport station on 530, but there is currently no TIS service on 1610, so we could allocate that to Micro-Radio broadcasters. Plus there are a number of empty frequencies on both AM and FM that could be used. These are availablee freuquencies in thee Sacramento Market:

AM

530
550
570
580
590
620
630
780
840
880
890
900
930
1010
1020
1030
1040
1050
1070
1080
1090
1160
1170
1260
1340
1350
1360
1400
1410
1420
1450
1490
1500
1510
1550
1590

1600
1610

FM

88.5
89.7
89.9
90.5
92.9
94.1
94.5
94.7
94.9
95.7
97.5
103.5
105.5

As you can see, in the Sacramento Market, there are a number of frequencies that the FCC could allot to Micro Radio.

## 1389. AM Stereo receiver (availability?)

Newsgroup: rec.radio.broadcasting
Date: 1993-09-02 01:10:53 UTC
From: badbunny@tfsp.saic.com
Message-ID: <263h6t$ni7@vixen.cso.uiuc.edu>

Is there any company that now markets home audio receivers or "walk about"
receivers that decodes AM Stereo (the common format{s})? If so, any ideas
where I can find them?

Thanks
Brendan

# 1390. AM stereo programming successful in Japan? and copy success here?

Newsgroup: rec.radio.broadcasting
Date: 1993-09-02 01:12:19 UTC
From: wa2ise@netcom.com
Message-ID: <263h9j$npc@vixen.cso.uiuc.edu>
Source record: 42528

this posting found in rec.radio.shortwave
frede@microsoft.com (Frederick Einstein) writes...

AM Stereo is EXTREMELY popular in Japan, in fact, the largest selling
^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^
consumer product of 1992 was an AM Stereo/FM Stereo micro-radio made
^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^
by Aiwa (the Aiwa model CR-D60). Sony makes both walkman and table
models and builds AM Stereo tuners into most of their Japaneese stereo
components as do JVC, Kenwood, Panasonic, and Aiwa. The only ones
that are compatible with North American 10 kHz channel spacings are
the Aiwas (including the above-mentioned CR-D60) and one Sony model
built into a portable CD player. The Aiwa performs superbly, is
compatible with all AM and FM bands around the world, and is
EXTREMELY small. I'm very happy with mine and would encourage them
to start importing these into the U.S. They sell for about $70.00 US
in Japan so could probably go for about $50.00 if they were to be
"officially" imported. So... If you want to try AM stereo, just
get a radio from Japan.
(end of crossposting, the ^^^^'s are my fault)

If this is true of AM radio in Japan, then maybe there is hope for AM
in the USA. What are the programmers of Japan's AM stations doing
right? And would it be usable here in the USA?

to what extent could the fines (regardless of their merit) be considered
grounds for violating a contract? especially since the station incurred
the fine & not the stern organization.

>

The "no creative control" phrase caught my attention. A quick look through the Rules did not reveal the rule section, but, as I recall, a station licensee MUST retain control over its programming. It cannot merely turn that responsibility over to someone else. If a station enters into an agreement where it does turn over control, I don't think that would necessarily make the contract unenforceable, though the enforcement would probably involve paying some penalty determined by the court or the contract (if the penalty is reasonable) instead of forcing a station to air a program it doesn't want to (a form of specific performance), which would then be violating the FCC rule I cannot find. As I recall, if a contract lists a "penalty" for lack of performance, the court will review its reasonablness. If, instead, a contract lists an "alternate performance", the reasonablness of the alternate performance would not be questioned, since the contract signers agreed to it. Tricky stuff! It'll be interesting to see how it all turns out.

> Media and/or WLUP for early cancellation of his contract. I stated
> that I didnt think that would happen.
> Well it appears that it just might happen after all.

Why shouldn't it happen? They('LUP management) breached a biding
legal contract without mutual agreement from both parties.

> In today's Robert Feder column in the Chicago Sun-Times, there is
> serious talk of the Stern camp suing LUP and Evergreen for brech of
> contract. Stern's Lawyer is paraphrased to have said that ... before
> this is over, Stern might very well *own* an AM station in Chicago.

A first-year law student should be able to handle Stern's case and win
it...easily. However, I don't see Stern winning a mega amount of money
(probably remamining affil payment of his salary and a large portion of
potential ad revenue based on his Chicago ratings for the past 18 months
which weren't that high).

I'm really surprised by 'LUP's move. It's very rare when a station
releases a legally contracted air-talent without paying off the remainder
of employee's salary/bonuses. In cases like that,stations don't like to
the courtroom of law since more often than not they'll end up on a losing side...
Unless, there are loopholes, and I don't really there are any,
in the 'LUP-Stern deal which would allow them to get out of it
after some amount of time, 'LUP shall lose...and lose bad...

> Well there may be a first time for *ME* to be wrong <big grin>, but I
> still doubt that Stern will win such a suit, given the excessive fines
> and such. I would imagine that Evergreen need only say "We pulled him
> because we didn't want to be libel for such large fines, especially
> for airing a show that we have no creative control over".

'LUP could've tape-delayed Stern's till later hours of the night if they
really feared the out-of-control FCC lawnmower cutting their grassy behinds...
To use FCC fines as the excuse is alot of bull...For 'LUP it basically
came down to dollars&cents(a common virus behind the frequently changing
radio formats in this country)...They think that by dumping Stern,introducing
a new format and getting tons of 'free' media publicity as the result,
they'll get better ratings,more listeners, more revenue...
Well, they better come up with a great sports radio formula
because this truly boring format which attracts alot of semi-intelligent
listeners/callers is yet to work for any sports radio station across
the country.

-Mark

For anyone who is interested, I read that the Sep 11 issue of Billboard magazine will pay a tribute to Rick Dees for 10 years of radio service.

Are there still any Rick Dees fans out there? Hmm.....

# 1396. KidStar / Radio Aahs

Newsgroup: rec.radio.broadcasting
Date: 1993-09-02 01:18:11 UTC
From: Ben.Harvey@lambada.oit.unc.edu
Message-ID: <263hkj$o6a@vixen.cso.uiuc.edu>
Source record: 42534

Someone posted an interesting post for KidStar, and I thought I'd share my views on Radio Aahs.

Visiting LA this week, I had a chance to listen to Radio Aahs on 830 am. Although some shows were very interesting, others were... unprofessional and boring. I was expecting more kid-jocks, instead of adult disc jockeys pretending to get along with kids. Jimmy, Stephanie, and another jock were the only kid/teen djs I heard, and only during "Just Kids," the short kids show.

These three jocks are the prime promoters of the show, and they've been on CBS this Morning, and all the LA morning shows. whew! To tell you the truth, they weren't even very good.

If Radio Aahs was open for improvements, I'd suggest the addition of more teen/kid deejays, that can relate to kids. I can understand it's a *very* hard process finding capable kid deejays, as I've found out for my teen show, Teen Voice USA. But hey, I've been a disc jockey since 10 years old...

Wild 107 is just a slogan - they don't spell it out or pretend to be any
thing other than KSOL - San Mateo/SF.

The real WILD is in Boston. Ma. They program a surprisingly successful
(for an AM daytimer) urban/soul format. s

You're right, of course. I think WIBC plays one rerun of Rush on Saturdays
starting at 2PM. Pity. Before baseball season, WNDE used to play him on
Saturdays from 10 AM to 3 PM. Then at 3 I switched over to 550 WKRC to
hear Bruce Williams for a couple hours. Made my lonely Saturday work in
the dead of winter much more enjoyable...

In early July, WLS was rebroadcasting Rush starting at 11:00 p.m..

Here in the Oregon Rain forest <buzzer> I have heard Rush in the early AM hours on KVI Seattle 570, KNBR SFO 680, and KFBK Sacramento 1530. KVI and KUIK have rebroadcast Rush afternoons.

To get your hacking hours Rush Fix(Tm) I would recommend a good conservative sky hook (or GE Superradio) and just tune around.

If you are a rich Republican you could afford a Radio Shack digital timer and a multi-cassette recorder such as the Sony TC-C5 and record Rush live. If you can't get Rush on FM, get a Denon TU-680NAB tuner. Use C110 cassettes, they get almost exactly one Rush show per side. Then you can listen at your convenience, fast forward over dull bits, and preserve good bits for posterity.

The following is a brief update of interest to anyone following
broadcast activities in South Africa. It appears that the state's
monopoly over radio and television is nearly over.

3. IBA & SABC Board

Negotiators at the World Trade Centre have agreed to the
establishment of an Independent Broadcasting Authority(IBA)
in mid-September. The members of the Authority will be
appointed after an open panel. Their authority will include
granting new radio and TV licences, setting basic conditions
for the SABC and other public broadcasters, establishing
criteria such as the minimum percentage of local content,
setting ethical standards, and preventing monopoly control. If
the IBA is established, it should lead to a wide range of
independent radio stations within the year. Currently, all
stations are controlled by the state excepting two stations
which broadcast under homeland licenses.

Meanwhile, controversy over the newly appointed SABC board
continues. After open hearings, De Klerk rejected 7 of the
board members chosen, including the chosen chair. Several
others then stepped down in protest. The situation has to some
extent been resolved, but furor arose this week when the new
chair, Ivy Matsepe (a ANC Women's League activist),
announced that the current Director-General of the SABC,
Wynand Harmse, would be retained in his postion.

Memo TO: IAMCR Network/Masscomm/Polcomm

FROM: Keyan Tomaselli, Director; Alum Mpofu, Research Coordinator

CONCERNING: National Research Project into a Post-Apartheid Public
Broadcasting Service (PBS)

BACKGROUND:
South Africa has had PBS since the 1930s, based on the Reithian model.
Between 1960 and 1990, however, the Service was used by the government to
entrench apartheid and for other propaganda purposes. As such, the service
(3 TV channels and 22 radio stations) lost popular credibility and ran into
financial problems. SABC (SA Broadcasting Corporation) is the only PBS
anywhere to rely more on advertising than licence revenue for its income.
This income is now drastically threatened in an environment of deregulation
which will see the establishment of commercial pay TV (in addition to M-
NET, which also has a share in Europe's FILMNET) and privately-owned radio
stations within the next 12 months.

Radio penetration is very high in African terms (13.5 millions daily),
reaching all sectors of the population in all 13 languages. TV has a
lesser penetration, but still reaching 9.3 million viewers daily from a
```

total population of 35 million.

While PBS is under duress in other parts of the world the arguments for PBS in South Africa remain strong due to the extreme disparities of wealth, the very low levels of literacy and high unemployment, the crisis in black eduction, lack of access to social services and the national communication infrastructure by the majority of the population.

Our argument is that PBS has a role to play in the reconstruction of our society. But we also argue that this restructuring needs to occur within an environment which takes account of the global information society.

The objective of this message, then, is to appeal to Comserve members to assist us in this project by drawing our attention to important studies, case studies, works and other information which may be of use.

The research involves 7 full time researchers, and the project has to be completed by the end of November. Proposals on the restructuring of the PBS will be distributed for public debate by mid-January 1994, with a national conference to discuss the research in February. This time-table is designed to impact debates on broadcasting BEFORE the first all party elections on April 27. Your urgent attention would thus be appreciated. We have an opportunity to fundamentally shape the future of broadcasting in South Africa.

Details of the prject follow below:

BROADCASTING POLICY RESEARCH AND DEVELOPMENT

The tasks of the proposed policy research project are to facilitate and inform popular debate and discussion on the future of the national public broadcaster and the democratisation of broadcasting in general and to assimilate those discussions into working policy guidelines.

GOALS OF THE PROJECT.

What will the transformation of the SABC from an apartheid broadcaster to a genuine public service broadcaster involve?

In order to most effectively equip people to develop a vision of what they want from the public broadcaster in a new non-racial democracy, and to lobby for the implementation of that vision, the policy research project will consist of the following areas:

a) The changing role of the SABC-perspectives on public broadcasting in South Africa and internationally.

b) Civic access to broadcasting and possibilities for regional civic stations/channels, community broadcasting etc.

c) Educational broadcasting and religious broadcasting - what are the responsibilities and capacities of the public, commercial and community broadcast sectors?

d) The financing of the public broadcaster.

e) Local content - what are the responsibilities and capacities of the public, commercial and community broadcast sectors in relation to

* language and cultural diversity in broadcasting
* news and current affairs programming
* music and culture
* drama
* documentary
* religious broadcasting

quotas for independent producers - what are the responsibilities of the public, commercial and community broadcast sector?

f) Human resource needs and development for the public broadcasters with a special emphasis on affirmative action along race and gender lines.

Please send hard copies of information to us at:

I read news from alternative sources onto tape for broadcast.

I can send you a tape or digitally compress the show and mail
it to you. I would prefer to post the shows to an ftp site
so you can download them when you need to.

Eco actions, native rights, human rights, corporate
thieves, third world solidarity, etc. are covered.

I usually do 10 minutes a week, but I'm going to two
10 minutes a day.

This news is international in scope and is in English.

Please mail me if your interested and what kind of news you need.

# 1405. Re: Cable Radio

Newsgroup: rec.radio.broadcasting
Date: 1993-09-06 07:40:11 UTC
From: dcampbel@flute.calpoly.edu
Message-ID: <26epgr$7s2@vixen.cso.uiuc.edu>
Source record: 42543

It's really odd to hear all this discussion of cable music
being something new and different. Sure, the modulation
method may be changing, but the idea is imho a good one.

I grew up in an area ( Lafayette, California ) where the only
way to get a decent variety of clean sounding stations was to
use the cable fm. Most cable companies I've seen offer some
stations on the fm band, some doing a better job than others.

Televents ( Lafayette ) did a particularly good job, providing
a (clear) signal on all but one station I wanted and leaving the
frequency of the cable signal the same as the original, for
easy reference. They even kept, via leased lines, the signal
from KCEQ after that high school station lost its class D...
after it lost it's class D license for broadcast

# 1406. Looking for advice on a second career in Broadcasting

Newsgroup: rec.radio.broadcasting
Date: 1993-09-06 07:40:13 UTC
From: rdg@netcom.com
Message-ID: <26epgt$7s3@vixen.cso.uiuc.edu>
Source record: 42544

Well, it's Friday afternoon, my 36th birthday is coming up in a few weeks, I have recently moved cross country, gone through a change in family status (anybody have a copy of music-minus-one), taken a new job and...

what I realize is that what I really want to do with my life is to spend a portion of each day on the radio talking with people and (hopefully) occasionally getting paid for it. I did the high school radio thing and the college radio thing and decided (let others decide?) that those activities were just a "hobby", and that I should really have a career in: (pick one) engineering, law, city planning, etc. But in the meantime I have finally begun to understand that the times I can remember for their pure joy (other than playing in a jazz trio) are the few hours I spent on the air. I have always had a good voice and delivery (I have been told I was a "natural"), although I don't have the traditional barritone. A pleasant tenor with just a hint of Brooklyn mixed with Boston (ewwww!).

So... I'm free, and over 21 and mobile... I also have no real experience in the business. Where do I begin? Any advice? How do I pitch myself, especially as someone outside the broadcasting mainstream? Can I pursue a career in doing "voice-overs" at the same time? (or is this a better place to start?) Anyone have a job opening and willing to take a chance on an untested unknown? I have "spunk"!

I know you get what you pay for, so I am happy to receieve all the free advice offered!

Thanks... Rich G.

# 1407. More station changes in the Ottawa area

Newsgroup: rec.radio.broadcasting
Date: 1993-09-06 07:40:16 UTC
From: aa422@freenet.carleton.ca
Message-ID: <26eph0$7s4@vixen.cso.uiuc.edu>
Source record: 42545

Radio stations here in Eastern Ontario are constantly trying to find a niche in Ottawa's very competitive radio market. Here are the most recent developments...

54 Rock (CJSB AM 540, owned by Standard Broadcasting), Ottawa's classic rock station for the last few years has applied to move to 106.9 on the FM band (location of now-defunct CKO1-FM, the last high-power FM frequency left in Eastern Ontario). The CRTC is expected to reveal their decision at the end of September.

CHEZ FM 106.1 (CHEZ 106, pronounced SHAY 106, locally owned) has changed their unofficial format to Classic Rock as of 7:00 this morning (their official format is still the very generic AOR -- Album Oriented Rock). This is the format the station had between its inception in 1977 and about 1988. Since 1988, they have been playing more 80's and 90's rock than anything else. Now they say "The original rock is back. Classic Rock CHEZ 106." Recent changes to FM regulations by the CRTC have also allowed CHEZ to drop its daily news program, CHEZ Ottawa, and its Sunday night alternative music programs produced by Brian Murphy. Murphy, one of seven on-air personalities laid off last week, has been with the station since it went on the air. The format change by CHEZ 106 may be partially attributed to anticipation of the CRTC decision on 54 Rock. CHEZ is currently playing 106 classic rock albums from their collection over the Labour Day Weekend.

In a related move, CHEZ's affiliate Rideau Broadcasting has returned the format of CJET AM 630 Smiths Falls from Hits & Oldies back to Country & Western. CJET Country was dropped when its sister station CHEQ-FM 101.1 Smiths Falls (now CFMO-FM) went Country a few years back. Since March, CFMO-FM 101.1 has been an Easy Listening station.

This is confusing, so I'll post a list of Eastern Ontario radio stations within the next few days for anyone who wants to update their log books.

By the way, if any of this interests you, check out the Radio and Television SIG on the National Capital Freenet (Telnet freenet.carleton.ca or 134.117.1.25 or telephone 613-780-3733).

# 1408. Cleveland Radio Journal

Newsgroup: rec.radio.broadcasting
Date: 1993-09-06 07:40:17 UTC
From: neil.parks@pcohio.com
Message-ID: <26eph1$7s5@vixen.cso.uiuc.edu>
Source record: 42546

PR<<But I would also want to know things about what certain stations are doing.
<<For example: Has WMMS completely backed away from playing hits like
<<they were in '86 and gone back to AOR. Are they battling WNCX for the
<<album rock audience and how much of MMS mix is classic rock?
PR<<Is MMS responding to WENZ presence - is the End perceived as a hits station
<<or an album station, or somewhere in the middle

To my ears, WMMS, WNCX, and WENZ all play very cacophonous
records that sound like they were made by sound effects men sted
musicians. I suppose there is an art of telling one of these
awful things from another, but I have not mastered it.

In the mornings, WNCX is distinguishable from the other two by
the fact that it plays no records at all. That's when Howard
Stern does whatever it is he does.

PR<<How is Jammin '92 different from WZAK? Whats WJMO-AM doing?

Again, no difference that I can tell. Both FM's play
rap/dance/urban/whatever. These records demonstrate somewhat
more musical talent than the ones on the three stations mentioned
earlier.

WJMO-AM plays soul oldies. Some of them are even recognizable.

PR<<Is WQAL the closest thing to a top 40 station in Cleveland now?

WQAL and WLTF are another pair. They play what is called "adult
contemporary". Some of this stuff, I actually like. As to
whether it is "top 40", I don't know. The newspaper, in its
Friday entertainment section, publishes some lists of popular
records. There is a "hot singles" list and an "adult contemp"
list, and the a.c. list seems to be what WQAL plays.

* SLMR 2.1a #T602 * Abort, Retry, Fail, Slam Fist on Desk?

[Stuff from original posting deleted for brevity.]
>
>[Moderator's Note: Sure wish I could figger out what this thread was about.
>Anyone wanna fill me/us in? What does this post have to do with the subject?
>Bill]
>--
I believe the original post refers a bill proposed by several congresscritters
to bring back the "fairness doctrine", which in theory would require broad-
casters to give equal time to both sides of controversial issues.

Critics of the fairness doctrine say that all it will really do is make
broadcasters stay away from controversial topics alltogether, out of
fear that special interest groups will challenge their licenses. Some people
believe that this is precisely what Congress wants. They point out that
talk radio has gotten a lot more popular, and also a lot more critical
of congress since the Reagan administration killed the original fairness
doctrine. A lot of congresscritters have complained quite vociferously
about this.

There was a big editorial about this in yesterday's Wall Street Journal.
They call the bill the "Hush Rush" bill, and in general seem opposed to
it.

Cordially,

JFN

## 1410. Clearing up my stand on micro-radio and other issues.

Newsgroup: rec.radio.broadcasting
Date: 1993-09-06 09:54:34 UTC
From: wdp@airwaves.chi.il.us
Message-ID: <26f1cq$fag@vixen.cso.uiuc.edu>
Source record: 42415
Cross-posted to: rec.radio.broadcasting,alt.radio.pirate

In the heated debates on micro radio, in which I took a very vocal part, much was said, and implied by me and others. I want to clear up some points that may have been obscured by rhetoric or getting carried away.

1) Corporate Broadcasters: I am not, despite what I may have said, opposed to corporations in America, or their owning and operating of radio stations. There is nothing evil or wrong with that in my book. Some of the greatest programming through the years has been on corporate stations. I do have a problem with bland, homogenized, musical-chairs-style formats, which seems to THIS reporter to be the standard fare and long suit of *today's* major programming companies. I am not at all happy about the overall creativity level in the media today.

2) DUOPOLY: I don't have a problem so much with the concept of duopoly as I do with the fact that I have never yet seen the promise of great new avenues of programming, alleged by the duopoly advocates, actually come to fruition. What I see is more of the same, just in fewer sets of hands. I have heard so much of the phrase "To Serve You Better" that I am quite unconvinced that there is any service improvements with duopoly. When cable TV was beginning, we were told tales of this 'brave new world' of television choices we would be offered. We were sold cable as the savior of television viewing. Whatever your interest, cable would provide for it. Well what we got was 50 more channels of the same goblety-gook that was on over-the-air tv. Now we can watch M*A*S*H on 5 channels instead of just one. WOW! I fear the same bill-of-goods is being sold to us on duopoly. At least that is how it looks from where I am sitting.

3) Satellites. I, again, have no real issue with satellite delivery of programs. My two gripes about most satellite "Programming" services is A) The proliferation of cheap, plug-in satellite programming is making the entry-level positions in radio as scarce as icewater in hell. B) Satellite networks lie to me. With some exceptions, satellite programmers try to appear local, right down to synchronized call-letter liners in the current DJ's voice. This indicates that even the satellite programmers know that people want to hear a locally produced station. Else why would they do hand-stands in an attempt to appear local. Satellite services who refer to themselves as a network, such as AAHS, Interstate Radio network, etc., do not offend me in the latter manner.

4) The FCC: I am not the FCC's enemy either. I just see through the hypocracy of enforcing content controls on broadcasters with one hand, then telling us that there should be no 'fairness' doctrine, because they don't feel its right to impose content controls ??? Huh? Am I missing something here? The commission drops public service requirements because...' a community should determine for itself what it's needs are'... yet if a community votes with it's tuning dials that Steve Dahl, or Howeird Stern serves their needs, still the commission says NO! One way or the other, please. Either it IS the commission's job to regulate content for the public good, or it is not. I fail to see how it can be OK to say that a broadcaster need not offer time to opposing views, because it is up to the broadcaster how s)he programs... and then to say that Howeird Stern is not OK, even if the broadcaster thinks he is!.

Bzzt, Sorry, I don't buy that. The commission wants it both ways.

My issue with what I have dubbed 'Big Business Broadcasting' is not so much that they are Big Business (Hell I wish everyone success), it is that I have grown weary and disgusted with the insipid and monotonous programming being churned out of radio speakers from coast to coast. SMN and Unistar affiliates all sounding identical, the predictable 7 or 10 formats in every market, where innovation is measured by minuscule variations within a rigid formula.

I support a legalized, responsible micro-radio service because I think radio needs a shot in the arm. I want to hear more diverse programming than I do. I want to see hundreds of little think-tanks churning away at some new idea, some uncharted course, some new vision. Yes even a new piece of amateurish garbage from time to time. In radio's infancy and childhood, there was a lot of experimentation. Most of us look back on those days as *radio's golden era*. I quite agree. I just think that the same minds that created *that* stuff, might not have been allowed to even try it on one of today's formulated, researched and sterilized major market jukeboxes.

Real creativity is not happening in most major radio media today to the extent that it could. (exceptions, of course, do exist and I applaud them). Big market stations continue to split the contemporary music pie thinner and thinner, splitting hairs within hairs, rather than venturing out into uncharted waters. WLUP-AM is a shining example of what can be done in uncharted waters by a bright and courageous programming and management team willing to go out on some limbs. I love to see stations do what *they said could not be done*. We need more Wilbur Wrights, Thomas Edisons and Henry Fords in broadcasting. Those who are not afraid to fly in the face of convention and create something worthwhile. *Broadcasters*, not bean counters. I think those new voices are out there. Micro-radio would offer them a place to practice and hone their craft, as well as offer a voice to those with none. If you broadcast something worthwhile and different, people will listen. WLUP is a shining example of that (and they did it all without duopoly, BTW).

But, alas, WLUP is the exception, not the rule. Radio AAHS is doing some good things, but they can afford to... they are calling it children's radio. WADN in Concord ma (Walden 1120) also is doing a good job with their all-folk format. Chicago's WJPC-AM does an all-rap format. I find myself listening to them because they are doing something different, not because I am an affectionado of rap!

So, in wrap-up, (pun unintended) I am not the enemy of established radio. I am opposed to stagnation and decline in what is arguably the greatest medium of mass communication yet to be developed. I believe that micro-radio's time has come. I know it is uncharted waters. I understand that the idea of hundreds of creative or crazy, responsible or rowdy, intelligent or insipid micro-radio practitioners all allowed access to the public's ears, must scare the polyester off some radio programmers who have never had to deal with competition on such a grass-roots level before.

I still think it'd be good for the complacent few in control of what we all hear and know as radio, to have to run for their money. I'd love to see something happen to get things hopping in radio. I long for the day when choosing a radio station to listen to is more than a multiple-choice question on a test paper. Instead of 5 or so, basic formats (and their variations) I wonder what it would be like to see 20 formats in markets with 35 stations (like ours). Personally, I think it'd be great! I also think that those who pioneered radio (Including Armstrong and his weird little idea, *FM* that was suppressed by the *powers that be* because they feared for their power base) would also support this micro-radio idea. It's just that many Americans have let the airwaves decline to the point that they don't know what real radio can be like.

Sadly, many broadcasting companies have lost any idea of what it means to do radio. It has become little more than a cold game of numbers. Hardly more than marketing cat litter, soap, or politician. Fresh energy is needed. Fresh ideas, fresh uncluttered creativity. Since established media seems unwilling to take those risks, for the most part, then we should have something new. I believe that this *something new* might well be micro-radio. I am heartened by the number of people who have expressed a positive interest in some form of this experiment.

Anyway, that about sums up my opinions. I hope I have cleared up any misinterpretations about my being 'anti-corporate' or anti-establishment. I am anti-stale-stagnant-boring radio, that's all.

Bill

The promos are running! The I-Man is coming back to Cleveland Sept. 6 on 3WE WWWE 1100 AM. (That's right Scott another 2 bit rag tag station ;-) ).
Imus is still in the hospital but is reportedly doing much better and will be back live Sept. 7. So I guess the first day in Cleveland will be taped bits called "The Best of Imus", which is what runs when Imus is on vacation.

# 1416. KFRC San Francisco -- epilog

Newsgroup: rec.radio.broadcasting
Date: 1993-09-06 09:55:00 UTC
From: andy@s50.es.llnl.gov
Message-ID: <26f1dk$fap@vixen.cso.uiuc.edu>
Source record: 42424

For those interested in the saga of KFRC-610 am San Francisco, there's one more tidbit to report. As discussed last week (I lost all the previous discussion), KFRC-am 610 changed formats from a popular standards/ big band format ("Magic 61") to an oldies format, simulcasting with their sister FM 99.7, which had been oldies and still is. The staff of both stations were cut and a new one was installed. The programming really echos the BIG 610 (top 40) format of the KFRC of the 70's, with resurrected jingles and such. The standards format was quite popular, and had good ratings in the bay area. Last week the skinny was that KKHI am 1550 would switch from simulcasting classical with their FM 95.7 side and pick up the magic 61 staff and format. This week, it's reported (and I confirmed on the way into work) that KABL am 960 has picked up the standards format (I didn't recognize the announcer, so maybe they were racing KKHI to the finish line). KABL has always simulcast with the FM 98.1 side. Again, in the 70s, KABL set the standard for "beautiful music format", but this faded away like all the rest into a soft AC "B-98". They even had Joe Montana in their TV spots right after he signed with the Kansas City Chiefs. Anyway, that's the latest.

It's true!!! WFAL, an AM carrier-current station owned by Bowling Green State University (Bowling Green, OH) used a system similar to "leaky coax" with several transmitters for many years. It was a pain in the #@&!! We have since decided to carry our programming in the form of the audio portion of the local cable "community bulletin board". We are also looking into micro-radio (one transmitter, low power. A sort of LPTV for radio.)

>two spots on the dial.

[some on micro radio and opportunities deleted.]

There is still a sore point for me on the whole issue of access to radio.
Micro-radio is just a narrow case in point. Reading the current fracas
at KPFA in the Folio brings it up once again, and much of the micro radio
discussion is also really wide of the mark. Radio is a public access
utility, and a public service, and is there for the benefit of the public.
But the public who is served is not the broadcaster! It's the listener!
Working with another of Lorenzo's projects, trying to get the Deganawidah
Quetzalcoatl University licensed and running near Davis, also in about
1974, it suddenly came to me that we were going about it all wrong. We
were talking about the right of access to airwaves for the speaker,
rather than for the listener. The people whose dreams need to be realized
are the consumers, not the producers! If you want to broadcast your
wonderful ideas, produce good taped programs and offer them to the

radio stations around the world -- they will air them if they're good. If they are really unique, and not available in the broadcast mix in your area, get a bunch of listeners together and bring pressure from the receiving end on the stations in the area -- convince them that more people want to listen to Gagaku court music at 4 AM than Crunchy Country. And if they're not good, why should the public be subjected to them? Countless pirate, micro, community and college broadcasters (and, of course, commercial and National Corpublic Radio outlets too) make that mistake, broadcast what they like, or what they think will grab up more listeners. KTAO worked, and its elfin daughter KKUP works today, because the line between producer and public has been blurred to the point where you can't see it anymore.

I think micro radio is a good idea, and the various things that local governments have done with their TIS's is a case in point. While it might be stretching 90.242 a little for Saratoga to broadcast the city council meetings, I think that is an entirely appropriate use. The whole new high AM band is a suitable place to put a few designated channels (might be able to open up the audio to 5 kHz, you think maybe) and the key to non-competition with NABbers etc is to not allow commercials. Public access to the public is important if the public listeners are interested enough to ask for it. There isn't a KKUP in every town, and I think a 10 watt AM micro radio every 9.3 miles is a good way to make this available.

# 1422. Micro Radio replies

Newsgroup: rec.radio.broadcasting
Date: 1993-09-06 10:19:42 UTC
From: af660@freenet.carleton.ca
Message-ID: <26f2ru$g72@vixen.cso.uiuc.edu>
Source record: 42402

In a previous message, David Josephson <david@josephson.com> writes:
#>How about AM?
#>We also have a few Travelers Information stations. LAX is on
#>530, various freeway stations are on 1610, and the Hollywood
#>Bowl runs a station on 820.
#
#That's even a doable thing, especially as there is a new hunk
#of the AM band being opened up. Since the TIS's so far are only
#authorized for 535 and 1610 kHz (the Hollywood Bowl station
must be on a waiver), why not designate 1620 as a Community
Information Station frequency (it always worked fine for me,
broadcasting in Berkeley in the late 60's ;-)). The rules
for TIS's would be a good starting place: 10 watts into a
vertically polarized antenna no more than 15 meters high,
producing no more than 2 mV/m at 1.5 km away. Good, stable
and spectrally well behaved transmitters are already available.
and not too expensive.

#There might be room for some improvement
#in the audio specs, the TIS regs specify 6K00A3E emission
#with an 18 dB/octave audio lowpass filter starting at 3 kHz!
#Anyway, start with that -- the rules are in 90.242, found at
#your local library in Part 47 of the Code of Federal Regulations.
As we expand the rules to allow micro broadcasting, the bandwidth
requirement could be relaxed . . .

In a previous message, wdp@airwaves.chi.il.us (RRB Moderator) writes:
#>As I mentioned in an earlier message, an expanded form of the
#>Travelers Information Radio service (on AM) may be a better
#>route to "micro radio", then a profileration of cheap FM equipment.
#>These low-power AM stations could serve up to a 3-4 mile range,
#>making them attractive for small communities or portions of
#>larger cities.

#Interesting idea. Problem with AM is it's inherent skip potential,
#hetrodynes between transmitters operating slightly off frequency of
#one-another, and the hash caused by marginal reception of two co-channel
#stations. FM has no skip problems, and the capture ratio of FM receivers
#will eliminate the co-channel noise problem.

Obviously, there will need to be a minimum separation between these
stations to prevent hetrodyning between them. The TIS stations currently
running are rarely, if ever, heard by skip.. Of course, there is the problem
of distant stations skipping *into* the service area of a micro broadcaster;
I would recommend the use of frequencies with only a few stations, or

perhaps a "local" channel. In any case, a desired operation would have to
be tested for interference.

FM can skip too, although not as predictably or reliably as AM. Capture effect
may not be as reliable for many weak signals as it is for two or three
stronger FM channels. I've noticed this on one of our local 2-meter repeaters
which has a serious problem with "jammers".

#>Antennas would be limited to those used in TIS (including leaky
#>coax setups for "linear" communities
#
#I disagree about 'leaky coax' antennas. They do not work well outside of a
#few hundred feet from the element and would be difficult or impossible to
#construct and operate (where would you string the coax?). Leaky systems work
#for highways because the right-of-way is controled by the same entity that
#controls the transmitter, usually the highway department. Ask any college
#with a 'carrier-current' radio staton how much fun it is to maintain
#thousands of feet of cable and many transmitters.
#
Perhaps an "easement" arrangement, like (in some communities) arrangements
between telephone/utility companies and cable companies, where the
cable company is allowed to string its cables along the telephone poles.
(That might be expensive, though)
#
#Also, you seem to be defining 'community' as a geographical area. Most
#micro-radio proponants seem to be defining the term not only as a
#geographical area, but as a cultural thing as well. Essentially,
#free-radiation is the only realistic alternative for micro-radio.
#
All radio stations are limited, as a function of power, frequency and other
factors, to coverage of a particular geographic area. Micro radio broadcasters
interested in covering larger areas, might be allowed more than one transmitter.

In the case of a very dispersed community of people, micro radio may not
be the best solution.

#>b. A substantial, but not overly-unattainable filing fee
#>($250-500) for the licenses to help pay for administration
#>and enforcement. (it's not *that* difficult to raise that
#>much if you're *really* interested)
#
#I would also like to see micro-radio licenses be *non-transerable* except to
#(perhaps) family members or other members of the original licensing entity.
#This would eleiminate 'speculation' in micro-radio (the buying up of licneses
#for profit) and assure a fair chance for everybody.

They could be like ham radio licenses: those are nontransferable to anyone.

I seriously doubt there'd be much profit in operating these stations. They
just don't reach that many people (as compared with even a 250-watt local
AM station)

# 1423. Re: [rec.radio.broadcasting] Why micro broadcasting

Newsgroup: rec.radio.broadcasting
Date: 1993-09-06 10:19:44 UTC
From: nagle@netcom.com
Message-ID: <26f2s0$g73@vixen.cso.uiuc.edu>
Source record: 42403

From: "Frank C. Haulgren" <haulgren@henson.cc.wwu.edu> writes
>The whole issue of micro-broadcasting may be one of those issues
>that is totally unresolvable.

It's worth noting that there already is a provision for "low-power broadcast stations", both TV and radio, in the FCC regs. And if you're not near a major metropolitan area, getting approval for one is easy. There's even a low-paperwork application if you have under five employees. There are several thousand such stations, and from the listings, about half of them are religious. Many are just translators, rebroadcasting a signal received from elsewhere, but they have the right to originate, and many do.

But doing it in a metro area is very, very tough. The regulations are designed to protect the outermost fringe areas of big stations when being received by the weakest TVs and radios. This is especially true for TV, where one TV station is considered to occupy not only its own channel, but a channel on either side, plus a few other harmonically related channels. And there's a freeze on low-power stations in the top 100 markets to "save spectrum for HDTV". Dealing with the regulations concerning interference is very difficult; you have to do engineering studies, tests, and build carefully trimmed antennas with directed output patterns to work around all possible interference.

San Francisco, for example, is considered to be in the fringe area of Sacramento and San Jose, which blocks out most possible low-power TV stations. Nevertheless, there is a low-power Spanish-language TV station in San Jose, and a new low-power arts-oriented TV station (channel 30) is starting up.

The industry likes these "barriers to entry". There's some concern that digital AM radio may open up much more AM capacity, and existing broadcasters are fighting it.

John Nagle

Source record: 42428

In a previous article, blonde@egr.msu.edu (EMB) says:

>
>Does anyone here collect or enjoy old radio shows.

Though I don't actively collect radio shows, I do have a set that is possibly the ultimate in old radio recordings. It's from a series called "America Before TV" and it is a recording of the ENTIRE broadcast day of WJSV in Washington DC (CBS station) on 9/21/39. ALL 18 HOURS, on 12 C-90's in a box album, with booklet.

The reason I freaked over this is that, on most other radio LP's, the show ends, and that's IT. I always wondered, say, what did the folks hear after the sign off of the War of the Worlds show? Only being in 1938 could one know this...Well this set has everything from the sign on to the sign off (except for a repeat of an FDR speech). Commercials, Amos n Andy, Arthur Godfrey as the morning DJ, local & network shows, baseball, Congress, dance music, Major Bowes, etc etc etc, all the station & network IDs...

If you're interested, the set is made by Greatapes in Minneapolis, and while they don't sell direct (I got it as a gift, was in a catalog)maybe they can point you toward a dealer. I think it was around $30. They are at 612-872-8284, 1523 Nicollet, Minneapolis 55403. Hope you find this helpful.

Chris

A third option is also available. Several organizations for people interested in OTR exist. By joining one of these you gain access to that particular club's library (or libraries) of recorded programs.
I am currently a member of two of these groups -- Old Time Radio Club of Buffalo, N.Y., and North American Radio Archives. OTRC has programs on both reels and cassettes. NARA has phased out its reel collection but has a massive collection of cassettes. Both groups also have some printed materials (mainly books and magazines about OTR) available for borrowing.
By the way, despite the name, OTRC is not limited to people in the Buffalo area. I was a member when I lived in Georgia, and I still belong now that I am in Louisiana.
If anyone is interested in contacting either of these groups for more information, contact me by e-mail. I will give you more details.

# 1430. PSYKOSONIK on radio

Newsgroup: rec.radio.broadcasting
Date: 1993-09-06 10:36:47 UTC
From: psykoson@well.sf.ca.us
Message-ID: <26f3rv$h1o@vixen.cso.uiuc.edu>
Source record: 42413

[Moderator's Note: We usually don't print record reviews/preee releases, but this one was so well written (and there was a radio reference) that I felt I should pass it along. Bill]

September 1, 1993

PSYKOSONIK's debut full-length album ( Wax Trax/TVT Records ) has been officially released and is now available in many stores nationwide, including Tower Records stores where, for the month of September, many locations will be featuring the album in the 'preview' section so you can hear the album and decide for yourself if you want it.

Who is PSYKOSONIK?

PSYKOSONIK is a four-piece group based in Minneapolis. Their first single "Silicon Jesus" has been a huge success in both clubs and on radio. "Silicon" is currently climbing the Billboard Dance charts and has broken the Top 10 on many record pool charts across the country. The track is bubbling at commercial alternative radio stations like KKDJ-Fresno, WDXY-Cincinnati, LIVE 105-San Francisco, KDGE-Dalllas, WDRE-Long Island, Pacific Northwest giant KCMB, and many others who are just now adding the single. If you are a club/rave go-er, you've heard at least one of the mixes.

PSYKOSONIK was formed in Minneapolis in 1991 and has since developed into a fully realized musical force. Citing such diverse influences as Ministry, early Duran Duran, cyberpunk writers Bruce Sterling and William Gibson, this foursome imbues each cut with messages of technofile libertarianism and futuristic concepts. They usher in a new generation of pop stars in tune with the realities and possibilities of the digital age.

PSYKOSONIK's eponymous debut full-length album is chock full of unstoppable high energy techno-pop. The lead track "Welcome to my mind" has been remixed for radio and club play and will be released as a single this fall. The video for the single features a trance-like combination of live and computer generated images.

PSYKOSONIK will be taking their multi-sonik pop assault on the neo-luddite state ON THE ROAD later this year, transforming the studio tracks into slammin' live performances and refuting the stereotype that the new era of dance-pop is somehow irrelevant or disposable.

As the press has written, " PSYKOSONIK is 90's pop. Tracks that sound as good blasting out of your car stereo as the building sized speakers of a rave. Fuel for the feet and food for the mind. A

delectable collection of driving techno grooves and infectious pop hooks."

So.... check out PSYKOSONIK's self-titled debut album and the singles "Silicon Jesus" and coming soon, "Welcome to my mind". The singles have tons of completely diverse mixes ranging from Techno to Ambient to Trance to lush House to Metal to..... just check it out. If you don't see it in your local record store, ask for it by name and tell them it's on Wax Trax/TVT Records... they'll get it for you.

You can talk to PSYKOSONIK via e-mail at two possible addresses:

On Compuserve: 71513,1130
On the WELL: psykoson@well.sf.ca.us

We'd love to hear how you like the album and singles, and we can keep you updated about tour info and release dates, etc.

# 1434. Sports and 820

Newsgroup: rec.radio.broadcasting
Date: 1993-09-06 10:37:06 UTC
From: neil.parks@pcohio.com
Message-ID: <26f3si$h21@vixen.cso.uiuc.edu>
Source record: 42414

PR<<A side note about the sports format, it would make sense for Chicago to have
<<fulltime all-sports station. Many LARGE markets do have them (660 in NY, 710
<<in LA, 680 in SF, 590 in Boston) and Chicago only has a daytimer on 820,
<<which was recently DENIED in their petition to the FCC to get night power!

Also Cleveland--WKNR 1220. (Actually the morning drive show on
WKNR is about 2/3 comedy and 1/3 sports. The rest is all
sports.)

Maybe if the Chicago station on 820 had applied for night usage
before WNYC in New York (which had been daytime only on 830 for
many years), it might have gotten it. But now between the Fort
Worth and New York stations, it would probably cause too many
problems.

>
>Is there any company that now markets home audio receivers or "walk about"
>receivers that decodes AM Stereo (the common format{s})? If so, any ideas
>where I can find them?

I'm sure you know that AM stereo is big in Japan, and there are lots of
personal radios, with and without cassette players, as well as boom boxes
in Japan that receive AM stereo. Many of them, however, will only use
the 9 KHz channel spacing that is present in Japan. So they will be useless
in the US. A few have "worldwide" tuners which means the increments are
switchable to 10 KHz.

Real Soon Now, a friend in Japan is going to send me an AIWA CR-D60
micro radio. It has a "worldwide" tuner and is a big seller over there.
There is a similar model which is attached to a Walkman-style cassette player.
At that time, I will probably put my Sangean SR-66 up for sale. It's an
analog-tuned micro radio that gets CQAM AM Stereo and standard FM Stereo.

I also have a SONY SRF-A1 which I will =never= sell.

> the fine & not the stern organization.

No licensee can relinquish control of the stations programming. If
a program runs inappropriate material it is the station ownership that
is ultimately responsible. That's why the fines were against the
stations. In the days when DJs had licenses, they could be individually
fined, based on the language on the back of the license.

No court would uphold a contract where a violation of the law was part
of the action. If you hired someone to drive a truck, and he let it get
in bad repair and gathered fines, you could fire the driver.

Same here.

# 1438. Teen Radio Show/Mailing List

Newsgroup: rec.radio.broadcasting
Date: 1993-09-06 10:41:09 UTC
From: Ben.Harvey@lambada.oit.unc.edu
Message-ID: <26f445$h3s@vixen.cso.uiuc.edu>
Source record: 42407

I'm the producer of a future-syndicated radio show involving teens. The show is called Teen Voice USA, and is a weekly/monthly one-hour radio show emphasizing the importance of teens in the world today. Many teen disc jockeys, including myself, work very hard to put the show together periodically, which includes many segments that are important for our audience, teens, to hear.

The teen Djs who host the show live in many different locations across the United States, adding to the diversity. We communicate via modem, and have "clubs" on many popular online services, including America Online, Prodigy, and GEnie.

Many services, not to mention the whole world, are linking in the direction, towards the Internet. Almost all services offer Internet mail, and therefore, a mailing list would be accessible by almost *all* members of Teen Voice USA disc jockeys.

If you are a teen disc jockey, an adult disc jockey with interest, or if the idea for this show interests you at all, please contact me. I'm currently in the process of creating a mailing list for the purpose of communicating between members of the show, and people interested wwith becoming involved. A mailing list will soon be created, but I need your support.

Please Email ben.harvey@bbs.oit.unc.edu for more information on the show, or with your support for a mailing list.

Much the way many (most?) adults hate Barney, but 2 year old kids love it,
AAHs has done a good job of targeting its audience - kids. My 13 and 3 yo
kids force me to put on AAHS (1050 AM in the DC area) every time we are in
the car. I think the idea is great but it is so repetitious I get bored.
However my kids will watch an Aladdin video 20 times, too, so repetition
doesn't seem to bother kids.

The DJs are just not a big part of kids' interest in radio shows. Even my
13 yo can't tell you the names of the DJs on the pop/rock stations he
listens to.

BR<< A nationally syndicated show ("Don and Mike Show") was purchased
<< by them but is getting verbally trashed by the WIOD radio per-
<< sonalities, so the story goes.

BR<< Any insights from people in the business ?

Let me understand this: A radio station buys (and airs) a
syndicated show, and the station's own air staff badmouths that
show? My own insight as a former d.j. would be, some of that
air staff will probably be handed pink slips before long.

If employees of any company in any industry disapprove of
something management does, then they should take their grievance
to management and not publicly sabotage the organization.

It's a daytime-only AM (1090 kHz) station catering to the black community
in Boston.

The fact that this is the ONLY black-oriented station
in Boston is often cited, with considerable justification, as an
indication of the Boston black community's lack of political and
economic power.

Wow, this brings back memories. When I was in high school I was
very involved with our little 10 watt station, as a dj for three
years and as programming manager then treasurer as well.

I would sometimes show up to my shows with a cd player, a cassette
deck, and connect them to a Realistic mixer. It got the job done --
the station only provided two turntables, a mic, and the promo carts --
but I couldn't picture getting a professional sounding show with that
as my primary mixer... It's hard to cue a quiet source when the mixer
sends the cueing output together with the main to the headphones.
It wasn't until I later bought one that I realized I probably shouldn't
have used it on the air...

Two of the yearly features of our station were the 100.5 hour marathon
(guess why..) and the one man dj marathon. The second was a pledge
event, where people would promise a certain number of cents per hour
that our masochistic dj would remain awake and on the air. We were
expecting something of the order of 50 hours, and Adam Parsons almost
doubled that. Wow.

You may be saying "so what" but remember, this was a high school thing
that was normally only on the air from 6:30 till 22:00. I miss KCEQ.

D. Campbell - most dedicated dj, KCEQ, '87.

>as "background noise" instead of really listening to it.
>
>In my opinion the concept of "cable radio" is good, but I think
>it needs a little work.
>

Well, IMHO, this is a bit of a rag against what probably will take over when it comes to listening in the home. I wish my cable company could offer DMX; here in rural America all (and I mean ALL) the radio stations SUCK, and I'd love to have the option of 30 or more formats with virtually no commercials to put on as background music. Even heavily consulted, preprogrammed formats would be more desireable that the idiots that pass themselves off as "broadcasters" where I live ...

Oh, and when I heard it (in State College, PA, home of Penn State), I thought the quality was pretty damned good. But then, rural broadcasters don't seem to know what signal quality is, either.

I guess what I'm saying is, if you don't like it, you don't like it. But don't assume it needs work until you;ve compared it to the worst stuff out there instead of the best.

Source record: 42435

Many of you that are non-commercial stations probably have or will be receiving letters asking for permission to rebroadcast your FM station. You do not have to grant it, as FM non-commercial stations are exempt from the new cable act. The cable company can rebroadcast your signal, either as a broadband or CAFM signal without permission and repurcussions or cost. THe cable act does not even give the power to non-commercial stations to grant or deny transmission consent nor does it alter any copyright authority granted the cable company. In other words, the cable companies do not need your permission to pick you up and broadcast you and they are protected from you "seeking compensation" for doing so, as some of the commercial stations are doing. SOmetime's the cable companies letter states you will be dropped unless they get you to sign the letter or that they will drop the service if all stations do not sign. It may be a good idea to discuss this. References are The Cable act, Section 47 U.S.C 325(b)(2) and 47 C.F.R Section 76.64, and Section 111 of the Copyright Act.

On another note, as cable systems update, some are considering dropping the CAFM potion of the service and offering Digital Cable Radio, with some local stations to be available. There is one system in our area talking about this, but has not made a decision yet. I was curious to see if this is something that is occuring and how stations are handling it?

# 1448. Re: Looking for advice on a second career in Broadcasting

Newsgroup: rec.radio.broadcasting
Date: 1993-09-08 06:28:26 UTC
From: SEDV1.acd4.acd.com!jwg@acd4.acd.com
Message-ID: <26ju2a$h9t@vixen.cso.uiuc.edu>
Source record: 42436

In article <26epgt$7s3@vixen.cso.uiuc.edu> rdg@netcom.com (Richard D. Goldstein) writes:
what I realize is that what I really want to do with my life is to spend
a portion of each day on the radio talking with people and (hopefully)
occasionally getting paid for it.
<deletia>
So... I'm free, and over 21 and mobile... I also have no real experience
in the business. Where do I begin? Any advice? How do I pitch myself,
especially as someone outside the broadcasting mainstream? Can I pursue a
career in doing "voice-overs" at the same time? (or is this a better place
to start?) Anyone have a job opening and willing to take a chance on an
untested unknown? I have "spunk"!

One of the hardest things for program directors is to find decent,
*reliable* part-time help. This could be a great way for you to break
into the biz. Find out what stations are in your area, call up their
business lines and ask for the program director's name, and either talk
directly with them or drop them a note. Tell them you have a little
experience, and would like a chance to both help them and satisfy yourself
by pulling part-time hours.

No, this isn't full-time work. You'd have to keep your regular job. But
it *is* a way in.

I did college radio, and I loved it. But once those days were behind me,
and I took the "real" job, just like you, I felt serious pull to get back
on the air. One day, the opportunity landed in my lap when, out running
about wearing a T-shirt from my old campus station, I bumped into a man
who asked me, "Are you in radio?" "Used to be," I said, "in college."
He asked, "Are you interested in getting back in?" Turned out I'd bumped
into the program director of a small AM doing full-service (middle-of-the-
road music with lots of news and features, personality-driven). He gave
me a shift. I was successful, and now that I look back, it was for
exactly three reasons: (1) I was reliable, (2) I kept working to improve
(I was pretty bad when I started), and (3) I was reliable. I kept the job
for two years until the station went satellite nights and weekends. The
program director of the sister FM, an AOR, scooped me up, again on the
history of reliability. Three months later, they offered me the just-opened
7 to Midnight slot. I turned it down because the pay was really low and
my radio cravings *were* satisfied by my part-time work, but the point is
that this *was* a path into the business for me.

Good luck!

In article <26f1cq$fag@vixen.cso.uiuc.edu> wdp@airwaves.chi.il.us (RRB Moderator) writes:
Random thoughts.

3) Satellites. I, again, have no real issue with satellite delivery of programs. My two gripes about most satellite "Programming" services is A) The proliferation of cheap, plug-in satellite programming is making the entry-level positions in radio as scarce as icewater in hell. B) Satellite networks lie to me. With some exceptions, satellite programmers try to appear local, right down to synchronized call-letter liners in the current DJ's voice.

A couple formats ago, WSDM-FM in Brazil, IN had a faulty cart machine. So sometimes you'd hear the DJ say, "Wisdom 98" every five seconds through a song until the secretary (the "official" board op) would notice, wander into the studio, and yank the cart. Sometimes this would take ten minutes.

My issue with what I have dubbed 'Big Business Broadcasting' is not so much that they are Big Business (Hell I wish everyone success), it is that I have grown weary and disgusted with the insipid and monotonous programming being churned out of radio speakers from coast to coast. SMN and Unistar affiliates all sounding identical, the predictable 7 or 10 formats in every market, where innovation is measured by minuscule variations within a rigid formula.

And the radio trade rags legitimize this behavior within the biz. Every week I read in FMQB or the Hard Report some interview with some PD from somewhere. Every week, they talk about the marvelous and wonderful things they're doing on the air that make them "unique". So when I finally drive through their market and get to hear their station... well, gawrsh, it's mostly just like ten other stations I've heard. This goes all the way from giants like WNEW/New York - yeah, they play "deep cuts" once an hour, but otherwise it's the same old same old - to minor players like WZZQ/Terre Haute - our brand of "AOR" is to aim upward in demos and try to attract more women, making us lean a bit AC. But we're more like WNEW than we are different.

I support a legalized, responsible micro-radio service because I think radio needs a shot in the arm. I want to hear more diverse programming than I do. I want to see hundreds of little think-tanks churning away at some new idea, some uncharted course, some new vision. Yes even a new piece of amateurish garbage from time to time. In radio's infancy and childhood, there was a lot of experimentation. Most of us look back on those days as *radio's golden era*. I quite agree. I just think that the same minds that created *that* stuff, might not have been allowed to even try it on one of today's formulated, researched and sterilized major market jukeboxes.

Radio started with no idea it would be so important! It started with no defined need to fill. It was a novelty that *became* a fixture in our lives. It wasn't until people started to have *expectations* of radio -- expectations that station owners, quick to see revenue potential, began to respond to.

Real creativity is not happening in most major radio media today to the extent that it could. (exceptions, of course, do exist and I applaud them). Big market stations continue to split the contemporary music pie thinner and thinner, splitting hairs within hairs, rather than venturing out into uncharted waters. WLUP-AM is a shining example of what can be done in uncharted waters by a bright and courageous programming and management team willing to go out on some limbs. I love to see stations do what *they said could not be done*. We need more Wilbur Wrights, Thomas Edisons and Henry Fords in broadcasting. Those who are not afraid to fly in the face of convention and create something worthwhile. *Broadcasters*, not bean counters. I think those new voices are out there. Micro-radio would offer them a place to practice and hone their craft, as well as offer a voice to those with none. If you broadcast something worthwhile and different, people will listen. WLUP is a shining example of that (and they did it all without duopoly, BTW).

It's great to listen to a station which has just begun a new, experimental format, for the same reason that radio's golden age was so exciting for the listeners of the time. The format gives you something you want that you didn't have before, in a package that is under construction, because the thing is so new. Should it prove to be popular and therefore profitable, others will copy it. Once that starts to happen, the "lexicon" of the format starts to form, and suddenly it's not so unexpected anymore.

In South Bend, Indiana, AM 1580 WAMJ has a personality-driven morning show that's a delight. Why? Because there's no music. It's not a talk show; they don't do topics. Imagine the old AM in your community doing unoffensive music with lots of news and an entertaining morning host who gives you the stuff you need to know for the day, does lots of trivia quizzes, has special features he puts together. Now take away the music. This makes WAMJ's morning show exciting, because the host can't dump out of a bit and go to music. He talks for three hours! (Okay, his engineer sometimes gets some words in.) I don't feel I'm adequately describing it here... but the feeling is continually one of "What's going to happen next?", because nobody's tried it there before.

Maybe I shouldn't admit this, but Rick Dees was one of the reasons
I got into radio. When I was in second or third grade, I listened
to Dees every morning on my way to school on WMPS, and later on WHBQ.
When I came home from school, I'd sit in my room, playing records
(Undercover Angel, The Night Chicago Died-My tastes really hadn't
developed yet) and talk into a mic my dad had run into my record
player. I lived radio from then on.
Thanks Rick.

Does anyone know I can find Don Imus on radio. I first saw him when he was a VJ on VH-1 - I think he got fired for his outrageous comments, e.g. Icky Little Michael (maybe he was right eh?) I last heard him on a New York station but I can't remember which one. Does anyone know if his morning show is aired in different cities?

# 1454. CKLW is all talk? News<>talk? What??

Newsgroup: rec.radio.broadcasting
Date: 1993-09-08 07:06:22 UTC
From: wdp@airwaves.chi.il.us
Message-ID: <26k09e$io3@vixen.cso.uiuc.edu>
Source record: 42442

Greetings in net land:

This story has not yet been brought to the attention if this newsgroup, so I will do so. Perhaps it is old news, but it is news to me.

The other afternoon, I was parked by lake Michigan and scannont the AM dial. I happenned upon 800 khz and heard a telephone talk program, with a female host. They I'd only as "The New 800" for the longest time, gave numvers but no area codes.

I thought ofCKLW, but that is all the way in detroit, and during the day? Besides, CKLW was playing music last time I heard them.

But alas, at the top of the hour, it was <and I quote> "Windsor's news/sports and weather station.. The new AM-800, CKLW Windsor" Apparently they are all hot-talk now. It sounded a lot like WLS, in fact. Of particlular interest is their strong identification with Windsor, rather than Detroit. In fact one liner says "... ... serving Windsor <slightpause, voice drops for emphasis> AND YOU!" I suppose the YOU refers to Detroit.

So when did this change? How are they dioing in the format?

Post replies please.

Bill

# 1455. M. Dung auditions for Chicag's Loop_and other news

Newsgroup: rec.radio.broadcasting
Date: 1993-09-08 07:06:24 UTC
From: wdp@airwaves.chi.il.us
Message-ID: <26k09g$io4@vixen.cso.uiuc.edu>
Source record: 42445

As told in the Robert Feder Column in the Chicago Sun Times, today... Personality "M. Dung" is auditioning for overnights on WLUP (Probably FM by then) Chicago's "LOOP" radio.

Apparently Dung is a close friend of midday host Kevin Mathews, who has prompted him to come and try out for the job. All I know is that it is for overnights.

The loop continues it's move to FM with the comedy-talk, and the assumed change of their 'ground-breaking' AM-1000 to an all sports talk format. The latter change has not been confirmed by LOOP staff, but it is widely believed that this is their plan. They would compete directly with daytim/upstart WSCR (5kw, omni 820khz) who was recently turned down for nighttime power. This comes in the wake of New York's WNYC moving from daytime on (I believe) 830khz to full time on 820. It is unknown if the New York change had any bering on the denial. It is noted that the previous licensee DID have night power (1kw, night with a wicked pattern).

This reporter maintains that the comedy-talk that WLUP broke ground with when it put the AM on the air, is among the most creative, hip and fun stuff found almost anywhere. It is sad for those outside of the Chicago inner metro, that they are moving it to the FM. WLUP's 50kw signal on AM-1000 could be heard over 200 miles iin any direction by day, and over the eastern half of the US by night (They are a three tower in-line cardioid at night aimed slightly north of due east).

For thise who wanted to know about John (Records) Landecker, he has signed with Chicago's [Very lame, IMHO] oldies station. You know the type of station. Predictable rotation of 300 overplayed oldies and aging jocks from the hey-day of Top-40 AM radio pretending it is 1959 again.

EURONEWS 7.9.1993
Edited by Risto Kotalampi, rko@cs.tut.fi

---

BELGIUM: 1125, 1233 and 1305 French language 2nd program were closed down in June. (Sennitt via ARC)

BULGARIA: Changes of characteristics: 576 Vidin (500 kW) now 2nd and local programs, 648 Plovdiv (30 kW) now 1st, 2nd and local programs, 774 Sofia (40 kW) now 1st, 3rd and local programs, 828 Shumen (500 kW) now 1st and 2nd program, 963 Pirin (50 kW) - ex-40 kW, 1224 Vidin (500 kW) will increase to 1000 kW for winter. (EBU via BDXC via ARC)

GERMANY: DLF and RIAS have had their amalgation plan approved, thus enabling nationwide broadcasts to begin on January 1st, 1994. The new station will be called Deutschlandradio and will broadcast from Cologne and Berlin. (BBCMS via BDXC via ARC)

KALININGRAD: R Kaliningrad 1116 with local programs Mon-Fri 0510-0600, 0610-0700, 1500-1520. Sat/Sun 0600-0700, 1300-1400. (BT via ARC)

LITHUANIA: Baltic Radio International has started building work at its new transmitter site near Butinges. BRI will build six radio masts, a transmitter building, generator and official premises with a reserve studio, all costing 1 400 000 pounds. BRI programs will consist of pop music, with several minutes of advertisements every hour. (Lietuvos Rytas via Arunas Silickas via BDXC via ARC)

NORWAY: UKE-Senderen, Trondeheim will be on the air during the whole UKA, which this year is from the 22nd of October and until the 14th of November. The frequencies are 1485 kHz and 7245 kHz. The latter frequency will not be used between 05-07 GMT. (Jon Gunnar Solheim via JM)

RUSSIA: Moscow has two different MW radio stations for motorists. Avtovolna is at 0300-0600 on 1116 kHz. The address is: Ul.Lesnaya 41, Avtobank, Room 412-A, 101514 Moscow. Another station, Avtoradio is on 765 kHz. (G.Grigoriev via BDXC via ARC)

SWITZERLAND: 1566 DRS1 transmitters at Monte Ceneri-Cima and Sarnen, both 300 kW, were taken out of service on March 31st, 1993. (EBU via BDXC via ARC)

UNITED KINGDOM: 837 BBC Radio Furness is nowadays called "Southern AM" and they aren't using Radio Furness-name any longer in their local programs. Local programs are at 0600-0800, 1430-1630 BST, Mondays to Fridays. V/s Mark Jones, Senior Producer (in Barrow-in-Furness).

# 1461. KOIL and KKAR Switch Freqs. on AM in Omaha, NE

Newsgroup: rec.radio.broadcasting
Date: 1993-09-08 07:06:41 UTC
From: pschleck@cwis.unomaha.edu
Message-ID: <26k0a1$ioc@vixen.cso.uiuc.edu>
Source record: 42451

Scott Fybush gave me the heads-up on this one. Seems that KKAR, a news/sports/Rush Limbaugh format, had to protect two other colocated stations on its original 1180 kHz channel by reducing power at night. They recently bought off neighboring KOIL on 1290 kHz to use their relatively clear channel. (Scott will probably follow up and give more details :-).

I haven't been listening closely, so the switch probably happened somewhere in the last week or two. KKAR has immediately taken over its new channel, while KOIL was silent for a while. Today, I just noticed that KOIL is running a tape-loop (shades of travel-advisory radio!) with an announcer doing standard promos over a musical background containing references to "a new KOIL" serving "an audience that has been neglected for years, but will be served like never before" with "the great songs that you won't hear on any other station," etc., etc. I would venture a guess that they are going to some sort of easy-listening "Middle of the Road"-type format with top-of-the-hour news.

The promised debut of the new format is Thursday, Sept. 9th at 6 AM.

I've never heard this type of "tape-loop" lead-in to a new format before (Usually the staff plays what they've been dying to play for years, such as when top-40 KXKT "The KAT" switched to a country format "KYNN." I've never heard so many repeats of "Fisheads, Fisheads" outside of Dr. Demento :-). I recall another technique used by stations I can't remember involving strange music and programming to chase off their old audience so they can bring in the new (useful with dramatic format changes).

Any other format or frequency change anecdotes out there?

Paul W. Schleck

KTAO went on the air July 9, 1966. It *survived* until the early 70s.
KTAO is the most recent commercial license issued in the SF bay area.
That's right, folks. *No* commercial licenses have been issued in the
SF bay area since 1966. So much for limitless opportunities.

As far as non-commercial licenses go, the most recent one granted was
KKUP (May 15, 1972). The FM band is simply too crowded in this area for
any further expansion under the existing rules.

>utility, and a public service, and is there for the benefit of the public.
>But the public who is served is not the broadcaster! It's the listener!

(some stuff deleted)

>Countless pirate, micro, community and college broadcasters (and, of
>course, commercial and National Corpublic Radio outlets too) make that
>mistake, broadcast what they like, or what they think will grab up more
>listeners. KTAO worked, and its elfin daughter KKUP works today,
>because the line between producer and public has been blurred to the

>point where you can't see it anymore.

Very well put. I'm going to steal that last line at some point, I'm sure.
>
>I think micro radio is a good idea, and the various things that
>local governments have done with their TIS's is a case in point.
>While it might be stretching 90.242 a little for Saratoga to
>broadcast the city council meetings, I think that is an entirely
>appropriate use. The whole new high AM band is a suitable place to
>put a few designated channels (might be able to open up the audio
>to 5 kHz, you think maybe) and the key to non-competition with
>NABbers etc is to not allow commercials. Public access to the public
>is important if the public listeners are interested enough to ask
>for it. There isn't a KKUP in every town, and I think a 10 watt AM
>micro radio every 9.3 miles is a good way to make this available.

Why exactly should commercial broadcasters be "protected" from micro-broadcasters who choose to support their operations by charging for ads rather than going the subscriber/fundraiser route? In many areas with no true local media - like my hometown of Gilroy, Ca., where the two commercial stations licensed to our town are operated as San Jose stations with rates to match - a microbroadcaster who offered low-priced spots to local businesses would be providing a true public service.

What has not been raised in this discussion so far is the spectre of religious broadcasters gaining control of frequencies allocated to microbroadcasting in a manner similar to the way they have accumulated translator an non-com licenses throughout the U.S. - especially here in the west. How could such a problem be prevented without getting a government agency such as the FCC involved in the content regulation of microbroadcaster programming? Any ideas?
c

Does anyone remember the series "Jean Sheppard's America" that ran on PBS in the late 70's or early 80's? A classic series....

Does anyone have a copies available?

# 1465. Introduction to rec.radio.boadcasting (7-29-93)

Newsgroup: rec.radio.broadcasting
Date: 1993-09-13 02:54:18 UTC
From: wdp@airwaves.chi.il.us
Message-ID: <270ncq$f4m@vixen.cso.uiuc.edu>
Source record: 42453
Cross-posted to: rec.radio.broadcasting,rec.radio.info

Greetings:

Rec.radio.broadcasting (r.r.b) is a Usenet newsgroup which
was founded in April of 1992, in order to provide a forum for
discussion of topics pertaining to 'domestic broadcast radio'.
Already in existance was rec.radio.shortwave, which centers around the
International radio scene, and rec.radio.noncom who's focus is,
obviously, non-commercial radio. Rec.radio.broadcasting was intended
to 'fill the gap' between these groups.

The Internet Radio Journal is a periodic email digest consisting,
mainly, of articles found in the newsgroup. It is intended for people
who either cannot access the newsgroup from their system or for some
reason perfer a digestified format for reading. Subscriptions to IRJ
are free, and available to anyone who wants one, and who is equiped
with some form of email service.

-=*=- DOMESTIC BROADCAST RADIO -=*=-

By domestic, we mean broadcasts which are intended, primarily,for
reception in the same country/nation in which they originate. R.r.b
is an international newsgroup, though, and the term 'domestic' should
not be taken to imply 'USA' or even North American. Readers in other
nations are encouraged to participate.

-=*=- SUBJECTS -=*=-

If it has to do with broadcast radio, and not _specifically_ international
shortwave, it is welcome here. Occasionally an article which IS
primarily about shortwave will be posted if the subject seems broad
enough that the readership of r.r.b might be interested, or be able
to assist the poster in some way.

Generally, if a subject 'seems' like it would be of interest to the
broadcasting community (which includes those involved in creating,
transmitting or listening to broadcast radio) will be published.
These subjects include (but are not limited to)..

1) Formats and programming.
2) Engineering & technical matters and interests.
3) DXing (long distance reception) on the standard broadcast bands
4) Community broadcasting (including non-commercial and clandestine stations).
5) Pirate broadcasting (especially non-shortwave, domestic pirates).
6) Legislation affecting the industry, and its 'offspring' industries.
7) Technologies affecting the industry, and its 'offspring' industries.
8) General station information. Who is going on and off the air, and why.

9) Radio's historical and cultural significance.
10) Radio's current and future trends.
11) Political and news coverage and its impact.
12) Job openings and help to those seeking work in the industry.
13) Information on equipment and techniques involved in transmission and reception of broadcast radio signals.
14) The International Scene and how broadcast radio is shaping up in the various nations of the world.
15) Gabfesting and all matters of general interest to those involved in, or interested in, the general subject of domestic radio broadcasting.

-=*=- POSTING -=*=-

1) Post to rrb as you would any other Usenet group. The software does the rest.

2) Email your article directly to rrb@airwaves.chi.il.us. Using other addresses to post will needlessly delay your article. You might consider installing an alias in your mailer for emailed articles, especially if you post a lot of stuff. See the end of this file for all applicable addresses.

-=*=- POSTING GUIDELINES -=*=-

* If you post a question that is of potential interest to others in the group, ask that replies be posted, instead of emailed to you. We all would like access to the answers If you do receive email replies, post a summary to the group. This forum is only as good as it's posters and readers. Keep the info flowing.

* If you email an answer to a question, send a Cc: to the group's submission address, rrb@airwaves.chi.il.us, so we can all learn from your knowledge. When id doubt... POST POST POST! :-).

* PLEASE edit quoted text to a minimum! Most users of this group are fairly regular readers and do not need, or want, to read the entire text of a recent article in every reply. Of course, if the thread is less current, more quoted text may be appropriate. Use your brains (and your editor :->).

* If your message is basically a one or two line "Me Too" or "I disagree" post, consider emailing it to the poster. However if you go into some details as to WHY you agree or disagree, then please post it.

* If you are replying to an article in the Internet Radio Journal, simply use your mailer's reply feature, and again, edit the text to ONLY the article you are replying to, and include the article's name in the Subject field. Subjects of "Re: Internet Radio Journal" are confusing and may result in needless delays.

* If you post about a local radio station or personality, realize that 95% or more of the readers will know little or nothing about it. Offer a little background, like location, station format, type of

music played etc.

* Last but not least, avoid flames and personal insults. R.r.b has a high percentage of broadcast professionals among it's readers. We try to maintain a reasonably high brain to bulls*it ratio here. It is perfectly fine to say "I think that what you said is the stupidest bunch of crap I have ever heard", instead of "YOU are the stupidest jerk I have ever heard". If you *must* make personal attacks, do it in email.

-=*=- MODERATION -=*=-

R.r.b is a _very_ loosely moderated group. Normally, all legitimate articles will be posted to the group. Matters that may cause an article to be rejected by the moderator include...

---

* Articles which are not on (or reasonably near) the stated charter and scope of the group (domestic radio broadcasting) or pertain to 'non-broadcast' radio services, such as cellular, two-way, ham, citzens-band, and such.

* Articles that are too long for submission as-is. If your article is longer than 10k (10,000 bytes), consider splitting it into two parts, or better yet, edit it down to a more reasonable size. Check to see if you can eliminate any quoted text. If you believe that your article is of an especially urgent or inforamative nature, and you also feel that you cannot reduce the size without damaging the content, let me know and I will try to work with you.

* Articles which are merely multiple repetitions of an identical answer which has already been offered several times. Often these will be bundled together into a single article to conserve bandwidth and increase readability.

* Articles which contain 'miles' of quoted and multiple quoted text followed by a few lines or less of original text. Please edit quoted text to a minimum and try to adhere to the *50% rule*, that is 51 (or more) percent of original text to 49 (or less) of quoted text. If the thread is not curent, more quoted text is appropriate. Only the worst offenders are omited, usually I will edit quoted text myself, when I have time.

* Articles that solicit for funds or contain blatant commercial content. (see next section on this)

* Articles which are unwarrantedly offensive, abusive or contentious for the sake of contention. Personal attacks and ridicule are considered such. Discussion, even argument, of issues and opinions are welcomed and encouraged. Flame-wars and such are not. We have discussions here, not shouting matches.

Note: Since most articles are used, we do not send out confirmations. If your article *is* rejected, you WILL receive a note explaining why the action was taken. If you do not receive such a note, and you do

not see your article in the group, notify the moderator at once and include a backup copy if you have one.

-=*=- NO SOLICITATION POLICY -=*=-

Rec.radio.broadcasting and the Internet Radio Journal maintain a non-solicitation policy. Articles which appear to contain substantial 'commercial content' or which appear to blatently solicit funds from readers for a 'cause' or a 'project' are generally rejected. I generally do accept..

Product reviews: ... provided they are objective and informative and contain little or no 'motivational' language. Prices should be reduced to a price 'range' and all inqiries must be directed to the poster -or- an address of the manufacturer/distributor.

Personal items: Such as old time radio tapes, a specific piece or two of equipment etc. sold at a low, hobbiest price.

Radio-related items for barter/trade: Self explanatory.

Announcements for non-commercial workshops, conventions, radio related flea-markets, etc. Pricing <other than small admission charge> and other specifics (like 'we take your credit card') are considered commercial content. If you want to publicize here, then you must deal with the followup mail/calls yourself.

Personal recomendations of a product/company that appear legitimate. Especially when it is in response to another poster's inquiry.

---

In general I will take an 'err on the side of permissiveness' approach to this. In other words, if you are credible, informative, reasonably intelligent, broadcast related, and have something to offer, I will do what I can to pass it along to the readers. I will only reject the worst of the lot. the rest I'll try to edit as necessary.

-=*=- ARCHIVES -=*=-

Archives of past Internet Radio Journals are kept for anonymous FTP at deja-vu.aiss.uiuc.edu . They can be found in the directory /misc/rec.radio.b-cast. In that directory you will find a file called INDEX, which contains the issue numbers of all Journals, and the title of each article contained within. The archives are updated every week or so. To determine when the last update was, look at the date on the file called "<-Archive Last Updated At".
If you need help with FTP, write me.

The Journals are arranged in sub-directories of about 100 issues each, and are in compressed (.Z) format. Remember that compressed files should always be sent using the "binary" mode. If you have trouble accessing anything, or if you have any questions about the archives, send email to rrb@deja-vu.aiss.uiuc.edu. If you appreciate the archives, send your notes of appreciation to the site admin, C. Lance Moxley

<lance@deja-vu.aiss.uiuc.edu>. He has been very gracious in his willingness to store our archives on his machine.

* Please do not bother the system admin with problems, direct those to me. *

-=*=- ENJOY THE GROUP! -=*=-

I hope you enjoy the group. Remember, it is only as good as it's contributors. So don't be shy :-). If you have a question, or answer, even if you are not sure, post - post - post.

I am open to suggestions on how to improve this group. Send them via e-mail to wdp@airwaves.chi.il.us -or- rrb@deja-vu.aiss.uiuc.edu.

Thanks to all who have, and continue to, participate.

We now return you to your regularly scheduled newsgroup :-).

# 1466. RADIO ACTION ALERT

Newsgroup: rec.radio.broadcasting
Date: 1993-09-15 05:58:46 UTC
From: resystom@web.apc.org
Message-ID: <276aum$82a@vixen.cso.uiuc.edu>
Source record: 42454

ACTION ALERT

ARGENTINEAN COMMUNITY RADIO STATION BOMBED

BUENOS AIRES, SEPTEMBER 1993 - A community radio station in Buenos Aires, Argentina, was the target of a firebomb attack by unknown persons on August 30. There were no casualties in the 1:30 am attack on Radio La Tribu FM but the resulting fire destroyed the entrance and windows of the station before being brought under control.

No group or individual has claimed responsibility for the attack. However in statements made to the press La Tribu's director, Ernesto Lamas, made clear that he believes that the attack was political. Lamas suggested that the firebombing may be related to station campaigns "against police edicts that we consider unconstitutional and a campaign in which we explained to young people what rights they had if they were arrested".

The firebombing is the most serious attack to date but it is not the first one against the station and its personnel. Lamas said that the station must keep alert, noting that they have been receiving threatening phone calls for a month and that two station workers had been attacked in the past two weeks. "Today they threw a bomb but we don't know what might happen next week", he added.

Established four years ago, La Tribu FM is a low-power community station located in Almagro, a neighbourhood in Buenos Aires popular with youth and students. The students who set it up envisioned a radio station for and by students of the University of Buenos Aires. However the station quickly developed links with other institutions and individuals in the neighbourhood and its volunteers and listeners expanded to include high school students, workers, senior citizens and housewives.

Like many other "micro-radio" stations that have appeared in Argentina since the late 1980s (there were an estimated 3,000 in 1989), La Tribu is dedicated to community participation and freedom of expression. Lamas emphasizes that while the station is non-partisan its volunteers have a strong political commitment to absolute freedom of opinion and expression.

La Tribu requests that supporters send faxes or letters to Argentina's President. Your message should include the following:

1. You are aware of and concerned about the firebombing of
La Tribu FM and the violent attacks against the station's
personnel.

2. You request that the government fully investigate these
serious attacks against freedom of expression.

Send your message to:

Message originally posted by tyson@debra.dgbt.doc.ca (Tyson Macaulay)
Subject: Canadian Document Database - Correction
Organization: Communications Research Centre, Ottawa, Canada
Date: Thu, 9 Sep 93 15:43:23 GMT

This is a re-post to correct an error in the original posting yesterday.
The anonymous ftp path in the original read: debra.dgbt.doc.ca pub/doc/

This should have read: debra.dgbt.doc.ca pub/isc/
^^^
The formatting was also damaged in the original post, this is more readable.

The Department of Industry and Science, Government of Canada, is
pleased to announce the launch of an on-line document database.
This pilot project currently makes nine telecommunications-related
documents available in both official languages, English and French.

**** ftp access

All documents are available in ASCII format, uncompressed via
anonymous ftp from:

debra.dgbt.doc.ca pub/isc/

for the most recent index of files retrieve "00readme"

*** Listserv access

These files are also available via Listerserv for people with e-
mail access only. The address is

listserv@debra.dgbt.doc.ca

To retrieve the most recent index of documents available send the
following command alone in the body of the message:

get isc 00readme

******

# 1468. Re: Looking for advice on a second career in Broadcasting

Newsgroup: rec.radio.broadcasting
Date: 1993-09-15 05:58:54 UTC
From: Dan.Bammes@m.cc.utah.edu
Message-ID: <276auu$82e@vixen.cso.uiuc.edu>
Source record: 42456

Yea and verily I do echo the words of my Brother Jim Grey (and everybody said Amen).

A good friend of mine kept knocking on the door of the station I worked for in the 80's for about four years before he got a full-time gig. But he was the best part-timer there ever was -- he played on our basketball team and showed up at every promotion. Today he's the program director of our company's FM operation in Colorado Springs (KKFM).

He had no lack of talent, but he had a lot more persistence than most people trying to break into this business. In contrast, I know a woman who's actually pretty good on the air who refuses to work night shifts. She just got blown out of her third gig in a year. People don't hire you to meet your needs. They hire to meet theirs.

# 1469. Re: CKLW is all talk? News<>talk? What??

Newsgroup: rec.radio.broadcasting

From: fybush@world.std.com
Message-ID: <276av2$82f@vixen.cso.uiuc.edu>
Source record: 42458

There was actually a format swap in Windsor. The owners of CKWW (580) and CIMX (88.7) were permitted to buy CKLW (800) and CKLW-FM (93.9).

When the sale went through, CKWW's talk format moved from the 500 watt 580 signal to the 50kw 800 signal, and the big bands went from 800 to 580. The 580 signal is VERY weak; I've heard it a few times in Rochester NY, but not reliably. OTOH, CKLW-FM is reportedly doing fairly well with a revived version of the great old top-40 format that made CKLW legendary in the 60s.

In a previous article, wdp@airwaves.chi.il.us (RRB Moderator) says:
...
>I thought ofCKLW, but that is all the way in detroit, and during the
>day? Besides, CKLW was playing music last time I heard them.
>
>But alas, at the top of the hour, it was <and I quote> "Windsor's
>news/sports and weather station.. The new AM-800, CKLW Windsor"
>Apparently they are all hot-talk now. It sounded a lot like WLS, in
>fact. Of particlular interest is their strong identification with
>Windsor, rather than Detroit. In fact one liner says "... ... serving
>Windsor <slightpause, voice drops for emphasis> AND YOU!" I suppose
>the YOU refers to Detroit.

Well, if only Canadian phone numbers were given, that may be the reason
for emphasizing Windsor. It may be too expensive to get a bounce line
from Detroit. (This is just a theory.)

>So when did this change? How are they dioing in the format?

I can't tell you exactly when they changed, but I would guess that it was
in the last couple of months. With the CRTC's recent FM radio rule
changes, FM stations have more freedom to play whatever they want,
and with less news and current affairs programming. Many AM stations are
migrating to talk radio or news formats (like happened years ago in the US).
Off the top of my head, I can think of at least four stations that have
changed to talk/news in Ottawa, Montreal, Toronto and Vancouver; and I'm
sure there are more.

Here in Ottawa, there are only three English AM stations left playing
music, and the only one that doesn't have an FM sister station has applied
to move to FM.

Here, here! The idea of cable radio is OVERDUE! Some small markets are
do suck, some are fantastic. ALL small markets lack variety. That's where
cable radio comes in.

I'd also like to see cable radio go one step farther. I'm in metro
Washington, D.C., and am from Pittsburgh. I'd love to hear a station
or two from home. Also Pirates and Steelers games. Whatever the
charge, it probable be a lot less than subscribing to a Pittsburgh
paper ~$130/year.

In article <26ju2q$ha3@vixen.cso.uiuc.edu>, ag208@freenet.carleton.ca (John Wrigley) says:
>Does anyone know I can find Don Imus on radio. I first saw him when he was
>a VJ on VH-1 - I think he got fired for his outrageous comments, e.g. Icky
>Little Michael (maybe he was right eh?) I last heard him on a New York
>station but I can't remember which one. Does anyone know if his morning
>show is aired in different cities?

The "I" Man is still on the old New York Freq of 660. The station is now WFAN. He can also be heard on several stations around the eastern part of the country including Boston (WEEI); Washington DC (WTEM); Cleveland (WWWE); Providence (un known FM station); Tampa; Scranton; Albany and several more that slip my memory at the moment.

Current news on the I-Man, he is recooping from a clasped lung about a month ago. He under went surgury last friday and is doing much better. The past two weeks they were running the best of imus. Tuesday, he re-emerged calling in from Columbia medical center. His doctor says he will be back in the studio next monday.

Rob

# 1475. Check out Mr. KFI!

Newsgroup: rec.radio.broadcasting

Message-ID: <276b0e$830@vixen.cso.uiuc.edu>
Source record: 42463

An interesting, or as the station touts, More STIMULATING!!, show out of LA, on KFI-AM, 640 on the dial, Is the "Ask Mr. KFI" program. The 50,000watt clear chanel signal covers the 14 western united states, and I have no problem picking it up here in Utah.

The show professes to be "The most cost effective show on the air, no topics, no screeners, just Mr. KFI and a 50,000watt microphone to pummel you into submission!" The show is madcap fun, the Mr. KFI "character" is intriguing, hilarious, and quick on his mental feet as he fields questions, serious and not, from his broad audience.

He's on the air Saturday night, 10pm-1am PST, 640-AM KFI the toll free number, available across the USA= 1-800-767-4KFI!
Mr. KFI is on the Internet, but keeps his isentity secret, on and off air.

Gaucho Joe.

wgsmith@netcom.com (William A. Goldsmith) writes:

> KTAO went on the air July 9, 1966. It *survived* until the early 70s.
> KTAO is the most recent commercial license issued in the SF bay area.
> That's right, folks. *No* commercial licenses have been issued in the
> SF bay area since 1966. So much for limitless opportunities.

But then he writes:

> In many areas
> with no true local media - like my hometown of Gilroy, Ca., where the
> two commercial stations licensed to our town are operated as San Jose
> stations with rates to match

I was one of the partners who bought KSND (formerly KPER) in Gilroy back in the seventies (about ten years AFTER KLGS cum KTAO went on), and turned it into KFAT. Jeremy Lansman and I personally hauled the RCA BTF-1D (later supplemented with a BTF-5D, modified) up to Loma Prieta from Mt. Madonna after we changed it from a Class A at 94.3 to a Class B at 94.5. We bought the turkey from Dick Ryan for about $160,000. We sold it (as a Class B station) to Harvey Levin for well over a million. Opportunities, you say?

(Granted, the AM side of the pair went to Al Rodriques who has operated KAZA as a San Jose station, as have subsequent owners of KFAT, now KUFX.)

In addition to improving our bottom lines, KFAT spawned a following the likes of which have never been duplicated in the Bay Area. Mr. Goldsmith's own KPIG is an offspring of KFAT. KFAT recently even had a re-union (which I missed). How many "defunct" stations do that?

But I guess if you want to blame someone for stealing your hometown radio station, I am probably the easiest person you will be able to reach who might fit that description. But that certainly was an opportunity. On Mt. Madonna, (with 90 watts ERP, no less), the station could hardly be heard in Gilroy. On Loma Prieta with 1,150 watts of ERP, the station can be heard from San Francisco to Monterey (including Gilroy). And if the sale value happened to go up...

Now it sure serves more people than it did. But now it is now Plug'n'Play Classic Rock rather than the fatties' blend of "progressive country".

> What has not been raised in this discussion so far is the spectre of
> religious broadcasters gaining control of frequencies allocated to
> microbroadcasting in a manner similar to the way they have accumulated
> translator an non-com licenses throughout the U.S.

Don't even get me started. These slime balls not only do bogus engineering to shoehorn translators where they do not belong (capturing other translators, etc.), they have an attitude about it. Perhaps you are unaware of the fact that the airwaves were put here to spread the word of the Lord? All else is unimportant.

> How could such a problem be prevented without getting a
> government agency such as the FCC involved in the content regulation
> of microbroadcaster programming? Any ideas?

I have one suggestion: existing rule enforcement. Many of these abortions are in violation of a multitude of engineering rules, but the FCC seems most hesitant to take any enforcement action. The FCC is completely cowed by religious broadcasters, who make major stinks whenever the FCC even makes a suggestion. If the FCC could be convinced to make life as uncomfortable for a God-pusher for an improperly installed and operated translator as it does for a commercial broadcaster who has a missing EBS test on a log, the topic might be moot.

Damn. Well, at least I don't need to go buy a rotator for my FM yagi now.

>Why exactly should commercial broadcasters be "protected" from micro-
>broadcasters who choose to support their operations by charging for
>ads rather than going the subscriber/fundraiser route? In many areas
>with no true local media - like my hometown of Gilroy, Ca., where the
>two commercial stations licensed to our town are operated as San Jose
>stations with rates to match - a microbroadcaster who offered low-
>priced spots to local businesses would be providing a true public
>service.

Now back when Lorenzo was active, "community service" was a valid lever
on which you could bend the Commission's ear a little, but with
deregulation and the effective demise of fairness doctrine and its ilk,
there isn't much hope for community access. As you point out, FM is
full anywhere within 100 miles of a major market. There has to be a
way to allow low power community operations, commercial or otherwise.

>What has not been raised in this discussion so far is the spectre of
>religious broadcasters gaining control of frequencies allocated to
>microbroadcasting in a manner similar to the way they have accumulated
>translator an non-com licenses throughout the U.S. - especially here
>in the west. How could such a problem be prevented without getting a
>government agency such as the FCC involved in the content regulation
>of microbroadcaster programming? Any ideas?

No sure-fire idea for that one. You bet that would be a major problem
as soon as such a service became available. The only thing out there,
and it isn't a broadcast service, is the TIS rule, which very strictly
controls content and license eligibility. I suppose it would have to
be a specifically defined class of station, with little or no room
for interpretation of the rules. Say, 20% local origination programming,
or commercial spots only for businesses within the city of license,
or something else along those lines.

The present FCC direction toward spectrum auction doesn't bode well
for this kind of set-aside by the FCC. But it is probably an
innocuous enough proposal that it wouldn't stoke too much ire, and
the high AM channels are worthless enough to the commercial broad-

casters that you might just get a special rule in that band for such purposes. Worth a try.

It shouild be noted that the Japanese have a different FM band
(75-92 Mhz I think) to most of the rest of thw western world.
For some reason (maybe this is the reason) there aren't nearly as many FM
stations over there as is in the US, Europe, etc., compared to AM stations,
so perhaps this is why AM stereo is so popular over there.

A little over a year ago I did an exhaustive search for AM Stereo Receivers and had little success. Right now it seems that only the high end automotive radios from the Big three auto makers is the only place you'll find AM stereo. As far as boom boxes, portables, etc. I haven't seen anything. A few years ago I was lucky enough to find an electronics store that still had the Sony Walkman model SRF-A1 which decoded three different AM stereo broadcasting techniques. I called up Sony and they said that model was no longer made after 1984 and nothing like it has been manufactured since then. The AM stereo sound quality on the SRF-A1 is much better than I've heard from any other AM receiver, however because of the manual tuning microphonics is a problem I've experienced. IF ANYONE KNOWS OF AN ELECTRONICS STORE WHERE YOU CAN STILL FIND THE SONY SRF-A1, OR ANY OTHER PORTABLE AM STEREO RECEIVERS LET ME KNOW.

: In any event, the upcoming days should be interesting, from a Chicago
: radio and Howeird Stern perspective.

Bill

In my oppionion it was a mistake for them to take the show in the
first place. They had put it up against their FM station which was(is?)
broadcasting Steve & Gary(chicago radio gods)
In that way they were competing with
themselves. (and making it impossiable for me to listen to steve and gary from
200 miles away, of course I moved and cant get it at all now. :( )

Unless Stern's (and some of these other new syndicated blabbermouths) contract is radically different from the way things were when I was still in radio, there's almost always a legal out for either party. Hell, half of them are on barter anyway, and Stern's most likely bitching because he knows if one station has the good taste to drop him, others will likely follow -- and he won't be selling any more ads, national or otherwise. Seems to me he's just being a big crybaby.

And this points out the major problem with content regulation, FCC-style. The "law" is defined after you commit the "crime". The station takes its best shot and then the FCC comes along and says, "Now you prove that you did not violate community obscenity standards." The FCC gives absolutely no indication of what is allowable and what is not until it receives complaints. Then on the basis of perhaps one single complaint writes the station up for "violations" that were not even defined the day before.

In the case of Howard Stern, one station was fined for each "offense", yet the program was carried simultaneously by many stations. Content is either "harmful" or it is not. The community standards nonsense is just more of the usual manifestation of federal bureaucracies attempting to avoid responsibility for the messes they create.

I agree with Bill. The FCC should be out of the content regulation business. If the yardstick is "community standards", then let the communities deal with it. There are many ways to put pressure on a radio station, not the least of which is turning the dial.

[Moderator grasps chest in heart attack: What a shock! He agrees with me on something. Wow! Now if we can only get Rush Limbaugh and Clinton to agree on something {No, I am not implying that either John or I fit those roles, although <Dont tell anyone, but...> I hear he voted Democrapublican :-) :-)].

In a post concerning low power FM, I beleive there is some confusion. Under current FCC rules, there is a big difference between part 15 and part 73 & 74. Part 15 covers permitted use of the FM band for wireless mics and other stuff at VERY LOW power (can you say Milli watts?) However, a translator is licensed with a call sign to REBROADCAST another station. It can be over the air fed, microwave, satellite or whatever, but it can NOT origonate any of its own programming (except fro 30seconds or so per hour for local Underwriting). There has been a case in New Jersey for years with someone wanting to use a translator for just this purpose and the FCC said NO!

# 1487. INTERNET RADIO JOURNAL CHANGES NAME

Newsgroup: rec.radio.broadcasting
Date: 1993-09-19 21:17:27 UTC
From: wdp@airwaves.chi.il.us
Message-ID: <27ii97$hdl@vixen.cso.uiuc.edu>
Source record: 42475
Cross-posted to: rec.radio.broadcasting,rec.radio.info

Greetings R.R.B and Internet Radio Journal readers:

Starting with issue 400, the Internet Radio Journal will be no more!

In it's place will be a publication called "Airwaves" which will essentially carry on the same mission as the IRJ, with one important difference.

With the world of data communications getting bigger, and distinctions between networks diminishing, it is time to rename the IRJ to something which is more 'network-neutral'.

With the renaming of the Internet Radio Journal comes a whole new horizon of interconnectivity to non-Internet systems such as CompuServe, GEnie and others, thus bringing even more radio people together to share and exchange ideas with one-another.

In addition, the email addresses connected with the Journal are being changed and simplified. The existing addresses will still work, but the following 'new' addresses are now active as well.

To subit articles to 'Airwaves': --- --- articles@airwaves.chi.il.us
To subscribe or un-subscribe: -- --- --- subscribe@airwaves.chi.il.us

All other addresses stay the same.

So how, if you want to send an article, just mail it to 'articles' and if you want to add or delete yourself from the list, send mail to 'subscribe' (@airwaves.chi.il.us).

Sometime in the next month or so, we will be making it even simpler by changing the ".chi.il.us" suffix to, simply, '.com' At that time the addresses will be ...

****@airwaves.com ... etc...

*** Don't send to the .com address yet, or it will bounce ***

We are also looking into an email archive server for those without FTP access, as well as other automated features to make the new publication even easier to obtain, reply to and enjoy.
Be looking for the new publication soon. Feel encourages to let me know your thoughts on the matter.

This message may be repeated a few times before the change is made to let everyone know what is what.

Bill

ACTION ALERT

ARGENTINEAN COMMUNITY RADIO STATION BOMBED

BUENOS AIRES, SEPTEMBER 1993 - A community radio station in Buenos Aires, Argentina, was the target of a firebomb attack by unknown persons on August 30. There were no casualties in the 1:30 am attack on Radio "La Tribu FM" but the resulting fire destroyed the entrance and windows of the station before being brought under control.

No group or individual has claimed responsibility for the attack. However in statements made to the press La Tribu's director, Ernesto Lamas, made clear that he believes that the attack was political. Lamas suggested that the firebombing may be related to station campaigns "against police edicts that we consider unconstitutional and a campaign in which we explained to young people what rights they had if they were arrested".

The firebombing is the most serious attack to date but it is not the first one against the station and its personnel. Lamas said that the station must keep alert, noting that they have been receiving threatening phone calls for a month and that two station workers had been attacked in the past two weeks. "Today they threw a bomb but we don't know what might happen next week", he added.

Established four years ago, La Tribu FM is a low-power community station located in Almagro, a neighbourhood in Buenos Aires popular with youth and students. The students who set it up envisioned a radio station for and by students of the University of Buenos Aires. However the station quickly developed links with other institutions and individuals in the neighbourhood and its volunteers and listeners expanded to include high school students, workers, senior citizens and housewives.

Like many other "micro-radio" stations that have appeared in Argentina since the late 1980s (there were an estimated 3,000 in 1989), La Tribu is dedicated to community participation and freedom of expression. Lamas emphasizes that while the station is

non-partisan its volunteers have a strong political commitment to absolute freedom of opinion and expression.

La Tribu requests that supporters send faxes or letters to Argentina's President. Your message should include the following:

1. You are aware of and concerned about the firebombing of La Tribu FM and the violent attacks against the station's personnel.

2. You request that the government fully investigate these serious attacks against freedom of expression.

Send your message to:
Dr. Carlos Saul Menem

>OTHER PORTABLE AM STEREO RECEIVERS LET ME KNOW.

Sangean's entry into this market was the "twin stereo" SR-66, which
tunes C-QAM am stereo as well as FM stereo. Its only drawback is that
the am stereo "lock" is sensitive to mechanical vibration (it may
go to mono for a second when knocked). FM performance is much superior
to the SRF-A1.

It's an analog set like the SRF-A1 was. Some places with large stock of
Sangean equipment (C. Crane, KUSW Shortwave Store, etc) might still
have one lying around. Check their ads in the World Radio TV Handbook or
Passport To World Band Radio.

Alas, 1510-WSSH Boston has returned to the air, sometime on the afternoon of Monday 13 September. The format is now satellite talk. I'm listening to it on my SR-I as I type this...and it's AWFUL! It's the "Talk America Radio Network"...and the fellow on the air is getting no phone calls, and reading (badly at that) wire copy. What a waste of RF...

During the two weeks or so that WSSH was silent I was able to hear WNLC-1510 New London CT and WGAM-1520 Greenfield MA during the day, and stations such as WTOP, CJRS, and WWKB at night. 'KB can still be heard well under WSSH at night at my QTH, about a mile and a half west of WSSH's transmitter on Waverly Oaks Road, Waltham.

I have yet to hear a local spot, so I don't think they're making any money running this thing. We'll see how long it lasts.

Central coast, California:

The cable company here (no names..) recently added another self-
advertising channel, two religious channels, and another shopping
channel. They dropped their FM rebroadcast service in favor of
using channels 95 and 96.

I don't know how the stations are handling this, but I do know
the consumers are switching to satellite in droves...

Some people have been commenting in favor of cable radio, especially importation of FM signals. My copy of the FCC rules (October 1992) does not have the new cable regulations, but I hear the new rules do not allow cable systems to charge extra for FM service. I also hear that based on that, our local cable system has dropped all FM stations they were carrying, local broadcast, local origination (a community college), and imported. This is not for sure, since I don't subscribe to cable.

>from Detroit. (This is just a theory.)

In the old days of CKLW (when it was a real radio station, known as the Big 8), they had request lines in both Windsor (519 966.4000) and Detroit (313 288??.8822). Thus, they had some kind of link arrangement (or perhaps an operator in Detroit, as well as Windsor, or a telco link across the border).

I don't know what brought on the demise of their legendary top 40 format, but one day they were playing the current hits, the next they lost their edge.

Not knowing that to which "a station like that" refers, but as a Cincinnati resident, most of us wish Q102 would just grow up, drop the annoying childish air personalities and just do what they do best which is heavy rotation top40.

I'm really looking forward to seeing the numbers on WAQZ, the "alternative" station operatied by Jcor (WLW-AM, WLWA-AM, WEBN-FM, WAQZ-FM) here in town. The signal gets lost in some parts of town here in Cinti (V E R Y hilly) because it transmits from the eastern boonies with very low power, but the playlist is cool and there are NO DJs. Since there is no college station here in town (WGUC-FM, while a UC station plays only classical, I worked there briefly, and WVXU from Xavier only plays tunes after 12AM) WAQZ has a lock on a fairly large market segment.

Should be interesting...

FREE RADIO BERKELEY UPDATES
Thursday, Sept 9, 1993

5 WATT KITS NOW SHIPPING

I would like to apologize for the delay in the 5 watt kits, we have been basically overwhelmed with work. Documentation has been reworked to make the kits as easy as possible to assemble. The other kits will start shipping out next week.

The 1/2 to 1 watt stereo transmitter will be available by the first of October. And the stereo generator/limiter shortly afterwards.

NO WORD FROM THE FCC

So far, the FCC has yet to respond to the 13 page legal response filed by attorneys for Stephen Dunifer and Free Radio Berkeley to counter the notice of apparent violation. It seems these huge fines being asked for are basically bogus scare tactics. Under the current regulations, the actual maximum fine for alleged unlicensed broadcasters is $1000. The $20,000 is taken from a whole other regulatory section meant only to apply to commercial licensed operations. When you get a license from the FCC you also consent to a rather outrageous fine structure.

Anyway, stay mobile and move your broadcast sites around. This will greatly reduce the risk of being nabbed. Unless, of course, you want to join Free Radio Berkeley as a test legal case.

WORKSHOP SCHEDULE

The next micropower broadcasting workshop will be held on Saturday, Sept. 18 at the Long Haul, 3124 Shattuck in Berkeley across from LaPena and the Starry Plough. A donation of $5-15 is requested and 5 watt kits will be available for $40. The next Berkeley workshop will be mid October.

Plans are under way for another New York City public forum and workshop. It looks like early to mid November. Philadelphia and Boston are being considered as well for that time period.

If you would like to sponsor and organize a workshop in your area, let us know. I am trying to work out some sort of schedule for the next 3-4 months for workshop tours.

MONDO 2000 ARTICLE

Mondo 2000 will be having a feature article on guerilla media in their October issue. Free Radio Berkeley along with other micro broadcasters are some of the main subjects presented. They took some real cool photos of

the prototypes of our transmitter and amplifier designs.

EQUIPMENT DONATIONS NEEDED

Both Free Radio Berkeley and SF Liberation Radio need portable tape recorders suitable for street interviews and related activities. Any other type of production equipment would be greatly appreciated - small mixers, microphones, blank tape, etc. We hope to set up several publicly accessible production facilities in both Berkeley and San Francisco. If you wish, wrtie me to find out how you can help.

FREE RADIO BERKELEY MAILING LIST

If you would like to be on the mailing list please send us your name and address (email or snail). We put out a monthly newsletter. If you would like info on currently available kits please note that as well.

DOCUMENTS TO BE POSTED

We will be posting a file containing the 13 page legal response to the FCC's notice of apparent violation along with several newspaper articles. It should be on by the first of next week.

LET A THOUSAND TRANSMITTERS BLOOM !

## 1500. Fuzzy Cable?

Newsgroup: rec.radio.broadcasting
Date: 1993-09-21 01:34:39 UTC
From: gchance@ecst.csuchico.edu
Message-ID: <27llnf$g2f@vixen.cso.uiuc.edu>
Source record: 42486

I am interested in something...

I'm the General Manager of KCSC, a cable-only college radio station in Chico, CA. There is a buzz--a BIG buzz, about Fuzzy(sp) that is going around. Just about everyone and their dog is coming up to me asking about it. In addition, our Associated Students organization, that is, the fellas who make the big decisions concerning our little radio station, are taking steps to go with Fuzzy(sp) Cable instead of our current cable-only system.

I have a few questions about it for those who may be in the know about it. What is Fuzzy(sp) Cable, and why is it called Cable? Everyone is saying that it allows you to broadcast a 1-mile radius and not be regulated by the FCC, and is very inexpensive. How much does a transmitter for it cost? Is this more corporate stuff to knock our tiny radio station off the map?

I would appreciate any and all information anybody can give me about this subject.

# 1501. Hello There specials

Newsgroup: rec.radio.broadcasting
Date: 1993-09-21 01:34:44 UTC
From: "Alfredo E. Cotroneo" <100020.1013@CompuServe.COM>
Message-ID: <27llnk$g31@vixen.cso.uiuc.edu>
Source record: 42487

FROM NEXUS-IBA, in Milano, Italy:
The "HELLO THERE" Special Editions in September '93.

Hi There from Milano, Italy:

We are back on the air with our regular listeners' contact program after the (long) summer break. The first program after the August pause went on the air on Sept. 5, featuring as usual your letters, your comments and receptions reports, and our answers to your questions, as well the whole story about the lightning strokes which hit twice our transmitter site, in the meantime. As promised, we shall try to make it all better for the rest of the year, and present you with more feature programmes and interviews along with your letters and reactions to NEXUS-IBA members programmes on the air on IRRS-Shortwave.

Starting with the September 12th edition of the "Hello There", we shall host Alex Bottonelli, Network and Security Administrator of a large multinational computer company based in Milano, who will be discussing what kind of useful information can be retrieved on Internet, what to read on USENET news and how to exchange e- mail messages if you are based in Europe. All this very basically for the inexperienced computer addicts, who have an interest in (Shortwave) radio, or broadcasting in general.

In the September 19th edition will be start talking about US pirate radio, with a series of interviews featuring a few of the overseas pirates, on Shortwave and on FM. On the last weekend of the month (Sept. 26), as every month, we'll be passing the microphone to UNESCO Radio from Paris for their monthly programmes in English and French, and take our last summer (or will it be Autumn already?) week-end out to the nearby Alps. Do not forget to set your clocks and watches one hour back in the night between Saturday the 25th and Sunday the 26th of September, when all countries in Europe switch to wintertime (CET=Central European Time = UTC +1).

In October starting on the 3rd we shall be back again with our listener's comments and letters, as well as continuing our special report on pirate radio, and the recent proposals/ideas for micro radio in the USA. Bill Pfeiffer moderator of rec.radio.broadcasting will be with us, as well as a few European pirates, some of them ex-pirates and now professional broadcasters. All that on the weekly fifteen minute "Hello There", the IRRS-Shortwave listeners mailbag programme, on the air over IRRS-Shortwave on 7,125 kHz at the following times (all times are CET, except were stated otherwise):

Saturday: 17:00 (first edition)
Sunday: 07:00, 08:15, 09:15, 15:30 (repeats)
Monday: 02:15UTC, 07:15, 08:15, 20:00 (previous week repeats)

Friday: 02:15UTC, 08:00, 13:30, 20:00 (previous week repeats)
Saturday: 02:15UTC, 07:15, 09:15 (previous week repeats)

---
"H E L L O T H E R E !"

One of NEXUS-IBA's most popular non-relay programmes, a listener contact show where we acknowledge reception reports and comments on programmes, as well as present items of general interests to the Shortwave listeners, including book and magazine reviews. We also encourage active listener participation by inviting everyone to send us a cassette recording telling us about themselves and where they live. Or, as an immediate means of filing reception reports or personal participation, our telephone service is available 24 hours-a-day, seven days-a-week (+39-2-266 6971). Like all Shortwave broadcasters today, IRRS-Shortwave very much encourages listeners to let us know how they are receiving us, but equally importantly, we also need to hear their programme comments, which are very valuable in helping our members produce better and more attractive programming.

Stay tuned, and send us your feedback's by mail, e-mail, fax or phone!

73,

Alfredo E. Cotroneo
President
NEXUS-International Broadcasting Association

# 1502. Help for Radio Venceremos book

Newsgroup: rec.radio.broadcasting
Date: 1993-09-21 01:50:40 UTC
From: resystom@web.apc.org
Message-ID: <27lmlg$hb5@vixen.cso.uiuc.edu>
Source record: 42491

/* Written 11:50 am Sep 15, 1993 by resystom in web:amarc.radio */
/* ---------- "Help for Radio Venceremos book" ---------- */
The Latin America Bureau (LAB), a London-based organization that does research, publishing and educational work related to Latin America is working on a project to do an English translation of the book "Las Mil y Una Historias de Radio Venceremos", by Jose Ignacio Lopez Vigil.

The 500 page plus book tells the story of Radio Venceremos' 12 years as a clandestine guerrilla radio station broadcasting from the mountains of Morazan province in El Salvador. The English title is "Rebel Radio: The Story of El Salvador's Radio Venceremos".

A first draft of the translation has been completed and publication is planned for spring '94. However, LAB requires an additional $15,000 to complete the project.

Can anyone out there help by suggesting any foundations or agencies that might be prepared to help support this project?

Thanks in advance.

Bruce

On 09-06-93, MARK FIELD expounded thusly:

MF>The promos are running! The I-Man is coming back to Cleveland Sept. 6 on 3WE
>WWWE 1100 AM. (That's right Scott another 2 bit rag tag station ;-) ).

Morning drive on 3WE now consists of an excellent 15-minute news
program at the top of each hour, followed by 45 minutes of
nonsense utterly unworthy of Cleveland's premier news station.

Just to add insult to injury, the Imus show frequently reports
New York local weather, as if to indicate that the producers of
the show don't think the rest of the country has any importance
at all.

I usually listen to the news, and then switch to Paul Tapie's
fine comedy show on WKNR 1220 for the rest of the hour.

Main topics this month :

- Check new times accoding to UTC effective Sept. 26 when we change from summer to winter-time.
- New extended times of operation now daily from 13:00- 18:00 CET
- Special programmes on the situation in Yugoslavia and Somalia aired on behalf of United Nations Radio, at various times.
- Special editions of the "Hello There" coming in September and October: Internetworking, e-mail and Shortwave, Micro Broadcasting and US/European pirate stations.

---

Frequency schedule effective September 1, 1993
on IRRS-Shortwave, and valid until further notice:

| FREQ | DAY(s) | CEST | UTC (summ) | UTC (winter) (*) |
|---|---|---|---|---|
| 7,125 kHz | DAILY | 04:00-05:15 | 02:00-03:15 | 02:00-03:15 |
| 7,125 kHz | MON THRU FRI | 07:00-10:15 | 05:00-08:15 | 06:00-09:15 |
| 7,125 kHz | MON THRU FRI | 10:00-13:00 | 08:00-11:00 | 09:00-12:00 (irreg) |
| 7,125 kHz | MON THRU FRI | 13:00-22:15 | 11:00-22:15 | 12:00-21:15 |
| 7,125 kHz | SAT and SUN | 07:00-23:30 | 05:00-21:30 | 06:00-22:30 |

(*) Effective September 26, 1993 (wintertime)
Use of 7,125 kHz is on a continuous basis over the whole year.

Target Areas: Europe, North Africa and Middle East.
(From 2-3 UTC and 7-9 CET also America and Australasia)
Target Zones: 18, 19, 20, 27, 28, 29, 37, 38 (ITU)
Languages: English, French, Spanish, Russian, German, Italian
Beams: Omnidirectional from Milano, Italy
Output Power: 10 kW (A3A/USB, -6db carrier, per CCIR)
Equivalent AM Power: 30 kW

To convert from CET / CEST to UTC, and vice versa:
UTC = CET-1 (CET = Central European Time: starts on Sept 26, 1993)
UTC = CEST-2 (CEST = Central European Summer Time: ends on Sept. 26, 1993)

NOTES:
Effective this month the complete PROGRAMME schedule of IRRS-Shortwave is not posted to save bandwidth. It is available upon request by e-mail or post in writing to the addresses above.

<<audience so they can bring in the new (useful with dramatic format
<<changes).
PS<<Any other format or frequency change anecdotes out there?
PS<<Paul W. Schleck

Here in Cleveland, when WPHR (top 40 hits) changed to WENZ ("The End", alternative rock/modern music), it introduced the new format by playing one record over and over for about a whole day. Either the title or the lyric of the record was "It's the End" or something like that.

On the other hand, I've heard formats change with no fanfare at all. When WIL in St. Louis changed from all news to country music in 1968, it was a big surprise to listeners. No one outside the industry knew it was coming.

the NJ guy got the last laugh though. He found a high school station
that had been dormant, bought it, originates programming from studios
75% of the way to the translator from the station, and uses the translator
to hit most of the county, and the highschool station to cover (?)
the city of license. Now he's got those "underwriting grant"
type not-commercial commercials on the air and a big band format
replacing what WNEW-1130 offered last year.

(all of this afte he'd rebroadcast a bout a dozen stations in the
6 years maybe 7 it was on).

Pertinent info translator W276AQ Fort Lee NJ. Station WRRH now
WJUX-88.7 Franklin Lakes. Yes a transmitting antenna for a big band
station is atop a Ramapo high school. Who else has such a dubious claim?

Bl> for just this purpose and the FCC said NO!

If this is the W220AA/WVRM case, they had actually used the translater as a remote pickup station for a Polka program until the FCC got wise. About 5 years ago my contact at WCNJ, (formerly WVRM), moved out of the area and I have had no connection with the station since. If this case is still going on, there has to be something wierd going on as well.

Historicly, the area had a few pirate stations, my friend was one of them. When WVRM went on the air he went legit doing his broadcasts from them and serving as their consultant engineer, (he was a comercial 2-way radio contractor). WVRM stood for the first name initials for the original partners, Victor, Randy and Mike. The last I knew, Mike, (air name: Mickey Caruso), was the sole owner and his daughter Maria was the GM.

My friend's old pirate transmitter became the translater and was licensed to him. It operated out of his parent's house in Parlin, NJ. It was during this period that the remote was done. When the parents retired to Florida, W220AA was moved to a commercial building a few miles to the north in So. Amboy. However, due to skip conditions that summer, (and notorious water conductivity in the area), it wound up retransmitting WPFW out of Washington, DC during the overnights since the signal just overpowered the 10 watts of what was now WCNJ, (Central New Jersey). That killed the translater for a while until it was moved back to Parlin, to the home of the Polka program producer.

My friend decided to migrate to the sunshine state himself not too much later and that ends what I know. WCNJ still operates with 10 watts ND at 89.3Mhz. If they could get the funding to move 20 miles to the west they could up power to 500 watts DA to the east, beaming all their power into the Lower New York Bay. That's not as bad as it sounds since they would triple their current service area and get a decent signal into Brooklyn. Programming is mostly broker time in foreign languages these days although it started with the idea of alternative music and community service in its infancy.

... I bet June Cleaver could handle this situation!

Bill,

WOuld you please forward this to John Higdon, and any other
Pd's who subscribe.

[Moderator's Note: I wish you all the success in the world and don't
let the nay-sayers get in your way. Bill]

Dear Folks

I am a student at the University of Wisconsin Milwaukee. My problem is
that I have been at this university for two years trying to get my
general Education Requirements taken care of and I have an interest
in Broadcasting (behind the scenes type of work). You once said that
there is a surplus of Mass Comm graduates in the market and that
getting a job was pretty tuff (at least something that paid decent)
and one of the other interests has been electronics (how they tick).
I would like to know if it would be in my best interest, to get into
the market if I should major in Electrical Engineering and Minor in
Mass Comm or vis versa. This question came as the result of one
of my professors (Dr. Ruane Hill) comments of how easy it was to
get a job in the market. I did once intern with one of the stations
in town (99.1 WMYX) and I came away from the experience with the
thought that I would never have what it takes to work for radio.
But several of my friends have been more successful with less work.
I'm just curious about which way I should spend my energies. Any
advice that you might be able to give would be helpful. Thank you.

chris hayes

What is this "Western Transit"? Is a newspaper, or a magazine, or what?

"Western Transit" is more like a newsletter. It comes out monthly as
has news about (mostly) west coast transit systems, with an emphasis
on southern California (where it is published). Cost is $15.00 per
year. I don't have an issue handy, but I can look it up at home.

Not only would I like the figures for the IEC, I
'd sure like to find out more about Western Transit

As I recall (it was a couple of weeks ago), LA county pays for 50%,
Riverside for 40%, and San Bernadino for 10% (or maybe it was SB
40% and Riverside 10%). And the issue was $300000.

I'll try to remember to get the info if you still want it.

#Why exactly should commercial broadcasters be "protected" from micro-
#broadcasters who choose to support their operations by charging for
#ads rather than going the subscriber/fundraiser route? In many areas
#with no true local media - like my hometown of Gilroy, Ca., where the
#two commercial stations licensed to our town are operated as San Jose
#stations with rates to match - a microbroadcaster who offered low-
#priced spots to local businesses would be providing a true public
#service.
Since the microbroadcaster's service area and audience would be miniscule in comparisonto that of the commercial broadcaster, I really don't see why the commercial broadcaster would have any real complaint. It would be like the
San Francisco Chronicle complaining about the Santa Clara Metro (local throwaway free paper)

#What has not been raised in this discussion so far is the spectre of
#religious broadcasters gaining control of frequencies allocated to
#microbroadcasting in a manner similar to the way they have accumulated
#translator an non-com licenses throughout the U.S. - especially here
#in the west. How could such a problem be prevented without getting a
#government agency such as the FCC involved in the content regulation
#of microbroadcaster programming? Any ideas?

Simple. You don't attempt to prevent religious (or any other type of broadcaster) from getting microbroadcasting licenses.

Oh, one could make up a rule preventing existing broadcasting concerns from obtaining microbroadcasting licenses, since the purpose of micro-broadcasting is to allow local community groups access to the airwaves. (The commercial broadcasters can still have their translators, etc.) But, if a microbroadcaster intends to broadcast religious programming, what makes it less worthy than any other type of broadcaster?

>Opportunities, you say?

Again, John, you make my point for me. In the past, there were plenty of opportunities available for new stations, substantial upgrades, etc. Today there are *very* few, and the costs involved are *much* higher.
>
>
>In addition to improving our bottom lines, KFAT spawned a following the
>likes of which have never been duplicated in the Bay Area. Mr.

I am familiar with KFAT's history, having worked there for 2 1/2 years. The key word is 'defunct'. I'm not interested in reflecting upon the past. I'm concerned about the future - a future that contains few if any "experiments" such as KFAT.
>
>Now it sure serves more people than it did. But now it is now Plug'n'Play
>Classic Rock rather than the fatties' blend of "progressive country".

Exactly. And what about those listeners whose interests lie outside of the mainstream? What about those would-be programmers who have no outlet for their ideas? They *could* go to non-commercial stations, of course. But non-commercial radio is fast becoming just as rigid in its programming policies as commercial radio is, and just as unwilling to give new ideas a shot. After all, how many of the true innovations in broadcasting have come from the non-com sector? All of the ones that are/were important to *me* (Top 40, Progressive FM, and - yes - the KFAT/KPIG abberration) got their start in low-budget commercial radio.

Do I *know* that micro-radio in any of the forms being proposed would fill this niche and allow for the kind of future growth and opportunities I'd like to see? Of course not. But I'd like to see all possibilities explored.

# 1515. WANTED: Recordings of Old Radio Broadcasts

Newsgroup: rec.radio.broadcasting
Date: 1993-09-21 02:15:29 UTC
From: asc002@dunix.drake.edu
Message-ID: <27lo41$jit@vixen.cso.uiuc.edu>
Source record: 42353

This may be a long shot but I'll try anyway:

I've been looking for recordings, on any medium, of radio broadcasts from the pre-1960s. These broadcasts could be news reports, radio plays, serials, virtually any type of broadcast that was recorded. These recordings could be either self-recorded by the listener or pre-recorded and sold to the public.

I've combed various places in my city and have found nothing. Everyone I ask tells me to go to a different type of store cause those types of records are considered collectibles and collectibles don't sell that well. (That's what they said.)

I'm not sure what people would want for these recordings but if you're getting rid of a box of pre-60s records or whatnot...this might be a way to get at least a LITTLE cash out of them.

Let me know...

# 1517. Sports Remotes and Radio Networks

Newsgroup: rec.radio.broadcasting
Date: 1993-09-21 02:15:31 UTC
From: dunne@marble.rtsg.mot.com
Message-ID: <27lo43$jj5@vixen.cso.uiuc.edu>
Source record: 42358

I was lucky enough to work a couple of baseball games this past weekend; Detroit Tigers versus the Chicago White Sox at Chi's 3 yr. old Comiskey Park. I currently work *very* part time for a 2-man company whose partners are quite well versed in major league sports remotes mostly here, but around the country as well.

I co-engineered the remote broadcast for the Detroit feed on Friday night. I asked my trainer a question about ID breaks: Why do we have to wait 15 full seconds when the announcer here only uses 10 or 12? "Because the other stations on the network may use all 15." I thought we were just sending the feed for broadcast on WJR in Detroit! You mean there's a bunch more little stations in Michigan on line, and "The Detroit Tiger Radio Network" isn't just slogan hype? Can this group give me a ballpark (heh) figure of how many stations this is, and how do they get their feeds from the 'flagship station'? (From what I'm told, our phone lines from the parks feed IDB Communications which has a sattelite uplink to The World.)

We almost always work the WMAQ-Chicago feed too, how big is "The White Sox Radio Network?" What does it cost a small or large station to pick up a major league game? Any restrictions on use or reuse?

Saturday I covered the CBS "Game of The Week" feed to New York, this one was Switched 56 (amazing but a tad expen$ive little box that CBS ships out the week before the game). I say 'covered' since my boss showed up before game time after engineering the Notre Dame at Michigan football game earlier that day in Ann Arbor, so I became a fifth wheel :-( Actually it was pretty scary having just our equipment sitting between lil' ol' Me and CBS voice Jim Hunter and his partner Johnny Bench :-o

So, even though the new Comiskey Park has lovely accomodations etc., I elected to leave since they weren't courteous enough to provide enough *chairs* in the various booths (it was a weekend, and I'm sure they want to discourage freeloaders). Still it was great to see it go down, also met Detroit broadcasting Hall of Famer Ernie Harwell. The atmosphere ain't like the smoky press rooms of old, in fact all most of these guys do is *EAT* ;-)

I sure hope to get trained on more remotes, but even with the bosses' contacts it's like pulling teeth to get an extra credential or parking pass. If they didn't have so much baseball to do, they could work on getting the Bulls and Blackhawks gigs again!

# 1519. Howard Stern Radio List - SHORT FORM

Newsgroup: rec.radio.broadcasting
Date: 1993-09-21 02:15:43 UTC
From: drchuck@kilowatt.linet.org
Message-ID: <27lo4f$jjh@vixen.cso.uiuc.edu>
Source record: 42359

Welcome to the Howard Stern Radio Network list - short form! Here's what we've got for this month:

Last update: September 12, 1993

New stations in the past 30 days: -None-

Possbile new markets mentioned in the past 30 days: -None-

News on current markets:

WLUP-Chicago has given Howard the big axe and dropped him from their lineup. It looks like everyone has their theories as to why he was dropped. As to whether or not he re-appears on Evergreen's newly-acquired WWBZ ("The Blaze") remains to be seen.

The long form of this radio list, which includes the stations in all markets plus phone numbers to dial Howard direct, is posted monthly to alt.fan.howard-stern. If you do not have access to the alt.* heirarchy, drop me a note at drchuck@kilowatt.linet.org and I will e-mail a copy of the list to you.

As usual, please send via e-mail any new markets or changes to old markets. Catch you next month!

From: prmount@attmail.att.com
Message-ID: <27lo4g$jji@vixen.cso.uiuc.edu>
Source record: 42360

Maybe Howard would have done better if he'd been kept, now
that it looks like his FM competition is Steve Dahl at home,
Steve Dahl in the studio, and maybe Mrs. Dahl at home.

The one theme I keep hearing is other formattic plans for the AM side
and HOWARD on an all sports station would fit worse than IMus on WFAN.

# 1521. Technical Question

Newsgroup: rec.radio.broadcasting
Date: 1993-09-21 02:15:55 UTC
From: jherman@uhunix3.uhcc.Hawaii.Edu
Message-ID: <27lo4r$jjp@vixen.cso.uiuc.edu>
Source record: 42356

How is it possible for 2 or more AM stations to use the same antenna tower? Here in Honolulu, it is not unusual for 2 or 3 stations to do this, yet someone with a broadcast backround has told me (on one of the rec.radio.amateur newsgroups) that this it next to impossible mainly due to the tower having to be at a specific height corresponding to the transmitter's frequency. With 2 or more transmitters feeding the tower, the tower would only be efficient with respect to only one of the transmitters unless various other elements were designed into the tower.

Any engineers wish to provide some answers?

Thanks so much!

Jeffrey Herman (amateur radio station NH6IL)

# 1522. Tonearms for Russco turntables?

I just had a chance to use the RRB archives last night, pulling
33 issues for review. The organization of the archives and the index
are great!

Harold

[Moderator's Note: Thanks Harold. I suppose this means that since you are
reviewing 33 issues, we can expect more posting from you, right :-). For
those interested, the old issues of the IRJ (which is the email digest form
of rec.radio.broadcasting) are stored in an archive at deja-vu.aiss.uiuc.edu
<128.174.53.10> and can be retrieved via annonymous FTP in the directory
misc/rec.radio.b-cast. All files are compressed and should be transfered in
the binary mode. There is an INDEX and README file to offer more
information We are working on an email archive server too. If you
need help with the archives, send mail to rrb@deja-vu.aiss.uiuc.edu. If you
use the archives, send a note of appreciation to the site admin C. Lance
Moxley <clm@uiuc.edu>. Please dont bother him with problems, direct those to
me. Bill]

# 1524. Need help with station id, BBC on 1160

Newsgroup: rec.radio.broadcasting
Date: 1993-09-21 23:08:10 UTC
From: martin@nosc.mil
Message-ID: <27o1gq$g5r@vixen.cso.uiuc.edu>
Source record: 42362

I need help identifying a station: BBC World Service on 1160 kHz.
I was in New London Ct, and virtually everything to the north
and west was blocked; I couldn't get Montreal most of the time.
Anyway, from local sunset until I fell asleep at #3:00 am,
I had this BBC station (not just news on the hour, but all of
their features too). The station was between 1150 kHz, with a lot
of domestics mixing, and 1165 kHz, religious programming from Antigua.
I have an analog dial, so I'm estimating 1160 kHz for this station.
My guess is that it's Bermuda, but they're only 1 kw at night.
Does anyone know if this station reaches the U.S. mainland,
or does anyone have any other hints as to its id?
Thanks,
Doug Martin martin@nosc.mil

# 1525. Re: Cable FM and Transmission COnsent

>CAFM portion of the service and offering Digital Cable Radio, with some local

The cable company in Terre Haute, Indiana plans to dump CAFM for DCR. I'm not happy with this decision. CAFM gives me excellent stations from Indianapolis and Bloomington which I can't otherwise receive. Bloomington has a great adult-alternative-progressive station with a *gasp* music-intensive morning show. I'll hate to lose it.

I don't know much about DCR. I've heard it's little more than a bunch of channels of jockless music with occasional commercials. If so, I don't think I'll want to listen. I'll consider DCR a reduction in cable service.

[Moderator's Note: DCR and its competitor, DMX do not have any commercials or DJ's. they are just music music and more music. They offer many formats including sub-divided formats (like DMX's 3 classical formats and several rock formats). Don't be so fast to sell out DCR/DMX, it is really quite a nice service if you like a wide variety of music and can do without the commercials and DJ's. It doesn't replace radio, it was never intended to. It is real nice, though to put on a station and hear nothing but music. Bill]

I'm trying to find out as much information as I can about an organization called "Radio Connection". It is based out of Hollywood, CA and the presidents name is Jimmy Petulla(?). I have received information concerning the progrma, but am interested to hear anything from people who have participated in the progrma or radio professionals who have taught under the program.

Currently, I am a club DJ, and am interested in a career in broadcasting. I have not contacted any stations in my area (Washington, DC) but need a way to get in the "door". Have considered sending demo tapes to various stations, but am unsure of the quality or content expected by the station.

Any help would be appreciated. My main concern is: Is Radio Connection worth my 2,000+ to maybe get a foot in the "door"?

Please email direct or post here.

Thanks,

Jeff Popovich

Apparently you like Top-40? WNCI used to be top-40. The closest thing in
Columbus is Hot 105/Hot 107 (105.7 in Columbus and north of Columbus, and
107.1 south of Columbus).

Creating radio for a new El Salvador

The following interview with NESTOR LARA, of Radio Farabundo Marti, was conducted in San Salvador by MATTHEW ABUD.

@question = Could you tell us how Radio Farabundo Marti grew up during the years of war: what were some of the major problems that you faced?

Our first transmission was in 1982. This was the result of a lot of effort of many people. When we began the transmissions, then only did we know that radio is not only the equipment. Really radio is the process when you are trying to get communication with the people.

Our first transmission was from El Jicaro. After we moved to the mountains for the real installation underground. That was a big hole, and in that hole we installed the generator, the transmitter - we had only the antennas outside. This is a very interesting engineering design, because you have gas and noise and you have to solve the problem how to limit the noise and how to get fresh air inside.

Our first signal was in short wave. Our power was about two kilowatts. With that power we covered the country - not a strong signal, but with some effort you can pick it up.

Our radio was designed to try to break the information isolation of the people. Our programs were normally information that the commercial radio and the official radio never gave.

@question = What emphasis do the peace agreements between the Salvadoran government and FMLN forces give to the popular media services? What rights are granted to Radio Farabundo Marti?

One very important part of the agreement was the media. We felt the media are the second power: one is the state and the other is the propaganda. The agreements legalised our radios, and made a new situation where the people can open new radios.

In El Salvador there are a lot of radios, a lot of TV channels. They are in very few hands. The effort in this discussion with the government was to really break this monopoly.

@question = Are the agreements being complied with - the legalisation and opening up of space for the popular media?

Our radio is legalised, we have a frequency, and we have really opened the doors. We have some commercial movement: the social organisations have some announcements, the government is paying for some time (we have some milk announcements).

The sectors which have the real power are not very motivated to continue with this peace process, and they're trying to break it. But inside the government there are some differences. There is a sector which is trying to stop the process and another sector which has a concept of a new country.

We have relations with the sector which is trying to open the doors. They are giving us some space, but the other sector make threats, normally by phone: we will destroy your radio, we will place a bomb, we will kill you.

@question = What role are the alternative media playing in promoting the peace agreements and national reconstruction, for example with the national civilian police which are being established to replace the old security forces?

Normally the commercial radios cannot do many things. We don't have that commercial compromise and can say many things which other radios can't. We receive phone calls where the people say: you have to say this, please explain this. The radio is very important because it's the reference of the people.

About the national civilian police, we are trying to motivate the people, especially the young people, to join. Because a lot of people have questions: what kind of police is this, what can be my role? Normally if you say ``police'' here, immediately you have a negative image, and we have to change this idea.

@question = How are the commercial or government media services treating these issues?

Journalists suffered a lot during the war. Many journalists were killed by the army, and this sector was sensitive to the problems of the people, the repression, the social conditions.

You can find this feeling in the news sections of different radios, but not because the radio wants to. It's because the journalists are very sensitive about this situation, and they cannot hide this information.

@question = Other projects are being developed, for example in community radio. What are they hoping to achieve?

Our motivation when we built Radio Farabundo was to try to change this country, to make it more democratic. In this peace process, we have to build new radio stations which have a very strong relation with the people.

It's not possible with only one national radio like Radio Farabundo. We have to help the people, the communities, to build their own radio. Then we can have a coordinated network so the people can have a strong relation with the

open radio.

Maybe we can find some way, for example, to transmit the national news or another important part of the programming, but combined with the local programs. So you can cover the national need for information, but you can create that strong relation with the people.

@question = Looking towards the elections in March 1994, what kinds of problems do you see in the level of campaign experience in the alternative media?

We have very little experience in this. But when we began the war it was the same. And we think, with the people, we have the capacity to prepare for this campaign.

@question = Now that US military aid is no longer necessary for the government, what role do you think other kinds of US aid could play?

US aid can play a good role if they use it to help the peace process. For sure the ultraright has no hope in this process; they want to use this help to increase the repression, to increase the psychological war against the people. But the help of the United States can play a very good role, but only if they think that we have to define what we want to build in our country.

The United States for sure will try to help their friends. Maybe they will try to block our forces. But I think the United States know the FMLN are a very real force in El Salvador; they cannot play with us.

We are optimistic in this process, especially because we think we can capture the spirit of the people. The people have a lot of hopes in our struggle, and now in these conditions they have more facilities for integrating into the struggle.

@question = Finally, what do you think is necessary to make sure that the elections are democratic and in the spirit of the agreements?

We have to struggle a lot still, but we have all the conditions. In this human rights struggle, the social and economic struggle, we have the strength here, but it's very important to have the broad solidarity of the peoples. To broaden the solidarity movement is very, very important.

Everyone has a role to play, and I think that in the future the new El Salvador will be the result of the effort of a lot of people, not only the

Source record: 42370

This morning (Sat. 9-18) I picked up two stations from home here in St Paul, MN that I was unable to copy locations on. They announced call letters for both, but no city/state. Any help would, of course, be appreciated..

98 WSBT (no exact frequency announced - light rock/top 40-type)
98.1 WISM (I *think* this one is from Eau Claire, WI, but not sure.)

The two occasionally overlapped, so WSBT is probably 97.9 or 98.3? The tuner I was using has an inaccurate slide rule on it - it reads 95 for a station with the frequency of 97.1 - but gets fabulous reception, regularly picking up stations located in Rochester, MN, about 70 miles or so away.

-b.

[Moderator's Note: According to my M-Street Radio Directory for 1994, WSBT is really WSPT and is in Stevens Point Wisconsin on 97.9 with 51,000 watts at 340 feet. You also have a 97.9 in Eveleth Mn (near Duluth) with 71,000 watts at 528 feet. 98.1 is WISM in Altoona Wisconsin (near Eau Claire) with 6000 watts at 279 feet. Also on 98.1 in your area is WWJO in St Cloud Mn with 100,000 watts at 1000 feet AND KBEW-FM in Blue Earth MN with 25,000 watts at 328 feet. I really like my M-Street book. It has virtually everything about stations that the Broadcasting Yearbook has, and it is only $33.00 instead of $200.00! Plus it is in a large paperback format instead of the 'phone-book' format of the B'casting yearbook. Bill]

Hi all,

I am an engineer doing some volunteer work at a small
Chinese radio station (Chicago). Due to a number of reasons,
the station rented a subcarrier from a local FM stereo station
and broadcast its programs thru' that. The quality of the
signal varies greatly (day to day and hour to hour) with a lot
of static usually. Another (Greek) station here used a similar
method and get much better performance but won't tell us how
they improve it. Can anyone help us out here ?

Thanks
Geoff
P.S. the broadcasts are receivable only by custom radios sold to
the customers. Station manager here knows nothing about electronics.

# 1536. Kansas City duopoly formed by KCMO sale to KMBZ

Newsgroup: rec.radio.broadcasting
Date: 1993-09-21 23:08:59 UTC
From: MARK808@delphi.com
Message-ID: <27o1ib$g71@vixen.cso.uiuc.edu>
Source record: 42374

Two Kansas City AM news/talk stations will soon have the same owner. Bonneville International, the owner of KMBZ(AM) (980 kHz, 5 kW), has announced the purchase of KCMO(AM) (810 kHz, 50 kW daytime, 5 kW nighttime) from Gannett. The purchase price has not been disclosed.

The purchase also includes oldies station KCMO-FM. Bonneville presently owns light-rock station KLTH(FM).

Facilities for all four stations will be consolidated at KMBZ/KLTH's present location in Westwood, Kansas, just across the state line from the Westport district of Kansas City, Missouri. KCMO AM and FM studios are presently located in the Westport area. They are to move to Westwood by March 1, 1994.

Gannett has owned KCMO AM and FM since 1986. Bonneville has owned KMBZ and KLTH since the early 1960's.

Bonneville is using an LMA to take over operation of KCMO AM and FM immediately. The first casualty is KCMO(AM) afternoon sports talk show host Al Eschbach. KMBZ and KCMO both broadcast sports talk shows in the afternoon.

In a KMBC-TV interview, KMBZ/KLTH's general manager, Ron Carter, said it did not make sense for both stations to compete head-to-head with afternoon sports talk shows. The Kansas City Star reported that a sports talk show was still airing on KCMO Monday afternoon, but noted Bonneville's plans to discontinue it shortly.

The Star reported that KCMO general manager Skip Stow, and newscasters Bob Mead and Richard Mock have been dismissed as

well. KMBC-TV quoted unnamed staffers as saying up to 18 KCMO employees will lose their jobs because of the merger.

Carter will be general manager of all four stations.

KMBZ/KLTH operations manager Brad Waldo will become program directors for the two FM stations. The search is on for an AM program director.

Both the Star and KMBC-TV quoted Carter as saying no format changes were planned for any of the four stations.

KMBZ presently is the Rush Limbaugh affiliate in Kansas City, and is an ABC Information Network affiliate. KCMO is a CBS radio network affiliate.

Kansas City has four news/talk or talk stations. Besides KCMO and KMBZ, there are KNHN (1340 kHz, 1 kW) and KBEA (1480 kHz, 1 kW).

To quote from the Star article by TV critic Barry Garron, "The sale puts into the control of a single owner four of the dozen most popular stations in Kansas City."

Official FCC approval is estimated to require three to four months.

# 1537. Analysis of Kansas City duopoly sale prices

Newsgroup: rec.radio.broadcasting
Date: 1993-09-21 23:09:00 UTC
From: MARK808@delphi.com
Message-ID: <27o1ic$g72@vixen.cso.uiuc.edu>
Source record: 42375

Some more news (and opinion) about the duopoly being formed
by Bonneville International with its purchase of KCMO-AM/FM
in Kansas City:

---

In its September 6 issue, Radio Business Report estimated the
purchase price of KCMO-AM/FM at between $7 and 8 million.
Gross revenues for both stations in 1992 were estimated at
$4.7 million, with 60% coming from the AM.
People often compare Kansas City and St. Louis, because they
are the two major metropolitan areas in Missouri, so it may be
of interest to compare those estimates with the most recent
station sale in St. Louis (the last week of August).
WKBQ(FM) and KASP(AM) were sold by Evergreen Media to Zimmer
Broadcasting of Cape Girardeau for $7 million cash. Zimmer already
owns WKKX(FM), licensed to Jerseyville, Illinois, but serving
St. Louis with a class B signal located in far northern St. Louis
County.
For the sake of comparison, let's assume that Bonneville also
paid $7 million for KCMO-AM/FM.
In St. Louis, $7 million gets you a class C1 FM (93,000 watts
at a little over 1,000 feet) and a 5,000-watt AM at 1380 kHz with
a badly impaired signal in most of the metro area (two DA's from
two separate sites). WKBQ and KASP presently are simulcasting.
I believe WKBQ placed among the top five St. Louis stations, but
I'm not sure about that.
In Kansas City, $7 million gets you a class C FM located on the

tallest tower in the city (100,000 watts, about 1,200 feet) and an AM with a 50,000-watt nondirectional, flamethrowing signal during the daytime. Nighttime power is 5,000 watts directional, but the pattern blankets the Kansas City area from the antenna's location near I-435 and US 169 in Clay County, Mo.

Both KCMO stations placed among the top 12 stations in Kansas City in the last Arbitron.

While St. Louis is a bigger metro area, that still doesn't account for the disparity, in my humble opinion.

---

Another item, from the Hearne Christopher, Jr. column in the Kansas City Star, September 9, excerpted:

When Bonneville International took over KCMO-AM radio (94.9 on the dial [sic]) recently, 20 of the approximately 55 staff members got their walking papers. Among the casualties: sports talker Al Eschbach.

...

Eschbach says, "You can imagine how shocked I was. I was at a newspaper that folded in 1980. Then, as I was about to turn in my column, they said, 'Don't bother, the paper just shut down.' This time I got an envelope. Then they shipped me over to another building to get severance checks.

He raises a question about his firing: "I wonder how much I mesh with the Mormon thinking." Bonneville is owned by the Mormon Church. "I don't know if that's a factor at all."

One KCMO official who asked not to be named says: "It's entirely possible. Part of the philosophy of Bonneville per se has to do with good taste and high standards, which are words they use. And ytou certainly could bring some of Al's stuff--you know, when you apply that test, he may not pass the test."

Probably not the Bazooka's test anyway. Part of Eschbach's

on-air routine included visits by the "Bazooka Girls," dancers at an area juice bar.

"A lot of people think he's pretty risque," says DaOnne Eschbach, Al's wife. "But what a lot of people don't understand is that is his on-air persona. In real life, he's pretty much a regular guy."

KMBZ operations director Brian [sic--his name is Brad] Waldo says, "You don't come to work here and say, 'Boy, I work for the Mormons.' It doesn't have anything to do with what you do. ... They don't force anything on you."

<end of excerpt>

---

One more Kansas City note: WHB(AM) (710) was to become a farm-oriented station, partially simulcasting KMZU(FM) in Carrollton, Mo., at the beginning of the month. Well, it's September 9th, and WHB is still cranking out the oldies. I have not heard any other news about WHB.

He was on and off a couple of days last spring, gone all summer and
now he is back on again, but from the East Coast. I got the idea
he was having trouble last spring. The few times I listened he
seemed very angry. Thanks Steve

# 1539. Chicago reaches end of radio era

Newsgroup: rec.radio.broadcasting
Date: 1993-09-22 21:53:48 UTC
From: wdp@airwaves.chi.il.us
Message-ID: <27qhhc$m5r@vixen.cso.uiuc.edu>
Source record: 42377

Well it is more like losing a family member than a radio personality.

Today, after 9 days of speculation and half-hearted news reports, it seems official. Chicago radio legends and fixtures Steve Dahl and Garry Meier have parted ways, presumably for good.

This morning on <the former> Steve and Garry show, a faltering and figiting Steve Dahl took to the airwaves after over a week of silence to tell his listeners that Garry Meier has left the show.

For those who are unaware, Garry Meier went on his honeymoon recently during which time (apparently) Steve made many cutting and biting remarks about Garry and his new wife. I didnt hear those shows but reports say that words like P-Whipped (P stands for a slang word for female genitalia), bitch and other stron negatives were used by Steve. Upon his return, Garry listened to tapes of the show(s) and essentially resigned from the show, ironically right when LUP was gearing up for a push into syndication for S&G.

Well today's show confirmed the worst. It is now just Steve (and the supporting news/sports people, etc) on the air.

In a speech that sounded like a eulogy (sp), an awkward, and hollow sounding Steve Dahl proclaimed that Garry's splitting was a long time coming and that Steve's harsh words were merely the catalist that pushed it over the edge. Steve seemd close to tears as hi likened Garry's leaving to a teenager leaving home and "[Paraphrased] needing to create some anxt (sp) in order to propell him into the next phase of life... The speech lasted some 15 - 20 minutes after which Steve took calls on the subject. I tuned in at 5:30 am and he finally went into his explanations about 8:00 am.

In another strange move, it seems that Steve will be on the AM station (1000khz) after the station takes on its new all-sports format! Yes it is true, the king of sarcasm, wit, and insight will be hosting a mornig drive all-sports talk show! Who knows who will be on FM, but mu guess is Danny Bonneduce <ex Partridge family) who is currently the next big hope on WLUP. Danny is very energetic, and IMHO an excellent personality.

On a personal note, I must say that Steve without Garry is a really pathetic sight. On this morning's show, Steve was a hollow shell of his former self. He tried to be funny and do his usual thing, but it rang false and empty. After 15 years of the duo's chemistry, Steve alone is a sad, dry, and as I said, pathetic thing to behold. He really sounded like someone who had just lost a lover, parent or

offspring. It was painfull to listen to this radio giant fumble through the simplest of routines and try to keep a stiff upper lip about it all.

Also, I could not help but feel a certain sadness too. S&G were more than funny-men, Steve's commentaries on the ironies of life and his ability to cut through the bullcrap on sacred-cows was unmatched. He was not just another morning man. With Garry as straight man, the two would rip through the obsurdities like a hot knife through butter. If you have never heard them,, it is really hard to describe since they were so unique in their style.

But now all of that has changed. Chicago radio will never be the same again. S&G were more than radio-personalities. They were part of our conciousness, part ofour lives and a part of the Chicago landscape that can not be replaced IMHO. Chicago radio listeners have lost something intangible, something that many try to duplicate and never have. That unique combination of wit and wisdom, sarcasm, silliness and sincerity that has made the team of Steve and Garry a true legend among radio personalities and a real asset to Chicago radio.

While nothing is certain in the radio biz, and while it is always possible that Garry might be pursuaded to rejoin Steve at some future time, the prospects seem bleek. If Steve does go to the all-sports AM (which would be a REAL strange thing) it is highly unlikely that Garry would return, since he has no interest in doing the sports thing at all. IMHO Steve on an all-sports station would be hard to imagine. But then again, if today's show is any indication, he is incapable of handling the current show by himself, so perhaps a total change of format is in order for him. Plus having him as morning drive on the AM will start the new station off with an instant drawing card. Perhaps that will be a boon for both Steve and for the station, who knows.

All I know is that Chicago radio will be just a little bit poorer now and that listeners have really lost a friend. If Steve's "close to tears" demeanor is any indication, I believe he has lost a part of himself as well. But Steve does seem to bounce back quickly, so who knows.

Bill

>remarks about Garry and his new wife. I didnt hear those shows but
>reports say that words like P-Whipped (P stands for a slang word for
>female genitalia), bitch and other stron negatives were used by Steve.
>Upon his return, Garry listened to tapes of the show(s) and
>essentially resigned from the show, ironically right when LUP was
>gearing up for a push into syndication for S&G.

I'm sorry, did you say this is the end of an era ? We're supposed
to mourn its passing because....?

>Steve seemd close to tears as hi likened
>Garry's leaving to a teenager leaving home and "[Paraphrased] needing
>to create some anxt (sp) in order to propell him into the next phase
>of life.

Yes, that would be adulthood...something the better creative
minds in radio have generally first experienced. I recognize,
however, there's a mindset that thinks creativity is being able
to giggle on the air in 30 different voices after your sidekick worked
"penis" into the sports report.

>On this morning's show, Steve was a hollow shell of
>his former self.

Everybody sing a line from an old Billy Preston song here.

> I could not help but feel a certain sadness too. S&G were more
>than funny-men, Steve's commentaries on the ironies of life and his

No, you are not expected to mourn anything. But this event is a shame because S&G have been a strong and unique force in Chicago Radio for over 15 years.

> Yes, that would be adulthood...something the better creative

Bob, obvously you have confused Steve and Garry with Howerd Stern.

In the very beginning, Steve (and later Garry) did fit the 'shock-jock' profile. Unfortunately, this is enough for many who are not familiar with them to conclude the matter and file them away in that manner.

But that is no more an accurate overview of S*G today than it is accurate to catagorize comedian "Gallagher" as merely "That fellow who smashes watermellons" . S&G have grown and matured with their audience in many (some more subtle than others) ways over the years. Is there still suggstive humor and risque bits? Sure. But to catagorize them as "... to giggle on the air in 30 different voices after your sidekick worked penis into a sports report..." si to miss a good deal of what S&G do (or should I say 'did') each day.

They were truly ground breakers and at times, rule breakers too. But they are NOT merely giggly, pottymouthed idiots. I don't fault you for not liking what they do, that is your right. I do wonder how many years it has been since you actually 'heard' any S&G? And even if you have heard an aircheck or two, that does not give an acurate impression of what their show really is. I could go on about some of the things they have spearheaded but that is not for this writing.

Basically, S&G are not 'gag men'. They are more of a continuing radio drama (some might sat 'soap opera') which has to be followed from day to day to really be understood or apprecated. I have heard a lot of morning teams, but none have matched S&G's ability to combine so many facets of life into one

show, and they did it masterfully. In fact, IMHO, the current incarnation of S&G (pre-split of course) are as far removed from the Stern type of show as Stern is removed from, say, Radio AAhs :-).

I think that S&G's appeal is their realism. They act just like they are talking to each-other and to the listeners. It is moere of a conversation than radio schtick.

> >On this morning's show, Steve was a hollow shell of
> >his former self.
>
> Everybody sing a line from an old Billy Preston song here.

What song is that... "Will It Go Round In Circles"? That would be an appropriate :-).

> >Steve's commentaries on the ironies of life and his
> >ability to cut through the bullcrap on sacred-cows was unmatched.
>
> You're missing the ultimate irony...his partner turned out to be
> a sacred cow that couldn't take the "cutting through the bullcrap."

I hear that!

But, no, I havn't missed that irony at all. In fact I thought of it the first time I heard of what Steve had said about Garry. I thought that Garry was behaving a bit childishly by taking so seriously what Steve had said, considering all the stuff the two of them had spewed out over the years. I believe what Steve had said about the split being ...a long time coming ... and that the comments Steve made were just the catalist to make it happen. I am sure that Garry has wanted more out of life and out of broadcasting than playing Ed McMahon to Steve's Johnny Carson.

Is Steve a jerk? Yes, I think he is. He even admits that on the air. That is one of the great things about that show. It is realistic. They do, and talk about, things that people relate to. They let their laundry hang out on the microphone cable. It is that kind of authenticity that turns some listeners into loyal supporters, and others into bitter detractors.

> >Chicago radio will never be the same
> >again. S&G were more than radio-personalities. They were part of our
> >conciousness, part ofour lives and a part of the Chicago landscape
> >that can not be replaced IMHO.
>
> Cheer up! There might be a Porky's film festival coming to Chicago.

<groan>...

I don't suppose that anything I can say will change or mitigate your opinion about S&G, but they pioneered and continued to fine tune a style that has been imitated and cloned by air-personalities across these fruited plaines. They have maintained a top level showing in all the ratings throughout the years. Stern took the potty-mouth and anger sides of early S&G and has built

an empire (albeit a crumbling one) from those bits, while S&G have consitantly
continued to evolve out of that mold and into what is best described as
a 'hip version of a full-service morning team'. I feel there has been a
significant loss on this city's radio scene. Just MHO, that's all.
I bet Howard Stern is elated!

> <Grin>, of course!

Back at ya!

I do beleive you may be receiving the BBC broadcast from Radio Canada International's transmitters in Sackville, New Brunswick. I will check with the BBC schedule, and tell you Sackville's frequencies and broadcast times. The frequency seems off by a factor of 10, but I'll check.

## 1546. Nearly 1000 stations apply for 1600-1700 AM subband

Newsgroup: rec.radio.broadcasting
Date: 1993-09-23 04:36:04 UTC
From: wa2ise@netcom.com
Message-ID: <27r93k$md8@vixen.cso.uiuc.edu>
Source record: 42384

In an article in the Sept 22 _Radio World_, nearly a thousand stations have applied for freqs in the new segment of the AM radio band (1600-1700). Only about 200-250 stations can be accomodated in this subband. Successful applicants will have 10Kw day, 1Kw night power, and encouraged to go AM stereo. The FCC is going to use a computer program to determine the "ideal" allotment, based on minimizing interference. Also full time stations will get preference over daytimers. The selection process won't be done before early 1994.

Looks like this means that there will not be ANY stations to be heard in this new subband before then. Which may mean that anything you find there now is probably a pirate.

When WPHR-FM (Cleveland) changed format to "The End", they played REM's
"End of the World as we know it" for 24 hours straight. Repeatedly.
This was May 11, 1992. I will never forget that date. (gack.)
(Not that I don't like REM, but...)

When WNCX took over WGCL-FM in '87, they played nothing but Beatles for four
days straight.

Source record: 42386

Hey look, folks, if you want to put up a new spiffo station with national coverage, think of this. You can't shoehorn in another FM, no one's excited about 10 watts on 1610 kHz. But for about $1500 a month you can rent a stereo SCPC spot on a geosynch satellite and carry your program all over, with commercials, religion, fat music, whatever you like. Then you can make deals with cable TV's all over to carry it for free and the backyard dish types can call in from wherever to ask you to play Gagaku court music to their generator powered receiver in Mandan, ND.

[Moderator's Note: So what's your point? Bill]

You can order this set from Wireless, a catalog you get when you
subscribe to public TV, or when your mom orders you something from
them and has them send it to your address (that's how I get it!).
Unfortunately, I'm at work and don't have their address handy.
Wireless regularly has collections of old radio shows as well.

I remember it very well; I also used to listen to him all the way in North
Carolina every night on WOR after the 10:00 news. He constantly amazed
and amused me with his sometimes poignant/sometimes rambling/sometimes
incoherent (i.e. playing his "head drum") ramblings. He made me
appreciate "nostalgic" type american humor that didn't have to caustic or
dirty. My favorite episode of the PSB show was when he went to the
farthest point north in Alaska and looked out over a beautiful tranquil
scene then looked down and picked up an empty beer can! saying "Look,
there's even empty beer cans up here!!! His album on Mercury, "The
Declassified Jean Sheperd" is really good too as are his books, "In God We
Trust, All Others Pay Cash" and "Wanda Hickey's Night of Golden Memories"
some of the material in these were adapted for the wonderful movie "A
Christmas Story". I wish I had heard him on the radio in the early -mid
sixties and gotten some of his earlier albums. If anyone has any
information about his early New York years I would love to hear it - I see
old ads for him in Village Voices at the library but only started hearing
him for myself in about 1970 or so. A true american humorist.

hi,

i was just wandering if anyone knows of any shareware programs one might use
for the managment of the radio station recocord collection, equipment, etc...
a bunch of us are currently starting a small, on-campus station and among
other things, organizing the records/CDs/tapes for easy access for our DJs
seems to be crucial. i was just thinking about writing a small program that
would handle basic librarian functions, but maybe there are already some
packages aimed at our needs...

any info would be greatly appreciated,

-tom

Community radio from space

By Karen Fredericks

``We don't want to encourage pale imitations of the ABC or commercial radio broadcasters. We want to preserve the spirit of community radio ... the unfiltered voices of real people telling their own stories.''

This, according to operations manager Stafford Sanders, is the mission of ComRadSat, a national community radio satellite network launched by the Community Broadcasting Association of Australia (CBAA) in March.

``Comradsat is a means of program exchange between community radio broadcasters'', Sanders explained to Green Left. ``It replaces the tape exchange service we have been running for many years, by which broadcasters sent programs into this organisation [CBAA] and we dubbed them and distributed them to other stations.''

The 82 community broadcasters who have been supplied with the satellite dishes and receivers required to link into the ComRadSat network now have immediate access to a huge range of programs produced by their fellow community broadcasters. Besides this CBAA-run service, ComRadSat, via the Optus B1 satellite (the one they didn't lose), also carries the BBC world service and the multilingual SBS radio station 2EA.

Stations can pick and choose from the programs offered on all three services. They can play them direct to air or can them for later broadcast, or they can play one channel direct to air while recording another.

One of the advantages of the network, says Sanders, is that it frees up the mostly volunteer staff at community radio stations so they can concentrate their program-making energies on local information and culture. In this way, CBAA hopes to strengthen the most distinctive and important characteristic of community radio - a base in the local community.

An example of the type of program Sanders sees as ideal for networking is the 2SER Voices from the South, a current affairs show focusing on third world issues and produced and presented by people from third world backgrounds.

``On the ABC and commercial networks you get reporters talking about the people of the South, such as the rubber tappers in the Amazon'', says Sanders. ``On programs like Voices from the South you get the people speaking for themselves. That's what community radio is all about, and that's why I feel so passionately about this network.''

Voices from the South and a range of other programs such as Public Radio News' daily current affairs half hour, Undercurrents, 3CR's Women on the Line and 2SER's gay and lesbian show, Out and Out, have regular timeslots on the CBAA satellite channel.

The channel also supplies one-off items such as the recent Tiddas Talk, a satellite link-up of Aboriginal women from around the country for International Women's Day. The network will even have its own live simulcast with SBS TV when they broadcast the 1993 ethnic business awards on October 13.

Sanders says there is currently very little controversy surrounding programming on ComRadSat, but as the number of stations providing programs grows, competition for timeslots may increase. While he, as operations manager, currently makes most of the programming decisions, control ultimately rests with the organisation's 115 member stations, exercised through an elected national committee and the annual conference.

CBAA raises revenue for the operation of the service from subscription fees which broadcasters pay for use of the channel (commensurate with their size and ability to pay) and from fees charged to organisations which wish to broadcast community information by way of ComRadSat. Sanders says CBAA hopes to restrict this second revenue-raising method to government departments, QANGOS and community-oriented organisations such as Greenpeace, although, he says, ``commercial sponsorship is already a fact of life for most community broadcasters''.

Some contributors to the network, such as Public Radio News and Melbourne's 3CR, charge an individual fee for use of their shows. The cost of establishment of the network was met by a federal government Ethnic Radio Current Affairs grant.

Sanders says Australian community radio is among the most, if not the most, highly developed and extensive community radio networks in the world. Through CBAA member stations have now gained access to satellite technology, an important technological advance which, Sanders believes, should not be restricted to government and commercial use but should be available to broadcast the voices of ordinary people.

``People listen to community radio because we are different to all the other stations, not because we are the same'', he says. ``That's what we have to

## 1555. Radio Station Information

Newsgroup: rec.radio.broadcasting
Date: 1993-09-23 05:16:53 UTC
From: dt399@cleveland.Freenet.Edu
Message-ID: <27rbg5$pbm@vixen.cso.uiuc.edu>
Source record: 42393

I'm new to this group, so please forgive me if this sort of thing
isn't supposed to be posted here.

I make tapes for friends as a sort of birthday gift for them. I
use their initials and a W or K and make them call letters for this
fictional radio station. I try to do entertaining things between
the music and thought that this year I'd try something different.

Can anybody give me ANY information on the following REAL radio
stations: (If they exist)

WACR KACR
WERJ KERJ

The information I'm after would be along the lines of location
(city/state), format, etc.

Any help or information would be greatly appreciated.

Thanks in advance.

[Moderator's Note: My 1994 M-Street Directory says that there is no WERJ,
KERJ or KACR. WACR is AM-1050 Columbus Ms and claims to have three seperate
formats, dayparted, consisting of Adult Contemp/R&B (black music)/Religious.
Sounds like a reak misture, huh? Consideringthat they are one of only two AM
staions in the city (plus 3 commercial FM's and one noncomm FM. Bill

# 1557. AM stereo in Australia

Newsgroup: rec.radio.broadcasting
Date: 1993-09-23 05:16:55 UTC
From: r.lightwood@trl.oz.au
Message-ID: <27rbg7$pbr@vixen.cso.uiuc.edu>
Source record: 42395

Here are some comments I sent to someone regarding AM stereo in Australia, in reply to a previous article. I decided to post them to the net as well.

AM stereo has been around in Australia since 1984 when testing began. It was officially launched on February 1 1985 using a single standard, the Motorola CQUAM standard, but appears to have become largely irrelevant. I'm not sure exactly why this is so, but I believe it may be due to the following reasons, which are based on personal observations:

1) There were never that many AM Stereo models available. The maximum number of different models at one time was 67, but these were mostly either high end hi-fi or extremely low-end hi fi units, and some car radio units. There were only one or two portable sized models and walkman models and virtually no 'ghetto blaster' type models available. Most models continued to be 'AM/FM stereo' as opposed to AM Stereo/FM Stereo'.

2) AM Stereo hi fi receivers or car receivers were never properly set up in stores to demonstrate how good AM stereo might have been. While the unit would typically have been connected to an external FM antenna, it was usually not (or didn't seem to be) connected to any good AM antenna, hence any received AM stereo signals were weak, full of interference from the stores lights, computers, etc. They were often so weak they weren't in stereo, or if they were in stereo they didn't sound that much better (if at all) than a regular AM signal. If any radios did have an AM antenna connected to them, this was usually an indoor antenna at the back of the set, hence it picked up all the interference.

3) The AM stereos I have heard in cars and in homes never sounded as good as FM stereo, even when in wideband mode. The signal to noise ratio was never as good, and neither was the high frequency response.

I have only seen one demonstration of AM stereo that cam close to sounding like FM. This was put on by a radio station in the Royal Melbourne (agricultural) show in 1986. This consisted of a single hi fi unit with an AM stereo radio and speakers. The sound was impressive, but I wonder whether they had to use a graphic equaliser to boost the high frequencies.

I know from personal experiments with crystal type radios that AM can sound almost as good as FM. An AM Stereo receiver kit design published in a local Electronics magazine (Electronics Australia ,Jan-??? 1986) had specifications for AM stereo similar to FM stereo (e.g. S/N ratio >70 db). Trouble is, this didn't seem to be reflected in virtually all

of the stereo AM models I have ever seen, or if it was, virtually nobody seemed to publicise this.

4) I guess people just preferred to listen to FM stereo. They had FM stereo receivers and there were several (though not many) FM stereo commercial stations.

BTW: with regards to my previous article on AM stereo in Japan I have been told that FM wasn't so popular in Japan because of the mountanous terrain that exists there.

Come ON, people! Read 49 CFR parts 70 to 79!!

A radio (or TV for that matter) licensee is REQUIRED BY LAW to maintain control
over their station, and this includes ALL programming. The station is
culpable for EVERYTHING that is broadcast. "That came from the net that way"
is no more a defense that "Well, he got in the way of the bullet" is a defense

for an unintentional shooting. The way our legal people have interpreted the law, allowing (or for that matter, entering into any contract) that allows someone other than the licensee to control programming constitutes transfer of day-to-day operation of the radio station, which, you know, is a B-I-G no-no under the law. Transfer of conrtol CANNOT take place without FCC approval, filing and public notice requirements, etc. Could this possibly mean that WLUP entering into a contract that FORCED them to carry the stern audio, without recourse, without a choice, was an ILLEGAL CONTRACT to begin with, and therefore, unenforceable?

Think about it, folks.

>designed into the tower.

Who said it had to be efficient? It's a lot more efficient to load into a
mumble-wave tower with a few more kW than to build a new tower, and often
the only way (politically/real estate wise) to do it.

The FCC is primarily concerned with radiated field strength, so if you load
up into an inefficient antenna, you get to use more transmitter power doing
it.

>to be at a specific height corresponding to the transmitter's frequency. With
>2 or more transmitters feeding the tower, the tower would only be efficient
>with respect to only one of the transmitters unless various other elements were
>designed into the tower.

Multiplexing AMs is relatively common where land is expensive or
getting permission to put up another tower is expensive. Here in SLO,
we have 920 KHz and 1030 KHz on the same 250 foot tower. It is done by
putting a bunch of LC traps between the two transmitters and the antenna
system. San Francisco has the old KFRC (610 KHz) and the old KRE or
KPAT (1400 KHz) on the same tower in Berkeley (at least last time I
checked). It is easier to do if the frequencies are relatively far
apart, as the traps don't have to be as sharp.
The height of a radiator affects its vertical radiation pattern
and its driving point impedance. The vertical radiation pattern mostly
affects skywave interference. The driving point impedance can be
converted to whatever impedance the transmitter wants to see (typically
50 + j0 ohms) with an LC network. In Hawaii, I doubt interference
protection is a major consideration, since all the co-channel and
adjacent channel stations are pretty far away. So, it's a relatively
common thing to multiplex AMs.
Years ago a friend was working on multiplexing 5 AMs onto a
single tower in Mexico. I dunno if he finally got it done. A method I
suggested to him was to get a giant op-amp and build a summing amp. The
tower would be driven with the zero ohm (ideal voltage source) output of
the op-amp. Problems would include intermod due to lack of linearity
and pretty poor efficiency due to use of a linear amplifier. Still, it
could be kinda interesting.

>
> Any engineers wish to provide some answers?
>

It's not unusual to share a tower between two (sometimes three) stations.
The magic is accomplished with tuned circuits to keep the two
TX's from interfering with each other. The operating frequencies
should be somewhat diverse to make the filtering easier.

As for the antenna height, almost any random length (within reason)
can be tuned up acceptably, but there are propogation advantages
to certain tower height/frequency combinations.

It's all done with smoke/mirrors/tuned circuits...

Sometimes an insulator is placed at a particular height to isolate
the tower into two sections, and a series resonant circuit is used to
make the tower look like the full length for the lower freq,
while only the bottom portion appears to the higher freq signal.

Well, the former owner of the Tigers (Fetzer, I forget his first name)
owned a bunch of stations throughout Michigan (the Lower Peninsula,
anyway). I think there were about a dozen stations in the Fetzer
Broadcasting Company. This was back in the '70s and early '80s
when I used to get the yearbook annually and see the ad for the
stations inside. I think Fetzer himself passed on in the mid '80s;
I don't know if Fetzer Broadcasting still exists, but I would imagine
that many of those stations would still carry the games. I'll dig
out a yearbook and post the station list if anyone's interested in
this bit of history.

# 1563. INTERNET RADIO JOURNAL CHANGES NAME

Newsgroup: rec.radio.broadcasting
Date: 1993-09-27 00:07:23 UTC
From: wdp@airwaves.chi.il.us
Message-ID: <285arr$b7c@vixen.cso.uiuc.edu>
Source record: 42301
Cross-posted to: rec.radio.broadcasting,rec.radio.info

Greetings R.R.B and Internet Radio Journal readers:

Starting with issue 400, the Internet Radio Journal will be no more!

In it's place will be a publication called "Airwaves" which will essentially carry on the same mission as the IRJ, with one important difference.

With the world of data communications getting bigger, and distinctions between networks diminishing, it is time to rename the IRJ to something which is more 'network-neutral'.

With the renaming of the Internet Radio Journal comes a whole new horizon of interconnectivity to non-Internet systems such as CompuServe, GEnie and others, thus bringing even more radio people together to share and exchange ideas with one-another.

In addition, the email addresses connected with the Journal are being changed and simplified. The existing addresses will still work, but the following 'new' addresses are now active as well.

To subit articles to 'Airwaves': --- --- articles@airwaves.chi.il.us
To subscribe or un-subscribe: -- --- --- subscribe@airwaves.chi.il.us

All other addresses stay the same.

So how, if you want to send an article, just mail it to 'articles' and if you want to add or delete yourself from the list, send mail to 'subscribe' (@airwaves.chi.il.us).

Note: If you currently subscribe to IRJ,
you DO NOT need to re-subscribe. The list will not change, just the name and a couple of email addresses.

Sometime in the next month or so, we will be making it even simpler by changing the ".chi.il.us" suffix to, simply, '.com' At that time the addresses will be ...

****@airwaves.com ... etc...

*** Don't send to the .com address yet, or it will bounce ***

We are also looking into an email archive server for those without FTP access, as well as other automated features to make the new publication even easier to obtain, reply to and enjoy.
Be looking for the new publication soon. Feel encourages to let me know your thoughts on the matter.

This message may be repeated a few times before the change is made to
let everyone know what is what.

Bill

AM only, or AM/FM?

I hope, also that it has a narrow selectivity position.
For instance, the Japanese AIWA CR-D60 is optimized for audio. not selectivity.
During the daytime in the "stereo enabled" position, local AM broadcasters
can spill 30-40 KHz on either side of the actual frequency.
If you disable the stereo detector the bandwidth seems to be narrower.

Unless they changed things, my understanding of AMAX is that they did not give guidelines for AM stereo transmissions(ie which AM stereo type). An article In the Feb. 1992 issue of Radio Electronics pp.48-52 mentioned briefly about AMAX standards. It has be a long time since the last AM stereo walkman model. 1984 I think.

>I had this BBC station (not just news on the hour, but all of
>their features too). The station was between 1150 kHz, with a lot
>of domestics mixing, and 1165 kHz, religious programming from Antigua.
>I have an analog dial, so I'm estimating 1160 kHz for this station.
>My guess is that it's Bermuda, but they're only 1 kw at night.
>Does anyone know if this station reaches the U.S. mainland,
>or does anyone have any other hints as to its id?

A check of the AM listings in the 1993 _Broadcasting_and_Cable_Yearbook
yields two possible suspects at 1160 kHz AM BAND from New Jersey:

WOBM Lakewood, NJ. Night power is 8900 watts directional.
WVNJ Oakland, NJ. Night power is 2500 watts directional.

WOBM is probably the prime suspect. I'll have to check the the B&CY
for the detailed description of its affiliation.

If the station is from the US, you should be able to hear station
identification once every hour within 10 minutes of the top
of the hour.

[Moderator's Note: WOBM-AM is satellite fed adult standards and the FM is
AC/oldies. I called them and got an answering machine offering programming
highlights and nothiong was said about BBC. The other station was listed in
the M-street Directory as a cp-new and had no phone number or format listed.
Also, isn't the legal-id thing 2 minutes either side of the hour? Bill]

The Canadian Radio-Television Telecommunications Commission is the regulatory body for broadcasting in Canada. They enforce and interpret the Broadcast Act and its related regulations.

The Commission has not changed its policy on single religion stations as far as I know. Such stations must still seek a licence under the same basic criteria as every other applicant. Anyone wanting a licence must still apply via the CRTC.

The closest commission office to you is Halifax. The manager was Bob Oxner, but I know he has retired. The office is small, but very friendly. They exist to help individuals get information on Canadian broadcast policy, take and answer complaints, as well as help individuals get the required paperwork to apply for a new licence.

Call them, they will be able to provide up to date copies of the regulations, the Act and any Commission decisions which reflect religious radio. If you plan on applying for a licence for such a station it is vital to know what is current CRTC policy.

The Commission will be able to provide you with all the paperwork you need to apply for a licence from them. You will also need a licence from Communications Canada (Moncton is Regional Office) for your transmitter plant and one from Transport Canada for your tower.

Look carefully at a few other broadcaster's applications before you complete your own. Also review the CRTC policy and decisions. If you closely follow what someone else has done, as well as stay with the policy you should not have trouble getting a licence. The issue of not for profit versus profit making stations can also bog a licence. The commission will take a long hard look at an application for a money making station. They

seem to like the idea of community access, not for profit stations.

After your application is filed comes a public hearing, provided that Communications Canada says you have a reasonable application and the CRTC staff feel your application is serious (properly thought thro', you have the money, you have the ideas, you have the proper corporate ownership, you will support Canadian talent, basically see if you know what you are doing). If no one interveins (for or against your application) you will be a non-appearing item. That means the Commission will not discuss your application in public. The whole process takes about a year.

CRTC policy is decided as a result of public hearings. The transcripts of these hearings, the CRTC decisions, as well the Act and regulations are all public docvuments available from any office of the Commission.

The Commission has made it clear that every broadcast licence must be balanced in view point, either on the station itself or in the market. Extremes are not usually licence. The Act has strict rules reguarding the discussion of sex, abortion, and drugs (there are a few more no-no's which escape me at this moment). These may conflict with the ideals of some. The CRTC is also very concerned that any station makes attempts to reflect its listening community, and not some small minority of the community. Finally any radio undertaking falls under the Canadian Human Rights Code, which forbids discrimination in hiring (perhaps even access to airtime if loosely interpreted, but I am no lawyer) on the grounds of religion. All of these could potentially effect a single-religion licence.

I am not trying to upset you, just want to point out a few of the stumbling blocks a single religion station may face. Take note. Newfoundland has more than a few single relion stations. Most date from before Conferedation (1949 for Newfoundland).

The Steve And Gary thing is regretable, and I hope that they can work out their differences. I never heard them, but from what the net has to say about them, I have to assume that they are damn good.

As regretable as it may be, with an empty place in Chicago's Pseudo Shock-Jock scene, would it leave space for the Greaseman to move in with his show, Howard had his chance...

Just a thought,
Carlos Castro

Uh...Bill?

Did you happen to see Feder's column yesterday that touts Garry Meier as the midday host of the Loop-FM? He's not going away, and he is (or was, in case you don't remember from the days before he was paired with Coho) a fine stock Jock.

Maybe this will be an occasion for those of us in radio to notice the "lesser players" on Chicago's 62 radio stations. Most can only name the high profile personalities, and many of those are ordinary folks who just happened to be at the right place and time. Who can name the midday or evening jocks on WGCI? It's the number one station in the city, and most of us suburban honkies can remember Doug Banks and Tom Joyner, but where would the station be without the other 4 full time staffers? Let's concentrate less on the egos and more on the working stiffs.

--
Doug Blair, just another working stiff. No sorry, I don't know Robert Murphy personally. No, I'm sorry, I can't take messages. No, I'm not like Steve or Gary. Just doin' my job, cuming more then them, and staying out of the spotlight.

# 1576. biannual posting: DecalcoMania

INTRODUCING DECALCOMANIA, "the club for fans of radio"

FREE SAMPLE ISSUE FREE AIRCHECKS LIST
see below

Decalcomania is THE club for radio enthusiasts who collect and trade AM &
FM stations' promotional materials and airchecks, and like to keep track of
what stations are doing in other markets, while keeping members updated on
what's happening in their own market.

The newsletter, issued 10 times annually, has these member write-in columns:

Market Lists - list of the stations, by frequency, call letter, and format,
in a given market, with the potential for an up-to-date and more
in-depth analysis of formats than an annual publication can give
with one,two,or three letter abbreviations
Stix Tipz - tips on which stations have what promotional items available,
including a description of the wording and colors of stickers, to
help you determine if you have this one or not.
Trading Post - what promotional items members have to trade
Aircheck Arcade - members tell about airchecking trips taken, what
stations they recorded and have available for trade, or what
they're looking for on tape
Chatter Box - like the Forums and Musings in other clubs, the general
write-in column where members can introduce themselves, give
radio news, opinions on their local stations, etc
Care and Feeding of a Promotional collection - tips on how to increase
response when writing or visiting stations, how to store, arrange,
display ones materials, etc.
Mailbag - members and non-members can write in with general requests,
mention items for sale [a recent entry was a 50 POUND box of
New York City music surveys for auction], catalogs available, etc.
Musical Time Machine - a sampling of music surveys from the past. As an
example, a list of the top five at 10 different stations this
week, 20 years ago. Sometimes the history of one station's music
surveys is detailed.
Jock Block - the life story of a particular radio air talent.
Record Exchange - members list what records they're looking for, and
can offer in trade.

The now eleven year old club also offers several publications, such as the
UnID Guide, aimed at helping you put call letters on that sticker that just
says "Rock 92" that you've had all these years.

In summary, DecalcoMania is a club for the hobbyist who lives and breathes
radio. Unlike most other radio clubs, it is not a DX reporting club, though

most of its members have their roots in DX clubs.

A year's dues are just $11 US, ($12 Canada, $17.50 Europe,$19 elsewhere)
and a trial 6-month membership is available for $6.50($7,$9.50,$10.50).

If you're ready to join now or if you would like a FREE SAMPLE issue, which
includes more introductory information and a membership application, send
e-mail to

att!pegasus!testnet!decal or testnet%decal@pegasus.att.com

with your name, mailing address, questions, and other pertinent information.

Also indicate if you would like an 12 page listing of one
collector's AIRCHECKS for trade.

This offer is good to anyone ANYWHERE ON THIS EARTH.

---
Not affiliated with AT&T, CBS, or the Columbia School of Broadcasting, lo-
cated just half a mile South of the blinking light. Classes that begin
in February can have you on the air by June. Offer void where prohibited. Your
mileage may vary. Batteries not included. Today's best music without any rap,
hard stuff, or sleepy elevator music. We don't stop the music more than twice
an hour for commercials, but we do stop the music 4 times an hour to tell you
that. All the promotional information, without all the DX. DecalcoMania.

# 1577. FMX rolling in grave!

GAK!

It's back again, like the flu or a bad penny.

Well, it's not *really* back (thank heavens), just threatening to come.

It's 'FMX', that mystery of the 80's that got lost in a chicken-or-the-egg scenario.

I recently heard, from a source quite closer to the owners of the 'technology' that they are planning another splash of this tired and generally ineffective system. Seem they feel that 'DAB isn't going anywhere', so that leaves the perfect entre' open for FMX to 'clean up' the FM band.

This pretzel logic amazes me....a few struggling companies hoping to cash in jumped on the bandwagon and made equipment for stations, and a few (if I recall about one or two hundred total) tried it, but the technology had two major problems: First, the results were inconclusive (I once heard it stated that FMX technology and cocking your head while listening to conventional FM had about the same effect), and second, and perhaps more importantly, there were virtually no receivers out there which could receive it. Add to that some resoundingly bad reviews by industry experts, and you essentially have a turkey.

Reports from auto companies have it that they were willing to *risk* a trial of it in the mid eighties, but the licensing fees that the new owners wanted were so completely outrageous that they quickly walked away. I'm told that once the Bose report came out pointing out FMX's shortcomings, those very same automakers looked to heaven and thanked their lucky stars.

Press Release

For immediate release: Thursday, September 23 1993

Contact: Free Radio Berkeley - (510) 464-3041

FCC Uses 20 SF Cops to Obtain ID

In a scene resembling a French noir film, one person
associated with San Francisco Liberation Radio was detained by
20 San Francisco police officers until his ID could be
presented to FCC agent David Doon. At approximately 9:30 PM on
Wednesday, September 22, Richard Edmondson was approached by
David Doon who asked for identification. After refusing to
produce identification and answer any questions, Richard drove
away and was stopped on Webster St. by SF police officers who
blocked off the entire northbound lane of the street with 8
vehicles. A confused scene ensued wherein the police officers
had virtually no idea of what was going on or why such massive
backup had been called. Richard was ordered to get out of his
vehicle with his hands up and in clear sight by clearly
agitated SF police who subsequently handcuffed him. SF police
officers were heard to say "who is this guy" and "what do we
have him for" - for several minutes these questions went
unanswered. By the time the FCC agent arrived to examine
Richard's ID there were at least 20 SF police officers on the
scene. After learning of what was going on some of the
officers were clearly exasperated at having their time wasted
by this FCC agent. A few were amused and asked for information
regarding San Francisco Liberation Radio's frequency and
broadcast schedule. After Richard's ID was verified he was
released without any further consequences by the SF police.

Richard stated, "Before it was all over there were at
least 20 police officers on the scene. They were all so pumped
up with adrenaline you would have thought I had committed the

crime of the century. It was clearly irresponsible for this FCC agent to call for such a massive response without giving clear reason or instruction to the SF police. When police officers go into a situation not knowing the details they naturally assume the worst. For one dark moment I feared my life was in danger."

Speaking for Free Radio Berkeley, Stephen Dunifer commented "It is an obvious case of overreaction by FCC agent David Doon who clearly endangered the life of Richard Edmondson by calling in such a massive police response. The FCC must be held accountable for the actions of their agents who use such extremely excessive and reactionary methods to suppress a growing micro power broadcasting movement. It would have sufficed for David Doon to have written down the license plate # of Richard's vehicle and run a DMV check. As more micro power broadcasters go on the air in the Bay area and Northern California we can anticipate further actions by the FCC to harass and intimidate those involved. However, we shall not be moved by their threats and police state tactics."

San Francisco Liberation Radio broadcasts on Wednesday and Saturday evenings from 8 PM to 10 PM at 93.7 on the FM band. Free Radio Berkeley broadcasts on Sunday evenings from 9 PM to 12 Midnight. More micro power broadcasting operations will be taking to the air very soon. Free TV Berkeley will start operations by the end of October. A public forum, Micro Power Broadcasting and the Future of Free Speech, featuring Normon Solomon and local micro power broadcasting activists will be held on Friday, October 15 at New College, 777 Valencia starting at 7:30 PM. Micro power broadcasting workshops will be held in San Francisco on Saturday, October 16 and in Berkeley on Saturday, October 23. Call (510) 464-3041 for further information.

# 1584. 680 AM station?

Newsgroup: rec.radio.broadcasting
Date: 1993-09-27 02:02:15 UTC
From: stuart@apollo.hp.com
Message-ID: <285hj7$jjd@vixen.cso.uiuc.edu>
Source record: 42322

Strange AM radio experience:

I was making my usual afternoon commute from work the other day, and the drive takes me right by the transmitter for WRKO-AM (680) [the studios are in Boston, but the transmitter is out next to Rt.128 in Burlington, MA]. Anyway, as it usually happens when I pass this transmitter, my car AM radio experiences some reception distortion, and it's not unusual for me to briefly pick up WRKO's signal, regardless of the frequency the radio is tuned to. It's usually a noisy over-modulated signal, but it's still audible enough that I can hear that it's definitely WRKO. But on this particular day, I got something else: I distinctly heard the dj give an i.d: "Radio 680" followed by the call letters (which were a little mangled in the distortion) "WYAC" or "WIAC", maybe "WYOC", "WIOC", something like that, but definitely not "WRKO". I'm not familiar with any such station in the area. There's certainly no other 680 signal that's audible in the greater Boston area, because it would obviously clash with WRKO. Yes, this was in the evening hours (around 5:30PM) when distant AM signals can often come in with some clarity. But it seems odd that I'd pick up another 680 station when I'm right next to WRKO's transmitter.
Can anyone explain this `phenomenon'? Also, anyone know of a 680 station with call letters similar to what I indicate there?
-stuart@apollo.hp.com

In the OLD days, you wouldn't have had to DX to hear Ernie Harwell in New Jersey. From 1950-1953, Harwell co-anchored the New York BASEBALL Giants games with Russ Hodges on WMCA. Like Harwell, a number of the "greats," including Red Barber, Mel Allen, Vin Scully, Lindsey Nelson, Jack Brickhouse, Frankie Frisch, and Curt Gowdy, did at least some announcing for the New York baseball teams during their careers.

# 1588. AM Stereo

Newsgroup: rec.radio.broadcasting
Date: 1993-09-28 18:43:02 UTC
From: gulino@ouvaxa.cats.ohiou.edu
Message-ID: <28a0jm$31v@vixen.cso.uiuc.edu>
Source record: 42326

As far as this AM stereo in car radios goes, my nearly-eight-year-old 1986 Dodge 600 has a factory AM/FM radio (no casette) that receives AM stereo and has always worked well. The problem is that most AM stereo stations I can receive (and there aren't all that many) are primarily *talk* stations. Stereo doesn't do as much for talk as it does for music. :)

Seems like someone should come out with an add-in AM stereo
board. Radio-Electronics did a kit story a few years ago using
the Motorola chip. In a side bar, a note indicated Circuit Specialists
of Tuson Arizona had a complete kit. Well, I called them and the
woman answering the phone said they no longer have anything like
this. Oh well...

The point was I tested the new super Denon unit next to the Lowe 150
with AM sysnc detector - no contest, the Lowe has a MUCH better RF
section, but NO stereo! I can add a board to demodulate AM stereo...

In article <285gv3$ip7@vixen.cso.uiuc.edu> ms128@konichiwa.cc.columbia.edu (Mary Summerfield) writes:

Has anyone in Los Angeles listened to the new Arrow93FM format of
newer oldies? How does it sound?

I was reading in one of the rock radio trades this weekend that Arrow 93
would play rock oldies from the 60s, 70s, and early 80s, heavily emphasizing
the 70s. I guess you could call this a "Classic Oldies" format -
rock-leaning stuff, but no wild guitar solos ala Zeppelin.

But I'm all the way out here in Terre Haute, Indiana and have no chance
to hear the station. Too bad; musically, it'd be nice to have something
like that here.

# 1591. Re: Need help with station id, BBC on 1160

Newsgroup: rec.radio.broadcasting
Date: 1993-09-28 18:43:21 UTC
From: prmount@attmail.att.com
Message-ID: <28a0k9$346@vixen.cso.uiuc.edu>
Source record: 42329

IF WVNJ were on it would be the best bet because their night
pattern is to go east towards CT. But they are not on yet.

I was able to get a live person who confirmed that there is
no BBC programming.

I like the idea of a SW image appearing on the AM band,as explanation.
One old transistor radio got great SW reception after it had
been dropped too many times. However, it was *supposed* to be
just an AM radio....

# 1592. Boston Radio (9-27-93)

Newsgroup: rec.radio.broadcasting
Date: 1993-09-28 18:43:22 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <28a0ka$34f@vixen.cso.uiuc.edu>
Source record: 42330

Back from vacation, back to the wacky, zany world of Boston radio...

* WSSH-1510 AM(owned by Noble Broadcasting) is now a syndicated
all-talk(via a outfit called Talk America). I sampled a few
shows over the last 3 days : no-name talk show hosts, goofy
topics, lame callers, and an overall low-budget production...
Basically, it makes TalkNet sound very entertaining....

'SSH was leasing its air to Spanish broadcasters for couple of
years prior to this programming switch...Noble hasn't been to unload
'SSH since selling the sister station WSSH-99.5FM(Soft AC) to Granum
Broadcating earlier this year...Earlier this year, the asking price
for the 50K watt WSSH-AM was around $2 million....Geez, you'd think
that if the station was going to go in the satellite talk direction,
it would at least place one available big name(Larry King,
G. Gordon Liddy,etc) in its line-up...

* Greater Media's 5K watt WMEX-1150AM is now leasing part of its broadcast
day to the Spanish group dropped by 'SSH. Haitian radio broadcasters
known as Radio Concorde which leased air-time on 'MEX since the spring are
no longer heard on the station. 'MEX has also made a change in the simulcasting
signals of its FM sister stations when it's not airing Spanish programming
: struggling country outlet WBCS-96.9FM has replaced WMJX-106.7FM,the
#1 AC station in the city.

* Celtics' owned&operated all-sports radio outlet WEEI 590AM has fired its
controversial evening(7-11pm) host Jimmy Myers on Friday(9/24) morning,
a week before his last show. The main reason behind the firing was : lack
of open nights for his show with the upcoming Bruins,Celtics and local
basketball games coming up in the fall/winter/spring. Myers' salary was
around $60K a year.

Myers, who happens to be black,often used his show to lash out at the Celtics
management and Boston fans for being racist...Personally, I liked the
guy because he was energetic and knowledgeable...'EEI will use boring
but informative part-timer Ted Sarandis on the nights whenever there is no
game action to fill in for Myers...

Speaking of 'EEI, Imus' ratings have been pretty decent for July-August.
He lifted 'EEI above the 2 rating which the station hasn't seen in the
morning drive since switching from all-news to all-sports in September
of 1991.

* Early indications are that the country explosion(2 new stations in the
last 7 months) is starting to die off slowly as predicted. Both, Faribanks'
WCLB-105.7(formerly WVBF) and Greater Media's WCSB-96.9FM(fromerly WCDJ),

took very hard hits in July-August Arbitredns. In the case of 'CSB, it never really took off since dropping smooth jazz format in May. It actually lost listeners since changing formats...

* Former WBZ radio personality Tom Bergeron is now the morning voice on WMJX-106.7FM,Greater Media's AC powerhouse...No word on what's going to happen to the former 'MJX morning guy, John Kosian...

* It's widely expected that a long-time morning voice Charles Laqidara on Infinity's WBCN-104.1FM will retire in the next couple of months and join his wife and kids in the sunny Florda...

* Funny guy Tom Doyle,dumped in July in favor of Imus on all-sports 'EEI, is back on WCLB-105.7FM as part of 'Warren&Wally' morning team...

* Atlantic Radio's WHDH 850-AM is becoming more all-news oriented in its morning drive-time. Eileen Prose is no longer hosting 'Boston This Morning' but will remain with the station since she's still under contract...She'll be temporarily replaced by Karen Grace(recently of WCLB) until management finds a permanent host...

Stay Tuned,

-Mark

## 1593. Radio Caroline

|> perhaps a Jane Fonda workout tape?
|> :-)
|>

"Fat Music": Alternative Country, a' la KFAT (1976-1981, R.I.P).
Now see KPIG, 107.5, Watsonville CA.

Longer story:
Once upon a time, a bunch of folks bought a cow-town FM station for $160K, to turn it into a San Jose class-B. To keep the license going, they programmed it with a what-the-hell format of anything-goes country music. They changed the call-sign to KFAT because it was supposed to get them rich, i.e. "Fat City" (if I have understood the story properly).

Unfortunately (for them), the format attracted a cult following which is still legendary. When it came time to sell the thing off, there was an outrage from the listeners and it took them a while to find a buyer who would pay the market price AND keep the format the same.

The late Harvey Levin's estate finally sold it off in 1981, against (as I understand it) the terms of his will. It became KWSS, now KUFX. Still 94 1/2.

John Higdon was one of the original conspirators. Bill Goldsmith was a jock there from mid '79. I was a fan. Semper Lipid.

*** STOP PRESS - STOP PRESS - STOP PRESS- STOP PRESS ***

-- MILANO, Italy, 25 September 1993: -- In reference to the press releases issued by Mr Ernst Zundel, 206 Carlton St., Toronto, Ontario, Canada, containing misleading information on the fact that IRRS-Shortwave would carry his German program "Voice of Freedom" effective Sept. 26, 1993, we are releasing the following statements:

1. NEXUS-International Broadcasting Association is a strictly non-profit organization, founded and audited according to the Italian law. Its entire motivation and purpose of existence is an idealistic dedication to the rights of Free Speech and Expression in accordance with the United Nations Charter On Human Rights, and is intended to provide an alternative cultural forum via radio, whereby individuals and groups may freely practice these rights, un-hindered by the bureaucracy and prohibitively high costs otherwise prevailing in European broadcasting;

2. NEXUS-IBA broadcasts via its own transmitters on shortwave via IRRS-Shortwave to Europe, currently on 7,125 kHz (41 metre), daily at various times, and on FM in Milano, on 88.85 MHz;

3. NEXUS-IBA has absolutely no political or religious affiliation whatsoever;

4. The NEXUS-IBA Charter clearly prohibits the broadcasting of any material that directly of by inference promotes racism or the use of violence against individuals or groups of individuals;

5. In the case of Mr. Ernst Zundel, the NEXUS-IBA's Executive Committee has taken the following position:

"Regardless of statements and claims originating from Mr. Zundel, himself, his programming was NOT scheduled for broadcast via NEXUS- IBA facility on Sunday September 26, 1993, In fact, it is the practice of NEXUS-IBA to review all material from new broadcasters before transmission approval is given. No such review/approval had been given in this case. With particular reference to the fact that our charter clearly prohibits the broadcasting of any material that directly of by inference promotes racism or the use of violence against individuals or groups of individuals, none of Mr. Zundel's programming will be broadcast over the facilities of NEXUS-IBA, pending thorough examination of its content and nature";

6. In regard to the information coming in that some German magazine would be using the misleading information contained in Mr. Zundel's press release to discredit our association, NEXUS-IBA warns that we will try all possible effort to prosecute by all legal means those who deliberately try to cause damage to the good name of NEXUS-International Broadcasting Association, its

members or its activities via IRRS-Shortwave, or those who will fall victim
to the unfortunate contemporary journalistic temptation to create a
sensational story, even though none exists.

# 1597. KSFO has "worst" oldies show

Newsgroup: rec.radio.broadcasting
Date: 1993-09-28 18:43:38 UTC
From: wa2ise@netcom.com
Message-ID: <28a0kq$36d@vixen.cso.uiuc.edu>
Source record: 42335

Sunday morning (Sept 27), KFSO did a "worst" oldies show. They had listeners call in requests for the worst popular oldies. Some of the oldies were "bad", (like "Seasons in the Sun" Terry Jacks), but others, like (Paul Revere and the Raiders "Indian Reservation", Simon and Garfunkle "Feeling Groovy, Donovan "Mellow Yellow", Chairman of the Board "Give Me Just a Little More Time" I thought were not "bad" oldies. Just ones that don't get put on playlists by consultants.
How do consultants and Program Directors compile their playlists? I could decide that 1974 was a poor year for oldies, but in that year I was stuck at a college I hated and 1974 oldies tend to bring on lousy memories of that for me, so that year's oldies have that strike against them for me. The year of "Seasons in the Sun" and "Kung Fu Fighting". Barf.
Also, oldies from 1968 to 1972 I tend to like better, as that was when I was in high school, which was a big improvement over grammer school for me. I suppose you'd have to combine many people's favorites and anti-favorites to remove such biases.

Also, KSFO-AM 560 went all talk.

# 1598. How to decode RDS-Data ??

Newsgroup: rec.radio.broadcasting
Date: 1993-09-28 18:43:40 UTC
From: lorenzc@Informatik.TU-Muenchen.DE

Hi!

Can anybody tell me, how I can decode the RDS(Radio Data System)-Data.
I've got the hardware, that sends the plain (encoded) RDS-Data to the serial
port of my PC, but I don't know, how to decode the data.

If you can give me hints (or pascal-sources), I'd be very happy :-)

Please do only respond via e-mail

Thanks in advance

Ciao
Christoph

Sounds like a high energy time warp to me! WRKO had the call letters WNAC when I was growing up in Reading, Mass. only a couple of miles down the road. It would come in on anything, a crystal set with no antenna, a telephone, you name it. Seriously, you probably are getting all sorts of intermod when the front end of your radio is getting fried like that, and you could easily be hearing bits of several other reasonably strong signals. I notice in my 1988 Broadcasting yearbook that WILD is listed on 1090?? Try again, but pull off on an exit, stop, and listen. Let us know.

## 1600. Sports radio stations

Newsgroup: rec.radio.broadcasting
Date: 1993-09-28 18:43:52 UTC
From: slutsky@tesla.njit.edu
Message-ID: <28a0l8$38g@vixen.cso.uiuc.edu>
Source record: 42338

I scanned the latest M Street Directory for Sports Radio stations. Some were listed as Talk/Sports others just Sports.
Sports Radio Stations

WEEI Boston 590
WIP Phila 610
WFAN NY 660
XETRA San Diego 690
KMPC Los Ang. 710
KJR Seattle 950
KFAN Minn/St.P 1130
WKNR Cleve. 1220
CJCL Toronto 1430
WSCR Chicago 820
WTEM Wash. DC 570
WAQS Charlotte 610
WSKR South NJ 102.7 (simulcat of WIP?)
WQAM Miami 560
KNBR SF 680
KWNK Simi Valle, CA 670 - simulcast of XETRA
WCCO Minneapolis 830

[Moderator's Note: Add to the list WLUP-AM1000 in Chicago which launcheed its all-sports format this past Monday. Also, unless there was a VERY recent change (which I doubt because they had the #1 rating in the market) WCCO is not all-sports. Add, also, WWLS (640 - AM) in suburban Oklahoma City. Bill]

# 1601. Tell me about a new AM BCB station in North Charleston, SC...

Newsgroup: rec.radio.broadcasting
Date: 1993-09-28 18:43:53 UTC
From: trev@netcom.com
Message-ID: <28a0l9$38m@vixen.cso.uiuc.edu>
Source record: 42339

I was tuning around a bit the other night, and ran across some program around 900-1000 kHz (in the dark, I couldn't tell) coming in loud and clear. It was like a walk-through how-to for Astral projection or something...very relaxing and beautiful imagery, neat music and all. As it started breaking up, I heard that it was in North Charleston, SC, but I never heard any numbers. I grew up down in the Lowcountry of South Carolina, and I am anxious for any radio contact with that area from here in the Upstate. Contact, that is, which does not consist of the 168 hrs/week sports coverage on WXTC 1390 out of Charleston. Most of the other stations down there are weak or daytimers, but I have managed one logging of WQMC from Morris College in my hometown, Sumter. Someone fill me in on the station, please...it doesn't appear in the 1992 WRTH. Thanks!

Trevor Bauknight trev@netcom.com

Can someone out there tell me WEVD's frequency?
E-mail would be great.

I ask because some one I know wants to find Bernard Meltzer,
who appeared to retire from WOR.

BTW, WEVD goes way back. Is it true that the call letters
are derived from Eugene V. Debs?

Many thanks, ken.

# 1603. Garry Meier, clear winner of S&G split-up

Newsgroup: rec.radio.broadcasting
Date: 1993-09-29 05:47:29 UTC
From: wdp@airwaves.chi.il.us
Message-ID: <28b7hh$6to@vixen.cso.uiuc.edu>
Source record: 42341

Now that some of the dust has settled following the strange breakup of Chicago radio team Steve Dahl and Garry Meier, here are my perspectives on the current situation.

Steve Dahl is now morning man on the LOOP-AM, now a new all-sports talker. Garry Meier is doing mid-days on the LOOP-FM,which has been transformed into what the AM used to be, a comedy/talk/rock station (kind of a 'hip full-service' outlet).

After listening to the first shows of these two individuals, it seems clear that Garry is the winner. While Steve attempts a double-whammy of a change (not only winging the show himself, but a new and more restrictive format as well) Garry remains among the same personalities and format that he and Steve had shared for so many years.

Steve Dahl's first show was, in no uncertain terms, a patentic disaster. He stumbled through it and in general was difficult to listen to. On the other hand, although getting off to a low-key and somewhat stubly start, Garry's show showed a lot of promise and he took the dificult situation and created something quite good out of it. It is my opinion that Garry w/o Steve will fare much better than Steve w/o Garry.

In his opening moments, Garry talked briefly about the split-up between himself and Steve. However, he did not drag out any dirt (DARN!). He said that he had respect for both Steve and himself (and for what they did for over 15 years) and was not going to sully that with the sordid details of why. He said that it was not due to any comments that Steve made, but that it was a lot of things.

His first words were "Well I got married and divorced in one month..." Refering to his marriage to Cindy and divorce from Steve. He spoke of how the S&G thing worked on a "brain-wave" between the two of them and now all that has changed and that the chemistry could not be faked.

All in all, Garry showed a great deal of personal integrity and respect and copped to the fact that "it will be tough after 15 years of sitting no more than 5 feet away from someone for 4 - 5 hours a day..." to do a show alone, but that things move on and this is one of those things. [Note that the use of quote marks are mine and that they may not be precise quotes, rather very close paraphrazing]

While I will sorely miss the authenticity and chemistry between these two on the air, it is refreshing to hear Garry in this light. He has shown himself to be an integritous person and a professional who will not be kept down by this unfortunate turn of events. The LOOP-FM's current lineup promisies to be as strong as, or stronget than, the old AM line-up. Once the dust totally

settles, I would like to see their entire broadcast day uplinked to a satellite and perhaps syndicated. The LOOP-FM's lineup si... Kevin Mathews AM drive, Garry Meier middays, Johathon Brabndmeier PM drive and Danny (Partridge) Bunneduce evenings. It is not clear if Eddie Shwartz will move to the FM at night or remain on the AM. It seems that he should move to the FM, since he is not a sports talker, but nothing has happened yet.

As for the AM, I am not a big sports fan so I have not really listened to it extennsively. However, unless something improves drasticaly, Steve Dahl as morning anchor will probably be a flop. I am sad to have to say that, but I believe it to be the truth.

My inner-gut feeling is that the entire AM sports thing on the LOOP is not likely to be a mega-hit. If it were not for the fact that WSCR-AM (820khz, The Score) was turned down recently for nighttime power, (which I still can't understand since the old licencee of 820 had 1000 watts at night) I would not have given LUP a ghost of a chance with the format. As it stands now, you have The Score with a loyal following, you have WGN which has a strong sports commitment, WMAQ's embryonic "Sports Huddle" from 6pm till Midnight, WVVX-FM (class-A North suburban 103.1) running a syndicated sports-talk show all night long, and now WLUP-AM, all trying for that sports-talk audience. Although Chicago IS a hell of a sports town, I still doubt that there is enough sport-aholics to support all of these venues. Something has to give, and I am betting that it will be Steve's morning show. Could Imus be far away?

Bill

Jeremy Lansman (the co-founder) told it to me as that they were looking
for some "rude" call letters. One of the first ones they picked was KPIG,
but they found it was taken by a station in Hawaii. They went with KFAT.

# 1605. KUOM-AM, Minneapolis/St Paul

Newsgroup: rec.radio.broadcasting
Date: 1993-09-29 05:47:37 UTC
From: bryen@netcom.com
Message-ID: <28b7hp$6u3@vixen.cso.uiuc.edu>
Source record: 42343

As of this upcoming Friday, KUOM-AM (770 KHz) will be changing formats (or so we all hear) to a "modern rock/college alternative" type station. As this is the sort of music that I normally listen to, and haven't been able to hear since our last station of this type went country a year or so ago, I'm pretty excited about this.. except for the fact that it's AM. Does anyone have info on transmitter location, type, etc for this station? The only thing I know is that it's 5000 watts, but the article in the paper about it didn't mention technical details, like night power, direction if any, and so forth.

Any help is appreciated as I rig up a decent AM antenna..

[Moderator's Note: According to my M-Street directory, KUOM is 770khz, 5kw days only, non-directional and is at the Univ of Minn in Minneapolis. At that frequency and power, they should do alright. If you live in the Twin Cities metro, you won't need anything special to get them. Too bad they are days-only. Bill]

jherman@uhunix3.uhcc.Hawaii.Edu (Jeff Herman) writes:

[...]
>When a federal agent asks you for your ID and you refuse and drive
>away, you deserve what ever happens to you!
[...]

Let me get this straight. If a federal employee with no police
authority (right?) asks you questions, but does not detain or arrest
you (because he lacks the authority to), you should consider yourself
detained or arrested anyway and you deserve to be shot if you leave.

I don't think so. I think you are confusing the USA with a police
state (sometimes an easy mistake to make).

>instead of $200.00! Plus it is in a large paperback format instead of
>the 'phone-book' format of the B'casting yearbook. Bill]

Thanks for the info, Bill. (replying to my own message.. hm)
Could you tell me where I could find a copy of the M-Street
Radio Directory?

[Moderator's Note: Sure Bryen. The guide is published by M Street Corp and
they are at 304 Park av in New York City, 10010. Their voice phone is (212)
473-4668, Fax is (212) 473-4626. They also have a magazine (newsletter?) but
I have never seen that. Scott Fybush was the one who first told me about it,
now I wouldn't be without it. In addition to stations by State/Province/City,
frequency and call letters, they have a 'former call letters' section for
recent changes, and a "markets" section where stations considered to be in a
market, but not necessarily in the main city, are listed along with
frequency, format and rating info. They also have sections on satellite
networks (one of my FAVORITE topics :->), domestic shortwave stations ...
anyway, for $33.00 it cannot be beat! If you order one, tell them you heard
about it on r.r.b. No, I do not work for them, nor do I make any commission
on sales :-). Bill]

Another all-sports station is WFNS, 910 AM, which serves Tampa-St. Petersburg, Florida, and is (I think) licensed to Plant City, Florida.

# 1609. WGST in Atlanta

Newsgroup: rec.radio.broadcasting
Date: 1993-09-29 05:47:57 UTC
From: eefacml@prism.gatech.edu
Message-ID: <28b7id$6uq@vixen.cso.uiuc.edu>
Source record: 42347

The Atlanta newspapers have reported that WGST (news/talk AM 640 in Atlanta) has signed a 5 year lease agreement with the owners of WCHK (country music FM 105.7 in Canton, GA) to simulcast the WGST signal. WGST is owned by Jaycor Communications which also owns WPCH (elevator rock FM 94.9 in Atlanta). Several years ago, Jaycor engineered a frequency swap from 920 kHz to 640 kHz for WGST. (640 kHz was opened in Atlanta as part of the FCC program to increase the opportunities for minority broadcasters. After putting the 640 kHz transmitter on the air, the owner promptly sold out to Jaycor for a neat profit, thus making a farce of the FCC program.) Although the frequency change allowed WGST to go 50 kW during the day, the night time power is so low that the station might as well be off the air after dark. As far as night time listeners were concerned, WGST had effectively shot themselves in the foot. The simulcast will give WGST a much needed increase in their night time coverage area. The station ID for WCHK will be changed to WGST-FM. The loss of country WCHK will probably not even be notices by the locals because there are so many country music stations in Georgia that it would be impossible to count them.

> of open nights for his show with the upcoming Bruins,Celtics and local
> basketball games coming up in the fall/winter/spring. Myers' salary was
> around $60K a year.

Wow! That's a shocker. In particular, sports fans might recall a rather
impassioned eulogy of sorts Myers delivered for Reggie Lewis...something
to the effect that he won't let the Celtics forget about the Lewis family
and that he'll be there to make sure they live up to their promises. Now he
gets canned by the station owned by the Celtics. Interesting.

> Myers, who happens to be black,often used his show to lash out at the Celtics
> management and Boston fans for being racist.

Boston fans ARE racist. Boston IS racist as those of us who grew up there
will attest when we're sober.

>* Former WBZ radio personality Tom Bergeron is now the morning voice on
> WMJX-106.7FM,Greater Media's AC powerhouse...No word on what's going to

The following comes from the Democratic Communique. It was posted in the APC network's media.issues conference.

DEMOCRATIC COMMUNIQUE
A Publication of the Union for Democratic Communications
Vol. XI #3, September 1993

editor: Jon Bekken
Communication Studies, SUNY; Cortland NY 13045
PeaceNet: jbekken
Bitnet: bekkenj@snycorva

Micro Radio
While Springfield, Illinois' Black Liberation Radio continues broadcasting in defiance of Federal Communications Commission orders to cease and desist, other low-power broadcasters are taking up the challenge. And two broadcasters have taken the FCC to court to block its efforts to force them off the air.
The FCC has fined Free Radio Berkeley and operator Stephen Dunifer $20,000 for allegedly broadcasting without a license. His attorney, Louis Hiken, argues that this action is "unwarranted, procedurally flawed, constitutionally invalid, and calls for a forfeiture amount that is grossly disproportionate to the alleged violations and which exceeds the maximum limits set by statute." Hiken argues that FCC policies prohibiting low-power radio broadcasting are obsolete and "violates the First Amendment rights of individuals seeking to exercise those rights via methods and mediums that were technologically impossible when the regulations were created." Dunifer contrasts FCC efforts to drive non-commercial low-power broadcasters off the air to the recent FCC ruling that the Home Shopping Channel served the public interest: "It is obvious the FCC is more interested in protecting the status quo of commercial and corporate interests than actual public interests," and pledged that Free Radio Berkeley would continue its weekly Sunday broadcasts from 9 PM to Midnight at 88.1 FM. "We will not be silenced by federal agencies who hide behind a facade of serving the public interest to mask their flagrant abuse of regulatory power, public money and resources to defend, promote, and serve private corporate media interests."
Another broadcaster, Bill Dougan of Phoenix, Arizona, is appealling FCC rulings against his unlicensed low-power station to the Ninth Circuit Court of Appeals.
The National Lawyers Guild's Committee on Democratic Communications is supporting the challenge as part of their efforts in behalf of "the rights of all people to have a world-wide

system of media and communications based on the principle of cultural and informational self-determination." The Guild's August 6-8 national convention included panels on the Right to Communicate addressing "Community Empowerment Through Radio," "From Algiers to Dublin: The Struggle for an Emerging Human Right" (with Fernando Reyes Mata, Chilean delegation to the U.S., and UDC member Colleen Roach), and "Towards a New International Legal Standard: The Right to Communicate" (with Alan Korn, author of NLG's brief on Constitutional Right to Micro Radio and Michelle Schwartz of Human Rights Advocates). Dunifer also led hands-on workshops on micro power broadcasting, including $40 5 watt transmitters capable of broadcasting to a one to five mile radius. Paper Tiger Television (339 Lafayette St., New York, 212/420-9045) hosted that workshop and is offering a video on micro radio.

Professionalization of Community Radio: The Friends of Free Form Radio Resistor's Bulletin (Box 3038, Bellingham WA 98227-3038) reports on struggles throughout the U.S. (along with some international coverage) to defend grassroots communication against attacks from regulators, professionalization, and such. The February/March edition reports on volunteer programmers at Seattle's KCMU booted from the airwaves for discussing an ongoing controversy over volunteer versus satellite-originated and computer-selected programming (station management hoped to boost ratings and income with a more professional sound, instead both have dropped precipitously); Bellingham's KUGS, where market forces and a controversy over use of non-student programmers (the station is largely financed by student fees) have spurred a format change from a variety of specialized shows (including free-form) to an entertainment-oriented rotation format; the Corporation for Public Broadcasting's turn towards audience research; and radio-related resources and discussions on the Internet.

Resources

Corporatizing Public Broadcasting: Fairness & Accuracy In Reporting's Extra! magazine (April/May, pp. 18-26) looks at National Public Radio's All Things Considered and Morning Edition, finding that NPR coverage generally mirrors the deficiencies of commercial news programming--focussing on the same official sources and events and largely excluding women and minorities from the world it portrays. Extra!'s Sept.-Oct. issue examines "The Broken Promise of Public Television, in articles documenting its generally conservative thrust on political and economic matters and discussing efforts to put the public back in public television. A longer study, "Public Television 'Prime Time,'" is available from FAIR (130 W. 25th St., New York NY 10001) for $9.

the M Street Journal is a weekly newsletter that has the most current call letter changes, frequency allocations, format changes, and usually 1-3 pages of industry news. Expensive - like $100 per quarter? half year? but if you get a sub, they usually throw in the _Directory_ for free.

In article <28a0kq$36d@vixen.cso.uiuc.edu>, wa2ise@netcom.com (Robert Casey) wrote:

> Sunday morning (Sept 27), KFSO did a "worst" oldies show. They had listeners call in requests for the worst popular oldies. Some of the oldies were "bad", (like "Seasons in the Sun" Terry Jacks), but others, like (Paul Revere and the Raiders "Indian Reservation", Simon and Garfunkle "Feeling Groovy, Donovan "Mellow Yellow", Chairman of the Board "Give Me Just a Little More Time" I thought were not "bad" oldies. Just ones that don't get put on playlists by consultants.
> How do consultants and Program Directors compile their playlists? I could decide that 1974 was a poor year for oldies, but in that year I was stuck at a college I hated and 1974 oldies tend to bring on lousy memories of that for me, so that year's oldies have that strike against them for me. The year of "Seasons in the Sun" and "Kung Fu Fighting". Barf.
> Also, oldies from 1968 to 1972 I tend to like better, as that was when I was in high school, which was a big improvement over grammer school for me. I suppose you'd have to combine many people's favorites and anti-favorites to remove such biases.
>
> Also, KSFO-AM 560 went all talk.

WOW! I thought 1974 was an EXCELLENT year for rock music, album and top-40, I guess the terms "excellent" and "worst" are all relative to the listener. I am tired of oldie syndicated shows/stations that play that have limited playlists of rock music from the 50's and 60's. Lets welcome variety to oldies formats.

S O C I A L C L I M A T E
~~~~~~~~~~~~~~~~~~~~~~~~~

PIRATE RIGHTWING RADIO ON THE AIR
Government fails to act

Mere months after closing down a Cape Town community radio station, the government last week granted a broadcasting license to a far-right radio station in Pretoria. The station has been on the air since last Saturday.

Government officials claim the licence was issue for 24 hours only, but no attempt has been made to shut the station down. Cape Town's Bush Radio had its transmitter seized by some 30 officials, and staff are facing charges for `illegally' broadcasting.

Armed rightwingers are guarding the Radio Pretoria transmitter, which beams German marching music, cheesy patriotic Afrikaans songs and speeches by apartheid architect DF Malan. Government claims the 24-hour license stipulated that no political broadcasts be made. The station calls itself `Radio with Boundaries', referring to the rightwing demand for an Afrikaner homeland.

Meanwhile, Parliament will this week pass legislation enabling a new Independent Broadcasting Authority (IBA) to issue licenses to new radio station, for the first time removing from government this power. The IBA will manage the broadcasting frequency spectrum and monitor compliance with a code of conduct.

# 1621. KKSF promotion via audio cassette by mail, value ($) of listener

Newsgroup: rec.radio.broadcasting
Date: 1993-10-01 03:01:18 UTC
From: wa2ise@netcom.com
Message-ID: <28g6hu$29e@vixen.cso.uiuc.edu>
Source record: 42259

Recieced in the mail yesterday a mailing from KKSF 103.7
It contained an audio cassette music sampler of the music that this
station plays. Said something like "now that you're new in the Bay area,
here's a sampler of the music on our station". Interesting but probably
an expensive promotion, 1 to 2 dollars maybe. It's a jazz station,
unfortunately for them, I'm more into "modern rock".

Wonder how much money a listener is "worth" to a station. Must be worth
at least the cost of the above mailing, and probably at least a multiple
of the above to compensate for the odds of successfully winning a new
listener with these mailings. Would an individual listener be worth
something like $10 per year to a station? Probably a crude way to determine
this would be to take the advertising revenue and divide by the number of
listeners as determined by the ratings. Probably a more meaningful
measure is "1 listener-hour is worth 0.0114 cents" or somesuch.

Add KDEF-AM 1150 to your all-sports format stations list. KDEF
has a FM simulcast (KUCU-FM 107.1 FM).

Also, I do believe WCNN-AM in Atlanta, GA is now an all-sports
format. Everytime I've heard them (pretty often), they have had
sports programming from either the SEN or the ASN (I don't listen
to enough talk show hosts on either sports network to make a distinction
between the two).

And, finally, WCCO Minneapolis is not a all-sports format. They have
some sports, but IMHO I would place them as a news/talk/info station
first and a sports station second.

# 1626. Triple-synchronous AM experiment to begin in Kansas City

Newsgroup: rec.radio.broadcasting
Date: 1993-10-01 03:01:42 UTC
From: transvox@tyrell.tyrell.net
Message-ID: <28g6im$29t@vixen.cso.uiuc.edu>
Source record: 42264

Bill:
I'm having to mail this directly to you again--more newsreader
trouble, this time on another system that doesn't like uunet
addresses. At least tyrell's mailer had the decency to tell me
what had happened. Anyway, here it is (revised slightly
so the dates make more sense. -- Mark
-----
The following are excerpts from an article in the Kansas City
Star business section, "Radio revamp: triple-synchronous
broadcasting to be tried to extend KNHN's range," Sunday, Sept. 26.
***
William R. Johnson has placed a $300,000 bet with his radio
station.
The 42-year-old general manager of KNHN-AM is gambling that
by using fiber optics, a satellite and special radio crystals he can
simultaneously broadcast from three widely spaced transmission towers
in Kansas City, Kansas; Amoret, Missouri; and Pittsburg, Kansas.
The new setup is called triple-synchronous broadcasting. If it
works, it will boost the KNHN signal from 25 miles to about 200 miles,
and Johnson will have created a superstation that can be heard as
far away as the Oklahoma border.
***
The outcome of the gamble, the first time triple-synchronous
broadcasting has been tried in the United States, will be tried in
the United States, will be known when he flips the switch Thursday [Sept. 30].
It has captured the attention of trade magazines and the AM branch
of the Federal Communications Commission, which has granted the
station a two-year experimental license.
"I will be either a hero or a goat," Johnson said.
***
The station, one of the oldest in the Kansas City area, was
licensed in 1925 and follows the same restrictions today that were imposed
at the time of its licensing.
"The problem we have is that the station just was not reaching the
suburban areas of Kansas City," Johnson said. "When you get to southern
Johnson County [Kansas--KC's wealthy suburbs], the signal begins to
deteriorate rapidly."
Another problem came from radio stations outside the area that were
broadcasting on the same frequency. Johnson said the KNHN signal,
especially at night, would be hampered by interference from stations
in Pittsburg; Mexico, Missouri; and Springfield [Missouri].
***
About 1-1/2 years ago, he came up with the idea of buying KSEK in
Pittsburg, about 130 miles south of Kansas City. It broadcast on the

same frequency as KNHN, and the station is now operating under the call letter of KPHN.
Early on, Johnson flirted with the possibility of buying the station solely for the purpose of shutting it down. But then he realized that it was a valuable resource and decided to seek ways to synchronize the signal with KNHN. To do that, he would have to build a synchronous tower in Amoret, between Kansas City and Pittsburg.
***
"What they are trying is completely unique to the United States," said Jim Burtle, who oversees the AM band for the FCC. "While there are about a half dozen synchronous stations in operation now, no one has tried synchronizing three stations before." . . . On Jan. 26, as part of FCC efforts to improve the AM band, the commission gave KNHN experimental authorization.
***
Burtle said the FCC would study the test results gathered by KNHN to establish future regulations on such synchronous operations.
***
Tim Sawyer, owner and technical consultant with T.Z. Sawyer Technical Consultants, said that although the concept was not new, the technology had just become available to make it easier to synchronize three stations.
The key components of KNHN's system ae custom-built crystal oscillators, which set the frequency of the transmissions. The crystal oscillators, about the size of a fist, have been built to be as accurate as one-tenth of a hertz. Most radio crystals are accurate up to 20 hertz.
Sawyer said that although the coverage would extend to the Oklahoma border, there would be two two-mile areas where the signals would interfere with one another, creating loud static.
Those areas will be about 60 and 100 miles south of Kansas City, Sawyer said. Both of these areas are not now served by KNHN.
<end of article>
********
KNHN is a news/talk station at 1340 kHz. It is one of three news/talk stations in Kansas City. During off-peak hours, it rebroadcasts CNN Headline News.

Are there any current Beatles radio programs heard regularly?

I am aware of the All Request Beatles special on WDHA (Dover, NJ).

I think there is a Breakfast with the Beatles show on a Los Angeles
station. Please let me know and I will summarize for the list.

Bruce Slutsky
New Jersey Institute of Technology

# 1628. Re: Garry Meier, clear winner of S&G split-up

Newsgroup: rec.radio.broadcasting

While I agree with virtually everything Bill Pfeiffer has to say about the Dahl and Meier breakup, it is worth bearing in mind that for all the difficulty both men have recently faced and will face in the months ahead, the breakup was Garry's to initiate and Steve's to recover from. That is, Garry conceivably has had months to prepare psychologically for the break from Steve, and it is likely he spent a great deal of that time envisioning a show without Steve and convincing himself he could do it. By contrast, Steve Dahl has had only three weeks to make a complete change. He is and will remain in a defensive, not to mention bewildered, position for some time to come.

Yet there's hope for Steve, because the situation in which he finds himself has a precedent. In 1978, Steve's management at WBAI-FM, his first station in Chicago after arriving from Detroit the year before, pulled the rug out from under him by deciding to switch formats. The change, from rock to disco, is by now legendary in local radio lore, chiefly for the chain reaction it triggered, culminating in Dahl's departure to WLUP, his pairing with Garry Meier, and the revenge of Disco Demolition. Easily forgotten is that Steve spent several months languishing under the dreadful disco format before making his move to WLUP. Similarly, Larry Lujack found himself trapped at WCFL for six months when the station unexpectedly switched to "easy listening" music before his contract expired and he was free to hop back to WLS.

Steve, quite honestly, sounds terrible. Given what he's gone through in the past month, we can even say he sounds like a guy still looking for the license plate of the truck that hit him. But he has been in this position before. More importantly, he has the protection of a station that suddenly has diminished in importance -- because the big-money jocks who created in it the first place have all been transferred over to its sister station on the FM. All, that is, but Steve, and I think his staying on the AM is an unexpected gift in this unstable time for his career. He is free to reinvent his show and his personality as he chooses, and does not have three weeks to do it or he gets yanked. Steve probably can take up to a full year to effect a change, perhaps more. Perhaps he can stay on as long as he remains interested in doing a radio show, because most assuredly no one will be able to occupy that particular morning position and keep ratings against Kevin Matthews *and* Tom Shaer (the competition on WLUP-FM and all-sports rival WSCR-AM, respectively). And he will certainly pull in

as many listeners, if not more, than his predecessor on AM, the disgraced Howard Stern.

Garry Meier has simply given himself a head start in the struggle to redefine the personalities of Chicago radio's most successful radio team. Steve Dahl, caught off guard, may appear to have been knocked out, but some perspective and respect for the man are in order. He is ten years Garry's junior; he has a wife who has worked closely with him to define his personality and who undoubtedly is working just as furiously to manage this transition; and he has been in this position before, perhaps more times than he can count if you include his days at all those two-bit California stations. If, and this is a big if, he has the stamina -- will, whatever you call it -- to continue, he will be back. Be patient, and don't forget to tune in from time to time.

[Moderator's Note: Great summary, Aaron. I hope this settles and things do get on-track. Keep in mind that this shake-up is far more dynamic than the WDAI thing since Steve and Garry have been a fixture for so long. In the 'DAI days Steve was still considered to be a shock-jock, and his following was primarily testosterone-poisoned suburban white teenage boys with an attitude. Now-a-days their audience are the parents of todays testosterone-poisoned suburban white teenage boys :-). Bill]

Workshops for $40 5 watts transmitters, with a 1-5 mile range? If you give me a little hyperbole, can you imagine the chaos that would be wrought in an area where this "took off" in its current, illegal, unlicensed state?
While most of these broadcasters have the sense to look at vacant frequencies, I have a lot of doubt about the concept of adjacent channel interference, overmodulation, and frequency stability are a foreign concept to many people who will plunge into this. Until the FCC acts, positive or negativly on this issue, I have strong reservations on the use of the FM band for this activity. Call it protectionist, but I would not want our signal limited by someone wanting to "express their first ammendment rights." In addition, you would think the FCC learned a valuable lesson with the CB band. The chaos that errupted on this "personal" communications band, was in part, due to the no regualtion or limited regualtion that it has received. I could see the same thing happen here. With the right expertise, a 5 watt transmitter can be amplified (our 5 watt exciter can easily drive 1KW) and a little antenna expertise can also add to interference. If the FCC will grant a regulated, interference free to other full power broadcasters type license, with no protection afforded the microbroadcaster, I think this would fly in the broadcast community. It would be similar in concept to the "holding pairs" that currently are used in the amateur 2 metre band in the US for testing and uncoordinated repeater use. Perhaps in the SF Bay area, 88.1 could be the frequency. In NYC it could be another. If it is the intention to truly be "micro" than this would not be a problem. However, if the idea is to cover a wider area, then I can only see a fully licensed and regulated stations existing. Standards also need to be set, and a method of resolving in channel and adjacent channel interference complaints.
Lastly, remember that 5 watts can be a powerful signal. 5 watts at 5000 ft HAAT is a lot different than 5 watts at 30ft HAAT.

For those of you with interest, I have added an old time radio feature to my Sunday Afternoon program on WRMR-AM/850 here in Cleveland.

The 1/2 programs air from 1:30 - 2 pm and features any and everything I have been able to get for broadcast.

If you enjoy that kind of stuff and live anywhere from Toronto, Canada, to Detroit, to Youngstown, to Columbus - be sure to tune in!

Frank Macek
Ass't Program Director/Announcer
Warm 850, WRMR - Cleveland

Due to the response I had three weeks ago, when I posted this, I will post this every month. If you would like to add something to this list then please e-mail it to me.

Thanks,

John

---

Below is a collection of SW receiver reviews written by readers of this newsgroup. The number following the brand and model number is the number of readers, who indicated they use this type of receiver.

All credit for these reviews should be given to the readers of this group and not me.

John Lloyd

Sony 2010 - 3

I found it VERY easy to plug in and start listening. The supplied instructions are adequate for what they do, but
are not really enough to really start enjoying the radio. The whip antenna works great at home, but just doesn't cut it at work (way too much metal/interference). Even the supplied wire antenna does not seem to help at work (I have not yet tried it at home (no real need).

Realistic DX-380 - 1

I am by no means an expert, but I have a DX-380 and can give some of my experiences. First of all, I would pay the extra to get the 390 to get the single side band capability. I miss it. I miss it. Also, the sensitivity for foreign broadcasts (I'm in DC) without an external antenna is poor. You get the BBC and some German broadcast relays from Canada transmitters, some south american stuff, and that's it. BUT with a 50 m Cu wire out my 2nd story window attached to the antenna with an alligator clip, I regularly get Abu Dhabi and Australia at night.

Realistic DX-390 - 2

Great mid-sized digital portable. Good sensitivity and selectivity. Digital display shows time, frequency, signal strength, and memory location. Covers LW (in 9 kHz steps), MW (in 9 or 10 kHz steps) and SW continuously from 150 kHz to 30000 kHz. FM reception (88-108 MHz) with stereo through headphone

jack. BFO control for SSB reception. Built-in timer/clock, 9 programmable memory locations per band, except 18 on SW. Good audio output. RF Gain and AM bandwidth controls. Keypad frequency entry. External antenna, AC-adapter inputs.

A great radio for the beginner or as an upgrade from a smaller and/or analog unit.

Purchased from Radio Shack for $219 in January, 1992.

I have a new Realistic DX-390 (alias Sangean 813??). Seems to be a great value for the price $169 US. I haven't yet heard from someone who can recommend a radio for the same price that is better, and can back it up with facts.

Grundig Satellit 700 - 3

Truly a world-class portable, digital receiver. Excellent sensitivity and selectivity. Digital display with two separate clock/timers, signal strength meter, band selection, frequency readout, and user-definable eight-character "name" for each memorized station. Has RDS circuitry on FM to decode the newly-phased-in system for identifying stations by call letters, format, etc. 512 memory positions, upgradable to 2048. Tunes in .1 kHz increments. Selectable wide/narrow bandwidth for AM mode reception. Tunes MW in 9 or 10 kHz steps. Keypad frequency entry. Receives USB and LSB. Synchonous detector helps pick difficult-to-receive stations out of the crowd. Selectable automatic/manual gain control. Covers LW (150-353 kHz), MW (528-1611 kHz), SW (1612-30000 kHz), and FM (87.5-108 MHz). Excellent audio output, with separate treble and bass controls. Stereo through headphones or external speakers. Line-level out (left and right), external antenna, and 12 VDC-in jacks. Local/DX switch. Built extremely rugged. Multi-national power supply included.

An outstanding performer, and worth the price to a serious SWL or DX'er who requires portability.

Purchased from Universal Radio for $479 in April, 1993.

The Following is a comparison of the SONY ICF-SW77 and the GRUNDIG SATELLIT 700:

Both of the receivers you are looking at are pretty solid. The Sony is slightly smaller and has a somewhat more "finished" feel about it. The Grundig is SOLID with a much better sound. Neither is as good a SW signal receiver as the previous Sony, the '2010 (2001). However, they both have very advanced features; multiple (and in the Grundigs case, expandable) memories with alphanumeric tags so that you have a name as well as a frequency, all sorts of memory grouping and scanning etc. The Grundig has good RDS ident. on it's FM band, but I have a feeling that this

isn't used much, if at all, in the US. If you intend to buy second-hand, be very wary of the SW77 - the early version was pretty flakey. The later version is better but still not as good as the '2010.
I think that the choice comes down to "feel". They are both quite complex to use, but both work as advertised. Try 'em both as they have quite distinct operational methods. If sheer performance on SW is the main point for you, compare them with the Sony ICF2010. You'll buy it and save some loot !
For what it's worth, I tried them both and settled on the Grundig. I have my Satellit 700 in daily use and it's performed without a hitch.

My reasons for the choice were:

1. Performance. The Grudig was much better than the early SW77.
2. Sound. I happen to prefer the slightly bassy Grundig sound to the somewhat sharper Sony.
3. Power. The Grundig takes D cells and can self-charge Nicads in the set, which is how I have it set up. (The SW77 used C cells) They both run down batteries fast. The Sony worse than the Grundig due to it's smaller cells.
4. RDS. I love it and the SW77 doesn't have it.
5. Feel. I like the, I don't know, Germanic solidity and sheer heft of the Satellit. A Satellit with a full load of 4AH Nicads can tip the scales at twice the weight of a SW77. Of course, if drop one on your foot the Sony would be the better bet ! I only use the Grudig about the house. I have a '2010 for the road.

I hope this splurge hasn't clouded the issue for you.

Editor's Note:
I have one of these radios and love it! I sent the following message to someone just after I bought it.

I just recently forked out $500 and bought a Grundig Satalit 700. The sound from the radio is truely impressive! I have always wondered why broadcasters put music on shortwave, because it alway sounded like garbage. However with the 700 I can listen and enjoy the music. The 700 has Bass and Treble controls, which improve the sound quality but the Automatic Gain Control most likely does the most toward improving the sound (I'm not an expert, so this is just a guess!). Anyway my Wife regularly listens to music coming from a 60m band radio station in Guatemala, and can enjoy the sound. However there are some bad points. It is programable, but I have not worked out how to do it yet. Well I tried once and gave up. This is not too bad though, because BBC, Deutche Welle, and about 10 others are stored in a ROM table. And these frequences actual work (i.e. they are the frequencies for North America and NOT Germany).

Also I connected a long wire antenna and found my local AM station on shortwave. I guess the front-end is not good enough to sort the signals out when coming from a large antenna. But don't worry about this either.
If you only want to listen to the biggies like BBC, Deutche Welle, you won't need an external antenna. I am planning to put a Pre-selector between The Radio and the Antenna, and I think this will cure the problem of AM stations on shortwave and cut out some interference. Finally I recommend this radio to you. I'm sure you will have hours if enjoyment from it.

Grundig Satellit 500 - 2

Formerly Grundig's flagship portable SW receiver, this is still an excellent piece of equipment. Excellent sensitivity and selectivity. Digital display with two separate clocks (only one displayed at a time), signal strength meter, frequency readout, and four-character user-definable "name" for each memorized station. 42 memory positions. Tunes to .1 kHz increments. Selectable wide/narrow bandwidth for AM mode reception. Tunes MW in 9 or 10 kHz steps. Keypad frequency entry. In addition to AM, has three receiving "modes" for LW, MW, and SW: USB, LSB, and "Sync," which should more accurately be described as "fine tuning," as this implementation of synchronous detection operates differently from the Satellit 700 or Sony 2010. Selectable automatic/manual gain control. Covers LW (150-353 kHz), MW (528-1611 kHz), SW (1612-30000 kHz), and FM (87.5-108 MHz).
Excellent audio output, with separate treble and bass controls. Stereo through headphones. Line-level out (mono), external antenna, and 12 VDC-in jacks. Local/DX switch.
Built extremely rugged. Power supply included.

An all-around great performer. Now that it's discontinued, many outlets are selling this unit at close-out prices, making this radio an excellent value for the money.

Purchased from Universal Radio for $379 in December, 1992.

I have a Grundig Satellit 500 and am basically satisfied with it. I miss the 512 memories of 700 and 'SSB clarify' control sometimes.

Yes, its 'sync' is exactly fine tuning in 100 Hz steps. However, it is rather simple to make it work similarly to '700 and '2010, because the detector chip is the same in all three. Only a switch with two pairs of contacts is needed. Another design fault, the excessive distortion in SSB mode, can be partly cured by adding two resistors. For serious DX-ers it may be important that the internal ferrite rod cannot be disabled on MW and LW in both 500 and 700, so the in-house noise may become a problem on these bands.

Lowe HF-150 - 1

The Lowe HF-150 (sold by Universal and EEB) is a nice compromise. Similar number of cubic inches as the Sony (different shape), but offering some features of the R8. Also the Lowe is made with a mostly solid alumnum case, which is better than the Sony or the Drake. The Lowe has dual antenna inputs (wire or SO-239), record out, audio out, 12vDC in. It can run off any 12V DC battery. I use 7 aH gelcells which I recharge. The Lowe also takes 8 internal AA nicads *OR* disposable batteries. It will recharge the nicads with a builtin recharger if you plug it into an external power supply. It's a nice semi-portable radio. It has a few ideosyncracies, but you might want to look at it.

Lowe HF-225 - 2

I've had an HF-225 for a few years now, and I'm pretty happy with it. I use it mainly for broadcast listening. It's connected to 25m of random wire via a 5m coax run inside the house.

I tried using an ATU to improve the matching between the aerial and the coax, and on some frequencies it gave a (small) improvement in signal strength, but it was such a pain to keep retuning that I gave up using it.

I recently bought a "magnetic longwire balun", and this seems to offer the best of both worlds - improved matching between the wire and the coax, but no retuning necessary. It's rather expensive, though, and it may be that I'd have been just as well off with a home brew transformer on a ferrite ring...

The other potential advantage of an ATU, filtering out of strong signals well away from where you're listening, seems to be completely irrelevant on the HF-225. I've never yet found a case where switching in the attenuator did anything beneficial. The receiver's front end seems to be excellent in this respect.

I've got the sychronous detector option, and I wouldn't be without it. It quite often makes a heavily fading signal quite pleasant to listen to. Pity it doesn't have a selectable sideband option, though - I quite often find myself tuning an AM signal in the LSB or USB modes to try to get rid of an adjacent interfering signal.

Would I buy it again? Yes, unless I decided that I really wanted a receiver which offered a computer interface.

Sony SW-1 - 2

I bought an SW1E over a year ago, for listening to broadcast SW and FM at home and while travelling. I like this very small radio a lot. It is maybe expensive for a portable, but the build quality is very good, - everything looks and feels right. Battery life is good, and the set DOES work with NiCads (2*AA)

contrary to the instructions. Reception of broadcast SW is good, either with the whip or clothes-line antenna. I've never noticed any big problems from adjacent channels either. As a bonus, FM stereo reception is good through headphones. Audio quality from the in-built speaker is fair, but you'll want to use phones for noisy environments. The only bug with this radio is the memory capacity - only 10 mems is really not enough to cover ALL of AM and FM.
Summary - if you want a very small portable, and appreciate high quality (and can afford it), I would recommend the SW1E. Note the E, which denotes the SW1 kit without the active antenna and brief case - these add a lot to the price, and I don't rate the antenna too highly either.

Sony ICF-5100 - 1

I bought this radio in Kuala Lumpur in 1988, and I'm not sure if it goes by the same model number in other parts of the world. It is a shirt pocket analog tuned radio with coverage from 6MZ to about 21MZ in seven bands. The radio is very rugged and has served me well despite of the physical abuse it has gone through. Because of its small size the speaker is only small and the sound from it it a little tinny, but I used it mainly to receive news in countries without English language news services and in remote areas while camping etc. I recommend this radio to anyone, who considers size the most important factor. Cost was about US$70.

Sony ICF-7601 - 2

In some respects this is my favorite radio. No bells no whistles no FM stereo -- just a good solid (feels like a small brick) analogue unit. It covers AM, FM and has 10 SW bands that cover most of the "out of band" frequencies. Band switching on SW is done by a slide on the front of the radio while buttons are used to switch from AM to FM to SW. The dial is accurate to 5 kHz so is very easy to locate a station. I believe that it was simply the best low cost analogue rig out there. It's still around and can be had for well under $100.00. Grab it!!

I have a 7601 also. Most of its weight is from the batteries and the speaker, giving it better tone and volume than smaller, lighter sets.

As with other cheap analog sets, it wasn't very hot out of the box.

If you "super tweek" the 7601, it's pretty good on AM, but no match for a 2010 or Superradio III. Most of the shortwave bands peaked up well, but I never could get 19 meters working right. As with most analog portables, the whip is part of the RF tuned circuit, so one must be careful to duplicate the exact listening conditions when tweeking the radio. Even the presence of

headphones will shift the antenna tuning.

Unfortunately the 7601 picks up FM stations at various places on the shortwave bands. If you're far enough away from FM and TV stations you might have room for an R-390.

When going on trips I usually take my SW-1 because of the convenience of the presets and the reception flexibility provided by the active antenna that comes with it.

Sony ICF-SW33

I've owned this radio (SW33) for about 8 months and use it as my "carrying around the house rig." I purchased it as a replacement for a Sony 7601 that I now have use at my office at school (things electronic can grow legs on a college campus). By far the best features of this unit are its convenient size and excellent performance on all bands; AM, SW and FM stereo. Don't get me wrong -- this is not a DX machine on SW but for listening to the major broadcasters it's excellent.

The filter selection seems just right and tuning on SW is in 1 kHz. This allows you to move away from interference to a degree. It's a big improvement over the 5 kHz that many radios in this price range allow.

The radio does not have a keypad so entering frequencies is a bit clumsy. By entering the middle frequency of each of the major SW bands in the 7 memories (5 memories plus 2 timer memories) and slewing up or down from those positions you can get around reasonability fast. The SW bands are changed by a combination of 2 keystrokes.

Setting the radio alarm is very easy -- once you have set the clock. That, frankly is a pain. The clock function is very good (combination world/home time) but it takes at least 7 distinct steps to set it. Fortunately the clock is fairly accurate (Looses about 0.2 sec/day) so you don't have to reset it too often. The lightedsec at the touch of a button) is a nice touch.

Would I recommend this radio to anyone? If you do a lot of band scanning, definitely not; it would drive you crazy. At about $140.00 (NYC mail-order) it's an excellent "second" radio to carry around for listening to the major broadcasters. I like it!

Realistic DX-440 - 1

I have a DX-440 and I think it is a good 'dabble' radio but if I ever get serious I will look for a > $500 table model.

DAK DMR-3000 - 1

I bought this radio since they have a 30-day money back guarantee and I did not know if I would like the hobby or the radio. Good

points: direct-entry tuning, 36 station memories, fairly small so it is easy to travel with, speaker sound was good, reception was okay, but improved dramatically with the addition of the Radio Shack 23' rollup longwire ($8.95). Bad points: only 5kHz tuning steps, only major broadcast bands tunable (large gaps between bands), selectivity not so good, no fine tuning, no BFO, no SSB or CW, poor FM reception. All in all, not a bad radio of $69.90, however, it left me wanting for more, so I got rid of it.

I have seen a couple of posts asking for a low cost SW receivers. I have recently bought a DAK Model DMR-3000, for just $69.90+$6.00 shipping from DAK - a mail order company.
The receiver has a direct access, so you can type in the desired frequency, and a manual / automatic scanning system. It also has a dual time clock with alarm and 'sleep' timer. Unfortunately you can tune only to the commercial frequencies on SW, AM and FM bands. I have to say though that cheapness comes at a price. The first receiver I got was defective so I had to ship it back and ask for a replacement. Now, I received a new one which works very well.

Compared to my Sony ICF-7601 the DAK unit is an insensitive brick. The fancy clock and timer features aren't really worth it. About the only thing nice is the FM Stereo support if you plug in headphones but the FM sensitivity leaves much to be desired as well.
Something else to watch for.... That pretty lettering on the buttons will wear off REAL fast. If you haven't used it much yet you won't see a wear off REAL fast. If you haven't used it much yet you won't see a problem. After you've done some tuning you'll see the pretty arrows disappear from the buttons.

Sangean ATS-803A - 1

Since I was now turned on by SWL'ing, I moved up to what most people agree is the best all-around radio for this price. Good points: excellent frequency band coverage (150kHz to 30mHz), fine tuning, good selectivity, BFO for SSB and CW, many scanning options, lots of accessories included, good AM and FM reception. Bad points: way too big to travel with, high battery consumption, synthesizer noise in background all the time, scanning frequently skipped lots of "listenable" stations that I was able to get by manual tuning (what's the use in scanning, then?). I found that adding a longwire antenna only increased interference and noise while not improving the set's scanning sensitivity. Overall, a fairly good radio for the price...

I have a Sangean ATS803A which I love. Comments to quote me on would be that it's an excellent beginner's radio for the price. Although I've heard that the 818 is the "latest and greatest" in this price/performance category. I especially love the full coverage 150kc-30mhz and the (albeit lo tech bfo) SSB

capability.

Sony ICF-SW20 - 1

I was in dispair when I could not find a decent travel portable for under $200. However, I accidentally crossed paths with a Sony ICF-SW20 on sale (normally $99, on sale for $49.99) at a local store and had to check it out. It is an analogue set, but since I got a 30-day return policy on it, what the heck? Good points: analogue tuning so no problem with confining 5kHz tuning steps, INCREDIBLE SENSITIVITY - this radio blew the DAK and Sangean away with the number of stations I picked up, good selectivity (no fine tuning knob - all you need to do is turn the tuning knob slowly), tiny size (4"w x 3"t x 1"d), small whip antenna (only 18"), addition of Radio Shack rollup longwire increased sensitivity even more, great low price (if I lose it or its gets destroyed, no problem replacing it), tuning bands are wider than the major broadcast bands, so you do get some utilitiy reception as well as WWV, AM and FM are really sensitive while FM goes from 76mHz to 108mHz so I can pick up some TV as well. Bad points: frequencies cover only seven broadcast bands (I can live with that, though), only monaural earphone included (however, you can get a $1.39 mono to stereo headphone plug), no BFO for SSB or CW, no station memories. All in all, this radio gave me the best price/features/size ratio of the ones I checked out first-hand. It's a keeper for me!

Magnavox 3625 - 1

Finally received my Magnavox 3625! Well, I'm certainly happy I purchased this little radio. Sure, it's not top shelf, but it's suitable for travel purposes and gives adequate SW coverage.

Has these features:
Travel Lock
Alarm (beeps, does not turn on radio)
Sleep Timer
9/10 KHz switch - for world travel
12 hour clock (however, when unit is swith to 9 KHz steps 24 hour clock kicks in)
20 presets - 5 for each band FM, AM, SW1, SW2
Dual time
Auto store - this feature allows the radio to automatically find the five strongest stations in an area and program
them into the memory of the FM & AM band.
Back stand
Antenna swivels and rotates
Runs on four AA batteries.

Well, the sensitivity is quite good. Steps in 1 KHz increments. No tuning knob but the slew tuning buttons work just fine. It's about the size of a paperback book and can be taken anywhere

reasonably well. No carrying strap,
though. The SW coverage is limited but it grabs the major
broadcasters exceptionally well. Example: the 41 meter band is
covered from 7100 to 7300. So if you want to listen to the BBC
on 7325, you're oput of luck.

However, I like to listen to the BBC on 12095 or 15070 European
signals during the day that I cangrab when I attach a long wire.
The 3625 can't tune these freqs. but it can grab 15400 (from
africa) WITHOUT a long wire antenna! I'm pretty impressed.

Bottom line....A GREAT little travel radio for $70.00! Call a
Magnavox outlet if you are interested.

Magnavox AE-3805 - 2

Great little digital portable. Good sensitivity, average
selectivity. Covers MW (in 10 kHz steps only), FM (no stereo),
and SW in two "bands": 3200-7300 kHz and 9500-21750 kHz. Built-
in timer/clock (12 hour format only), 5 programmable memory
locations per band. Great for travel use.

Purchased from Damark for $49 in May, 1993.

$50 from Damark closeout -- cheapie category

Emerson PSW-4010 - 1

Great analog portable. Good sensitivity and selectivity. Covers
MW, FM (stereo through headphones), and SW in 8 bands (roughly
split out as 13m, 16m, 19m, 25m, 31m, 41m, 49m, and
60/75/90/120m). An excellent travel portable.

Purchased from DAK for $49 in June, 1988.

Sony ICF-5900W - 1

Sony ICF-5900W was a good radio in its day, but isn't worth
listing now.

YORX AM908 - 1

Drake R8 - 1

Drake SPR-4 - 1

Icom R-71A - 1

Kenwood R-2000 - 1

Kenwood R-5000 - 1

Japan Radio Company NRD-525 - 1

Japan Radio Company NRD-535D - 1

Yaesu FRG-100 - 1

Panasonic RFB-65L - 2

$220 from Universal, EEB, etc. -- my main set, an excellent portable, many features, nice construction and details.

Sony SW-55 - 2

This is my principal radio at the present time (I also have the Sony ICF-SW33 and the Sony 7601). This rig is an extremely sophisticated piece of equipment. I especially like the fact that you can store up to 125 frequencies on 25 electronic pages that can be named as you wish (by country). Once programed this is very convenient. The two filter selections are well chosen (much better than the stock Sony 2010 filters). My use the radio to copy WEFAX with excellent results attests to its stability (and that it receives USB and LSB).

The versatile timer/alarm and tape remote feature allow automatic recording with certain tape recorders (Sony and others) of up to five times and frequencies in a 24 hour period. I use this feature all of the time. Audio (stereo on FM) qualitity for a portable is very good; better I believe than the stock 2010 although as with the 2010, it is improved with a set of external speakers.

Unlike the 2010, the SW55 does not have synchronous detection. That's too bad because I believe that if it had this feature it would blow away
tition. As it stands it is an excellent radio. Most interference can be eliminated with the narrow filter or moving away from the interference a bit (the radio is tunable in steps of 0.1 kHz) so the lack of sd is not critical. I really believe that Sony did not include it because it would have then had a very negative impact on sales of the SW77.

Would I buy this radio again. You bet! The only problem I've had in the year an
owned it is that the lettering has worn off the 1, 5, 0 and EXE keys on the keypad. That should not happen on a $300.00 radio!

Philips AE3905 - 1

In short, in my experience, the AE3905 is no real great shakes. It looks neat as hell, and marks its owner as a man of taste and distinction with more money than brains (like I said, *I* have one). Its shortwave performance is mediocre. Using this in a hotel last February, I found that attaching the included reel antenna caused the radio to overload fairly badly. The batteries don't last very long. The filters included are fair, but you still get a fair amount of interference from adjacent stations (not as bad as some small portables, but not good). I certainly wouldn't want to use this as my primary radio. For portability,

it's fantastic. I can listen to the BBC or VoA anywhere. The radio fits in my shirt pocket, although reception in my pocket isn't all that good. In short, the radio isn't worth what Philips charges for it, but if you've got more money than you know what to do with and a desire to have a flashy looking toy, it'll do. The radio has only recently been available in small quantities in the U.S., and appears to have been discontinued in Europe. I got a reconditioned copy for $179 from the Magnavox factory outlet in Kentucky. Universal lists the radio in their catalog for something like $250 new if I recall correctly. You're not likely to find it anywhere else.

I have seen in broadcasting where the FCC has revoked call signs that were assigned after they "slipped by". I think KCUF would not make it, just like KUNT. It is similar to the DMV having restrictions on what combinations of letters & numbers are on a license plate.

WSUC is assigned to SUNY COrtland, about an hour south of Syracuse. If you remember, this station was slapped with an FCC NOL for almost $24,000 for indecency. I have not heard about the outcome, as the institution was challenging the validity of the complaint, even though initially the College & the station staff admitted that the event occurred (it was in print in local papers, before the SUNY lawyers came in). as anyone heard what the disposition of the case is?

>Once heard some college station asked for WSUC ("state university campus"
>and the FCC said no way. This was 10 to 20 years ago, think it was
>a college in/near Buffalo, NY.

Not so. WSUC-FM has been assigned to the State University of NY at Cortland [near Ithaca, SW of Syracuse], since the station went on the air November 17 1976.

You may be thinking of Purdue University, whose new FM CP was randomly assigned the calls WFUC(FM) a few years back. The students _really_ wanted to keep the calls, but the administration decided to have them changed to WBAA-FM (to match the university's pioneer WBAA(AM)) before the station ever went on the air. Talk about being sheepish (groan)!

WFUC, incidentally, was assigned as part of a series. When a new CP is granted and no specific call letter request has been made, the FCC will assign all the new CPs in a given week calls in alphabetical order. Thus the next station granted a CP that week was WFUD, 107.3 in Honeoye Falls NY. WFUD is not yet on the air, more than two years after the CP was granted. Generally the FCC looks to little-used combinations like WFU_ or WZX_ to assign these unrequested calls.

Fitting End to Radio Ship
by Steve Coletti, Crossband Productions

After a lurid career as a fish trawler, a smugglers ship and finally a radio boat, the MV Sarah became a Movie Star for one fleeting moment. In 1987 this old rust bucket was purchased by Alan Weiner, a notorious radio pirate broadcaster, from the US Government. The ship's prior assignment had been to smuggle narcotics under a false deck and it had be taken in a seagoing raid by the DEA and USCG.

It was renamed the Sarah in honor of some rock hero's wife, and was immediately rebuilt by some of New York City's FM broadcast pirates as a radio ship. To be later named Radio New York International, the pirates performed the major work on returning the ship to seagoing fitness and installing the towers while it was docked in a secluded part of Boston Harbor.

Radio New York International hit the air for four days in 1988, and the story of how Weiner, Ivan Rothstein and a reporter for The Village Voice were led away in handcuffs caught press attention world wide. After another attempt at broadcasting in 1989, the ship's transmitters were again silenced, but in a less volatile way, by FCC order.

While RNI began a legal venture as a time buyer on shortwave broadcaster WWCR in 1990, the Sarah went through some of it's own changes. A sale to another seagoing broadcaster fell apart and Weiner again regained ownership of the Vessel. And so it stood in dock in Boston Harbor, until recently.

Weiner has been involved in the construction/conversion of another ship into a radio vessel, The Fury II, owned by Voyager Broadcast Services, also being built in Boston. While working on the Fury II, he was approached in June by MGM. They were looking for an old trawler to use in an as yet untitled motion picture to be released next year. Weiner simply said, "sold"!

The movie company also provided Weiner funds to deliver and clean out the ship which meant that Weiner immediately began stripping out all the left over radio gear and the generator for the Fury II. The movie people then began stripping off the ship's towers and wheel house and replacing them with wooden facsimiles. They also began painting the ship to look much more rusted and dirty then it ever was. According to Weiner, you had to be closer than 6 feet to tell it wasn't real rust. Finally, the ship was made to lisp into an abandoned dock for an added effect.

Last Saturday, September 25, 1993, the Harbor was cleared, the cameras in position and rolling, and with windows boarded up for a mile around, the

director yelled "Action!". In a brilliant display of pyrotechnics, the listing ship was blown up in a sequence of 5 explosions that included the Hollywood mandated fireball and roman candle like, white hot shrapnel fragments spewing out from its inferno engulfed hulk.

According to Alan, who was with one of the camera crews across the bay, "the concussion and display was nothing short of spectacular. It lit up the harbor in broad daylight. It was a fitting end to the ship." For those who saw the explosion on last Monday's "Entertainment Tonight", you now know the story behind the story.

As for the Fury II, that radio ship is getting it's final wiring right now and it should sail soon. This past Wednesday, they received their registry and radio license, however the exact location and the country licensing the venture are still being kept secret. After a shakedown cruise and equipment testing, Alan says you can expect them to be on the air by mid winter.

# 1636. Talk Radio, Pulpit of the ultra-right?

Newsgroup: rec.radio.broadcasting
Date: 1993-10-02 03:01:30 UTC
From: RIOTGIRL@utxvms.cc.utexas.edu
Message-ID: <28iqua$eub@vixen.cso.uiuc.edu>
Source record: 42272

It's ironic that talk radio hosts claim to have special access to
a democratic sample of "public opinion" which in American mythology is re-
sponsible for political processes and policy outcomes. Talk radio in the
hands of ideologues becomes an automatic legitimation of whatever nonsense
makes it out of the mouth of the talk radio preacher. Talk radio therefore
represents the power of the appearance of agreement and consensus, not the
actual consensus itself, although it is possible to say that talk radio also
creates a false consensus.

Christian radio programming, especially of the talk radio format,
is responsible not only for a very large source of funding for radical,
ultra conservative political factions, but also takes up more and more of
the AM (&FM) bandwidth. The stations which like to program talk radio shows
are privately owned and operated for profit. These stations build giant
networks of advertisers and political personalities and campaigns and fuse
advertising money with evangelical political missions. There has been a
dearth of discussion in professional journals about the influence of Christian
talk radio on local and regional political campaigns against abortion clinics,
abortion doctors, homosexuals, and "liberals." As a propaganda tool and
mechanism for disseminating consumer information,

Christian talk radio is a very efficient and economical means to produce the
impression of a vast moral majority linked up in a technocratic solidarity
against differences of opinion. Talk radio creates an interactive reality
where perhaps for the first time "born again" Christians can speak plainly
and openly about their stubborn intolerance of differences in color, gender,
sexual preference, economic status, etc., and expect their claims to register
with popular opinion.

The appearance of agreement and harmony about cultural and political
conflicts in American culture is shattered whenever the monologue is broken
by actual expressions of difference. There are recent artifacts which show
quite clearly what can happen when clever crank callers pose as "normals"
on fascist talk radio shows and then pull the rug out from under the conver-
sation at the last minute. A group of crank callers from Portland, OR
called the National Hardwood Floor Association of American put out an LP/CD
of prank calls to the Christian radio station KPDQ in Portland made over a
three year period. Numerous reviews of this CD have appeared, none of which
thoroughly covers the groundbreaking concept of political crank calling.
KPDQ was an outpost of Oregon Citizens Alliance fundraising and political
advertisement, about the same time this group initiated harsh persecutionist
campaigns against homosexuals and pregnant women.

The Hardwood Floors turned a monological and oppressive talk radio
show format into an opportunity to inject humor, theater, absurdity, \

unpredictability, and radical politics into the "grand conversation" of public opinion. Callers assumed names and identities, personal problems and differences of opinion, and by the end of each call (usually terminated by the host or else amiably resolved) undermined the integrity of the monologue or else made it very hard for the host to keep from laughing. The record is a testament to the ambivalence of the interactive talk radio technology: what usually makes for solid-looking, above-board, uncontradicted and seamless propaganda can be turned on its ear by a few clever and persistent technological activists. Too bad these prank callers will probably be restricted to pranking established programs, and will never make it to a posi the other side of the supposedly democratic talk radio process--pranksters rarely usurp petty tyrants on the radio.

# 1637. Changes at WRKO/WHDH Boston

Newsgroup: rec.radio.broadcasting
Date: 1993-10-02 03:01:31 UTC
From: fybush@world.std.com
Message-ID: <28iqub$eud@vixen.cso.uiuc.edu>
Source record: 42273

You heard it here first...before the papers (or Mark S. :-)...

Boston's co-owned 50kw talk stations, WRKO and WHDH, are
making some changes. The big moves:

WRKO is dropping night-time talk host Victoria Jones,
who was originally mid-day talk host Victoria Jones, and
who was rarely heard anyway because of night Red Sox games.
She'll be hosting Saturday mornings until her contract
runs out. Replacing her in the 8-11pm slot will be
Gene Burns, WRKO's pre-Jones midday host, whose WOR
network show is now heard 6-8 pm on WHDH.

WHDH will reconfigure to make up for the loss of Burns.
There's still no new host for the AM drive slot
involuntarily vacated by Eileen Prose. The station wants
to be more news-oriented in AM drive (to take on #1 AM WBZ).
Middays will still be Money Experts 10am-noon and Rush
noon-3pm. 3-7, currently a news-talk mixture hosted
by Janet Jeghelian (formerly part of WRKO's AM team)
will now be a talk block with Herald columnist Howie
Carr (formerly 9am-noon on WRKO). Howie will go
head-to-head with fading WRKO talkmeister Jerry Williams.
In effect both stations will cannibalize each other.
7pm-5am will be Talknet.

To summarize:

1991 1992 1993
WRKO WHDH WRKO WHDH WRKO WHDH

5am Cuthbert/ Clapp- Cuth./ Clp./ Clp./ Prose
6am Jeghelian rood/ Jegh. Wht. Wht. |
7am | Whitley | | | (now vacant)
8am | | | | | |
9am | | Carr | Tom |
10am Burns Money | Money Leykis Money
11am | Experts Carr/Jones Ex | Experts
12n | Rush Jones Rush | Rush
1pm | Limbaugh | Limbaugh | Limbaugh
2pm Jerry | | | | |
3pm Williams Larry Jerry Late Jerry Howie
4pm | Glick WilliamsAftern.Wms. Carr
5pm | | | Edition | |
6pm Lutsk | Lutsk Gene Lutsk |
7pm | | | Burns | Net. Talk

And if you think this is confusing, you're beginning to understand why listenership has been declining on both stations across the board.

# 1638. Reviews of several DX radios (long)

Newsgroup: rec.radio.broadcasting
Date: 1993-10-02 03:16:03 UTC
From: jlloyd@pluto.cs.clemson.edu
Message-ID: <28irpj$fvk@vixen.cso.uiuc.edu>
Source record: 42265

Due to the response I had three weeks ago, when I posted this, I will post this every month. If you would like to add something to this list then please e-mail it to me.

Thanks,

John

---

Below is a collection of SW receiver reviews written by readers of this newsgroup. The number following the brand and model number is the number of readers, who indicated they use this type of receiver.

All credit for these reviews should be given to the readers of this group and not me.

John Lloyd

Sony 2010 - 3

I found it VERY easy to plug in and start listening. The supplied instructions are adequate for what they do, but
are not really enough to really start enjoying the radio. The whip antenna works great at home, but just doesn't cut it at work (way too much metal/interference). Even the supplied wire antenna does not seem to help at work (I have not yet tried it at home (no real need).

Realistic DX-380 - 1

I am by no means an expert, but I have a DX-380 and can give some of my experiences. First of all, I would pay the extra to get the 390 to get the single side band capability. I miss it. I miss it. Also, the sensitivity for foreign broadcasts (I'm in DC) without an external antenna is poor. You get the BBC and some German broadcast relays from Canada transmitters, some south american stuff, and that's it. BUT with a 50 m Cu wire out my 2nd story window attached to the antenna with an alligator clip, I regularly get Abu Dhabi and Australia at night.

Realistic DX-390 - 2

Great mid-sized digital portable. Good sensitivity and selectivity. Digital display shows time, frequency, signal strength, and memory location. Covers LW (in 9 kHz steps), MW (in 9 or 10 kHz steps) and SW continuously from 150 kHz to 30000 kHz. FM reception (88-108 MHz) with stereo through headphone

jack. BFO control for SSB reception. Built-in timer/clock, 9 programmable memory locations per band, except 18 on SW. Good audio output. RF Gain and AM bandwidth controls. Keypad frequency entry. External antenna, AC-adapter inputs.

A great radio for the beginner or as an upgrade from a smaller and/or analog unit.

Purchased from Radio Shack for $219 in January, 1992.

I have a new Realistic DX-390 (alias Sangean 813??). Seems to be a great value for the price $169 US. I haven't yet heard from someone who can recommend a radio for the same price that is better, and can back it up with facts.

Grundig Satellit 700 - 3

Truly a world-class portable, digital receiver. Excellent sensitivity and selectivity. Digital display with two separate clock/timers, signal strength meter, band selection, frequency readout, and user-definable eight-character "name" for each memorized station. Has RDS circuitry on FM to decode the newly-phased-in system for identifying stations by call letters, format, etc. 512 memory positions, upgradable to 2048. Tunes in .1 kHz increments. Selectable wide/narrow bandwidth for AM mode reception. Tunes MW in 9 or 10 kHz steps. Keypad frequency entry. Receives USB and LSB. Synchonous detector helps pick difficult-to-receive stations out of the crowd. Selectable automatic/manual gain control. Covers LW (150-353 kHz), MW (528-1611 kHz), SW (1612-30000 kHz), and FM (87.5-108 MHz). Excellent audio output, with separate treble and bass controls. Stereo through headphones or external speakers. Line-level out (left and right), external antenna, and 12 VDC-in jacks. Local/DX switch. Built extremely rugged. Multi-national power supply included.

An outstanding performer, and worth the price to a serious SWL or DX'er who requires portability.

Purchased from Universal Radio for $479 in April, 1993.

The Following is a comparison of the SONY ICF-SW77 and the GRUNDIG SATELLIT 700:

Both of the receivers you are looking at are pretty solid. The Sony is slightly smaller and has a somewhat more "finished" feel about it. The Grundig is SOLID with a much better sound. Neither is as good a SW signal receiver as the previous Sony, the '2010 (2001). However, they both have very advanced features; multiple (and in the Grundigs case, expandable) memories with alphanumeric tags so that you have a name as well as a frequency, all sorts of memory grouping and scanning etc. The Grundig has good RDS ident. on it's FM band, but I have a feeling that this

isn't used much, if at all, in the US. If you intend to buy second-hand, be very wary of the SW77 - the early version was pretty flakey. The later version is better but still not as good as the '2010.
I think that the choice comes down to "feel". They are both quite complex to use, but both work as advertised. Try 'em both as they have quite distinct operational methods. If sheer performance on SW is the main point for you, compare them with the Sony ICF2010. You'll buy it and save some loot !
For what it's worth, I tried them both and settled on the Grundig. I have my Satellit 700 in daily use and it's performed without a hitch.

My reasons for the choice were:

1. Performance. The Grudig was much better than the early SW77.
2. Sound. I happen to prefer the slightly bassy Grundig sound to the somewhat sharper Sony.
3. Power. The Grundig takes D cells and can self-charge Nicads in the set, which is how I have it set up. (The SW77 used C cells) They both run down batteries fast. The Sony worse than the Grundig due to it's smaller cells.
4. RDS. I love it and the SW77 doesn't have it.
5. Feel. I like the, I don't know, Germanic solidity and sheer heft of the Satellit. A Satellit with a full load of 4AH Nicads can tip the scales at twice the weight of a SW77. Of course, if drop one on your foot the Sony would be the better bet ! I only use the Grudig about the house. I have a '2010 for the road.

I hope this splurge hasn't clouded the issue for you.

Editor's Note:
I have one of these radios and love it! I sent the following message to someone just after I bought it.

I just recently forked out $500 and bought a Grundig Satalit 700. The sound from the radio is truely impressive! I have always wondered why broadcasters put music on shortwave, because it alway sounded like garbage. However with the 700 I can listen and enjoy the music. The 700 has Bass and Treble controls, which improve the sound quality but the Automatic Gain Control most likely does the most toward improving the sound (I'm not an expert, so this is just a guess!). Anyway my Wife regularly listens to music coming from a 60m band radio station in Guatemala, and can enjoy the sound. However there are some bad points. It is programable, but I have not worked out how to do it yet. Well I tried once and gave up. This is not too bad though, because BBC, Deutche Welle, and about 10 others are stored in a ROM table. And these frequences actual work (i.e. they are the frequencies for North America and NOT Germany).

Also I connected a long wire antenna and found my local AM station on shortwave. I guess the front-end is not good enough to sort the signals out when coming from a large antenna. But don't worry about this either.
If you only want to listen to the biggies like BBC, Deutche Welle, you won't need an external antenna. I am planning to put a Pre-selector between The Radio and the Antenna, and I think this will cure the problem of AM stations on shortwave and cut out some interference. Finally I recommend this radio to you. I'm sure you will have hours if enjoyment from it.

Grundig Satellit 500 - 2

Formerly Grundig's flagship portable SW receiver, this is still an excellent piece of equipment. Excellent sensitivity and selectivity. Digital display with two separate clocks (only one displayed at a time), signal strength meter, frequency readout, and four-character user-definable "name" for each memorized station. 42 memory positions. Tunes to .1 kHz increments. Selectable wide/narrow bandwidth for AM mode reception. Tunes MW in 9 or 10 kHz steps. Keypad frequency entry. In addition to AM, has three receiving "modes" for LW, MW, and SW: USB, LSB, and "Sync," which should more accurately be described as "fine tuning," as this implementation of synchronous detection operates differently from the Satellit 700 or Sony 2010. Selectable automatic/manual gain control. Covers LW (150-353 kHz), MW (528-1611 kHz), SW (1612-30000 kHz), and FM (87.5-108 MHz).
Excellent audio output, with separate treble and bass controls. Stereo through headphones. Line-level out (mono), external antenna, and 12 VDC-in jacks. Local/DX switch.
Built extremely rugged. Power supply included.

An all-around great performer. Now that it's discontinued, many outlets are selling this unit at close-out prices, making this radio an excellent value for the money.

Purchased from Universal Radio for $379 in December, 1992.

I have a Grundig Satellit 500 and am basically satisfied with it. I miss the 512 memories of 700 and 'SSB clarify' control sometimes.

Yes, its 'sync' is exactly fine tuning in 100 Hz steps. However, it is rather simple to make it work similarly to '700 and '2010, because the detector chip is the same in all three. Only a switch with two pairs of contacts is needed. Another design fault, the excessive distortion in SSB mode, can be partly cured by adding two resistors. For serious DX-ers it may be important that the internal ferrite rod cannot be disabled on MW and LW in both 500 and 700, so the in-house noise may become a problem on these bands.

Lowe HF-150 - 1

The Lowe HF-150 (sold by Universal and EEB) is a nice compromise. Similar number of cubic inches as the Sony (different shape), but offering some features of the R8. Also the Lowe is made with a mostly solid alumnum case, which is better than the Sony or the Drake. The Lowe has dual antenna inputs (wire or SO-239), record out, audio out, 12vDC in. It can run off any 12V DC battery. I use 7 aH gelcells which I recharge. The Lowe also takes 8 internal AA nicads *OR* disposable batteries. It will recharge the nicads with a builtin recharger if you plug it into an external power supply. It's a nice semi-portable radio. It has a few ideosyncracies, but you might want to look at it.

Lowe HF-225 - 2

I've had an HF-225 for a few years now, and I'm pretty happy with it. I use it mainly for broadcast listening. It's connected to 25m of random wire via a 5m coax run inside the house.

I tried using an ATU to improve the matching between the aerial and the coax, and on some frequencies it gave a (small) improvement in signal strength, but it was such a pain to keep retuning that I gave up using it.

I recently bought a "magnetic longwire balun", and this seems to offer the best of both worlds - improved matching between the wire and the coax, but no retuning necessary. It's rather expensive, though, and it may be that I'd have been just as well off with a home brew transformer on a ferrite ring...

The other potential advantage of an ATU, filtering out of strong signals well away from where you're listening, seems to be completely irrelevant on the HF-225. I've never yet found a case where switching in the attenuator did anything beneficial. The receiver's front end seems to be excellent in this respect.

I've got the sychronous detector option, and I wouldn't be without it. It quite often makes a heavily fading signal quite pleasant to listen to. Pity it doesn't have a selectable sideband option, though - I quite often find myself tuning an AM signal in the LSB or USB modes to try to get rid of an adjacent interfering signal.

Would I buy it again? Yes, unless I decided that I really wanted a receiver which offered a computer interface.

Sony SW-1 - 2

I bought an SW1E over a year ago, for listening to broadcast SW and FM at home and while travelling. I like this very small radio a lot. It is maybe expensive for a portable, but the build quality is very good, - everything looks and feels right. Battery life is good, and the set DOES work with NiCads (2*AA)

contrary to the instructions. Reception of broadcast SW is good, either with the whip or clothes-line antenna. I've never noticed any big problems from adjacent channels either. As a bonus, FM stereo reception is good through headphones. Audio quality from the in-built speaker is fair, but you'll want to use phones for noisy environments. The only bug with this radio is the memory capacity - only 10 mems is really not enough to cover ALL of AM and FM.
Summary - if you want a very small portable, and appreciate high quality (and can afford it), I would recommend the SW1E. Note the E, which denotes the SW1 kit without the active antenna and brief case - these add a lot to the price, and I don't rate the antenna too highly either.

Sony ICF-5100 - 1

I bought this radio in Kuala Lumpur in 1988, and I'm not sure if it goes by the same model number in other parts of the world. It is a shirt pocket analog tuned radio with coverage from 6MZ to about 21MZ in seven bands. The radio is very rugged and has served me well despite of the physical abuse it has gone through. Because of its small size the speaker is only small and the sound from it it a little tinny, but I used it mainly to receive news in countries without English language news services and in remote areas while camping etc. I recommend this radio to anyone, who considers size the most important factor. Cost was about US$70.

Sony ICF-7601 - 2

In some respects this is my favorite radio. No bells no whistles no FM stereo -- just a good solid (feels like a small brick) analogue unit. It covers AM, FM and has 10 SW bands that cover most of the "out of band" frequencies. Band switching on SW is done by a slide on the front of the radio while buttons are used to switch from AM to FM to SW. The dial is accurate to 5 kHz so is very easy to locate a station. I believe that it was simply the best low cost analogue rig out there. It's still around and can be had for well under $100.00. Grab it!!

I have a 7601 also. Most of its weight is from the batteries and the speaker, giving it better tone and volume than smaller, lighter sets.

As with other cheap analog sets, it wasn't very hot out of the box.

If you "super tweek" the 7601, it's pretty good on AM, but no match for a 2010 or Superradio III. Most of the shortwave bands peaked up well, but I never could get 19 meters working right. As with most analog portables, the whip is part of the RF tuned circuit, so one must be careful to duplicate the exact listening conditions when tweeking the radio. Even the presence of

headphones will shift the antenna tuning.

Unfortunately the 7601 picks up FM stations at various places on the shortwave bands. If you're far enough away from FM and TV stations you might have room for an R-390.

When going on trips I usually take my SW-1 because of the convenience of the presets and the reception flexibility provided by the active antenna that comes with it.

Sony ICF-SW33

I've owned this radio (SW33) for about 8 months and use it as my "carrying around the house rig." I purchased it as a replacement for a Sony 7601 that I now have use at my office at school (things electronic can grow legs on a college campus). By far the best features of this unit are its convenient size and excellent performance on all bands; AM, SW and FM stereo. Don't get me wrong -- this is not a DX machine on SW but for listening to the major broadcasters it's excellent.

The filter selection seems just right and tuning on SW is in 1 kHz. This allows you to move away from interference to a degree. It's a big improvement over the 5 kHz that many radios in this price range allow.

The radio does not have a keypad so entering frequencies is a bit clumsy. By entering the middle frequency of each of the major SW bands in the 7 memories (5 memories plus 2 timer memories) and slewing up or down from those positions you can get around reasonability fast. The SW bands are changed by a combination of 2 keystrokes.

Setting the radio alarm is very easy -- once you have set the clock. That, frankly is a pain. The clock function is very good (combination world/home time) but it takes at least 7 distinct steps to set it. Fortunately the clock is fairly accurate (Looses about 0.2 sec/day) so you don't have to reset it too often. The lightedsec at the touch of a button) is a nice touch.

Would I recommend this radio to anyone? If you do a lot of band scanning, definitely not; it would drive you crazy. At about $140.00 (NYC mail-order) it's an excellent "second" radio to carry around for listening to the major broadcasters. I like it!

Realistic DX-440 - 1

I have a DX-440 and I think it is a good 'dabble' radio but if I ever get serious I will look for a > $500 table model.

DAK DMR-3000 - 1

I bought this radio since they have a 30-day money back guarantee and I did not know if I would like the hobby or the radio. Good

points: direct-entry tuning, 36 station memories, fairly small so it is easy to travel with, speaker sound was good, reception was okay, but improved dramatically with the addition of the Radio Shack 23' rollup longwire ($8.95). Bad points: only 5kHz tuning steps, only major broadcast bands tunable (large gaps between bands), selectivity not so good, no fine tuning, no BFO, no SSB or CW, poor FM reception. All in all, not a bad radio of $69.90, however, it left me wanting for more, so I got rid of it.

I have seen a couple of posts asking for a low cost SW receivers. I have recently bought a DAK Model DMR-3000, for just $69.90+$6.00 shipping from DAK - a mail order company.
The receiver has a direct access, so you can type in the desired frequency, and a manual / automatic scanning system. It also has a dual time clock with alarm and 'sleep' timer. Unfortunately you can tune only to the commercial frequencies on SW, AM and FM bands. I have to say though that cheapness comes at a price. The first receiver I got was defective so I had to ship it back and ask for a replacement. Now, I received a new one which works very well.

Compared to my Sony ICF-7601 the DAK unit is an insensitive brick. The fancy clock and timer features aren't really worth it. About the only thing nice is the FM Stereo support if you plug in headphones but the FM sensitivity leaves much to be desired as well.
Something else to watch for.... That pretty lettering on the buttons will wear off REAL fast. If you haven't used it much yet you won't see a wear off REAL fast. If you haven't used it much yet you won't see a problem. After you've done some tuning you'll see the pretty arrows disappear from the buttons.

Sangean ATS-803A - 1

Since I was now turned on by SWL'ing, I moved up to what most people agree is the best all-around radio for this price. Good points: excellent frequency band coverage (150kHz to 30mHz), fine tuning, good selectivity, BFO for SSB and CW, many scanning options, lots of accessories included, good AM and FM reception. Bad points: way too big to travel with, high battery consumption, synthesizer noise in background all the time, scanning frequently skipped lots of "listenable" stations that I was able to get by manual tuning (what's the use in scanning, then?). I found that adding a longwire antenna only increased interference and noise while not improving the set's scanning sensitivity. Overall, a fairly good radio for the price...

I have a Sangean ATS803A which I love. Comments to quote me on would be that it's an excellent beginner's radio for the price. Although I've heard that the 818 is the "latest and greatest" in this price/performance category. I especially love the full coverage 150kc-30mhz and the (albeit lo tech bfo) SSB

capability.

Sony ICF-SW20 - 1

I was in dispair when I could not find a decent travel portable for under $200. However, I accidentally crossed paths with a Sony ICF-SW20 on sale (normally $99, on sale for $49.99) at a local store and had to check it out. It is an analogue set, but since I got a 30-day return policy on it, what the heck? Good points: analogue tuning so no problem with confining 5kHz tuning steps, INCREDIBLE SENSITIVITY - this radio blew the DAK and Sangean away with the number of stations I picked up, good selectivity (no fine tuning knob - all you need to do is turn the tuning knob slowly), tiny size (4"w x 3"t x 1"d), small whip antenna (only 18"), addition of Radio Shack rollup longwire increased sensitivity even more, great low price (if I lose it or its gets destroyed, no problem replacing it), tuning bands are wider than the major broadcast bands, so you do get some utilitiy reception as well as WWV, AM and FM are really sensitive while FM goes from 76mHz to 108mHz so I can pick up some TV as well. Bad points: frequencies cover only seven broadcast bands (I can live with that, though), only monaural earphone included (however, you can get a $1.39 mono to stereo headphone plug), no BFO for SSB or CW, no station memories. All in all, this radio gave me the best price/features/size ratio of the ones I checked out first-hand. It's a keeper for me!

Magnavox 3625 - 1

Finally received my Magnavox 3625! Well, I'm certainly happy I purchased this little radio. Sure, it's not top shelf, but it's suitable for travel purposes and gives adequate SW coverage.

Has these features:
Travel Lock
Alarm (beeps, does not turn on radio)
Sleep Timer
9/10 KHz switch - for world travel
12 hour clock (however, when unit is swith to 9 KHz steps 24 hour clock kicks in)
20 presets - 5 for each band FM, AM, SW1, SW2
Dual time
Auto store - this feature allows the radio to automatically find the five strongest stations in an area and program
them into the memory of the FM & AM band.
Back stand
Antenna swivels and rotates
Runs on four AA batteries.

Well, the sensitivity is quite good. Steps in 1 KHz increments. No tuning knob but the slew tuning buttons work just fine. It's about the size of a paperback book and can be taken anywhere

reasonably well. No carrying strap,
though. The SW coverage is limited but it grabs the major
broadcasters exceptionally well. Example: the 41 meter band is
covered from 7100 to 7300. So if you want to listen to the BBC
on 7325, you're oput of luck.

However, I like to listen to the BBC on 12095 or 15070 European
signals during the day that I cangrab when I attach a long wire.
The 3625 can't tune these freqs. but it can grab 15400 (from
africa) WITHOUT a long wire antenna! I'm pretty impressed.

Bottom line....A GREAT little travel radio for $70.00! Call a
Magnavox outlet if you are interested.

Magnavox AE-3805 - 2

Great little digital portable. Good sensitivity, average
selectivity. Covers MW (in 10 kHz steps only), FM (no stereo),
and SW in two "bands": 3200-7300 kHz and 9500-21750 kHz. Built-
in timer/clock (12 hour format only), 5 programmable memory
locations per band. Great for travel use.

Purchased from Damark for $49 in May, 1993.

$50 from Damark closeout -- cheapie category

Emerson PSW-4010 - 1

Great analog portable. Good sensitivity and selectivity. Covers
MW, FM (stereo through headphones), and SW in 8 bands (roughly
split out as 13m, 16m, 19m, 25m, 31m, 41m, 49m, and
60/75/90/120m). An excellent travel portable.

Purchased from DAK for $49 in June, 1988.

Sony ICF-5900W - 1

Sony ICF-5900W was a good radio in its day, but isn't worth
listing now.

YORX AM908 - 1

Drake R8 - 1

Drake SPR-4 - 1

Icom R-71A - 1

Kenwood R-2000 - 1

Kenwood R-5000 - 1

Japan Radio Company NRD-525 - 1

Japan Radio Company NRD-535D - 1

Yaesu FRG-100 - 1

Panasonic RFB-65L - 2

$220 from Universal, EEB, etc. -- my main set, an excellent portable, many features, nice construction and details.

Sony SW-55 - 2

This is my principal radio at the present time (I also have the Sony ICF-SW33 and the Sony 7601). This rig is an extremely sophisticated piece of equipment. I especially like the fact that you can store up to 125 frequencies on 25 electronic pages that can be named as you wish (by country). Once programed this is very convenient. The two filter selections are well chosen (much better than the stock Sony 2010 filters). My use the radio to copy WEFAX with excellent results attests to its stability (and that it receives USB and LSB).

The versatile timer/alarm and tape remote feature allow automatic recording with certain tape recorders (Sony and others) of up to five times and frequencies in a 24 hour period. I use this feature all of the time. Audio (stereo on FM) qualitity for a portable is very good; better I believe than the stock 2010 although as with the 2010, it is improved with a set of external speakers.

Unlike the 2010, the SW55 does not have synchronous detection. That's too bad because I believe that if it had this feature it would blow away
tition. As it stands it is an excellent radio. Most interference can be eliminated with the narrow filter or moving away from the interference a bit (the radio is tunable in steps of 0.1 kHz) so the lack of sd is not critical. I really believe that Sony did not include it because it would have then had a very negative impact on sales of the SW77.

Would I buy this radio again. You bet! The only problem I've had in the year an
owned it is that the lettering has worn off the 1, 5, 0 and EXE keys on the keypad. That should not happen on a $300.00 radio!

Philips AE3905 - 1

In short, in my experience, the AE3905 is no real great shakes. It looks neat as hell, and marks its owner as a man of taste and distinction with more money than brains (like I said, *I* have one). Its shortwave performance is mediocre. Using this in a hotel last February, I found that attaching the included reel antenna caused the radio to overload fairly badly. The batteries don't last very long. The filters included are fair, but you still get a fair amount of interference from adjacent stations (not as bad as some small portables, but not good). I certainly wouldn't want to use this as my primary radio. For portability,

it's fantastic. I can listen to the BBC or VoA anywhere. The radio fits in my shirt pocket, although reception in my pocket isn't all that good. In short, the radio isn't worth what Philips charges for it, but if you've got more money than you know what to do with and a desire to have a flashy looking toy, it'll do. The radio has only recently been available in small quantities in the U.S., and appears to have been discontinued in Europe. I got a reconditioned copy for $179 from the Magnavox factory outlet in Kentucky. Universal lists the radio in their catalog for something like $250 new if I recall correctly. You're not likely to find it anywhere else.

It may have been the "Canadian Content" law that did them in.
The Canadian government came up with the short-sighted idea that
radio stations should play a certain quota of local product
whether it was popular or not.

CKLW-FM tries to sound like the old top-40 CKLW format.

The local station carrying Larry King's weekday afternoon show, WDWS/ Champaign, recently dropped it, returning to a lighter local talk show. A friend at that station told me that besides unimpressive ratings, they also took into account listener feedback that Larry was too "rude" with callers. I wonder if that's a small city/Midwestern reaction from afternoon listeners (who may not have been familiar with King's previous overnight show). Have stations been dropping/moving King in other markets, and what's the local reaction to his afternoon show in your neck of the woods?

M Street is informative, but overpriced for my needs.
Unfortunately, since White's Radio Log seems to have gone out of
business many years ago, M St is the only substitute.

I wish someone would publish a national listing of all stations
that broadcast major league baseball, Paul Harvey, Rush Limbaugh,
Charles Osgood, Gil Gross, On Computers, etc. To me, that would
be much more useful than M Street.

[...]

The basis of my claim is that:
1) as far as I know, the FCC has no sworn peace officers
2) you and I have every right to leave a government agent/employee
unless a) that agent/employee is a "sworn peace officer" and
a) that "sworn peace officer" detains or arrest us.

If the FCC employee was not a sworn peace officer and if he did not
detain or arrest the person, the person was merely exercising his
rights as a free American; the havoc was caused by a government
employee who did not respect those rights.

>havoc that ensued.

Correct me if I'm wrong, but FCC employees are *not* peace officers,
have no power to *enforce* anything except the conditions of licenses gran-
ted by the FCC. And the regulations in question are *not* laws, they are
*regulations*, and are enforceable only by having the FCC seek a court
order (at least when they are applied to ordinary citizens).

This, at least, is how it's been explained to me. If I'm wrong, I'd like
to know.

# 1652. Re: KSFO has "worst" oldies show

Newsgroup: rec.radio.broadcasting
Date: 1993-10-06 21:08:49 UTC
From: r.lightwood@trl.oz.au
Message-ID: <28vc51$fiv@vixen.cso.uiuc.edu>
Source record: 42290

Worst song shows aren't always as good as they are cracked up to be.

In 1989 and 1990, 3MMM Melbourne (Australia) had a Top 8 at 8 show.
One night in 1989 they decided to have a 'Top 8 you hate'. The funny thing
was that many of the songs that made it into the Top 8 You Hate were
in the regular Top 8 just a few nights before, and the following night,
they were back in the regular Top 8 at 8.

When they held another Top 8 You Hate in 1990, some of the songs that made
the chart included songs which were actually in the station's regular playlist.
And they continued to be in the playlist despite being voted as one of the
most hated songs.

The moral of the story is that the songs which people hate aren't always
mutually exclusive from the songs that people like, and you can't please
everybody.

# 1654. Talk Show Hosts (response to thread)

Newsgroup: rec.radio.broadcasting
Date: 1993-10-06 21:08:52 UTC
From: "Ellis P. Carter Jr." <epj2@Ra.MsState.Edu>
Message-ID: <28vc54$fj4@vixen.cso.uiuc.edu>
Source record: 42292

In response to: Article 2624 of rec.radio.broadcasting:

"It's ironic that talk radio hosts claim to have special access to
a democratic sample of "public opinion" which in American mythology is re-
sponsible for political processes and policy outcomes. Talk radio in the
hands of ideologues becomes an automatic legitimation of whatever nonsense
makes it out of the mouth of the talk radio preacher. Talk radio therefore
represents the power of the appearance of agreement and consensus, not the
actual consensus itself, although it is possible to say that talk radio also
creates a false consensus."

Any radicals, liberal or conservative, make dangerous hosts.

"Christian radio programming, especially of the talk radio format,
is responsible not only for a very large source of funding for radical,
ultra conservative political factions, but also takes up more and more of
the AM (&FM) bandwidth. The stations which like to program talk radio shows
are privately owned and operated for profit. These stations build giant
networks of advertisers and political personalities and campaigns and fuse
advertising money with evangelical political missions."

This IS America, and the above actions are not illegal. Besides, although
this is true in some rare occasions involving RADICAL WACKOS, this is for
the most part an unfair stereotype of people who do some very good things.

"Christian talk radio is a very efficient and economical means to produce the
impression of a vast moral majority linked up in a technocratic solidarity
against differences of opinion."

The people who criticize them also seem to have a "solidarity against
differences of opinion". The problem here seems to be radicals of either
political leaning. What we need more of is people who are willing to
open-mindedly listen to differences of opinion and, instead of criticizing,
simply agree to disagree.

"Talk radio creates an interactive reality
where perhaps for the first time "born again" Christians can speak plainly
and openly about their stubborn intolerance of differences in color, gender,
sexual preference, economic status, etc., and expect their claims to register
with popular opinion."

It also creates a forum where those willing to make the sacrifice of money
and/or time can exercise their first amendment rights. Besides, just
because their views do not agree with yours does not make you right
(although you have the right) in branding their views as "stubborn
intolerances". Their opinions are as valid as yours.

"The appearance of agreement and harmony about cultural and political conflicts in American culture is shattered whenever the monologue is broken by actual expressions of difference. There are recent artifacts which show quite clearly what can happen when clever crank callers pose as "normals" on fascist talk radio shows and then pull the rug out from under the conversation at the last minute. A group of crank callers from Portland, OR called the National Hardwood Floor Association of American put out an LP/CD of prank calls to the Christian radio station KPDQ in Portland made over a three year period. Numerous reviews of this CD have appeared, none of which thoroughly covers the groundbreaking concept of political crank calling. KPDQ was an outpost of Oregon Citizens Alliance fundraising and political advertisement, about the same time this group initiated harsh persecutionist campaigns against homosexuals and pregnant women."

This is as comical as the Howard Stern callers who frequently interrupt cable call-in shows like those hosted by Larry King and Tom Snyder. I think that these calls, when properly done, have a comical value worth their weight in gold. Yet there are others who think that these calls are an inexcusable show of immaturity and disrespect. But you don't see me calling their views "stubborn intolerances". Besides, for the target listener, these calls don't shatter the "appearance of agreement and harmony" any more than the views of the show hosts seem to shatter your personal beliefs. And the target audience seems to be the only audience that matters in radio, other than the audience composed of FCC investigators.

"The Hardwood Floors turned a monological and oppressive talk radio show format into an opportunity to inject humor, theater, absurdity, \ unpredictability, and radical politics into the "grand conversation" of public opinion. Callers assumed names and identities, personal problems and differences of opinion, and by the end of each call (usually terminated by the host or else amiably resolved) undermined the integrity of the monologue or else made it very hard for the host to keep from laughing. The record is a testament to the ambivalence of the interactive talk radio technology: what usually makes for solid-looking, above-board, uncontradicted and seamless propaganda can be turned on its ear by a few clever and persistent technological activists. Too bad these prank callers will probably be restricted to pranking established programs, and will never make it to a posi the other side of the supposedly democratic talk radio process--pranksters rarely usurp petty tyrants on the radio."

No, the record is a testament to the hilarious nature of these calls. They should be archived and played on a weekly radio show.

"Submitted by RIOTGIRL@utvms.cc.utexas.edu"

There are no conspiracies by people of either political leaning to brainwash people or take over the world through the use of talk radio. There are, however, many people exercising their first amendment right through the use of talk radio, even more who agree with their views, and still more that enjoy the programming, despite whether they agree with the views of the host. Attacking talk radio is not justified solely because one does not agree with the views being expressed on a few shows, nor is it justified to attack a group that does good in the world solely based on

the fact that you disagree with their beliefs. If you are intolerant of the intolerant, are you intolerant of yourself?

[Moderator's Note: Are you SURE there are no such attempts to 'brainwash' the population via talk radio? There certainly is in the world of advertizing, some argue that news is slanted in favor of what ever ideology they oppose. Leftists say that the news is right-wing slanted and right-wingers (now called conservatiuves) say that it is controled by the left. What about a conspiracy to brainwash people into denying that there could possibly be a conspiracy to brainwash people? That would be a good place to start, NO? If I wanted to brainwash you, the first thing I would attempt to instill in you is the denial of the possibility that you are being brainwashed. Thereby anyone who warns you of the process that you are undergoing would be rejected out-of-hand by you as being ridiculous. Bill]

# 1655. Rebuttal/ Talk radio: Pulpit of the ultra-right

Newsgroup: rec.radio.broadcasting
Date: 1993-10-06 21:08:53 UTC
From: alo2@po.CWRU.Edu
Message-ID: <28vc55$fj5@vixen.cso.uiuc.edu>
Source record: 42293

Let's join the host in a little reality break, shall we?

(Trumpet-dominated jingle theme starts, up and under host's vocals...)

good morning, and welcome in to the Intelligent Morning Radio Program for Saturday, October 2, 1993. Sunny skies today with a high of 58, right now 48 at the station, 49 downtown and 45 at the airport. Get on the air by calling us right now, or emailing at the address at the top of this posting.

(theme ends in appropriate trumet blast and jingle singers singing calls.)

I was telecomputing last night on INTERNET, one of those electronic super-highways that the Billary Clinton administration would love to see keeping track of your entire life, when I read a severaly misinformed, but decidedly liberal posting from someone in Texas. Having been to Texas for an eight month stint in Odessa, a place I reccomend you NEVER go, I felt the need to put this liberal in her place, where they all belong.

She was decrying the recent explosion of conservative talk shows, which, if you've listened to this show for more than 15 minutes, you will be intimately familiar with. Her problem seems to be that the right wing, and more specifically, CHRISTIANS (aaack! get 'em away! folks with morals!!) have found a voice that had been reserved for liberals for decades, and she's scared to death. That's right, listeners, I said SCARED TO DEATH! To understand the significance of this fear, let's take a look at how those save=you-from-yourselves, liberal do-gooders have spread their prophecy of dependence on government and lack of personal responsibility on the pouplace.

It all started in the sixties, when time for these birds was measured in NASA style countdown terms of t-minus minutes until the next protest. All through the 70s they carried signs, sat down in the street, and hyphenated their names in a vain effort to instill their political agenda upon us.

The eighties brought the 12 years of unprecedented economic growth, when liberals were downright ignored, pushed to the side as the free market provided money and jobs, much to their horror. Reagan cut taxes (the mark of the devil for left-wingers...they only want taxes to increase) and saw revenue increase. The Democrat controlled congress spent and spent, but the power of the free market continued to dominate.

Now comes along Bill Clinton, the pied piper of the left. He convinced forty-some precent of the nation that Bush was bad, and that he would lead us to the promised land of entitlements and tax increases.

All the while, Talk radio became fab. Now, conservatives, not people given to hedonistic shouting of oaths and useless sit-ins, found a place to inform the public of the facts that the Liberally-controlled media would not. Rush

Limbaugh led the way and proved that conservatives really do exist. You don't hear from them because while the liberals protest and whine, the rightists are making a living, making money, and succeeding, which is exactly what the dems could do if they weren't so damned jealous of those who choose to work and prosper.

Now, a way for those who do while others protest have a way to speak and be heard without taking days off work to march and picket.

WAIT!! Screamed the liberals! HOW CAN THEY BE HEARD! How can they possibly do this and still make money? This, you, see exploded in their faces. The shattered peices of their hyphenated names littered the sidewalks where "Hell no, we won't go" was heard (and ignored) just months before.

Now what. Let's see. We've got no money, so we can't put them out of business. We work on emotion, not facts and reason, so we can't go on a traditional campaign. I KNOW! GRAB YE SIGNS, O disenfranchised boomers and clueless college kids! We'll scream and howl our protest cries for the masses! It's not....well, FAIR!! Yes! We deserve EQUAL TIME!! If no one will listen to our ludicrous protests, then we'll cry until someone pacifies us with a talk show! And then we can all commiserate via the airwaves how unfair life is, and the urgent need to separate americans from their money through taxes!

The commentary that statred this points up just how afraid the liberals are, now that the right has found a dignified, effective medium for intelligent discourse on how fast everything is going to hell under clinton. No signs and slogans needed. Just facts and thought, two weapons that the liberals have no way to combat.

Right-wing talk hosts tell the TRUTH. All you have to do is have the inner strength to believe it, or at least check our facts.
We are unstoppable. Just watch the left squirm.

After the break, your phone calls, and the local headlines from NewsChannel 15.

I'm Paul Phillips. We'll be right back.

Paul Phillips

I happen to work in both radio and TV here in Chicago and am very discusted with what's going on in these fields. I am not sure how aware the public is of this but it's about time someone opened their mouthes.

Gary Spears is a great friend of mine. He has number one ratings at WBBM-Fm (B-96) in Chicago. He was let go "blown out" because he was "making tooooo much money." For Chicago in afternoons, I'm sorry but $70,000.00 is NOT toooo much money. Yes it is a lot, but not for the Chicago Market (Steve Dahl---$670,000 and Doug Banks WGCI----$645,000 and Tom Joyner WGCI--1.2 Mil). it's not a lot of money.

NBC and CBS are about the CHEAPEST companies that I have ever worked for. To the American public, programming suffers. As owners of the airwaves (The American People)...it's about time we demand more. With the American's airwaves, do you know how much bartered "stuff" these stations get without forking over a penny....bulidings, supplies, payroll cash, you name it!

It's time that this stops!!

kforsha@orion.itt.luc.edu

[Moderator's Note: Steve Dahl does not make anywhere near what you claim. He and Garry made somewhere around 300k for the two of them, ples a very small profit share in the AM station. Still in all your point is well taken. Bill]

# 1657. South African Pirates

The following is from the weekly political update produced by
the South Africa Parnership Project and posted in the APC
conference reg.safrica.

As the author notes, the fact that the right-wing Radio Pretoria
was broadcasting illegally and was rewarded with a licence contrasts
sharply with the decision to prosecute the progressive community
station, Bush Radio.

If you missed the posting about the latest harrassment of Bush Radio,
send an email message to amarc@web.apc.org and we will forward it to
you.

2 - Right Wing Station Given License

Rebel Radio Pretoria, which has been broadcasting illegally
since September 20, has been given a temporary license to
broadcast "cultural events" for the month of October. The
station's "cultural" events include promoting a shooting
match commemorating guns used in the Boer War and the
birthday of right-wing hero Paul Kruger. The licensing
contrasts sharply with the action taken against Bush Radio, a
community radio collective in Capetown, which had its
transmitters sealed and confiscated after broadcasting for
four hours in April.

/* ---------- "RaqdioAction Alert" ---------- */

4 October, 1993

AMARC Solidarity Action Network received this urgent demand today
from Bush Radio, a community radio project in Cape Town, South
Africa.

An Action Alert was first issued in support of Bush Radio when its
equipment was seized in May. For a copy of that Alert, send a request
to amarc@web.apc.org.

Please distribute it to interested parties and please send a fax
in support of Bush Radio.

Thanks.

30th September, 1993

OPEN LETTER RE: PROSECUTION OF BUSH RADIO

To Bush Radio's Members, Users Friends and Supporters

Bush Radio is being prosecuted for starting a community radio
station. We are charged on three counts:
1. illegal broadcasting
2. illegal possession of broadcast apparatus, and
3. obstructing the course of justice.

These charges are being levelled at two of our members, who face
stiff penalties: R10,000 and/or 3 years imprisonment each on the
first two counts alone.

The first court appearance is set for October 13. We now need
your support to stop the victimisation of genuine community radio
before it even gets going.

Bush radio is a community radio initiative, owned and controlled by its membership, a wide range of organisations and individuals. For more than two years we planned and talked about going on air. Our attempts to get a broadcasting license from the Ministry for Home Affairs were repeatedly frustrated, and our membership eventually decided that we should go ahead without one.

So from 4 - 8 pm on Sunday April 1993, listeners on the Cape Flats heard a mix of programmes produced and presented by our "networkers" (volunteer producers from the community). Scores of other people were there, and all of them had a chance to go on air, most of them for the first time in their lives.

In the week that followed the state seized our transmission equipment, effectively silencing us on the eve of our second broadcast, scheduled for May 1st. About six weeks later we were warned that the state was considering laying charges against us. Last week charge sheets were served on our lawyers, to appear before a regional court on October 13th.

For the state to take such action at this time seems to contradict their professed commitment to a more open South Africa. We are being charged in terms of laws inspired by apartheid at the very same time that new legislation passes through parliament - including bills for the transitional Executive Council and an Independent Broadcasting Authority, drawn up by parties at the negotiations.

The enforcement of these charges could have serious consequences for us at Bush Radio. For an organisation which employs a staff of only two people, we do a disproportionate amount of work, and can ill afford to be spending time on defending unnecessary legal action. Bush Radio runs a range of training programmes aimed at bringing new voices into the broadcasting environment. We work with a number of organisations, producing programmes that are distributed either on audio-cassette or on other radio stations. Substantial time and energy is invested in building up a network of volunteers, the backbone of a truly participatory community radio. A lot of time is spent providing support to others who want to start radio stations in their own communities.

Despite our modest resources, Bush radio has become something of a "flagship" for the emerging community radio sector in South Africa. For us to be criminalised could weaken the growth of this new sector which holds such real potential for communities wanting to control their own development.

We were always open and peaceful in our methods, and feel that this treatment is misplaced. To drag us through the courts is a waste of time and money, not only for Bush Radio but also for the taxpayer who foots the bill.

We hope the charges might be dropped, and seek your support in making our case. What can you do?

At this stage we ask that you write letters. They should be:
"To whom it may concern,"

The content of your letter would depend on your relationship with Bush Radio.

If you are a member, we'd like you to say why you think it's inappropriate for us to be prosecuted, and include a statement of solidarity.

If you are a client, we'd like you to say why you think it's inappropriate for us to be prosecuted, and include a statement of solidarity.

If you are a client, we'd like to hear about the value of service you have derived from Bush Radio, and we would like you to be specific about what we did together.

If you are a friend, or supporter, please write whatever you feel is appropriate, and we'd appreciate comments on how this kind of action undermines confidence in the nature of change in our country.

Please send these letters to:
BUSH RADIO at fax no.:
+(27-21) 448-5451

and send originals to:
P.O. Box 13290
Mowbray, 7705
Cape Town, South Africa

We should receive these letters by Friday 8th October, or as soon as possible thereafter.

Thanking you in anticipation,

JEANNE DU TOIT
Secretary for the Coordinating Committee

wgsmith@netcom.com (William A. Goldsmith) writes:

> Correct me if I'm wrong, but FCC employees are *not* peace officers,
> have no power to *enforce* anything except the conditions of licenses gran-
> ted by the FCC. And the regulations in question are *not* laws, they are
> *regulations*, and are enforceable only by having the FCC seek a court
> order (at least when they are applied to ordinary citizens).

No correction necessary. When and if the FCC needs to take physical enforcement action, federal marshalls are taken along to provide the legality. An FCC field engineer is just exactly that: an engineer who works for the FCC, fancy badge notwithstanding. He has no power to forcibly question, detain, or otherwise compel any physical action. Of course, he could come back with some marshalls, or call for the local gendarmarie (who, in this case, probably got really pissed).

My first encounter with this person (the FCC engineer) was in 1970. David Doon, on what just had to be one of his first field inspections, came to KRPM (now KOME). No amount of classroom training could have prepared him for what he found. The studio operations were carried out on a kitchen table set up in an abandoned dental office. A single rack contained the Belar monitor and some home made amplifiers as well as the Moseley WRC10T remote control.

He spent a considerable amount of time watching the Belar frequency meter and then pronounced that it did not meet FCC specs. "The rules," he explained in moderate Asian accent, "require the meter to be able to be read within fifty Hertz. This meter wobble around several hundred Hertz. It cannot be accurately read."

I had to explain to him that the 1946 vintage RCA exciter ("The Iron Fireman" as Ben Dawson called it) used a Singer motor connected to a variable cap as the AFC. Even though it was viscous damped, there was still some instability that could be observed on the monitor. And that was what he was seeing: the AFC gyrations of the exciter--not monitor ambiguity. Mr. Doon scoured the rules to find some applicapable violation, but he was unable to save face. So he wrote it up anyway! The answer given for the citation was the same one I had given in the field.

49> Is it possible to get a radio announcing job without
49> having experience on radio? Let me explain.
49> All my life Ihave always wanted to be on radio

There are always small market stations willing to hire an
apprentice at minimum wage. Check the trade journals, and send
out audition tapes.

[Moderator's Note: While I would heartily concur that one should send out tapes and even physically beat on the doors of small staions seeking that entry-level position, I would also suggest developing a rapport with staion personel and laying a lot of groundwork. I would not concur whole-heartedly, though, with your contention that "...There are always small market stations willing to hire an apprentice...". With the proliferation of cheap, slick satellite formats, there are fewer and fewer stations using local air talent(especially the tiny markets where one would be most likely to find such a break) . Of course, the topic of satellite formats and why they are (IMHO) killing local radio, has been discussed here before, but it applies in this case. Esentially, if you are one who "MUST" be in radio, and you re willing to go "anywhere" and do "anything", format wise, are willing to make less than the local Taco Bell employee (for a while anyway) and can deal with non-existant job security, then you WILL make it... eventually. Keep trying and trying. However if you are one who insists on working in a certain small geographic area, doing only "your favorite" format(s), requiring a salary in excess of minimum wage, and you want to be an instant "Star", you might as well give it up now and go get a day job. In this business it is the flexible, persistant, self-motivated and talented (or one willing to cultivate talent) individual who will break through that invisible barrier between listening to, and creating, radio. Bolt <boltb@Operatns.mohawkc.on.ca> writes:

> One of my Radio Broadcasting students recently asked the question about
> certain FM radio signals having a negative effect on the Ozone. That was
> news to me. Has anyone else any input?

EMR at FM frequencies is non-ionizing and should have absolutely no
effect on upper layer ozone levels. Of course, if the antenna is shot
and is experiencing corona discharge, it might be actually generating
ozone. But that would have no effect on "the ozone", assuming you are
talking about the "ozone layer".

Maybe they meant that if Rush Limbaugh were to appear on FM, it would
be bad for "the ozone". :-)

[Poster's Note: Oh, brother!]

Tapes go out Tuesday morning, mail me your snail address IF YOU
CAN BROADCAST

In our efforts to uncover and reveal news, we've run into many
lies, coverups, deceits, propoganda, and manipulations.
The more we read from alternative sources like In These Times,
the Progressive, the Nation, Public Citizen, Z magazine,
CAIB, and electric sources like misc.activism.progressive
and alt.org.food-not-bombs, the less the news in The New
York Times, The Washington Post, The San Francisco
Chronicle/Examiner, and electronic sources like CNN,
ABC, NBC, CBS, FOX, etc seem true.

I am greatly disheartened that what I felt to be "all the
news fit to print" has become a sham in my estimation. I
used to live and breathe the NYT and now I can't. But do
I dispare? No way.
-Buck

# 1666. Kansas City follow-ups

Newsgroup: rec.radio.broadcasting
Date: 1993-10-09 22:37:18 UTC
From: transvox@tyrell.tyrell.net
Message-ID: <297eeu$nf2@vixen.cso.uiuc.edu>
Source record: 42158

Here are follow-ups to some items I posted over the past few weeks:
---
KNHN(AM) says its experiment with triple-synchronous broadcasting
is going well.
At noon Sept. 31 (last Thursday), the one-kilowatt station at 1340 kHz
began synchronous broadcasting with transmitters in Amoret, Mo., and
Pittsburg, Kansas.
According to the Kansas City Star, this is the first time in the
United States that an attempt has been made to synchornize three
transmitters on the same frequency with the same programming.
The station's general manager, William Johnson, is quoted by the
Star as saying, "everything is going better than anticipated."
---
Control of WHB(AM) is now officially in the hands of nearby Carrollton
farm broadcaster KMZU(FM). WHB(AM) appears to be simulcasting KMZU,
under the slogan "Missouri's Farm Voice."
The Kansas City Star reported that a delay occurred in transferring control
of WHB from its former owner, Shamrock Broadcasting, to Kanza, Inc.
Control was to be transferred midnight Sunday (Sept. 26), but did not
occur until late Tuesday morning (Sept. 28). In the meantime, WHB
continued to broadcast oldies without announcers or commercials.
---
In the process of forming a duopoly involving Kansas City talk stations
KCMO and KMBZ form a duopoly, Bonneville Broadcasting has dismissed a
KMBZ morning talk show host.
Tom Leathers was relieved of his duties Sept. 31 (Thursday), according
to the Kansas City Star. Leathers is the publisher of the "Squire"
newspaper of Johnson County, Kansas. Leathers was replaced by KCMO sports
talk show host Jon Hart.
Hart has been filling in on the afternoon sports talk show on KCMO since
Bonneville took KCMO over from Gannett under an LMA. Bonneville is buying
KCMO-AM/FM for a price estimated between $7 and 8 million.
Leathers had been with KMBZ for two years. KMBZ management said the
change is being made to replace someone that has multiple outside interests
with a full-time station employee.

>You overall opinions of its operation??? Bill]

Well, it's hard to be objective on this; I work as a consultant for the
company. I do think that it's easy to use though. It can print mailing
labels and generate reports on the stations (although I think it's a
little weak in this area). You can export all the data into a comma
delimited ASCII file, and then use it in another database program.
BBH software updates the data quarterly, and it cost $99.95 for a
years worth (4 issues).

# 1668. Re: Rebuttal/ Talk radio: Pulpit of the ultra-right

I don't want to start a thread on this, but I would like to point out that I am a CHRISTIAN (yup, a real-life, Bible-thumpin born-again type), and NOT a CONSERVATIVE. There are huge numbers of Christians, who, like myself, want to avoid the stereotype this person is encouraging.

I have also had the experience of encountering "folks with morals" who were not Christians.

God bless,

Al.

WILLCOX@UCSVAX.UCS.UMASS.EDU

"The Bible doesn't say God is a Republican, or a conservative. He's not white, nor is he European. He doesn't favor Laissez faire or socialism. Jesus was a Palestinian Jew. Over 75% of Christians today live outside of North America and Europe. God cannot be so easily pigeon-holed. The Bible does say that GOD is LOVE (not to be confused with love is god)."

# 1669. Re: How to decode RDS-data?

Newsgroup: rec.radio.broadcasting

David Vrona writes:

>What is RDS data?

The Radio Data System is a way to send digital out-of-band information
together with the radio signal. The information includes things like
station name, type of transmission, traffic information indicator (so a
car radio can switch on automatically), time and date, frequencies of
nearby transmitters of the same network, frequencies of nearby
transmitters which carry traffic information, etc.

I think it can only be used on FM. I don't know if it is used outside
Europe.

# 1674. Administrivia: Seeking "RADIO-WATCHERS"

Newsgroup: rec.radio.broadcasting
Date: 1993-10-10 02:43:47 UTC
From: wdp@airwaves.chi.il.us
Message-ID: <297st3$9e4@vixen.cso.uiuc.edu>
Source record: 42162

I was thinking that with the renaming of Airwaves, and the growth of the mailinglist and readership, that I would put out the call for readers who would like to be 'Radio Watchers"

I would like to develop a dialogue with one or two people in different major-metro areas who wish to be 'AIRWAVES Radio-Watchers' in their city. You would be the one(s) to send in the quarterly arbitron ratings for your market, pass along local radio happennings in your town and generally keep the list/group informed of changes in your area.

Now we have a couple of people who are doing this from time-to-time, and a couple (like Mark and Scott) who do it fairly regularily. What I would like to put together is a team of individuals who would be responsible for reguar features about media in their local area. This invitation is open to readers all across the globe. In fact I would like to extend a SPECAIL encouragement to people outside of North America, since we don't hear nearly enough from them.

This project is not intended to limit or replace existing posters from given cities. All are welcome to post. This idea is more to try to create a core of reguilar posters who keep track of media in their areas and can pass on information regarding same.

Does this sound like you?

Send me some mail and lets talk.

Bill

True of CKLW FM, even some of the old BIG 8 jocks like Tom Shannon
still play the oldies to this day. IMHO, what toppled CK in the
70's , and many other AM rockers of the day, was the rise of FM
and album rock. The fact that so many people were buying stereo
albums and not bad sounding 45rpm singles, listening to them on
"HI-FI" stereo systems instead of plastic table radios had to
have affected AM listenership. Also, the fact that many AM music
directors refused to recognize heavy sales of a significant new
music product by refusing it airtime drove many of us to FM.
ALmost sounds like the College radio vs. mainstream FM clones
battle of the bands going on now!
_-_-_-

Actually what they found was that in the long-term, playing them made
them popular. Just exactly what one would expect - if the groups were
good and they were - and the exact purpose of the policy. Which is
why there is still a content policy.

IMHO...

I think King has gotten ruder (is that a word?) in recent years. Years ago, I had enormous respect for LK and listened to him faithfully. Then he began to grate on me and I pretty much quit listening. Now, I can't take him at all. I don't think it's because I've gotten that much more "polite" in that time, but I suppose it's possible.

BTW, I think his late-night successor, Jim Bohannon, is the most rude and intolerant talk show host I've ever heard. Except maybe for Stern. Logical replacement for King. :-(

Bill Pfeiffer recently suggested that we new subscribers post a little bit of introductory information. Since I am not employed in broadcasting there isn't much to tell, so this won't take much of my time to write, or your time to read :-). Plus, Bill can throw this away if not appropriate.

I'm a computer programmer with IBM. My background is in electrical engineering, and I have always been interested in all types of radio, both technically and "operationally". My primary interest is in ham radio (I am KU4A), but I also keep tabs on broadcast radio (obviously) plus shortwave (both utility communications and broadcasting).

I have had several relatives that have been in the broadcasting business at various times. The primary broadcaster in the family was my uncle, who passed away a couple of years ago. He was Bud Sunkel, and during his career he was involved in all phases of radio, from station ownership to DJ. He worked primarily in east-central Illinois and west-central Indiana (plus a lot of other places), and I would be very pleased to hear from anybody on this list who knew, or remembers hearing Bud.

As a kid, I dreamed about being involved in broadcasting as a career, but it so happens that I didn't choose to follow that path. It is fun sometimes to think about what might have happened had I chosen broadcasting as a career, especially how I would do things so much better than anyone else :-). In any event, it is interesting to read this journal and learn how life is for those who work in broadcasting.

>
I would like to challenge the assumption that the only way to get on the air with an alternative approach is to "usurp" an existing position. Leave the petty tirants alone (or continue to creatively hassle them :-) ) and find an alternative way to get your ideas heard. If you're talented, bright, willing to work *very* hard, and (here's the key) if you are able to strike a chord with the public that translates into ratings and $$$ for the station you're working for - then you are on the road to being able to deal with the right-wingers and demagouges on a level playing field.

The impact and influence of Rush Limbaugh and his ilk can never be counter-balanced by prank calls and local public radio programs. What this country badly needs is a voice from the left that is articulate, entertaining, and persuasive enough to draw a nationwide audience equal to Limbaugh's.

>
>

WBEN in Buffalo also dropped Larry King. I think his act goes over better
late at night. Also, they wanted more local talk during the day.
King was on WBEN since darn near day one of his late night show (if not
since day 1). Jim Bohanen (sic?) replaced him and is still on.

Larry was picked up by a 1,000 watt daytimer (WWWS 1400AM) that primarily
has a satellite fed business format (formerly heard on WWKB 1520).

Another problem Larry has in this market on WWWS and had on WBEN is that
both stations tape delay him and run him in the morning. On WBEN after
morning drive, I think WWWS is running him during morning drive. This
prevents locals from participating. I think his show normally runs
at around 4pm. Is this correct? I would think the bigger stations in
a market would want this drive slot local. Maybe another problem for the
former King.

> news to me. Has anyone else any input?

EMR at FM frequencies is non-ionizing and should have absolutely no
effect on upper layer ozone levels. Of course, if the antenna is shot
and is experiencing corona discharge, it might be actually generating
ozone. But that would have no effect on "the ozone", assuming you are
talking about the "ozone layer".

Maybe they meant that if Rush Limbaugh were to appear on FM, it would
be bad for "the ozone". :-)

The name-calling and direct appeal to the base instincts practiced by you and your fellows are the best argument in favor of digital cable radio. From Joe Pyne to Morton Downey Jr. to Rush Limbaugh, each one of you has had your flash in the pan, ignited by the heat generated by exploiting prejudice.

I was a full-time broadcaster for over twenty years. Today, still working part-time, if you called my talk show and started in on that monologue, you would be talking to a dial tone.

Want to talk the issues? Fine. Want to call people names? Not on my dime, pal.

> left.

The difference between a "sales pitch" and "brainwashing" is the IQ of the audience. The "real" brainwashing comes about when the dissemination of alternative points of view is eliminated or curtailed (i.e., you can have any flavor you want, so long as it's vanilla). People who tire of right-wing radio can always listen to NPR. (grin) People who want a neutral viewpoint can listen to the BBC World Service. (grin)

By the way, *I* happen to control all the media. I have this little Windows program. Every time I click on the Rupert Murdoch icon, he buys another company. Soon I will consolidate everything into NewsCo and then *I'll* tell you what to believe, and you'll pay me $19.95 a month to believe it. For an extra $4.95 a month I can eliminate your ability to think. Just thought you'd like to know.

> What about a conspiracy to brainwash people into denying that there

Karim Alim quotes me as saying....

>> [Moderator's Note: Are you SURE there are no such attempts to 'brainwash'
>> the population via talk radio? There certainly is in the world of
>> advertizing,
>
>The difference between a "sales pitch" and "brainwashing" is the IQ of the
>audience.

How do you figure? Brainwashing, in it's most broad application (as I meant it) is merely the act of strong persuasion, or manipulation, of a person's perspective or belief structure to more closely coincide with the opinions and perspectives of the persuader. Sales is exactly that. At its best, sales is the presentation of information in a motivational format designed to enlighten and inspire the consumer to buy a certain brand or type of product/service.

However at the other end of the spectrum advertizing is a finely crafted black art of manipulation of the intended target's reality. This form of advertizing is indistinguishable from brainwashing, other than by name.

Many commercials today spend much more time appealing to the target's fears, ego, vanity, low self esteem and insecurities than they do on hard factual descriptive information as to *why* their product is better. Lines like "Wear it and be wonderful.." connected to 25 seconds of passionate, fantasy, love clips followed by the phallic shaped perfume bottle is a prime example. The implication is that this product will transport you to a world of hot, steamy, romantic bliss. Same can be said about many many ad approaches.

>The "real" brainwashing comes about when the dissemination of
>alternative points of view is eliminated or curtailed (i.e., you can have any
>flavor you want, so long as it's vanilla).

Good brainwashing is more than that. It is the art of convincing the other person (or yourself) that what you really *want* is vanilla. It is the creation of illusory choice, then the proces of progressive suggestion the goal of which is to instill a 'second nature' respose that anything but vanilla is a bad choice. Oftem the reasons for the choie are not clear and a skillful persuader can convince a significant number of people to favor a personal choice that is directly opposed to their own interests.

So instead of eliminating alternative points of view, the brainwashed masses are convinced that the alternative views are to be voluntairly rejected out of hand, often without more than a cursory glance.

One vehicle for this sort of thing is to catagorize large areas of thought into one or two word 'catch-phrases'. By concatenating large groups of

ideologies into simple (often sarcastic or pajorative) lables, the actual content of these points of view are lost or diminished in favor of the overriding lable. Thereby, the brainwashed person can write off entire ideologies at once by simply playing back a macro in his/her brain that says "Bad Thought". Whatever information is received from those roped-off areas of thought is catagorized by the lable and sent to the mental equivilent of /dev/null.

>People who tire of right-wing
>radio can always listen to NPR. (grin) People who want a neutral viewpoint
>can listen to the BBC World Service. (grin)

The left-wing is as full of it as the right wing. I am firmly convinced that the only place sanity can be found is to listen to all (or as many as possible) points of view, take the good from each and discard the rest. I always keep my windows and doors open. In some things I am liberal, in others I am very conservative. In fact most people I know are like that. If I disagree with you, I will determine exactly where I disagree with you and then we can eiter discuss it or agree to disagree. But at least I know exactly where we disagree. I will not file you away in a catagory of "liberal" or 'wacko', never to be heard from (or listened to) again.

This is my main gripe with Limbaugh and some other talk-show hosts who lean to the right. They need to draw these lines of distinction. To Rush, one is either 'a liberal' or 'a conservative'. Then he procedes to define for us what those terms mean, and which groups of thought fall into which catch-phrase. He offers his audience simple 'us vs them' solutions to very complex issues and assigns clever-yet-negative lables to those who believe in a manner not consistant with Rush's party line.

It is not Rush's politics which I object to. He says a lot of very good stuff. I do not wish to see him off the air or stiffled in any way. What I object to, with Rush and the new breed of Rush-clones on the air, is his building imaginary walls between people and encouraging them to take sides and call names instead of really discussing and learning from one-another. It is this 'Pavlovian, knee-jerk' effect which offends me.

Funny thing too, I believe that Rush would welcome a 'left-wing version' of himself a lot more than a reasoned approach to a complex world which takes into account that there is more than one 'right' answer. Put THAT guy/gal on the air with a fun, entertaining show and see what happens.

>By the way, *I* happen to control all the media.
>I'll tell you what to believe, and you'll pay me $19.95 a month to believe
>it. For an extra $4.95 a month I can eliminate your ability to think. Just
>thought you'd like to know.

[Action: Moderator places tongue firmly in cheek.]

Great, where can I sign up? Is there a 900 number? Wow, super, someone to tell me what to believe, that sure is a load off of my back. It's so confusing, you know. Liberal, conservative, right, left geez, sure am glad I have your service. Now I can relax.

>> What about a conspiracy to brainwash people into denying that there
>> could possibly be a conspiracy to brainwash people?

>
> (hmmm....) We're upping your dosage to 300mg a day.

But I am already taking 500mg a day. Does this mean I get 750?

> The last time I heard someone say something like that, they wore an aluminum
> foil hat to protect themselves from killer CIA maser guns. (The hat was not
> properly grounded, though.)

Now that *IS* ridiculous! Everyone knows that does not work. Not with
today's CIA masers. My hat is titanium. I bought it from an ad I heard on
the G.Gordon Liddy show. They told me not to be duped bu that liberal media
bias. They told me not to be fooled into buying one of those 'foil' hats,
made in Taiwan sweatshops by communist-enslaved workers living under tyrany
and praying for the day that they can save enough to buy a Big Mac.

Excuse me while I check the ground on my hat. Cant be too careful.

[Action: Moderator removes toungue from cheek].

# 1690. Boston Radio (10-11-93)

Newsgroup: rec.radio.broadcasting
Date: 1993-10-13 08:10:06 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <29gd4u$r6u@vixen.cso.uiuc.edu>
Source record: 42178

*The summer ratings are in. Here's how they stand :

In the 12+ group :

1. WXKS-107.9 FM 'KISS-108' (CHR/Top-40) Pyramid Broadcating
2. WBZ-AM 1030 (News/Talk/Info/NFL Patriots) Group W
3. WRKO-AM 680 (All Talk/MLB Red Sox) Atlantic Radio
4. WJMN- 94.5 "Jam'n 94.5"(Dance/Churban) Ardman Broadcasting Corp
5. WMJX-106.7FM 'Magic 106.7' (AC) Greater Media
6. WBCN-104.1FM 'The Rock of Boston' (AOR) Infinity
7. WBMX-98.5FM 'Mix 98.5' (Hot AC/Motown Classics) Atlantic Radio
8. WODS-103.3FM 'Oldies 103' (Oldies) CBS Inc.
9. WSSH-99.5FM 'WISH 99.5' (Easy Listening AC) Granum Broadcasting
10. WBOS-92.9FM (Soft Rock) Granum Broadcasting

In 25-54 :

1. WMJX-106.7FM
2. WODS-103.3FM
3. WXKS-107.9FM
4. Tie WBCN-104.1FM
WBMX-98.5 FM
6. WBOS-92.9FM
7. Tie WBZ-AM 1030
WZLX-100.7(Classic Rock)
9. WSSH-99.5FM
10. WRKO-680AM

In 18-34 :

1. WXKS-107.9FM
2. WJMN-94.5FM
3. WBCN-104.1FM

- Pyramid's WXKS-107.9FM has been #1 with 12+ and 18-34 groups for both, spring and summer periods now. However, its shares did slip in the 18-34 group thanks to an impressive showing by Ardman's outlet WJMN(changed calls from WZOU on 6/25/93) which began with new dance format on 5/11/93. Not only WJMN came in second(up from 4th in the spring) in the 18-34 group, its total overall(12+) listening audience zoomed up from 4.0 in the spring to an impressive 5.8 in the July-August book. And 'XKS people are probably as not as cocky as they were in May when 'XKS's GM John Madison declared: " We're going to kick their butts and close their door. But it's not even a matter of kicking their butts...it's kicking their butts again!" Well, I think KISS-108 is KISSing some butt right now...

'JMN is focusing on the 18-29 group known in the radio advertising circles as 'Generation X'. So far 'JMN's strategy is paying off in a very big way...

- Coming and goings :

- Stephen Hill left WILD(Urban). He was a PD with daytime WILD-1090 for the past 5 years. He moved to Dallas to host his own 'Urban Gold' show on ABC's Satellite Radio Network...

- Kid Valentine left WJMN 94.5 after 2 years to become an evening jock at KHKS-FM in Dallas. He'll be replaced in a 7pm-12a slot by Marc "with a C" Clark "with no E"....

- As well-detailed(by Scott F. :-) in this group couple of weeks ago, Atlantic Radio has revamped line-ups on its 2 major AM stations, WRKO and WHDH. Gene Burns will be now heard on a 5(!)-hour tape delay on WRKO starting at 8pm since Red Sox are done until next spring...Boston Herald columnist Howie Carr is back on the air on 'HDH from 3-7...British import, Victoria Jones is history after 1 year on WRKO...Reportedly, next on the block are 'RKO's program director David 'Junior' Bernstein and nationally-known radio host Tom Leykis whose schtick never caught on in Boston(they don't take well to the radio outsiders around these parts :-(...And 70-year old Jerry Williams may as well be "getting out of the business". His endless shows on taxation and goverment corruption will bring anyone's head down in the middle of the PM drive..

* Speaking of 2 major syndicated stars :

-Imus, with a collapsed lung and all, vaulted lifeless WEEI-590AM from 12th(spring) into fifth place in the morning drive-time. The numbers for the rest of WEEI-mus line-up didn't change that much...The Celtics who are trying to unload the struggling 5KW sports radio station will now attempt to make a full-force effort to fetch a buyer....Imus also doubled WEEI-mus 25-54 male audience from 2.6 to 5.1 in the morning drive...

- Howard Stern continues to rule Boston night-time radio! He's number 1 in the overall 12+, among males 18-34, and now both,males and females(that's a schocker!) in the attractive 25-54 group...Stern's good summer numbers is an indication of better things to come as far as his presence on the Boston airwaves is concerned. 250,000 college from NY and NJ invaded Boston in September. Howard should break all sorts of records in the fall book...As I predicted when he first arrived on WBCN in March, the summer period would be the biggest test for Stern as far as his longevity around here goes...He passed the test...With soon-departing long-time 'BCN morning voice Charles Laquidara, I think Infinity has no choice but place hot Howard in the morning drive...

By the way, Stern will be profiled on NBC's DateLine on Tuesday(10/12) at 10pmEDT.

<<<<<<<<<<<<<<<<<STUFF DELETED >>>>>>>>>>>>>>>>>>>>>>>>>>>>

In reply to Stuart, who is seeking info on a good quality AM car radio.

Unfortunately I have found the same thing to when it comes to car stereo, that is, the AM tuner section is a mere afterthought in good design. I have tried out many car stereo units from many different manufacturers and my experience has been that factory installed radios, Chrysler in my case, offers the best performance as far as AM tuner performance goes. As far as a radio with analog tuning these days I don't know where you'll find that. Even with factory installed radios you have to be carefull. Case and Point, I have two factory Chrysler radios both with AM stereo. One model

I have is the premium stereo which features a graphic equalizer and cassette player and the other is a basic AM/FM stereo radio, both have digital tuning. The basic radio has much better performance as far as AM reception goes. The other unit isn't selective enough and when you are several channel spacings away from a strong signal you get some mixing of signals that produce a horrible distortion that sounds like a buzzing bee.

I am having a service center look into this problem but they claim there is nothing wrong. If that is the case then each radio must have different AM tuner designs. If push comes to shove you might want to try an auto graveyard. this is the only place that I've seen today with car radios that have analog tuners also they are a lot cheaper than buying from the dealer and most places will give a waranty on the radio they sell you. Id be intersted in whatever responses you get.

Good Luck,

Rob

Just as a matter of curiosity, does anyone out there know when it was that the FCC abolished the Class D liscence for FM, and what the reasons were that they gave fo doing so? Also, does anyone know how difficult it was to get one before they abolished it? Just curious.

We are going to a half hour format from 15 because
of music and so much news.
Again, if you can broadcast and would like a copy
of the tape, please send land-mail address.

The sources for the show are available from
ftp netcom.com; cd pub/andyrose; get Oct15

In our efforts to uncover and reveal news, we've run into many
lies, coverups, deceits, propoganda, and manipulations.
The more we read from alternative sources like In These Times,
the Progressive, the Nation, Public Citizen, Z magazine,
CAIB, and electric sources like misc.activism.progressive
and alt.org.food-not-bombs, the less the news in The New
York Times, The Washington Post, The San Francisco
Chronicle/Examiner, and electronic sources like CNN,
ABC, NBC, CBS, FOX, etc seem true.

I am greatly disheartened that what I felt to be "all the
news fit to print" has become a sham in my estimation. I
used to live and breathe the NYT and now I can't. But do
I dispare? No way.

# 1695. Re: #404 Airwaves Radio Journal

Newsgroup: rec.radio.broadcasting
Date: 1993-10-13 08:10:46 UTC
From: Scott Seely <UCSSCS@uwplatt.edu>
Message-ID: <29gd66$r83@vixen.cso.uiuc.edu>
Source record: 42183

I have been reading this journal for a while now. I am amazed at the numbers of people lambasting Limbaugh. Believe it or not, the man speaks about things that a large portion of the country believe is true. His idealogy is that of the majority of talk radio listeners. That is why he is so popular. The country may be evenly split politically speaking, but for those who really enjoy politics, Rush is the answer. Regardless of what you may have been told, the man is more of a centrist than King ever was. Now, if you do not listen to Rush, you will not know what he really is.

His show draws an audience for a few different reasons. One is he helps keep his listeners up on politics. He fairly represents both sides of an argument and then explains what the effects should be. He tells you sources to check if you disbelieve him. If he is found to be an error, an event which he broadcasts on an almost daily basis, he admits it and apologizes to his audience. Another reason he is popular is because he is funny. Obviously, he is more on the Republican side of things as this is his political leaning, but he is irreverant to both sides. Remember, most of the people who listen to political oriented talk are centrists, usually with a Republican leaning. The other reason he is the most popluar talk show host in the history of radio is because the people who like him talk about him. It's called word of mouth publicity.

So, if you really think he is awful, try giving him six weeks of your time before making that opinion final. Otherwise, admit that you don't like what you've heard, but can't form an opinion because you've never really listened to him. This isn't like drugs where you know what happens from seeing others or crime, killing, etcetera. This can do no harm to anyone, hence you need to experience it to know. During the six week trial, a half hour every other day is all that is really needed to form an opinion. And if you don't like him, remember, you can change the station. When he loses popularity, he'll disappear from the airwaves. Until then, between 12-3 EST, don't listen if you don't like him. But I thnk you might.

Scott Seely

[Author's Note: Please be aware that all references to "Rush Limbaugh, Rush or Limbaugh are in reference to his radio show. I have no way of knowing him personally, therefore no personal judgments are intended, or implied. Bill]

Scott Seely typed:

>I am amazed at the numbers of people lambasting Limbaugh. Believe it or >not, the man speaks about things that a large portion of the country believe >is true. His ideology is that of the majority of talk radio listeners. That >is why he is so popular.

Rush Limbaugh is popular because he offers his public simple, binary choices in a complicated and multi-sided world. Rush neatly sifts the landscape of life into two basic identities, Liberal and Conservative. Or to put it more bluntly, Bad Guys and Good Guys. He defines the boundaries of who falls into what category and then tells his hungry listeners that all their problems are the result of "THE LIBERALS". In the world according to Rush, there ARE only these two basic ideologies and *everything* must fall into one of them.

Most people are thrilled to find a faceless group to project all their quandaries upon, to cast all blame upon and to neatly package in one bag and toss it over their shoulder. That is the basis of racism. In Rush's case, he does not cut along racial lines (I do not think Rush is a racist), instead Rush uses the framework of racism and inserts different criteria. In other words, whether it is blacks and whites, liberal and conservative, or any thing else, the structure is the same. "WE" are better than "THEM". With the Limbaugh ideology, you no longer need to listen to both sides and determine for yourself which parts of which argument is for you. Rush has cut up your steak into nice tasty bite-sized portions and is spoon feeding it to his listeners. And the listeners eat it up.

>The country may be evenly split politically speaking, but for those who >really enjoy politics, Rush is the answer.

** NO ** *YOU* are the answer. You have a mind of your own, don't hand it over to Rush! It both saddens and frightens me that some form of the above statement "Rush is the answer" is so common among his listeners. Remember this, the same sort of messianic popular response is what got Adolf Hitler elected (yes kiddies, he WAS elected).

NO, I am NOT saying that Rush is Hitler. Hardly. But he is not the messiah either. Rush is entertaining, without a doubt. He is very intelligent and does say a lot of very right-on things. But he appeals to the fear in people and the prejudice. Also, he is, after all, a syndicated talk show host, not a guru, not a savior.

>Regardless of what you may have
>been told, the man is more of a centrist than King ever was.

Rush?!?!? A Centrist?!?!? HA HA HA HA HA! Oh that is a good one, Rush Limbaugh, a centrist. Oh god, that hurts to laugh that hard.

As far as his comparison to King, I cannot say. I never felt any political leaning from King (Larry, I assume you mean). Larry just took calls in a rotation and had very little to say. I see Rush and Larry's show as being totally opposite formats. But, please, you cannot be so Rushypnotized as to actually believe that Rush is any sort of a centrist. Rush Limbaugh is the unofficial spokesman and chief PR man for the Republican Party and the New Right. How anyone could call Rush a centrist with a straight face is hard for me to fathom.

>Now, if you do
>not listen to Rush, you will not know what he really is.

I totally agree. I think one should know about what one discusses I've listened daily for the first couple of years that he was on here in Chicago and at least weekly in the past year. I have tapes of his shows. I DO know the product I am discussing. I realize that many do not really listen to the show before judging it. This is ignorant.

Ironically, though, that is exactly what Rush asks his listeners to do on a daily basis. He tells them that *HE* will think for them and that HE will tell them what to think about a given issue. He ridicules and puts down ALL thought systems which do not follow his, and assigns the "bad groups" cute, sarcastic and pejorative manes, so as to separate them even further from their reality.

>His show draws an audience for a few different reasons. One is he helps
>keep his listeners up on politics.

Rush draws an audience for many reasons, that is true, but I feel very sorry for the soul who uses the Rush Limbaugh show to "keep up on politics".

Rush draws an audience because A) He is clever. B) He appeals to the part of each of us that seeks a simple, easy to swallow answer to complex problems. c)Rush's show is a drug, a sedative that lulls the mind into a complacent, 'everything is gonna be fine" stupor and numbing the mind to any argument which would intrude on this euphoria. Rush strikes me as sort of a modern day Nero, who would fiddle as Rome burned. Only Rush is fiddling on 600 stations and asking his millions to buy fiddles, sit back and ignore the burning city.

Another reason he has a large audience is that he gives his show away for free. So if you had a 500 watt station in cow country, would you not take the show? I probably would have.

>He fairly represents both sides of an argument and then explains what the
>effects should be.

Oh, c'mon, Rush's show is as partisan as partisan gets. He makes no bones about it.

Ever wonder why you seldom actually hear a caller say "Good Bye" on Rush's show? That is because Rush tells the engineer to fade down the caller as Rush makes HIS point followed by "thanks for the call... BACK after these... <fade to commercial>. This is SO manipulative. The only callers to get to say good-bye are small children and women who fawn all over him.

>He tells you sources to check if you disbelieve him.

First, we know that less than 1% of any audience will ever check sources.

Second, It is Rush, not the 1 in a million listener that checks on something, who is in control of the microphone which has over 600 transmitters connected to it. Who do you suppose will get the last word?

Third, it is not Rush's 'facts' which are suspect, it his interpretations. These cannot be sourced out. They are his personal opinions.

>If he is found to be an error, an event which he broadcasts on an almost daily basis, he admits it and apologizes to his audience.

Again, opinions are not wrong or right. They are just opinions.

>Another reason he is popular is because he is funny.

He certainly is funny. I do appreciate his political humor and parody. However a lot of it is very harsh and even unwarrantedly cruel. The thread of "our club VS Their club' permeates all of the Rush humor and IMHO it is just another ingredient of the persuasion campaign. Also, since Rush has one point of view and one only, even the parody gets a little old sometimes.

>Obviously, he is more on the Republican side of things as
> this is his political leaning, but he is irreverent to both sides.

Um, can you name for me one time he was irreverent to a Republican?

I cannot see where you base this statement. My experiences of the Limbaugh show is that he virtually NEVER says anything bad about the Republicans, and never says anything good about the Democrats, or to anyone who is on the other side of Rush's invisible fence. He bows and kisses the ground that Republicans walk on and plants land mines in the path of anyone else.

>Remember, most of the people who listen to political oriented talk are
>centrists, usually with a Republican leaning.

Who's numbers are these, Rush's? Besides, there is very little else on the talk radio dial these days. Oh, Bob Lassiter where are you when we need you?

>The other reason he is the most popular talk show host in the history of
>radio is because the people who like him talk about him. It's called word of
>mouth publicity.

Another reason is that he has free use of over 600 stations every day in real time. He has, as we say, bought the pot. He is there all the time,

naturally that will have a lot to do with popularity.

>So, if you really think he is awful, try giving him six weeks of your time

[Almost verbatim repeat of a regular Rush feature of "Give me 6 weeks", deleted]

>This isn't like drugs where you know what happens from seeing others or
>crime, killing, etcetera.

Actually, it is like drugs. People get lulled in and start to judge the outside world, NOT as a collection of people, but a bunch of file folders and absolute paths.

>This can do no harm to anyone,

It can do harm if you relinquish control of your objectivity to someone who gives you simple 'no-brainer' answers to mind-boggling questions.

>And if you don't like him, remember, you can change the station.

True, you can change the station, but what you will probably hear in many places is another station playing Rush. In many rural places he is heard on several stations at once. Or you might hear G. Gordon Liddy, who has Rush's basic political leanings, but absolutely NO fun! In Chicago, we are lucky enough to have a decent variety of stuff to listen to, not so in may other places.

>Don't listen if you don't like him. But I thnk you might.

I think everyone should have the chance to hear Rush, I just wish there were some viable alternatives to his one-sided world view.

As I have said in my past 'Rush Rants', I am equally as turned off by the left-wing extremists. They and their Political Correctness (really just another way to limit free thought and expression) are just as ridiculous and damaging as anything the right can dish out. What would be great (IMHO) is someone who is neither right OR left, but who thinks for him/her self. Someone who is not too lazy to form an opinion, and encourages the listeners to form THEIR OWN opinions, and not just parrot some mindless party-line and call it truth.

A talk show which celebrated the wide diversity of opinion and promoted the idea of talking TO each other instead of throwing around sarcastic nicknames and talking AT each other. Someone to make the point that we all have to live on the same piece of cosmic rock, if we cannot get along, at least let's not stifle dialogue. After all, isn't dialogue what talk radio is all about?

You may now turn your hymn books to page 46.

(oh BTW, <<grin>>)

Bill

# 1697. Introducing net telecom-tech mailing list

Newsgroup: rec.radio.broadcasting
Date: 1993-10-13 08:10:56 UTC
From: john@zygot.ati.com
Message-ID: <29gd6g$r8d@vixen.cso.uiuc.edu>
Source record: 42185

[Moderator's Note: In consideration of John Higdon's continuing contributions to this list, I am posting an excerpt from his notice to all interested parties that he is starting a mailinglist for discussion of telecom ralated matters. Please direct all inquiries to him, and not th this list. Bill]

As a more or less temporary substitute for the failed 'comp.dcom.telecom.tech' newsgroup, we are hereby offering the Telecom Tech Mailing List. Initially, the list will manifest itself as an unmoderated digestifier that lives on this site. Digests of approximately 20K bytes will be formed out of the incoming mail and sent to those who have subscribed. I will be performing this task more or less manually until and unless the traffic makes this a prohibitive responsibility.

Our charter is simple (lifted from the CFV for c.d.t.t):

CHARTER

This unmoderated list will cover all general technology aspects of the telecommunications industry in an unmoderated format. This includes communications mediums (physical transport, wiring, antennas), control systems (switches, routing, ATM), wireless systems (AMPS, NAMPS, PCN, PCS, CDMA, TDMA, GSM), and more (such as the history and management of the above, and new advances). Included would be the effects of regulations on the design, development, and implementation of new technology.

Archives will be maintained at this site and available via anonymous FTP. For those without access to FTP, I am searching for a site (volunteers?) that can do an e-mail delivery of archives or as an alternative supply me with software to enable that capability from here.

For the next two weeks, I will only be accepting requests for subscriptions. We need to get a handle on just how big this thing is going to be. If there is a flood of requests (entirely possible given the amount of e-mail I have received thus far without even asking for it) we may have to begin publication from a larger site immediately. If it looks doable, we will begin operations from here after that two week time frame, or about October 25. Articles will then be accepted for remailing.

E-mail your subscription requests to:

Tech_Request@zygot.ati.com

DO NOT, repeat DO NOT mail articles to this address. The address for articles will be given when we are ready in about two weeks.

Wish us luck and tell your friends. Feel free to re-distribute this
anywhere you see fit.

## 1704. Job Inquiry

Newsgroup: rec.radio.broadcasting
Date: 1993-10-15 19:33:53 UTC
From: dt399@cleveland.Freenet.Edu
Message-ID: <29mtv1$k3d@vixen.cso.uiuc.edu>
Source record: 42192

I've tried every other method of getting a job and to no avail, so I am trying this forum. Perhaps someone can assist.

Does anyone know of any on-air or production openings at radio stations in the eastern part of the U.S.?

I'm looking for my "first gig." I finished college last December. I have great production skills and can work in virtually any situation. I practice daily doing production and voice-improvement exercises. I do tapes for people (you may remember I asked about radio stations' existance a few weeks back), I do re-mixes for my mobile DJ business, and I even do creative messages for my answering machine and other peoples' also.

I'd be willing to move pretty much anywhere as long as I could make enough money to not be living in a cardboard box in the radio station parking lot. I have been told by many local radio jocks and production directors that I have a great talent and would be a great asset to any station. But this town (Buffalo) thinks too highly of themselves as a market and won't give me a chance to prove myself. I know I can deliver a quality product and pull in good numbers if someone would just give me the chance.

The first station to hire me will be extremely lucky because I'll work 24-hour days if I have to in order to prove my point.

Any help would be greatly appreciated.

>country may be evenly split politically speaking, but for those who really

Rush, around where I am, cumes about 20 or so. That means that, according to
Arbitron, around 20 percent of the total radio audience listens to Rush at
least once per week. Yeah, that makes him top of the talk show heap. However
don't make the leap of faith that so many 'ditto-heads' make and extrapolate
those figures into statements like "Rush speaks for the majority of Americans."
That may or may not be true. Personally I hope it isn't. But it is certainly
an unfounded statement - unsupported by either Arbitron or the Electoral College
>His show draws an audience for a few different reasons. One is he helps
>keep his listeners up on politics. He fairly represents both sides of
>an argument and then explains what the effects should be. He tells you

Pardon me. This is the Rush Limbaugh who's on from 12-3 EST, right? Fairly
represents both sides???? Give me a break.
>
>So, if you really think he is awful, try giving him six weeks of your time
>before making that opinion final. Otherwise, admit that you don't like
>what you've heard, but can't form an opinion because you've never really

Oh, I've heard him. I still listen occassionally. I think Rush is a great
entertainer - someone who understands radio & how to use it to best effect
probably better than anyone else on tghe air currently. But I find his neg-
ative stereotyping & characterizations of his opponents offensive & devisive.
I find his ego-centrism and willingness to expound all-knowingly on *any*
subject to be ridiculous. And I find those who are willing to 'ditto' anything
he says - to let him do all of their thinking for them - to be pathetic.

Pathetic and perhaps a little dangerous. I see this culture at a crossroads,
and badly in need of people who are willing to let go of old ideas and reach
forward toward the kind of future that the advances in technology - and the
worldwide crumbling of archaic social systems - have made possible. Yet, to
be heard, any voices bearing new ideas and fresh approaches on the airwaves
have to force their way through a babbling chorus of 'dittos' and past the
articulate ravings of Limbaugh as he tells us how things ought to be.

This again? well, most of these are Ohio, one is from Chicago...

Cleveland-area stations....
WLTF - Lite FM. - Cleveland
WAKR - Akron, OH
WCLV - Cleveland, OH
WPHR - Power Hit Radio or We Play Hit Records (defunct)
WNCX - when it started up, the call letters stood for "North Coast eXpress"
WRDZ AM - "Words" (as in the Bible... this is a religious station.)

WONE AM (Dayton), WONE FM (Akron), WTUE FM (Dayton) - Guess what...

GCC Communications stations:
WGCI AM - Chicago
WGCL FM - Cleveland (defunct)

Nationwide Communications stations:
WNCI FM - Columbus (flagship station) and I believe
WNCO FM - Wooster, OH

Great Trails Broadcasting:
WGTZ FM - Dayton
WXGT FM - Columbus (now WCOL)

>
>AtDhVaAnNCsE and 73's
>

I did a little research into low power FM last weekend (for my series of articles in Radio World). My notes make reference to the FCC decision regarding class D stations. Actually, they did not "abolish" them, they just stopped accepting applications for them (see 73.511(a)) and required existing class D stations to either increase power or move to a commercial channel (see 73.512).
The closest thing to low power FM currently authorized is FM translators. It is interesting that the FCC allows these to operate, suggesting that they can operate without causing interference, then makes a severe "program content restriction" by prohibiting local origination.
Again, my notes are below. I've given the source reference (Federal Register or FCC Record). Please excuse the typos... I did this on a laptop computer in the library while staring at a microfiche reader...

Harold

Notes on translator policy.

53FR22035
FCC Docket 88-140, 6/13/88. Full text in FCC Record (3 FCC Rcd No. 12, page 3664). This NOI adopted 3/24/88, released 6/2/88. This NOI is in response to petitions for rulemaking filed by NAB (RM-5416, 5/14/86) and AGK Communications (RM-5472, 6/13/86).
In the introduction, the FCC states "We continue to believe that the most effective and efficient means of providing FM service to the public is through the higher-power facilities of full-service stations."
In paragraph 13, the Tucson Broadcasters Association points out that translators do not have local service obligations. It asserts that the intent of Section 307(b) of the Communications Act is to provide for as many outlets as possible "for local self-expression" and, thus, the Act does not contemplate service within a community from stations located hundreds of miles away.

In paragraph 15, several commenters oppose changes that would tighten the translator rules, arguing that the NAB proposals are "protectionist" and that translators do not pose an economic threat to full-service stations. They argue that translators increase program diversity and provide radio service tailored to the needs of the listening public.

Paragraph 21 cites an FCC statement in Docket 19918 that says small market stations would not be harmed by imporation of large market sigals, since local advertisers would not want to pay the higher rates of the distant large market station.

Paragraph 24, Cornell argues that the unlimited use of FM translators would fractionalize local radio audiences resulting in a net loss of local service to communities that would undermine the FCC's policies in furtherance of Section 307(b).

In response to AGK's claim for a need to use translators to cover its "metro area" beyond the 1 mV/M contour so it can charge competitive rates, Cornell states that the FCC's concern for the financial success of individual stations should not go beyond ensuring that there is no loss of service to local communities.

In paragraph 26, John Davidson Craver petitions to allow local origination for "narrowcasting" of diverse and unique programming targeted to smaller geographic areas that share common interests, and sometimes languages, which would not otherwise be commercially viable. He states that this service would be in the public interest and would constitute efficient use of the FM broadcast band since translators fill in the gaps between full-service stations without creating objectionalbe interference. Finally, he states that because FM translators are less expensive to build and operate than full-service stations, his proposal would make participation in broadcasting possible for a larger segment of the public.

In paragraph 27, John S. La Tour also petitions for local origination. He also requests the allowance of satellite program distribution, a uniform 10 watt power limit, protection from interference and elimination of their classification as a secondary service.

In paragraph 29, Bruce Quinn petitions to allow the use of class D stations operating with 10 watts or less on any FM channel. Licensing would be based on spacing requirements only, not based on allocations. These stations would operate on a secondary basis.

In paragraph 30, Robert Jacoby petitions for a low-power FM Consumer Information Service. It would be similar to the Travelers Information Service on AM, but would allow shopping centers, malls, etc. to broadcast over a five mile radius to advise potential shoppers of available products.

In paragraph 31, the FCC cites Docket 20735 issued in 1978. This apparently concludes that low power stations result in spectrum inefficiency. In this docket, the FCC required all class D stations to increase poweror move to a non-reserved

channel. "The Commission also observed that full-service stations make more efficient use of the spectrum than translators in tha the ratio of coverate go interference area is much larger for full-service stations than for low-power translators." "Consistent with this position, we do not contemplate the creation, as the La Tour petition appears to suggest, of a new class of low-power FM stations equal in standing to full-service facilities and will carefully examine all policy options in this area in terms of their effect on our overall FM allocations plan.
In paragraph 49, the FCC explains, "First, there are the concerns expressed by NAB that expanded operation of FM translators could impact full-sercie FM stations, as discussed above. In addition, the licensing of large numbers of FM translator stations could impose undue burdens on the Commission's resources, and thus might cause delays in the initiation of new translator service to the public in areas unserved or underserved by full-service stations. Also, widespread operation of FM translators stations could pose significant and difficult new monitoring and enforcement requirements for the Commission. For all these reasons, we tentatively conclude that translator operations should not be altered substantially."
In paragraph 52, the FCC states, "We also invote comment on authorizing increased program origination by FM translaotrs as proposed by Craver, La Tour, Quinn and Jacoby. We observe that to permit unlimited program origination has the potential to make available more channels of radio programming in less rural areas of the country. In these areas, program origination authority may result in programming tailored to small audiences with specialized tastes rather than to a least common denominator mass audience. We seek comments on the value, need, and desirability of expanding the FM translator authority to permit increased program origination. Since the expected location of such translators would affect listeners' options as well as competing full-service stations, we request comments on the expected location of such new translators. We also request information regarding the extend to which the service provied by full-power FM stations may not meet the public's needs or wants and how expanded translator program origination might further the public interest in this regard."

53FR52742
FCC reopens comment period on translator policies (MM Docket 88-140) on request of NAB, who filed an economicstudy using data that was not available at the previous comment period closing. New closing date for comments is January 23,1989. Date for reply comments is February 7, 1989.

5 FCC Rcd No. 7, page 2106.
NPRM on FM translators. RM-5416, RM-5472.
Paragraph 39, the FTC suggests that employing translators

for program origination has the potential to benefit conssumpers. The FTC states that an increase in the number of listening options -- in this case translator program origination -- ma increase consumer satisfaction by increasing the number of formats.

Paragraph 40, NABsubmitted a study of listening behavior which concludes there is no need for local origination. According to the NAB study, the smalles counties (12+ populations of less than 1,000), there are an average of 10.5 different radio stations registering listenershipby diary keepers. In the largest counties,the average is in excess of 80 stations. NAB also submitted a list of translator applications showing they tend to propose service to "well-served" areas.

In paragraph 45,the FCC argues against starting another Class D service,since itis not spectrum efficient.

# 1710. KLRX Dallas to "Arrow 97.9" 10/15

Newsgroup: rec.radio.broadcasting
Date: 1993-10-17 05:58:12 UTC
From: "Chip (C.D.) Kelley" <chipk@bnr.ca>
Message-ID: <29qmtk$2s7@vixen.cso.uiuc.edu>
Source record: 42198

Following KCBS-FM-93.1 Los Angeles, CBS' newly acquired soft AC KLRX-97.9 "Lite 97.9" Dallas-Fort Worth has switched to classic rock-oldies "Arrow 97.9." Like Arrow 93, Arrow is for "All Rock and Roll Oldies" from the 60s and 70s ("and a little of the 80s"). KLRX is co-owned with longtime AOR KTXQ-102.1 "Q102."

D/FW seems to be a little rock-heavy on the dial now: classic rock KZPS-92.5, modern rock KDGE-94.5 "Edge," current-driven rock KEGL-97.1 "Eagle" and Z-Rock KDZR-99.1, KTXQ, and the new KLRX.

Other recent Texas changes in recent weeks...

Spanish AC KSRR-FM-92.9 San Antonio flips calls to KROM

Top 40 KIOC-106.1 Beaumont/Port Arthur has switched to top 40/rock. KIOC still remains "Power Hits K106," but is now the Golden Triangle's "all rock, no rap radio station." KIOC joins WAAL "the Whale" Binghamton NY, KTUX "Tux 99 Rocks" Shreveport LA, WZAT Savannah GA, KWTO-FM (formally KKHT) Sprindfield MO, and WRFY-FM Reading PA as rock 40 converts over the past year.

Corpus Christi area KPCB-102.3 finally returns to the air under a LMA with KDAE-1590/KLTG-96.5 as KXCC with SMN's classic rock format.

Silent KCRM-103.1 Cameron returns to their on 103.9 and 50,000 watts under new owners. KCRM is now AC "CD103.9" serving nearby Bryan/College Station.

# 1712. Chicago AM 1000 still WLUP

Newsgroup: rec.radio.broadcasting
Date: 1993-10-17 05:58:19 UTC
From: okt1@crux5.cit.cornell.edu
Message-ID: <29qmtr$2se@vixen.cso.uiuc.edu>
Source record: 42200

I checked AM 1000 out of Chicago for two consecutive nights
on October 14 and 15 and heard that the station still
identifies itself as WLUP. Furthermore, Eddie Schwartz was
on both nights around 11:00pm Central Time and he did not
talk sports at all. AM 1000 also played album-oriented
rock throughout the night.

So what happened to their new all-sports format? Why isn't
the station doing sports all-night? Also, is the call
letter switch to WMVP still pending FCC approval as
the call letters WMVP currently belong to a station in Milwaukee?
(_USA_Today_'s Michael Hiestand reported the call-letter switch in
his "Sports on TV" column on October 8).

Perhaps our moderator can answer these questions since he is based in
Chicago. Thanks in advance.

[moderator responds: WMVP in Milwaukee is now WMCS. Although WLUP-AM
was using the calls casually and IDing as WLUP for a while, I think
the changeover is official now or soon will be. As far as the format
is concerned, it is true that the pure sports format has not taken
hold. Schwartz is still orphaned on the AM, while the rest of the
crew has moved to the FM. While I am not a big Ed Schwartz fan, he is
certainly being messed around by the station. He should be on the FM
after Danny Bonneduce. Overnights on AM-1000 is a thing called
LOOP-A-PALOOZA, a best-of collage for the FM (ex-AM-1000) personalities.
My take on all of this is that the LOOP is full of themselves and is
kind of adrift in uncertainty. I believe they never should have
messed with their mega-successful AM-1000. The downfall, if you will,
began when Brandmeier switched with Steve and Garry, and then
the subsequent signing of Stern, which I am sure they will regret.
Loop brass were quoted as saying, when asked why they were shuffling
the deck so much... "because we can.." Not the best attitude.
However, the FM lineup is very fresh and very very entertaining.
Kevin Mathews in the morning is an absolute RIOT and Danny Bonneduce
is a truly fresh and original talent. I hear talk that they will
be going on the satellite. Good news for people who like the
LOOP but cannot receive the FM. As for the AM, I think it will either
flop, or be far less successful than the previous format was. We now
have 2 (so-called) all sports AM's (WMVP and WSCR), a 6 hour sports
block on WMAQ (Group W all news), a strong and long standing sports
commitment at WGN (Tribune Broadcasting - Full service), and all night
satellite-fed sports on north suburban FM WVVX. Something has to
give. Even a sport-junkie town like Chicago can only support so much
sports talk. Bill]

Does anybody out there know how the San Francisco & Los Angeles radio stations fared in the latest Arbitrons? I would like to know.

# 1715. RATINGS: Sacramento, CA

Newsgroup: rec.radio.broadcasting
Date: 1993-10-17 05:58:40 UTC
From: alandb@netcom.com
Message-ID: <29qmug$2so@vixen.cso.uiuc.edu>
Source record: 42203

Here are the 12+ (6AM-Mid Mon-Sun) Arbitron Rankings for Sacramento, CA.
(Arbitron Market Ranking: 28)

As a newcomer to the area, I've had a hard time getting interested in the market because there just aren't any good stations here. Add to this the fact that there are 4, yes 4!, country stations (3 FM, 1 AM). The really surprising thing about it is that they are all owned by EZ Communications [KNCI pending FCC approval]. Why would anyone want four stations in the same market, all with the same format, when there are obvious gaps in the market?: NO CHR, NO commercial jazz/new age, NO commercial classical.

The only two FM stations not making the top 15 were KFIA 101.9 (Religious) and KQBR 104.3 (Country).

| | | | Spring | Summer | Owner |
|---|---|---|---|---|---|
| 1 | KFBK | 1530A | News/Talk | 12.9 | 11.8 | Group W |
| 2 | KSFM | 102.5 | Urban | 9.6 | 9.4 | Genesis Bcstg |
| 3 | KRAK | 105.1 | Country | 6.0 | 6.3 | EZ Communications |
| 4 | KGBY | 92.5 | AC | 5.2 | 5.7 | Group W |
| 5 | KSEG | 96.9 | Classic Rock | 6.0 | 5.6 | Grt Amer TV & Rad |
| 6 | KRXQ | 93.7 | AOR | 5.2 | 5.3 | Fuller-Jeffrey Br |
| 7 | KHYL | 101.1 | Oldies | 3.3 | 4.5 | Nat'l Radio Partn |
| 8 | KYMX | 96.1 | Lite AC | 5.6 | 4.2 | Tribune Bcstg |
| 9 | KXOA | 107.9 | AC | 3.2 | 4.0 | Brown Bcstg |
| 10 | KNCI | 98.5 | Country | 4.2 | 3.8 | EZ Communications |
| 11 | KWOD | 106.5 | Modern Rock | 2.5 | 3.6 | Royce Internat'l |
| 12 | KQPT | 100.5 | Lite AOR | 2.7 | 2.9 | Brown Bcstg |
| 13 | KCTC | 1320A | Adult Standards? | 2.1 | 2.6 | Tribune Bcstg |
| 14 | KRAK | 1140A | Country | 2.6 | 2.3 | EZ Communications |
| 15 | KSTE | 650A | Talk | 1.0 | 1.6 | Fuller-Jeffrey Br |

I'd like to see more people post ratings for their area. I'm especially interested in Los Angeles and Miami/Ft Lauderdale.

Digital Audio Broadcasting - action request
---

I have been asked, as convenor of the AMARC Action Committee on DAB,
to support a proposal from the Australian administration to the
forthcoming International Telecommunications Union
(Radiocommunications Sector) meeting in Geneva (18 October - 4 Nov).

The request has been made by the Community Broadcasting Association of
Australia. The proposal draws attention to some concerns with the
proposed DAB system known as Eureka 147. It recommends that more
research is required for the needs of local and community
broadcasters. I enclose a copy of the Australian proposal.

After consulting with colleagues I have prepared and sent a suitable
letter (also enclosed) to the following people:

Mr C Terzani, Chair ITU Study Group 10
Mr R. Zeitoun, Chair ITU Working Party 10-11S
Mr Andre Keller, Chair ITU Working Party 10B
Mr Frank Kozamernik, European Broadcasting Union

Several administrations will be sending delegates to ITU Working Party
10B which meets from 28 October to 4 November. I recommend that you
send a letter similar to that enclosed to the delegates from your
country who will attend this meeting in order to encourage their
support. This should be sent by fax to arrive by the 22 October.

I assume you will be aware or can find out who will be attending from
your country. If you can not find the correct contact I would
recommend you send your letter to the ITU (fax: +412 2 733 7256) for
the attention of your country's delegation.

Regards

Steve Buckley
Vice President, AMARC

ITU Radiocommunications Sector Meeting, Geneva, October 1993
---

I am writing on behalf of AMARC, the World Association of Community Radio Broadcasters to express concerns at shortcomings in the Eureka 147 System Digital Audio Broadcasting. We would like these concerns to be formally raised at the ITU-R meeting in Geneva this month. AMARC is an international non-governmental organisation having category "C" recognition with UNESCO and observer status with the ITU and serving the international community radio movement.

There are today over 50 countries with some form of community radio and in several countries community radio has grown to become a substantial sector of the radio industry numbering hundreds of local licence holders. Several thousand such services can be counted worldwide.

Community radios are not run for profit, but offer a service to the community in which they are located and promote the expression and participation of the community in the radio. They serve towns, cities, neighbourhoods, rural areas and special interests across wider areas. Such services have proliferated with the independence and affordability of FM technology.

We are aware of concern amongst our membership that the present Eureka parameters provide a "central broadcaster" solution but fall short of the flexibility which is required by local and community broadcasters. This problem has also been raised in a study carried out last year for the Council of Europe: "New technical developments in the sound broadcasting sector and their impact on a mass media policy" (Ref: CDMM (92)18).

The Eureka 147 System provides for multi-channel transmission over a single transmitter or over a transmitter network but where Single Frequency Networks are in use, access for local programme services may be restricted. In theory a local service can be opted out from the multiplex but there is insufficient evidence that such a shared arrangement can be viable. There is a need for further research to define systems with the flexibility to accomodate the needs of local and community broadcasters within Single Frequency Networks or a viable stand alone alternative.

We therefore support the Recommendation made by the Australian administration in document 10B/[AUS1], 10-11S/[AUS1] dated 18 July 1993 and submitted to the ITU-Radiocommunications Sector Meeting in Geneva calling for further research in this area. We ask that delegates support the adoption of the proposal in respect of incorporation of the following text, or similar, in CCIR Report 1203:

"Future digital sound broadcasting systems planning should accommodate the needs of different requirements of broadcasters by providing

capacity for integrating networked, non-networked and local radio services, and provide for local origination of programme material for services that are networked for part of the time and need local coverage at other times.

"Administrations are encouraged to study and provide further contributions on planning options and methods of delivery of digital sound broadcasting that address this need."

Please can you draw these comments to the attention of delegates at the ITU-R meeting in Geneva.

Yours sincerely

# 1719. DAB FLASHBACK - 1992

Newsgroup: rec.radio.broadcasting
Date: 1993-10-17 21:36:23 UTC

/* Written 6:25 pm Oct 16, 1993 by peg:pbaatech in web:amarc.radio */
/* ---------- "DAB FLASHBACK - 1992" ---------- */
********DAB Set to Conquer the Airwaves*******

Unlike AM and FM radio broadcasting, which transmits an
analog (sound) signal adapted to frequencies which can be
heard by the human ear, Digital Audio Broadcasting (DAB)
converts sound into binary code1's and 0's.

A decoder on the receiving end then translates this digital bit stream
back into an analog signal audible by the human ear.
There seems to be no doubt that DAB systems will be
implemented in the very near future.

The question is,
- which DAB system?
- Will DAB eventually replace FM broadcasting?
- What are the implications for community stations, especially those
in so-called "developing countries?"

New cause for worry arose over the course of the Montreux DAB
Symposium, held in Switzerland, June 8-9, 1992. The stated
aim of the symposium was to present a strategy for the
world-wide introduction of DAB, proposed by the European
Broadcasting Union (EBU) in conjunction with the partners of
the EUREKA 147 project, the most advanced DAB system to date.

They are proposing that the EUREKA 147 project be used as a
world standard for all future digital audio broadcasting
systems.

While EUREKA 147 was not developed by the EBU, it seems that
the relationship between the EBU and EUREKA is akin to that
between a client (EBU) and a supplier (Eureka 147). In
addition, The EUREKA 147 project is made up of a number of
exclusively European organizations. some 20 partners in all, half of
whom are large equipment manufacturers.

There are huge profits to be made from the introduction of DAB,
with millions of receivers to replace, not to mention transmitting
equipment.

*******What this means for community broadcasters:

Community radio didn't seem to figure very highly in the
scheme of things at Montreux. This was confirmed by a Swiss
community broadcaster who represented the European Federation

of Free Radios (FERL) at the symposium. He stated that community stations in Europe would not have the resources to jump on the DAB bandwagon. And if that's the case in Europe, it's highly doubtful that community broadcasters in Latin America, Africa and Asia will be able to come up with the cash to do so.

The near certain problems with DAB, for community radio, hinge upon the fact that in Europe at least, DAB has its eyes on the FM band, which is to say, on the eventual replacement of FM broadcasting, with DAB.

The EUREKA 147 project does not incorporate an "in band" system (which would allow FM stations to encode a DAB signal within their existing FM transmissions, until such time as they could afford to switch over entirely to DAB transmission), and has no plans to develop one.

Other DAB projects in the works which do incorporate an "in band" system, are lagging far behind EUREKA 147; in other words, part of the world may be "obliged" to adopt EUREKA 147 by default, with several countries hoping to begin DAB transmissions within three years.

******The threat of centralized broadcasting:

The most disturbing aspect of this debate centers on the potential dangers posed to the very nature of community radio broadcasting, which could easily be compromised by the introduction of DAB. Generally speaking, most community stations, be they AM or FM, have their own studio to transmitter link, and their own broadcast frequency. DAB may change this set-up.

Using the example of the EUREKA 147 project, it's possible to predict some of the problems DAB may impose upon community stations. Their ability to provide "small" coverage to a specific area may be jeopordized.

The Eureka system can be broadcast either terrestrially or by satellite. Each transmitter sends a signal on a frequency block 1,5 megahertz wide, each signal can carry five stereo channels (a larger number of mono, stereo and data channels can be carried in different combinations using this system).

There appears to be no economical means of providing small coverage, short of implementing a full 1,5 megahertz block capable of carrying five channels.

*******Conventional Planning

The city of Montreal (which is home to four community stations) can be used as an example. A large, commercial

station (let's call it Radio Rich-RR) could put up a DAB transmitter, set it to 50 Kilowatts, and cover a radius in excess of 35 kilometres, using one frequency block of 1.5 MHz carrying five digital stereo programs.

Radio Centre-ville, which broadcasts multi-ethnic programming to a smaller area, would not be able to use Radio Rich's transmitter, even if a channel was available, since RR provides much wider coverage than that needed by Centre-ville, and the costs of larger coverage would be too expensive.

Centre-ville would have to install its own transmitter capable of carrying five channels, though it would only need one channel to broadcast on.

Centre-ville could try to rent out the other 4 channels, however, they could not share readily their chunk of spectrum with CIBL-FM (another adjacent community station), CIBL would need another chunk of spectrum, at a different frequency, or else it would interfere with Centre-ville.

A community radio spectrum planner could arrange to tailor small coverage stations in and around Montreal by using not more than four different blocks of 1.5 megahertz. To keep it simple, a given block can be reused, providing that it is not reused in nearby areas, or else stations will interfere with each other.

So while Radio Rich has covered its service area with one block of 1.5 megahertz, using all five channels to reach a very large audience, the community groups would have to use four such blocks to provide small coverage to the same area. This is not efficient, even if they use all five channels, beside, they probably only need one!

As for rural stations they too could use all five stereo channels to cover a larger area; however, this could present a problem if a community station didn't need to make use of all five channels. And while they could try to rent out data channels, it seems unlikely that they'd be able to find other stations in the region who could make use of the other four available stereo channels.

******Single Frequency Network (SFN).

SFN is sort of like having digital retransmitting stations, a small number of transmitters set up to provide better coverage of large areas. With DAB, all the transmitters would be set to the same frequency blocks. SFN is of little use to community broadcasters, as SFN transmits the same programs over a large area..There appears to be no scope for local program input at any given transmitter, itself part of a SFN network.

So the community station wishing to implement a service there will still have to set up their own service, meaning their own 1,5 megaherz chunk of spectrum.

This issue of small coverage and network planning raises important issues for community broadcasters in the third world. While community broadcasters in countries such as Canada or Australia may eventually find a compromise to accomodate the small stations, with the assistance and cooperation of their broadcasting authorities, this will probably not be the case for many countries around the world.

***The Advantages of DAB

Proponents of DAB who work in community radio argue that DAB will be beneficial to community broadcasters. First, DAB requires a lot less wattage to broadcast than either AM or FM. It is claimed that an area which requires a 10 watt FM transmitter, could be covered with a one-watt DAB transmitter.

Second, it's true that community stations could sell off additional stereo and/or data channels, and thus cover the costs of implementing DAB, and perhaps even generate long-term funding. While this would involve a heavier workload in terms of sales and administration, it could pay off for some stations.

Third, DAB would be an excellent opportunity for community stations to increase their coverage and their listenership. Radio Centre-ville in Montral, for example, might decide that it would be to its advantage to share a transmitter with Radio Rich, thus covering the entire city, and reaching a wider audience (which could also increase advertising revenues and listener donations during fundraising campaigns).

Conclusion
While this article examines some of the problems inherent in Eureka 147, and examines the pros and cons of DAB for community broadcasters, it is by no means comprehensive.

Other DAB systems (in-band systems) are in the works, and there is no guarantee that Eureka 147 will be adopted as a world standard for DAB.

There may also be ways of getting around spectrum limitations, allowing community broadcasters to solve the problem of frequency distribution and coverage.

Regional community radio associations, as well as AMARC, have a strong role to play in promoting discussion and the exchange of information around DAB.

but perhaps the country
stations are playing 'different' formats within country - contemporary,
classic, etc.

> NO CHR

i think KWOD used to be CHR before it began to lean modern. Maybe KSFM, too.

> NO commercial jazz/new age.

KQPT used to be adult alternative, and actually did well for a time (top 10).

Hello,
I am a graduate student researching contemporary farm radio formats for a thesis paper. Right now, I am in the preliminary stage of gathering information from radio stations with agriculture intensive formats and agricultural network s. I would appreciate hearing from anyone who might have some insight into this subject. Of special interest would be any information regarding the uses and audience gratification of "farm radio" in rural/small markets. Also, I would like to hear about in locally originated programs geared towards the agricultural community. Any comments may be sent directly to:

James Morrow <3X7RHRS@CMUVM.BITNET>

## 1724. Digital Audio Broadcasting (DAB)

# 1725. **RADIO WATCHERS REPORT - Boston **

Newsgroup: rec.radio.broadcasting
Date: 1993-10-30 05:34:29 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <2asud5$rhp@vixen.cso.uiuc.edu>
Source record: 42214

* Group W Radio is about to add a second AM signal in the Boston market. Group W which already owns WBZ-AM 1030(NewsRadio 1030) is about to close the deal for financially-troubled Celtics owned and operated an all-sports(with an exception of weekday morning syndicated Imus show) 5,000 watt WEEI AM 590(SportsRadio 590). Both Boston morning dailies report that the deal should be announced shortly. The sale price is reportedly somewhere between $2.5 and $3million. When the Celtics bought the station in the spring of 1990 they paid $6.5million to Papa Gino's Pizza chain. The current all-sports format replaced long running all-news programming in September of 1991. If the deal goes thru Group W will have 2 out 6 major AM signals in the city. I would venture out and guess that Group W people will now try to make a strong bid for the Red Sox radio rights which could make WBZ-WEEI a real sports powerhouse(WBZ owns rights to NFL's Patriots,WEEI owns rights to NBA's Celtics and NHL's Bruins).

* Boston's #1 morning DJ Matt Siegel who had been with Pyramid's WXKS-107.9FM(CHR) for the last 12 years will begin to syndicate a special Saturday morning show(6-10am) starting sometime in January of 1994. Stations in LA, Chicago, NYC and of course Boston are already on board...Siegel also plans to syndiacte his weekday highly-rated show sometime later in 1994...

* Former WXKS-FM personality John Garebidian has his own nationally syndicated Sunday night dance-oriented music on WJMN-94.5FM(Jam'n) from 7pm-12am. The show is broadcast from the basement of Garabedian's house in the suburban Boston. Garebidian's show is called 'StreetJam'. It has replaced long-running 'ClubClassics' with Vinnie Peruzzi that used to air from 9-12 on Sunday nights...

After about thirty years of following radio and its many changes, I have come up with the following scenario. What if, in 1951, Alan Freed had to deal with the myriad of consultants and marketing research data involved in today's radio programming? What would have happened to popular music?

-- Tabloids would be talking about reported sightings of the Late, Great Frankie Laine many years after his tragic death in 1977. Laine, as you know, set record sales and concert attendance records all through the fifties and sixties.

-- Amidst screams of "Doggie in the Window", Patti Page would be starting on her 1993 world tour. Cities are reporting instant sellouts for all concerts.

-- Promoters have upped the ante to get the "Fab Four" back together again, the Four Aces. Former leader Al Alberts says, "No way. That stage of my life is over."

-- Meanwhile, from Liverpool, local art teacher John Lennon tries to get enough students to make a living wage.

-- Finally, in Memphis, a testimonial was held for Crown Electric Company President Elvis A. Presley to honor his 40 years as an Electrician. Occasionally he talks about the handful of records he made for local labels in the fifties. He says he doesn't have much interest in music any more.

Meanwhile, it's back to "Classic Hits Radio".....

Message-ID: <2asuh6$rjv@vixen.cso.uiuc.edu>
Source record: 42217

Kansas City radio news:

Excerpted from the Kansas City Star, 10/26/93:

Monday brought different assignments to four on-air personalities at
adult contemporary radio stations KUDL-FM and KMXV-FM.
The shuffle reflects a market research poll of 700 adult-contemporary radio
listeners commissioned last summer by the stations' owner, Apollo Broadcasting.
Apollo owned KMXV and took ownership of KUDL from Shamrock Broadcasting late
last month. . . .
KUDL's target audience is women 25 to 54 and the station broadcasts middle
of the road adult contemporary music.
KMXV tries to attract its target audience, women 25 to 49, with more uptempo
adult contemporary music.
"You have some people who are 25 years of age who want to hear KUDL-type
music and some people who are 25 who want to hear Mix-type music . . . ,"
[ellipsis in Star article; Mix 93 is KMXV's slogan] said Fred Murr, general
manager of the stations. "(The research) had to get into musical taste."
This week's on-air personnel switches were made to better match the sytle of
music played with the personality behind it, Murr said.
*** *** *** *** *** *** ***
For 25 years, Phil Jay's name was synonymous with oldies station WHB. But
last month new station owners replaced him with a farm format and on-air cow
moos.
Tom E. Beal, owner of the KFEZ "easy listening" station, says Jay now is the
host of his station's morning show. Has Jay forsaken Elvis for Barbra
Streisand?
Not yet. "I just do slogans," Jay says. "'Good morning, I'm Phil Jay, your
morning host on KFEZ--easy music for an easy morning'--things like that."
But that's it. "I won't be introducing songs or anything," Jay says.
*** *** *** *** *** *** ***
...KY-102's Paul "Fredrocks" is history at the FM album rock station. "He
resigned," says program director Scott Souhrada. Why? "I'd rather you get
that from him."
One KYYS employee said last Friday: "I got a memo that said he resigned,
but when I saw him leaving this morning, he was in tears."
Fredrocks' final show was last Thursday, Souhrada ssays. "Right now we'll
take care of (his) shift on a temporary basis."
Fredrocks could not be reached for comment.
*** *** *** *** *** *** ***
[Background info: KFEZ is at 1190 kHz, 5 kW, stereo, nostalgia/MOR format.
KYYS is at 102.1 mHz, 100 kW, somewhat stale AOR format. Fredrocks' real last
name is Fredricks. WHB is at 710 kHz, 10 kW, used to be stereo until
KMZU(FM) Carrollton, MO bought it and converted the oldies station into a
farm and country-music station. Moo.]

You can find antique microphones and a lot of other old broadcasting stuff in in Antique Radio Classified, P.O. Box 2, Carlisle, MA 01741. I don't know if they sell individual issues, but a subscription is about $60 a year. Their phone number is 508-371-0512.

# 1731. Missouri Radio News

Newsgroup: rec.radio.broadcasting
Date: 1993-10-30 05:36:45 UTC
From: Mark Roberts <transvox@TYRELL.NET>
Message-ID: <2asuhd$rk3@vixen.cso.uiuc.edu>
Source record: 42218

Radio news from the rest of Missouri:

Columbia-area radio station KBXR signed on for its first official day of broadcasting October 15.
The adult-alternative album station is owned by former executives at community station KOPN(FM), Patricia Watkins and Dave Taylor.
The station had been on the air for several weeks on a sporadic basis, playing everything from old Edward R. Murrow newscasts to Bob & Ray comedy records.
The station's slogan is "Where The Music Comes First." It may fill part of the market niche left by the sudden demise of University of Missouri alternative-rock station KCOU(FM). KCOU(FM) left the air September 22 after its owner, the Residence Halls Association at the University of Missouri, claimed the station was over budget. All of KCOU's volunteer management was fired.
KBXR is licensed to Ashland, about 15 miles south of Columbia (halfway between Columbia and Jefferson City). Its studios are located along with the studios of KFRU(AM) and KARO(FM) in Columbia.
The nature of the relationship between KBXR and KARO/KFRU is somewhat unclear, but the management of the combo is currently serving as sales and management consultants to the KBXR management. It's rumored that KARO/KFRU may eventually buy KBXR.
KBXR is at 106.1 mHz (C1) with a power of 28,000 watts.
*** *** *** *** *** *** ***
Jefferson City station KKFA(FM) has reclaimed its old call letters and is trying a new format.
KKFA formerly programmed an adult-contemporary format with the slogan "Soft Rock Cafe." It is now KTXY(FM), but it has not gone back to its former CHR format. Instead, it is trying a modified AOR format with the slogan "Rock without the Hard Rock." The format change occurred early in October.
KTXY is a class-C station at 106.9 with a power of 100,000 watts.
*** *** *** *** *** *** ***
From the St. Louis Journalism Review, October 1993:
The list of radio owners in the St. Louis market keeps getting smaller. With EZ Communications' purchase of the two Gannett properties [KUSA(AM) and KSD(FM) -- EZ owns KYKY(FM)], the town loses another broadcast company. Rumors abound that Emmis Broadcasting, which owns KSHE, has been looking for another property here, but it's not known if they would be interested in KXOK-AM & FM, which are up for sale.
Insiders have known for some time that KXOK was having financial problems. Michael Frischling, whose father owns the parent company, was unable to come up with enough money to follow through on an LMA with Evergreen's WKBQ/KASP [subsequently sold]. Evergreen cancelled the agreement and kicked Frischling and his stations out of the studios on Hampton Avenue.

[Also note: KUSA(AM) has reclaimed its former call letters of KSD(AM). Gannett owns the call letters, which are used on its Denver TV station.]

*** *** *** *** *** *** ***

Also from SJR, October, 1993:

While the biggest news of the Summer 1993 Arbitron was the dramatic rise by KEZK [A/C], there are other trends worth noting.

KMOX, the perennial giant of the market [1120 kHz, clear-channel], is showing signs of recovering from its long audience erosion. Some dayparts have started to show audience increases over the shares registered in the same survey a year ago. It is surprising, though, that the station's share increase wasn't more, given the fact that this survey came during July, August and September. One would have thought the high impact flood news would have been more of a tune-in factor for the market's radio news voice. . . .

At WKBQ, it appears the loss of a high-profile morning team [because of on-air racial slurs] took its toll. The drop in morning number was from last year's 4.3 to a current 2.7. [WKBQ is a CHR station.] . . .

Another station showing across-the-board increases in every daypart is KFUO. While not mentioned in many other assessments of the Arbitron, this station continues to develop a growing share of the market. [KFUO(FM) is a classical station.]

[NOTE: This time, the SJR did NOT print the full set of Arbitron numbers. Perhaps they assumed readers already saw them in the Post-Dispatch, although the Post-Dispatch's coverage of radio is among the worst of any major American newspaper--ironic for a newspaper that was one of the pioneers in radio and TV!]

Buddy of mine -- Dave Hull, production genius & all-around great guy
-- just got his butt canned in San Luis Obispo, CA. Reason? Does anybody
in commercial radio need a reason? I suspect his competence & experience
threatened management.

Guy's got pipes like the Tabernacle Organ. He's also got a family
that likes to eat occasionally. If you could use one and help the other,
drop some e-mail.

# 1733. Kansas City Summer 1993 Arbitrons

Newsgroup: rec.radio.broadcasting
Date: 1993-10-30 05:37:06 UTC
From: Mark Roberts <transvox@TYRELL.NET>
Message-ID: <2asui2$rkb@vixen.cso.uiuc.edu>
Source record: 42222

The following numbers appeared in the Kansas City "Star", 10/20/93. Once again, the Star's accompanying article was a just a shallow recitation of the numbers with some reaction quotes from station managers. No 25-54 or 18-34 numbers were given. The 18-34 numbers would have been especially interesting, in order to see how well KLZR (Lawrence, KS, 105.9 mHz, C1) penetrates the market with its modern rock format, the only one available anywhere near here. In the spring, KLZR managed a 0.6 in the 18-34 demo, although it really belongs in the Topeka market.
That's despite a signal that is somewhat spotty in the metro area, especially in Kansas City, MO, where RF front-end overload is a real problem.

KANSAS CITY ARBITRON RATINGS

# 1734. SCA in Dallas

Newsgroup: rec.radio.broadcasting
Date: 1993-10-30 05:37:11 UTC
From: linnig@m2000.dseg.ti.com
Message-ID: <2asui7$rkd@vixen.cso.uiuc.edu>
Source record: 42221

Folks,

Can you tell me if there are any FM stations transmitting SCA in the Dallas area? I've built the Ramsey SCA Decoder kit and cannot pick up any. I'm wondering if something is wrong. If there are any, could you tell me what stations transmit SCA?

Please Email, as I don't regularly read this newsgroup.

Thanks,

-- Mike, N5QAW

Hi,
Does anyone know if TV stations broadcast on subcarriers as well? By this I
mean do they have subcarriers services as are used by FM broadcast stations?
Best Wishes,
Henry.

# 1736. Serbian Opposition Hit by UN

Airflash - Issue 45 Summer 1993
-------------------------------
SERBIAN OPPOSITION HIT BY UN
-------------------------------

A Radio station providing one of the few outlets for political
debate in Serbia has been hampered by United Nations sanctions.

Radio B-92 in Belgrade, which exists as an antidote to the
misinformation and hatred spread by the state-backed-media,
has found it impossible to get spare parts for equipment.

Although the UN has exempted independent media from the sanctions
imposed on Serbia, that exemption has not been respected on the
ground - with the result that broadcasts have already been
interrupted.

In an appeal to supporters outside Serbia, B-92 editor-in-chief
Veran Matic said "We are asking you to contribute to the
preservation and further development of independent media in
ex-Yugoslavia by letters and petitions to your movements,
newspapers, and to the UN Security and Sanctions Committee."

-----------------------------------
For information on what you can do to help Radio B-92 contact
AMARC at amarc@web.apc.org. 3575 blvd. St Laurent, suite 704,
Montreal, Quebec, Canada H2H 2T6 Phone (514) 982-0351

>>WTFM is WAPP

when was this written, 1985?

Sarcasm off, information mode on: WAPP was rock 40, went
classic rock for a week in 1986 then become Hot 103 with
dance music in August 1986. ON 9/22/88 WQHT Hot 103 and
WYNY-97.1 swapped frequencies due to ownership deals/agreements.
103.5 is WYNY, y-103.5 now.

You gotta come back east more often.

## 1738. TRANSTAR Radio -- new services now?

Newsgroup: rec.radio.broadcasting
Date: 1993-10-30 05:37:36 UTC
From: <>
Message-ID: <2asuj0$rkl@vixen.cso.uiuc.edu>
Source record: 42225

On the satellite Satcom C5/21 in analog SCPC format are several music services (Transtar radio).

After listening to Spectrum last week (or the week before), I am wondering if those services are not know as Transtar anymore. Are they now know as the Unistar music formats?

I just want to get the true name of those music services correct -- or up to date.

Thanks.

## 1739. who's responsible?

Newsgroup: rec.radio.broadcasting
Date: 1993-10-30 05:37:41 UTC
From: dbelson@vaxc.stevens-tech.edu
Message-ID: <2asuj5$rko@vixen.cso.uiuc.edu>
Source record: 42227

as part of my ongoing research, i need to find out something else...

if a radio station is chartered as a school organization (ie. submits a constitution, and becomes a "recognized student organization" by the student council), and then gets into trouble with the fcc, who is responsible for paying the fines incurred? would it be the responsibility of the organization, or of the school? (or does it simply depend on the school?) mainly, who would the fcc go after?

thanks in advance.

-david belson

# 1740. Chicago AM 1000 now officially WMVP

Newsgroup: rec.radio.broadcasting
Date: 1993-10-30 05:37:55 UTC
From: okt1@crux5.cit.cornell.edu
Message-ID: <2asujj$rkr@vixen.cso.uiuc.edu>
Source record: 42228

Chicago's AM 1000 finally identified itself officially as WMVP.
I heard the following official station ID at
9:07pm Central Time on Thursday October 29 during
a Blackhawks hockey game:

"You are listening to Blackhawks hockey on Sports 1000,
WMVP Chicago."

Looks like the FCC has finally approved the call letter switch.
The station identified itself officially as "WLUP-AM Chicago"
only a week ago even though it promoted itself as WMVP in its ads.

# 1741. **RADIO WATCHERS REPORT - Boston **

Newsgroup: rec.radio.broadcasting
Date: 1993-10-30 05:38:17 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <2asuk9$rku@vixen.cso.uiuc.edu>
Source record: 42229

* Group W Radio is about to add a second AM signal in the Boston market. Group W which already owns WBZ-AM 1030(NewsRadio 1030) is about to close the deal for financially-troubled Celtics owned and operated an all-sports(with an exception of weekday morning syndicated Imus show) 5,000 watt WEEI AM 590(SportsRadio 590). Both Boston morning dailies report that the deal should be announced shortly. The sale price is reportedly somewhere between $2.5 and $3million. When the Celtics bought the station in the spring of 1990 they paid $6.5million to Papa Gino's Pizza chain. The current all-sports format replaced long running all-news programming in September of 1991. If the deal goes thru Group W will have 2 out 6 major AM signals in the city. I would venture out and guess that Group W people will now try to make a strong bid for the Red Sox radio rights which could make WBZ-WEEI a real sports powerhouse(WBZ owns rights to NFL's Patriots,WEEI owns rights to NBA's Celtics and NHL's Bruins).

* Boston's #1 morning DJ Matt Siegel who had been with Pyramid's WXKS-107.9FM(CHR) for the last 12 years will begin to syndicate a special Saturday morning show(6-10am) starting sometime in January of 1994. Stations in LA, Chicago, NYC and of course Boston are already on board...Siegel also plans to syndiacte his weekday highly-rated show sometime later in 1994...

* Former WXKS-FM personality John Garebidian has his own nationally syndicated Sunday night dance-oriented music on WJMN-94.5FM(Jam'n) from 7pm-12am. The show is broadcast from the basement of Garabedian's house in the suburban Boston. Garebidian's show is called 'StreetJam'. It has replaced long-running 'ClubClassics' with Vinnie Peruzzi that used to air from 9-12 on Sunday nights...

>from the archives.

Must be the company mandate or something...About a month ago Infinity's
WZLX-100.7(Boston's Classic Rock) classic rock outlet in Boston was
doing exact the same thing...All the DJs pretaped their shifts so
it was made it for some very weird listening with no mention of time or
weather during AM and PM drives...I wonder if Infinity's other classic
rock stations throughout the country did 'The History of Classic Rock' week
as well...

## 1744. Divorce comes to NYC radio

After about thirty years of following radio and its many changes, I have come up with the following scenario. What if, in 1951, Alan Freed had to deal with the myriad of consultants and marketing research data involved in today's radio programming? What would have happened to popular music?

-- Tabloids would be talking about reported sightings of the Late, Great Frankie Laine many years after his tragic death in 1977. Laine, as you know, set record sales and concert attendance records all through the fifties and sixties.

-- Amidst screams of "Doggie in the Window", Patti Page would be starting on her 1993 world tour. Cities are reporting instant sellouts for all concerts.

-- Promoters have upped the ante to get the "Fab Four" back together again, the Four Aces. Former leader Al Alberts says, "No way. That stage of my life is over."

-- Meanwhile, from Liverpool, local art teacher John Lennon tries to get enough students to make a living wage.

-- Finally, in Memphis, a testimonial was held for Crown Electric Company President Elvis A. Presley to honor his 40 years as an Electrician. Occasionally he talks about the handful of records he made for local labels in the fifties. He says he doesn't have much interest in music any more.

Meanwhile, it's back to "Classic Hits Radio".....

Kansas City radio news:

Excerpted from the Kansas City Star, 10/26/93:

Monday brought different assignments to four on-air personalities at
adult contemporary radio stations KUDL-FM and KMXV-FM.
The shuffle reflects a market research poll of 700 adult-contemporary radio
listeners commissioned last summer by the stations' owner, Apollo Broadcasting.
Apollo owned KMXV and took ownership of KUDL from Shamrock Broadcasting late
last month. . . .
KUDL's target audience is women 25 to 54 and the station broadcasts middle
of the road adult contemporary music.
KMXV tries to attract its target audience, women 25 to 49, with more uptempo
adult contemporary music.
"You have some people who are 25 years of age who want to hear KUDL-type
music and some people who are 25 who want to hear Mix-type music . . . ,"
[ellipsis in Star article; Mix 93 is KMXV's slogan] said Fred Murr, general
manager of the stations. "(The research) had to get into musical taste."
This week's on-air personnel switches were made to better match the sytle of
music played with the personality behind it, Murr said.
*** *** *** *** *** *** ***
For 25 years, Phil Jay's name was synonymous with oldies station WHB. But
last month new station owners replaced him with a farm format and on-air cow
moos.
Tom E. Beal, owner of the KFEZ "easy listening" station, says Jay now is the
host of his station's morning show. Has Jay forsaken Elvis for Barbra
Streisand?
Not yet. "I just do slogans," Jay says. "'Good morning, I'm Phil Jay, your
morning host on KFEZ--easy music for an easy morning'--things like that."
But that's it. "I won't be introducing songs or anything," Jay says.
*** *** *** *** *** *** ***
...KY-102's Paul "Fredrocks" is history at the FM album rock station. "He
resigned," says program director Scott Souhrada. Why? "I'd rather you get
that from him."
One KYYS employee said last Friday: "I got a memo that said he resigned,
but when I saw him leaving this morning, he was in tears."
Fredrocks' final show was last Thursday, Souhrada ssays. "Right now we'll

Radio news from the rest of Missouri:

Columbia-area radio station KBXR signed on for its first official day of broadcasting October 15.
The adult-alternative album station is owned by former executives at community station KOPN(FM), Patricia Watkins and Dave Taylor.
The station had been on the air for several weeks on a sporadic basis, playing everything from old Edward R. Murrow newscasts to Bob & Ray comedy records.
The station's slogan is "Where The Music Comes First." It may fill part of the market niche left by the sudden demise of University of Missouri alternative-rock station KCOU(FM). KCOU(FM) left the air September 22 after its owner, the Residence Halls Association at the University of Missouri, claimed the station was over budget. All of KCOU's volunteer management was fired.
KBXR is licensed to Ashland, about 15 miles south of Columbia (halfway between Columbia and Jefferson City). Its studios are located along with the studios of KFRU(AM) and KARO(FM) in Columbia.
The nature of the relationship between KBXR and KARO/KFRU is somewhat unclear, but the management of the combo is currently serving as sales and management consultants to the KBXR management. It's rumored that KARO/KFRU may eventually buy KBXR.
KBXR is at 106.1 mHz (C1) with a power of 28,000 watts.
*** *** *** *** *** *** ***
Jefferson City station KKFA(FM) has reclaimed its old call letters and is trying a new format.
KKFA formerly programmed an adult-contemporary format with the slogan "Soft Rock Cafe." It is now KTXY(FM), but it has not gone back to its former CHR format. Instead, it is trying a modified AOR format with the slogan "Rock without the Hard Rock." The format change occurred early in October.
KTXY is a class-C station at 106.9 with a power of 100,000 watts.
*** *** *** *** *** *** ***
From the St. Louis Journalism Review, October 1993:
The list of radio owners in the St. Louis market keeps getting smaller. With EZ Communications' purchase of the two Gannett properties [KUSA(AM) and KSD(FM) -- EZ owns KYKY(FM)], the town loses another broadcast company. Rumors abound that Emmis Broadcasting, which owns KSHE, has been looking for another property here, but it's not known if they would be interested in KXOK-AM & FM, which are up for sale.
Insiders have known for some time that KXOK was having financial problems. Michael Frischling, whose father owns the parent company, was unable to come up with enough money to follow through on an LMA with Evergreen's WKBQ/KASP [subsequently sold]. Evergreen cancelled the agreement and kicked Frischling and his stations out of the studios on Hampton Avenue.

[Also note: KUSA(AM) has reclaimed its former call letters of KSD(AM). Gannett owns the call letters, which are used on its Denver TV station.]
*** *** *** *** *** *** ***
Also from SJR, October, 1993:
While the biggest news of the Summer 1993 Arbitron was the dramatic rise by KEZK [A/C], there are other trends worth noting.
KMOX, the perennial giant of the market [1120 kHz, clear-channel], is showing signs of recovering from its long audience erosion. Some dayparts have started to show audience increases over the shares registered in the same survey a year ago. It is surprising, though, that the station's share increase wasn't more, given the fact that this survey came during July, August and September. One would have thought the high impact flood news would have been more of a tune-in factor for the market's radio news voice. . . .
At WKBQ, it appears the loss of a high-profile morning team [because of on-air racial slurs] took its toll. The drop in morning number was from last year's 4.3 to a current 2.7. [WKBQ is a CHR station.] . . .
Another station showing across-the-board increases in every daypart is KFUO. While not mentioned in many other assessments of the Arbitron, this station continues to develop a growing share of the market. [KFUO(FM) is a classical station.]
[NOTE: This time, the SJR did NOT print the full set of Arbitron numbers. Perhaps they assumed readers already saw them in the Post-Dispatch, although the Post-Dispatch's coverage of radio is among the worst of any major American newspaper--ironic for a newspaper that was one of the pioneers in radio and TV!]

Buddy of mine -- Dave Hull, production genius & all-around great guy
-- just got his butt canned in San Luis Obispo, CA. Reason? Does anybody
in commercial radio need a reason? I suspect his competence & experience
threatened management.

Guy's got pipes like the Tabernacle Organ. He's also got a family
that likes to eat occasionally. If you could use one and help the other,
drop some e-mail.

Source record: 42238

The following numbers appeared in the Kansas City "Star", 10/20/93. Once again, the Star's accompanying article was a just a shallow recitation of the numbers with some reaction quotes from station managers. No 25-54 or 18-34 numbers were given. The 18-34 numbers would have been especially interesting, in order to see how well KLZR (Lawrence, KS, 105.9 mHz, C1) penetrates the market with its modern rock format, the only one available anywhere near here. In the spring, KLZR managed a 0.6 in the 18-34 demo, although it really belongs in the Topeka market.
That's despite a signal that is somewhat spotty in the metro area, especially in Kansas City, MO, where RF front-end overload is a real problem.

# 1751. SCA in Dallas

Newsgroup: rec.radio.broadcasting
Date: 1993-10-30 05:39:17 UTC
From: linnig@m2000.dseg.ti.com
Message-ID: <2asum5$rlf@vixen.cso.uiuc.edu>
Source record: 42239

Folks,

Can you tell me if there are any FM stations transmitting SCA in the Dallas area? I've built the Ramsey SCA Decoder kit and cannot pick up any. I'm wondering if something is wrong. If there are any, could you tell me what stations transmit SCA?

Please Email, as I don't regularly read this newsgroup.

Thanks,

-- Mike, N5QAW

Hi,
Does anyone know if TV stations broadcast on subcarriers as well? By this I
mean do they have subcarriers services as are used by FM broadcast stations?
Best Wishes,
Henry.

# 1753. Serbian Opposition Hit by UN

Newsgroup: rec.radio.broadcasting

Airflash - Issue 45 Summer 1993
-------------------------------
SERBIAN OPPOSITION HIT BY UN
-------------------------------

A Radio station providing one of the few outlets for political
debate in Serbia has been hampered by United Nations sanctions.

Radio B-92 in Belgrade, which exists as an antidote to the
misinformation and hatred spread by the state-backed-media,
has found it impossible to get spare parts for equipment.

Although the UN has exempted independent media from the sanctions
imposed on Serbia, that exemption has not been respected on the
ground - with the result that broadcasts have already been
interrupted.

In an appeal to supporters outside Serbia, B-92 editor-in-chief
Veran Matic said "We are asking you to contribute to the
preservation and further development of independent media in
ex-Yugoslavia by letters and petitions to your movements,
newspapers, and to the UN Security and Sanctions Committee."

-----------------------------------
For information on what you can do to help Radio B-92 contact

From: <>
Message-ID: <2asums$rlm@vixen.cso.uiuc.edu>
Source record: 42243

On the satellite Satcom C5/21 in analog SCPC format are several music services (Transtar radio).

After listening to Spectrum last week (or the week before), I am wondering if those services are not know as Transtar anymore. Are they now know as the Unistar music formats?

I just want to get the true name of those music services correct -- or up to date.

Thanks.

as part of my ongoing research, i need to find out something else...

if a radio station is chartered as a school organization (ie. submits a constitution, and becomes a "recognized student organization" by the student council), and then gets into trouble with the fcc, who is responsible for paying the fines incurred? would it be the responsibility of the organization, or of the school? (or does it simply depend on the school?) mainly, who would the fcc go after?

thanks in advance.

# 1757. Chicago AM 1000 now officially WMVP

Newsgroup: rec.radio.broadcasting
Date: 1993-10-30 05:39:58 UTC
From: okt1@crux5.cit.cornell.edu
Message-ID: <2asune$rlr@vixen.cso.uiuc.edu>
Source record: 42245

Chicago's AM 1000 finally identified itself officially as WMVP.
I heard the following official station ID at
9:07pm Central Time on Thursday October 29 during
a Blackhawks hockey game:

"You are listening to Blackhawks hockey on Sports 1000,
WMVP Chicago."

Looks like the FCC has finally approved the call letter switch.
The station identified itself officially as "WLUP-AM Chicago"
only a week ago even though it promoted itself as WMVP in its ads.

In article <2a845u$diu@vixen.cso.uiuc.edu> thahn@andy.bgsu.edu (Thomas A. Hahn) writes:
> I am looking for any information as to why we would not be allowed
>to broadcast over-the-air instead of through carrier-current. So far, I have
>not found any information regarding our problem. Of course, we would love
>to go FM but that is way out of reach for the time being. AM broadcast would
>solve many of our problems because we are a commercial station that is NOT
>funded by the University. Therefore, we need an improved signal to reach our
>intended audience.
>
> Any information at all on this topic will be of great help! Is there
>a reason we cannot broadcast to the campus instead of re-wiring the old carrier-
>current system in place now?

Part 15 of the FCC rules makes a special provision allowing
broadcasting on AM on educational campuses with no limitation on
radiated field or power IF the station does not cause interference to
any licensed station (in the protected contour of that station, as I
recall) AND the radiated field at the CAMPUS BOUNDARY meets the normal
intentional radiator limits of part 15. It would appear that this can
provide good coverage of a campus. I wrote a couple Radio World
articles that discuss this. They are reprinted below.

Insight On Rules #37

7 November 1990

All Things Considered broadcast a story about "Zoom Black
Magic Radio" on 6 October. This story gave considerable detail
on the operation of a 0.4 watt unlicensed FM station. Unlicensed
pirate radio has quite a mistique. A licensed Los Angeles FM
station uses the pirate radio image to differentiate itself from
the competition. While in London in 1985, I had the opportunity
to hear Laser Radio and Radio Caroline, broadcasting from the
North Sea. Even Tracy Ullman did a skit on pirate radio!
Reviewing the stack of information I recently received from the
FCC, I found an interesting unlicensed station in Hawaii.
This "public radio" group appears to have done just about
everything right but get a station license. The group was
incorporated in Delaware in 1987. The group applied as a
501(c)(3) tax exempt organization with the IRS. The tax exempt
purpose of the corporation was to "provide the public with
quality listening entertainment and information." The area to be
served by the station was a "remote and sparsely populated
district on the island of Hawaii." That area received no FM
signals.

It appears that the station manager sent a letter to the FCC in Hawaii regarding starting an FM station in 1986. The letter asks how to start a low power (under 100 watt) FM station. In its reply, the FCC Field Office said "Unfortunately, there are no provisions in our rules to operate the kind of station you propose." Station licenses are only granted on allotted channels. One is free to petition the Commission to allocate a channel to the community. The letter also points out the minimum operating schedule and minimum operating power requirements.
Eventually, the station went on the air without the benefit of a station license. The equipment was purchased from a company that advertised in Rolling Stone (another competitor for RW?). It consisted of a stereo generator, an exciter, a ten watt power amplifier and an omnidirectional antenna on a 20 foot pole. The equipment supplier catalog includes a disclaimer: "The plans & kits in this catalog are offered for your information only. You, as the purchaser and user, assume all legal and financial responsibility which results from the ultimate use of your purchase."
After about three years operation, a Hilo public relations firm called the FCC to find out the "ownership situation" of the station. After the FCC could not find any record of the station, the PR firm sent a copy of the station's "Station Profile", which provided various details about the station (frequency, coveage, format, operating schedule, etc.).
The station was inspected by the FCC on 24 October 1989. On 26 October, the FCC issued a Notice of Apparent Liability for $750 for willful violation of the Communications Act of 1934 by operating an unlicensed broadcast station. The NAL also ordered the station to cease and desist all operations immediately.
On 30 October, the station advised the FCC that the station was off the air and would remain so until it could obtain an NCE license. The station operator pointed out that the station provided a public service, being the only receivable FM station in the area. Further, the station did not have the assets required to pay the fine. For these reasons, it was requested the fine be reduced.
On 9 November, the FCC phoned the station with a compromise: turn in the transmitter. The station operator said the other board members (remember, this is a corporation) wanted to hold on to the transmitter. The FCC then suggested each of the six board members pay $50 (reducing the fine from $750 to $300). The station operator said no, but he'd like to discuss it with the other board members. He also said he'd like a court hearing. The FCC advised him that if he refused to pay, the forfeiture would go to court for the full $750.
On 13 November, the station operator said the board felt they should not pay the $300.
On 14 November, the FCC issued a forfeiture order for $750. The order details why the fine was not reduced. The FCC pointed

out that discontinuance of a violation after notification to cease does not excuse the violation (in this case, unlicensed transmissions). Further, the FCC records showed that the violation was done willfully, as the operator had full knowledge that a radio license was required to legally broadcast (the FCC still had the 1986 correspondence where the operator asked how to get a license).

The FCC dismissed the community service justification by saying that the potential of unlicensed stations to cause interference to other radio users, the undermining of the FCC administrative procedures to properly obtain a license, and the encouragement to other unlicensed operations far exceeds any community benefits provided.

The FCC stated the purpose of issuing a forfeiture is to penalize in order to prevent future violations and to discourage other potential violators. If the violator could readily afford the forfeiture, it would not serve its purpose. In telephone conversations, the FCC and the station operator were unable to come to a compromise, and the station did not provide any detailed financial information demonstrating that it could not afford the $750 fine.

On 24 November, the station sent financial information (a bank statement) showing no account activity and an account balance of $20.29. Based on this, on 30 November, the FCC reduced the fine to $100, payable in two installments. The second payment was made 17 February 1990, closing the case.

So, what unlicensed radio broadcasting is allowed? Many people assume anything is permitted if the transmitter power is under 100 mW.

15.219 allows unlicensed operation between 510 KHz and 1706 KHz if the final amplifier input power is 100 mW or under (excluding filament power) and the total of the antenna, transmission line and ground lead lengths is 3 meters or less. This is the current regulation that the old Knight Kit transmitter I build in fourth grade operated under (it cost $12.95, had 2 50C5s and a 12AX7). That transmitter replaced the old spark gap transmitter I'd built out of a toy buzzer.

15.221 authorizes "carrier current" transmission on an educationcal campus. This section, along with the section covering "tunnel radio" (real underground radio) pretty much put the conducted and radiation limits at the campus or tunnel boundary. Inside the campus or tunnel, the owner is pretty much free to do whatever, as long as it does not interfere with the protected contour of a licensed station.

15.239 covers unlicensed operation in the FM broadcast band. Transmitters must be FCC certified. The radiated field is limited to 250 uV/meter, measured 3 meters from the radiator. There is no 100 milliwatt exemption for operation in the FM band.

So, it appears that unless you own a campus or a tunnel, you're limited to use of that FCC certified "Mr. Microphone"

without a station license. Next month we'll deal with licensed broadcast stations (I promise!). I'll look forward to your comments.

Harold Hallikainen is president of Hallikainen and Friends, a manufacturer of transmitter control and telemetry systems. He also teaches electronics at Cuesta College, San Luis Obispo. He can be reached at 805 541 0200.

Insight On Rules #43

8 May 1991

We've recently been discussing what a station chief operator should do to insure compliance with the FCC and ANSI specifications for human exposure to RF fields. Last month I suggested a report be prepared based on predicted and measured fields. This report would show what areas are safe for human exposure for unlimited periods of time, those areas safe for limited exposure times, and those areas where a transmitter power reduction is required. The report would contain sufficient measurement and calculation detail to fully justify its conclusions (such as, how much must the transmitter power be reduced when a climber is a certain height on the tower).
I received a call from Richard Tell of Richard Tell Associates, Inc. (phone 702 645 3338). His company specializes in RF radiation consulting. Prior to that, he spend 18 years with the Environmental Protection Agency studying the potentially hazardous effects of electromagnetic fields. In the call, we discussed "RF hot spots" and RF contact currents. He also sent me a copy of a paper on this subject from the NAB 1990 Engineering Conference Proceedings.
The study of human exposure to RF fields appears to be a very interesting and controversial subject. The ANSI guideline the FCC is currently using is being revised to include various new ideas. The FCC may or may not adopt the new specifications (it'd appear that to adopt the new specifications, the FCC would have to go through the notice of proposed rulemaking, comment and report and order process, which can be slow).

Hot Spots & Contact Current

Hot spots are small areas of high RF field in areas of much lower RF fields. They are generally caused by reradiation. For the NAB paper, Richard Tell measured hot spots generated by reradiation from a mail box on a metal post, a metal window frame and a guy wire. In each case, the field close to the metal object was substantially more than the "ambient" field. "Surface fields" were measured about 5 cm from the surface. The "E squared" and "H squared" fields were increased to 5.9 to 15.8

times ambient. If these fields are above the ANSI limit, is exposure to these fields allowed?

Ideal Transducers

Ideally, a transducer or measurement instrument does not affect or "load" the parameter being measured. For example, an ideal voltmeter draws no current, an ideal ammeter has no voltage drop, an ideal pressure gauge introduces no volume displacement, etc. An ideal EM field meter does not change the field at the point of measurement (which it might do, due to "loading"). However, when a person enters this area, the radiator is substantially loaded, possibly decreasing the radiated field to within the ANSI limits. When the person actually touches the radiator, the radiated field drops substantially, but a contact current flows. A limitation on contact current is being considered for "hot spot" exposure, instead of specifying the undisturbed field be measured some arbitrary distance from the reradiator.

Wrist Currents

Since mailboxes and window frames are generally touched by hands, and the hand is connected to the remainder of the body by a relatively small diameter wrist, it would appear that the highest heat dissipation due to RF contact would be in the wrist. Using the specific conductance of the various tissues in the wrist and the density of those tissues, a total wrist current can be determined to give a Specific Absorbtion Rate in watts per kilogram of tissue. The SAR can then be tied back to how much temperature rise would be expected in the tissue due to the RF current. The current ANSI standard limits SAR to 0.4 watts per kilogram for the whole body, but allows 8 watts per kilogram in any one gram of tissue, allowing for varying fields, such as those generated by a hand held radio transmitter. Mr. Tell's paper shows a contact current of 75.1 mA in the AM band and 87.3 mA in the FM band for an SAR of 8 watts per kilogram in the wrist. Further, since wrists seem to be able to survive elevated temperatures (if not, I won't wash dishes any more!), an SAR of 20 watts per kilogram has been suggested. This would limit AM contact current to 119 mA and FM to 138 mA.

Lots of Study

Mr. Tell's paper lists 19 references from a wide variety of organizations and publications. A lot of research is being conducted in this field. The current ANSI limits are based on the heating effects of RF exposure. There is also study being conducted into other effects. It might be interesting to see how computed peak SARs (possibly at the tip of a finger) compare with those expected by contact current as the finger approaches a reradiating object. The tip of the finger is very close to the

object, resulting in a potentially high field and high SAR, but the reradiator is also "loaded" by the presence of the finger, decreasing the generated field. It would be interesting to see a graph of peak SAR, SAR in the wrist and whole body SAR as a function of the distance between the tip of the finger and the reradiator. The actual field at various places on the finger and wrist would have to be measured to take into account the loading as well as the attenuation due to distance from the radiator. Does the peak SAR approach a limit as the finger approaches the reradiator? How does this peak SAR compare with that expected by contact current (I squared R)?
This is a very interesting field deserving additional study. There may be a safety advantage to the proposed DAB and digital HDTV systems, since they generally use lower power.

Unlicensed College Radio

I got another call from a college FM station operating without the benefit of a license. Various intentional and unintentional unlicensed radiators are discussed in part 15 of the Rules. 15.211 and 15.221 are quite interesting. 15.211 allows any frequency or power to be used IN A TUNNEL, provided any emissions escaping the tunnel meet the various specifications of part 15. These systems are allowed when the radiator and all connecting wires are contained within the "tunnel, mine or other structure that provides attenuation to the radiated signal due to the presence of naturally surrounding earth and/or water."
15.221 similarly allows educational institutions to use AM frequencies on a noninterference basis with any power or radiated field as long as the field meets the general limitations of part 15 at the campus boundary.
Note that 15.221 permits such operation on AM only. It appears that operation on FM would only be permitted at an "underground university".
We've always assumed that radio required federal regulation because it does not "stop at property lines". These two sections, however, seem to define the word "stop" and, with some extension, could allow radio use on any frequency and power as long as the field at all points on the property line (and perhaps a certain distance above the property) met certain field limitations. Instead of setting a limitation on the field 30 meters from some box that radiates, the field would be set 30 meters from the property line (the property itself becomes a large "box"). I've heard of this reasoning being used to transmit an FM signal in a concrete sports complex. Radiation outside the complex was well below the part 15 limits.
But, as I read the rules, unlicensed operation in the FM band is limited to 250 microvolts per meter measured at 3 meters (15.239(b)).

Continuing Education

Barry Mishkind recently wrote in RW about continuing education. I'd like to suggest RW readers be learners. Too often people cram through four years of college, graduate, and never return to an intense learning environment (of course, we hope we learn on the job and through life in general). I'd like to suggest taking one class a semester or quarter in any field of interest at a local college or university (conflict of interest warning: I teach at a community college). The flexible hours of contract engineers often allow a few hours a week to be set aside for continuing education. Over the years, I've taken many business and computer language courses. I am now relearning calculus (after a 20 year break). It's much more interesting when you don't have to deal with lots of other classes, or, perhaps, when you're a bit older. Many colleges also offer tutoring to students. Working as a tutor (either volunteer or minimal wage) is a very good way of reviewing subjects. I'm currently tutoring algebra and calculus, Basic, Cobol, assembly and C languages, and accounting. The students and the instructors provide a very stimulating environment. Give it a try!

[Moderator's Note: With all of the talk about micro radio and the factor of interference, why is it that the Canadian government has seen fit to license many 1 watt community stations throughout the country? The above example is testimony to the fact that the FCC is less interested in interference as they are in administering a set of inflexible rules designed to keep 'non-standard' broadcasting off the <so-called> public airwaves. Clearly, this 10 watt station in Hawaii posed no threat to anyone, since there were NO other signals receivable there on FM. Yet, they were fined and ordered off-the-air. Of course, if they were a mega-corporate entity which wished to place a 50kw repeater of some Satellite format there, I am sure they would have no problem. C'mon people, Geesh... Great article Harold. Can't wait for your next installment. Bill]

# 1759. Introduction to rec.radio.broadcasting (11-1-93)

Newsgroup: rec.radio.broadcasting
Date: 1993-11-01 05:19:55 UTC
From: wdp@airwaves.chi.il.us
Message-ID: <2b269r$lvt@vixen.cso.uiuc.edu>
Source record: 42247
Cross-posted to: rec.radio.broadcasting,rec.radio.info

Greetings:

Rec.radio.broadcasting (r.r.b) is a Usenet newsgroup which
was founded in April of 1992, in order to provide a forum for
discussion of topics pertaining to 'domestic broadcast radio'.
Already in existance was rec.radio.shortwave, which centers around the
International radio scene, and rec.radio.noncomm who's focus is,
obviously, non-commercial radio. Rec.radio.broadcasting was intended
to 'fill the gap' between these groups.

The Airwaves Radio Journal (Formerly Internet Radio Journal)is a
periodic email digest consisting, mainly, of articles found in the
newsgroup. It is intended for people who either cannot access the
newsgroup from their system or for some reason prefer a digestified
format for reading. Subscriptions to Airwaves are free, and available
to anyone who wants one, and who is equipped with some form of email service.

-=*=- DOMESTIC BROADCAST RADIO -=*=-

By domestic, we mean broadcasts which are intended, primarily,for
reception in the same country/nation in which they originate. R.r.b
is an international newsgroup, though, and the term 'domestic' should
not be taken to imply 'USA' or even North American. Readers in other
nations are encouraged to participate.

-=*=- SUBJECTS -=*=-

If it has to do with broadcast radio, and not _specifically_ international
shortwave, it is welcome here. Occasionally an article which IS
primarily about shortwave will be posted if the subject seems broad
enough that the readership of r.r.b might be interested, or be able
to assist the poster in some way.

Generally, if a subject 'seems' like it would be of interest to the
broadcasting community (which includes those involved in creating,
transmitting or listening to broadcast radio) will be published.
These subjects include (but are not limited to)..

1) Formats and programming.
2) Engineering & technical matters and interests.
3) DXing (long distance reception) on the standard broadcast bands
4) Community broadcasting (including non-commercial and clandestine stations).
5) Pirate broadcasting (especially non-shortwave, domestic pirates).
6) Legislation affecting the industry, and its 'offspring' industries.
7) Technologies affecting the industry, and its 'offspring' industries.
8) General station information. Who is going on and off the air, and why.

9) Radio's historical and cultural significance.
10) Radio's current and future trends.
11) Political and news coverage and its impact.
12) Job openings and help to those seeking work in the industry.
13) Information on equipment and techniques involved in transmission and reception of broadcast radio signals.
14) The International Scene and how broadcast radio is shaping up in the various nations of the world.
15) Gabfesting and all matters of general interest to those involved in, or interested in, the general subject of domestic radio broadcasting.

-=*=- POSTING -=*=-

1) Post to rrb as you would any other Usenet group. The software does the rest.

2) Email your article directly to rrb@airwaves.chi.il.us. Using other addresses to post will needlessly delay your article. You might consider installing an alias in your mailer for emailed articles, especially if you post a lot of stuff. See the end of this file for all applicable addresses.

-=*=- POSTING GUIDELINES -=*=-

* If you post a question that is of potential interest to others in the group, ask that replies be posted, instead of emailed to you. We all would like access to the answers If you do receive email replies, post a summary to the group. This forum is only as good as it's posters and readers. Keep the info flowing.

* If you email an answer to a question, send a Cc: to the group's submission address, rrb@airwaves.chi.il.us, so we can all learn from your knowledge. When id doubt... POST POST POST! :-).

* PLEASE edit quoted text to a minimum! Most users of this group are fairly regular readers and do not need, or want, to read the entire text of a recent article in every reply. Of course, if the thread is less current, more quoted text may be appropriate. Use your brains (and your editor :->).

* If your message is basically a one or two line "Me Too" or "I disagree" post, consider emailing it to the poster. However if you go into some details as to WHY you agree or disagree, then please post it.

* If you are replying to an article in the Airwaves Radio Journal, simply use your mailer's reply feature, and again, edit the text to ONLY the article you are replying to, and include the article's name in the Subject field. Subjects of "Re: Airwaves Radio Journal" are confusing and may result in needless delays.

* If you post about a local radio station or personality, realize that 95% or more of the readers will know little or nothing about it. Offer a little background, like location, station format, type of

music played etc.

* Last but not least, avoid flames and personal insults. R.r.b has a high percentage of broadcast professionals among it's readers. We try to maintain a reasonably high brain to bulls*it ratio here. It is perfectly fine to say "I think that what you said is the stupidest bunch of crap I have ever heard", instead of "YOU are the stupidest jerk I have ever heard". If you *must* make personal attacks, do it in email.

-=*=- MODERATION -=*=-

AIRWAVES and rec.radio.broadcasting, are _very_ loosely moderated group. Normally, all legitimate articles will be posted to the group. Matters that may cause an article to be rejected by the moderator include...

---

* Articles which are not on (or reasonably near) the stated charter and scope of the group (domestic radio broadcasting) or pertain to 'non-broadcast' radio services, such as cellular, two-way, ham, citizens-band, and such.

* Articles that are too long for submission as-is. If your article is longer than 10k (10,000 bytes), consider splitting it into two parts, or better yet, edit it down to a more reasonable size. Check to see if you can eliminate any quoted text. If you believe that your article is of an especially urgent or informative nature, and you also feel that you cannot reduce the size without damaging the content, let me know and I will try to work with you.

* Articles which are merely multiple repetitions of an identical answer which has already been offered several times. Often these will be bundled together into a single article to conserve bandwidth and increase readability.

* Articles which contain 'miles' of quoted and multiple quoted text followed by a few lines or less of original text. Please edit quoted text to a minimum and try to adhere to the *50% rule*, that is 51 (or more) percent of original text to 49 (or less) of quoted text. If the thread is not current, more quoted text is appropriate. Only the worst offenders are omitted, usually I will edit quoted text myself, when I have time.

* Articles that solicit for funds or contain blatant commercial content. (see next section on this)

* Articles which are unwarrantedly offensive, abusive or contentious for the sake of contention. Personal attacks and ridicule are considered such. Discussion, even argument, of issues and opinions are welcomed and encouraged. Flame-wars and such are not. We have discussions here, not shouting matches.

Note: All articles are auto-replied to as they arrive, to indicate that we have received them. Each piece of mail to the submission

address(es) will generate a separate auto-reply message. Most articles which appear reasonable and on topic are published in the Journal/newsgroup. However the Editor/Moderator reserves final judgment on matters of acceptance or rejection of submitted material. When possible, rejected submissions will be returned with a note explaining why the submission was rejected.

-=*=- NO SOLICITATION POLICY -=*=-

Rec.radio.broadcasting and the Airwaves Radio Journal maintain a non-solicitation policy. Articles which appear to contain substantial 'commercial content' or which appear to blatantly solicit funds from readers for a 'cause' or a 'project' are generally rejected.

I generally * DO * accept..

o Product reviews: ... provided they are objective and informative and contain little or no 'motivational' language. Prices should be reduced to a price 'range' and all inquiries must be directed to the poster -or- an address of the manufacturer/distributor.

o Personal items: Such as old time radio tapes, a specific piece or two of equipment etc. sold at a low, hobbiest price.

o Radio-related items for barter/trade: Self explanatory.

o Announcements for non-commercial workshops, conventions, radio related flea-markets, etc. Pricing <other than small admission charge> and other specifics (like 'we take your credit card') are considered commercial content. If you want to publicize here, then you must deal with the followup mail/calls yourself.

o Personal recommendations of a product/company that appear legitimate. Especially when it is in response to another poster's inquiry.

---

In general I will take an 'err on the side of permissiveness' approach to this. In other words, if your article is credible, informative, reasonably intelligent, broadcast related, and has something to offer, I will do what I can to pass it along to the readers. I will only reject the worst of the lot. the rest I'll try to edit as necessary.

-=*=- ARCHIVES -=*=-

Archives of past Airwaves Radio Journals are kept for anonymous FTP at deja-vu.aiss.uiuc.edu . They can be found in the directory /misc/rec.radio.b-cast. In that directory you will find several sub-directories. They are plainly labeled INTERNET_RADIO_JOURNALS (which contains issues through 300) and AIRWAVES_RADIO_JOURNAL which contains issues 400 to present. The Journals are arranged in sub-directories of about 100 issues each. In each main sub-directory is a file called 00-INDEX, which contains the issue numbers of all

Journals, and the title of each article contained within. The
archives are updated every week or so. To determine when the last
update was, look at the date on the file called "<-Archive Last
Updated At".

If you need help with FTP, write me.

Journals are in gzip (.z) format. Gzip is the GNU zip format and can be
'unzipped' using the command 'gunzip <file>'. The gzip and gunzip
utilities are available free from many FTP sites for Unix, DOS and
Macintosh platforms. Remember that compressed files should
always be sent using the "binary" mode. If you have trouble accessing
anything, or if you have any questions about the archives, send email
to rrb@deja-vu.aiss.uiuc.edu. If you appreciate the archives, send
your notes of appreciation to the site admin, C. Lance Moxley
<lance@deja-vu.aiss.uiuc.edu>. He has been very gracious in his
willingness to store our archives on his machine.

* Please do not bother the system admin with problems, direct those to me. *

-=*=- EMAIL SERVER -=*=-

We are in the first stages of building an email archive server for
AIRWAVES. Currently you may obtain this help file at the INDEX files
for either the Internet Radio Journal, -or- the AIRWAVES RADIO JOURNAL.
You can also send for the file -COMMANDS-, which is updated as new
features are added. To access these servers, send email ti the
archive site address <rrb@deja-vu.aiss.uiuc.edu> with one of the
following commands as the SUBJECT of your message. The body of the
letter is ignored by the server.

** COMMANDS **

HELP - - - - - - - - Sends the latest version of the file you are reading now.
INDEX IRJ - - - - - Sends the 00-INDEX file for the Internet Radio Journal.
INDEX AIRWAVES - - - Sends the 00-INDEX file for the AIRWAVES Radio Journal.
COMMANDS - - - - - - Sends out a list of commands which the server will accept.

Soon we will be expanding this service to permit email access to the
entire archive site. Stay tuned for further developments.
Remember that only mail addressed to the archive
address will be processed by the server.
- rrb@deja-vu.aiss.uiuc.edu
-

-=*=- ENJOY THE GROUP! -=*=-

I hope you enjoy the group. Remember, it is only as good as it's
contributors. So don't be shy :-). If you have a question, or answer,
even if you are not sure, post - post - post.

I am open to suggestions on how to improve this group. Send them via e-mail
to wdp@airwaves.chi.il.us -or- rrb@deja-vu.aiss.uiuc.edu.

Thanks to all who have, and continue to, participate.

We now return you to your regularly scheduled newsgroup :-).

William Pfeiffer

So that's what AAA means!

I would imagine it's the new format played by WENZ Cleveland, KNDD Seattle,
WWCD Columbus, etc., with a heavy new music/progressive/college music format.
Just a guess....

THE FACTS AND FUN BEHIND CALL LETTERS

Most people in the television business have heard of
WLS-TV/Chicago. But how many know those venerable call letters stand
for "World's Largest Store," a slogan for Sears and Roebuck, the company
that put WLS radio on the air?
Or how many know that WPIX-TV/NY's call sign alludes to "The
Picutre Newspaper," a slogan for The Daily News, which competed with
The New York Times by offering more pictures? Like many businesses in
the 1920's, The Daily News got into the fledgling radio business (in
this case, WPIX-AM) to help promote its core business.
Other broadcast pioneers carved their initials onto the airwaves
like WABD for Alan B> Dumont, who launched channel 5 in NY (not Fox's
WNYW) with those call letters. Dumont, creator of the Dumont Network,
which competed for a time with CBS and NBC, named another of its
stations, WTTG in Washington, DC after his chief engineer, Thomas T.
Goldsmith.
Call letters have existed since the first days of radio, when
the US Commerce Dept. created th3em to keep track of the frequencies it
was licensing. Doug Bailey, a member of the Broadcast Pioneers Club,
says the government usually assigned three-letter call signs in radio's
earliest days. "But they figured that if radio caught on, they'd run
out of combinations pretty quick, so they switched to four-letter
cominnations."
The old, three-letter combos have always been considered
valuable because they're easy to rememebr. So, companies that have them
sometimes move them around as they've traded stations.
KYW/Philadelphia, for example, moved rto Cleveland for a while and then
returned, Bailey recalls. And WJZ starte dout in NY, but later moved on
to Baltimore. Both call signs are Westinghouse-owned and were
eventually attached to TV stations as well as the original radio
outlets.
Other call signs have been valuable because particular owners
wanted them. Ted Turner reportedly paid $50,000 for the call sign WTBS,
which had belonged to a small FM radio station operated by thge
Massachusetts Institute of Technology. "We wanted to be TBS, just like

CBS," Turner said. TBS, of course, also stood for Turner Broadcasting System.
A 1979 survey byNATPE found that most call signs stem from one of three sources. They often allude to a station's city of license, such as WPVI for Philadelphia 6 (VI is Roman numeral for 6), WDIV/Detroit for Detroit 4 or KMSP for Minneapolis-St. Paul.
Call signs also frequently represent the initals of the station's original owner, such as WJLA/Washington, DC for Joel L Albritton, or KMPH-TV/Visalia, California for Mike, Pete, and Harry Pappas. And they represent promotional slogans, such as WGN for "World's Greatest Newspaper," the tagline for the Chicago Tribune.
Another slogan gav e birth to the well-known calls attached to the Grand Ole Opry in Nashville, WSM, though those letters had nothing to do with country music or the Opry initially. They stood for "We Shield Millions," the slogan for the insurance company that first put the station on the air as an AM radio outlet. WEM-TV was later sold and the new owner changed the calls to their present-day WSMV-TV.
Some calls were assigned at random, but quickly acquired slogans to fit them. WSB in Atlanta came to mean "Welcome South, Brother" and KGW/Portland, Oregon pikced up the slogan "Key to the Great West." WBBM in Chicago is said to have adopted the slogan "We Broadcast Better Music" in its early days.
other call signs described something about their cities of origin. KPRC/Houston dates back to 1926 and stands for (what were then) the three chief industries of the area: (k)otton, port and rail center. WIS in Columbia, SC, stood for "Wonderful Iodine State."
And some call letters carry a spiritual message, built in by the churches or evangelists who originally put them on the air. WKBW in Buffalo, NY stands for "Well-Known Bible Witness," an epithet for evangelist Clinton Churchill, who eventually sold his TV station to what was then Capital Cities. KCIK-TV in El Paso, Texas stands for "Christ Is King" and WJBK-TV in Detroit stands for "Jesus Be Kind>"
For some station owners the appeal of a call sign wasn't that the letters created an acronym but that it had more colorful applications; WXYZ in Detroit once went with the slogan "The Last Word in Radio," and the letters WZZM in Grand Rapids, Michigan, are said to have appealed to the station's owner because they look the same right side up as upside down -- "and that comes in handy," said a respondent to NATPE's call letter source survey, "in case your TV falls off the table."

. . . sorry no attribution, but found this in the news letter of a friend's station.

# 1767. More Details about KCOU

Newsgroup: rec.radio.broadcasting
Date: 1993-11-03 02:47:44 UTC
From: Mark Roberts <transvox@TYRELL.NET>
Message-ID: <2b764g$icf@vixen.cso.uiuc.edu>
Source record: 42107

Here are some more details about the bizarre shutdown of University of Missouri campus station KCOU, from the Columbia (Mo.) Daily Tribune, 10-6-93:

Two weeks ago, a booby trap at MU student radio station clattered to the floor, startling Residence Halls Association president Dave Cohen, who had shut the station down pending a financial investigation.
Cohen was not hurt by the cinder block that fell from a perch above the door, but last night the brick boomeranged when the student congress, owners of the station, fired KCOU's entire staff.
The congress officially cited financial mismanagement, but distraught station workers said today the booby trap was the underlying reason for the mass firing.
"The cinder block caused it all to happen," said program director Jeff Boock. "We would have been on the air right away if it wasn't for that."
A student worker for the station confessed last week to setting the trap and was fired by KCOU. He says since denied involvement to university police, who are still investigating the incident. . . .
The decision took KCOU staffers by surprise, Boock said.
"I was appalled, amazed," he said. "I couldn't believe they had such gall. It was ridiculous."
The radio station and its owner have had "bad blood" for a long time, said Mike Mulvihill, a KCOU disc jockey and former general manager.
"It's like dealing with a big, uncaring boss who just didn't" understand how to run a radio station, he said. [Editorial comment: Welcome to the real world, Mike!]
The station was shut down by Cohen Sept. 20 for financial problems stemming from a loss of $2,000 to $3,000 at a spring music festival and a pending FCC fine for improper recordkeeping.
[Another editorial note: the station was still off the air as recently as October 24; the last time I was in Columbia.]

KCOU at the University of Missouri faces this situation right now.
The station wasn't keeping its logs or public file. The station is not
owned by MU (which owns KBIA, the NPR station); it is owned by the Residence
Halls Association. The RHA is scrambling to find some way of paying the
fine, which initially was $25,000, I believe.

I just posted an article about the KCOU situation. The station is off the
air at present because of a dispute relating to the fine and the RHA
government and a concrete block that almost hit the head of the RHA
president. Why hasn't this been on a daytime talk show yet, I wonder? :-)

What entity is named on the license? That's who's responsible
in the eyes of the FCC.

u1066579@csdvax.csd.unsw.edu.au writes about Subcarriers on TV stations??:

>Hi,
> Does anyone know if TV stations broadcast on subcarriers as well? By this I
>mean do they have subcarriers services as are used by FM broadcast stations?
>Best Wishes,
>Henry.

There is a facility on TV broadcasts called SAP, which, I believe, stands for Second Audio Program. Unlike SCA on FM, SAP is readily and legally available. In fact, most stereo TVs and VCRs are equipped with it. Before you ask, no it is not a matter of using the left channel for main and right for auxiliary, the only (broadcast) channel in this area that is using SAP is also stereo, but there have been times when the stereo has gone out due to poor reception but the SAP has remained. Probably something to do with using an FM subcarrier rather than AM.

A couple of years ago, I was subscribed to the local cable service, and I noticed that they carried the BBC World Service on a SAP signal with TNT, they carried CSPAN Audio I (relays of various other international broadcasters) on A&E, WXXI-AM on WXXI-TV (that's the one broadcaster to use it) and HBO carried Spanish-dubbed soundtracks to their movies on a SAP signal. Of course, these are all put in place at the discretion of the local cable company, due to the severe difference between methods of satellite TV and cable TV transmissions.

Hope this helps.

And now, an apparently appropriate sig....

Just a note to say that KALW in San Francisco (91.7) is now running the BBC live overnight from midnight to 6:00am. This marks the first time KALW has been on 24 hours a day since its start in 1940 as the first FM in the West. KALW Information Radio is a non-commercial affiliate of NPR and APR, and also carries programming from Canada's CBC, and local public affairs, arts, and music programming.

>a Blackhawks hockey game:

>"You are listening to Blackhawks hockey on Sports 1000,
>WMVP Chicago."

That may not have been a legal ID. The legal ID has to come within
five minutes of the top of the hour, and must consist of the call
letters and city of license, with only a frequency or channel no.
allowed to separate the two. It's very easy for a station to use
a legal-sounding ID most of the hour, like:

"Country 98, WCTK-FM Providence"

and then just hit the legal once at :55 or :56...

"Country 98, WCTK-FM New Bedford Providence."

Note that as many times as WCTK uses the "providence" ID during
the hour, their city of license is still New Bedford. Likewise,
I don't believe WLUP(AM) has changed calls until:

a) I see it in M Street...they work from official FCC releases.

and

2) I hear "WMVP Chicago" within 5 minutes of the top of the hour.

-=Scott Fybush - fybush@world.std.com=-

[Moderator's Note: Far be it from me to question you <grin>, but my
antiquated understandings were that it was 2 minutes either side of
the hour *or* at the first natural break in programming as close to
the top-of-the-hour break. No? Bill]

Just to clarify the "company line" on WBZ allegedly buying WEEI:

Mark S. is quoting several reports in the Boston papers over the last few days saying a deal is imminent for WBZ to acquire WEEI.

This is all coming out of WEEI. There are indeed negotiations going on, but the WEEI people have ignored our requests to keep quiet while the negotiations continue.

As of Sunday 31 October, no papers have been signed and nothing is official. When it is official, I assure you the first thing I'll do is post a note about it. In the meantime it's all just rumor and may never happen at all.

# 1781. Columbus OH ratings

Newsgroup: rec.radio.broadcasting
Date: 1993-11-03 03:00:45 UTC
From: Kyle McPeck <nbs13@austin.onu.edu>
Message-ID: <2b76st$j9f@vixen.cso.uiuc.edu>
Source record: 42114

Here are the ratings from the Columbus OH market.

1. WTVN-AM 8.3
2. WSNY-FM 7.9
3. WNCI-FM 7.6
4. WLVQ-FM 6.9
5. WHOK-FM 5.9
6. WBZX-FM 5.2
7. WRVF-FM 5.1
8. WCLT-FM 5.1
9. WWHT-FM 3.5
10. WCKX-FM 3.5
11 WBNS-FM 3.4
12. WBNS-AM 3.2
13. WCOL-AM 3.2
14 WCOL-FM 2.9
15. WWCD-FM 2.7

WTVN won big due to their morning show host Bob Connors. WNCI-FM took a small dive as they began increasing the rotation on *disco* music of all things.

WHOK-FM won the country race between themselves, WRVF, WCLT. It was announced recently that WHOK-FM had been bought and the buyer was interested in purchasing WRVF "The River". WCLT-FM took a big jump as they increased their promotions with their recent "100 days of Summer" contest.

In the Oldies battle WBNS-FM came out on top beating WCOL who was also beat by their sister station. WCOL was recently purchased by Nationwide Communications, owner of WNCI-FM. It is rumored WCOL-FM will go country soon.....

WCOL-AM gained big on the news/talk format and Rush Limbaugh. Sad news for them that they are losing Rush to WTVN in December.

# 1782. RE: Subcarriers on TV stations??

Newsgroup: rec.radio.broadcasting
Date: 1993-11-03 03:00:46 UTC
From: JOHN SCHMIDT <schmidt@auvax1.adelphi.edu>
Message-ID: <2b76su$j9g@vixen.cso.uiuc.edu>
Source record: 42115

Subcarriers do exist on TV stations, just like FM, but not for the same purposes.

The most common subcarriers are those used for stereo, with a system somewhat similar to that used for FM radio, but with some improvements. The pilot frequency is 15,734 Hz, locked to the horizontal sync frequency of the video carrier. The center frequency of the subcarrier (double sideband supressed carrier) is double the pilot frequency. The subcarrier (but not the baseband L+R signal) audio(before modulation) is processed with a DBX noise reduction compression algorithym, to compensate for the L-R noise which has always plagued FM stereo. There are some other differences also.

There is also the SAP subcarrier, Second Audio Program. This is an "open" subcarrier, intended for reception by the general public. Most common use is for second language (Spanish, etc.) or descriptive information for the blind (done primarily by PBS). Some stations have duplicated a co-owned FM, put the BBC World service, or the Weather Service on the SAP, all of which causes gross confusion when your four year old kid gets ahold of the tv remote control and switches the TV audio to SAP, and the parents don't know what happened. "something's wrong with the TV, when I tune it to Channel 13, you hear the BBC, instead of PBS". The best move seems to be either to turn the SAP subcarrier off when it isn't needed, or program a mono mix of the main channel audio on the SAP.

There is also defined a "PRO" (for professional) subcarrier, intended as a "closed" or private subcarrier for TV station internal use. The most common use is as an "IFB" for ENG use. That, for those not up on TV lingo is "interruptible foldback" or the audio fed to the earpiece that the talent wears, so s/he can hear the station, and the producer can, by pressing a key on the intercom, talk into the talent's ear, "interrupting" the program audio.

I don't have my rulebook handy, but I don't think you can legally lease out the PRO channel. It is not anywhere near a full quality channel.

There also is space for a telemetry subcarrier for transmitter remote control.

There is no provision in the rules for an "SCA" type channel for leasing to others for non broadcast-related private use. There really isn't enough bandwidth, the sound carrier frequency is really too close to the edge of the 6 MHz TV channel allocation. If you crammed anything more in there, the deviation would push you over into the next channel, or in the case of band-edge channels, interfere with the services in the adjacent frequencies.

John

BTW, on a totally different subject, Harold H. might be interested to know that LPB is now offering an FM "carrier current" system. Not really carrier current

though. They make a leaky coax, which you string down the corridors of the dorm, it's like Radiax, but supposedly a lot less expensive. They claim you can get reasonable Stereo reception on most receivers, and still be within the FCC radiation limits, if you put it every two stories or so in a dorm. From what I understand, it only takes milliwatts to drive the coax.

We are considering trying it to replace the never listened to AM carrier current transmitters we have in some dorms. We have used the AM side as a training ground before allowing new DJ's on the over-the-air FM station here.

It's cruel that the FCC used the only multi-syllable letter in the English language as the prefix for all eastern US call letters. When there's more than one "W" it's even worse, as Bill points out.

I worked at WWUH West Hartford Connecticut, at the University of Hartford. Those calls were especially hard for new broadcasters.

What helped me to always pronounce the "W" correctly was to remember that "there's an 'L' in 'W'".

For those interested, here is a followup to my posting last week
regarding the CBS Radio Mystery Theater:

I contacted KNX in Los Angeles, the station which aired the program
during the time I lived there. I discovered that the program was not
actually produced by CBS but by a man named Hy Brown. KNX provided me
with the phone number of Hy Brown in New York.

I contacted Hy Brown, a very enjoyable person to talk to, and discovered
the following. First, he produced (and still produces) and owns all of
the episodes of the Radio Mystery Theater. The episodes ARE NOT
available on cassette, and any episodes which may be floating around out
there on tape are illegal copies. Mr. Brown has apparently been
approached on several occasions to publish his works on tape, but he
feels that this opens the door for excessive pirating and copying and
has no plans to do so.

Mr. Brown tried at one point, unsucessfully, to get these shows back on
the air (not just the old ones but new productions), but could not find
enough stations to carry the episodes to make it worth his while. He
would like to get these shows back on the air at a national level, as he
feels very strongly (believe me, I talked to him!) about radio as a
theater medium, and he emphasizes that he has modern, 90's-style mystery
shows just waiting to go, but he wants a sponsor (wasn't it True-Value
hardware stores that used to sponsor the show) and the involvement of
one or two hundred stations. He said he was very easy to work with and
that this could easily expand into very low cost, national radio
advertising. Anyone out there reading this own a large corporation? :)

He regretted that he would not be able to make the shows available to me
on tape, but did recommend that I call my local radio station and tell
anyone else interested to do the same.

One last thing which didn't hit me until I got off the phone with him, but if he is still producing shows and is employing writers as he said he is, to whom is he selling this material? Is he just sitting on it while trying to get it back on the air at a national level? He mentioned that he had over 1500 shows, which includes something like 400 original Radio Mystery Theater episodes.

For anyone interested, Mr. Brown can be contacted at:

285 Central Park West
New York, NY 10025
212-724-4333

BTW, there is obvious interest across the nation in this series of shows, as evidenced by the volume of e-mail I have received since my posting last week, and by Mr. Brown's own indication that he receives one or two phone calls a week just like mine. I can certainly understand, as this was one of the best radio theater shows that I can ever remember existing. This was good stuff! Let's hope there is enough interest to rekindle it in the not too distant future.

Ron

Some news at New York's sportsradio WFAN:

Daily News sports columnist Mike Lupica heard on WFAN from 10 AM to 1 PM on weekdays has resigned. Lupica reportedly had several clashes with station stars Don Imus and Mike Francesa over guests and the pecking order at the station. One WFAN source sid that he just never really fit in. He will be replaced by WWOR-TV's Russ Salzberg who initially sought the job early in the year.

Don Imus has endorsed David Dinkins for re-election "out of friendship." This endorsement was muted by Imus's statement that Dinkins could do a better job and will probably lose the election anyway. Imus also called Dinkin's challenger Rudy Guiliani and "equally good and decent man." Imus' support was coveted by both major candidates.

By the time you read this the electio results will be known. Last night (Monday) I had to turn on a noncommercial station because I was tired off all the negative campaigning. May the best man win. IMHO I wish there was a lever that stated none of the above.

THEY BOTH STINK!!

>You gotta come back east more often.

Hmmmm, probably the last time I listened to that station was around 1982,
so that drives home my original point anyway!

And yes I need a dose of Lawn Guyland once in a while...

Cheers & happy listening.

Alt.fan.greaseman FAQ

The Greaseman is a radio personality on the Infinity Broadcasting network. He broadcasts from Los Angeles to New York City, Washington, Atlanta, Philadelphia, Las Vegas, and San Jose. He is known for his bits and song parodies. He also has his own vocabulary which he uses to avoid trouble with the FCC. Before, he broadcast out of DC on DC/101 where he competed and beat Howard Stern on a consistant basis. The Greaseman is on by himself most of the time, though sometimes you hear his producer, Bill Scanlan cackling in the background.

Q: What is the Greaseman's real name?

A: Doug Tracht. He prefers to keep his radio life and his personal life separate. His radio name is Nino Greasemaneli.

Q: Why does Howard Stern hate the Greaseman so much?

A: Howard worked for DC/101 until he got fired. When the Greaseman was hired to take Howie's place he not only held on to Howie's audience but increased it. Then when Howard syndicated in DC he competed with the Grease until the Grease moved to Infinity where they now are co-workers for the Broadcasting Giant. Now, mentions of the Greaseman on the Howard Stern show appears to be just an act in part of Stern.

Q: Which one was the Grease in the Village People?

A: He was not really in the Village People. But in the bit, he was the construction worker.

Q: What is this Bingo that the Grease dislikes so much?

A: The Greaseman's college nick name... Ask him about it.

Q: How can I get in touch with him?

A: Call him between 1730 and 2200 EST at 1-800-544-9294 and 1-213-850-0986 (FAX) and BTW do not address him as "dude".

Q: What bits does the Greaseman do?

A: Fudgeman- Fudgeman and his chicken assistant throbin
save the world from deviant behavior
Back in time with an uzi-
the Grease uses the equipment in the radio
studio to return to key moments in history
with his uzi

Carlos the International Terrorist-

Methods to which recieve ingus.

Damien- The Grease has occasion to run into the "dark master"
while he is trying to perform his duties.

Q: What is the alarm that is sometimes heard in the background when the
Greaseman talks?

A: The Geeze alarm. This goes off when the greaseman starts geezing.

Q: What other gigs did Grease do on the radio?

A: Like any other up-and-coming DJ, Grease worked at other stations in
other markets to develop his unique style. They include:

Washington DC (WRC-AM 980) 1974 - 1976
Jacksonville, Florida (WAPE) 1976 - 1981
Washington DC (WWDC-FM 101.1) 1981-1993

Q: Did he always leave on good terms?

In almost all cases, yes. The one notable exception was WRC, when
management decided his morning personality wasn't quite right, and gave
him a choice between dropping the "Greaseman" character and leaving.
Grease chose the latter. If you ask about it today, he will joke about
the time he was collecting unemployment insurance in DC and would "stay
up to watch the moon rise and CURSE THE NIGHT!" although I'm sure at the
time it was somewhat unsettling.

Although he left Florida voluntarily to take the better offer at DC-101,
he did offend some bible-belt types during his stay. The Florida gig
was important to developing the Grease as a "god-fearing, truck-driving
redneck," though. The Florida station has since gone to religious music
("From Grease to Grace" was their motto for a while). Their loss.

Q: Are there any good biographies or other comprehensive stories about
the Greaseman?

A: Grease is a very private person, and spent a number of years in DC
before finally consenting to an in-depth story about him in the
Washington Post Magazine Fall 1987. It's a good resource to summarize
his past gigs and overall life story. Also the Washingtonian Magazine
did an article on him in the January of 1993 in commemeration of his
departure from DC.

Grease also appeared on the Larry King Show (early to mid-80's) to talk
about morning radio in general. The only down side was that he was
teamed with a "Morning Zoo" DJ as a co-interviewee, a format that has
become annoyingly ubiquitous on the radio landscape. Transcripts may be
available (don't know how to get them, sorry). This is the old
Mutual show that ran all night (Grease probably got up early to do it :-),
and not the current CNN TV talk show.

Q: Are there any albums or compilations of Grease bits?

A: There was a 4-part "Best of Grease" compilation, available on cassettes. These became unavailable shortly before he left DC-101. They are now prized collectors items and can only be obtained from private owners. Part of Grease's popularity on a national basis before he went into syndication (and hence part of the motivation for this newsgroup) was the creation and exchange of bootleg tapes among an extended network of fans. Some of his best work has never been republished (although you can occasionally talk him into doing them again on his current show).

Q: Did Grease ever serve in the military?

A: Like John Wayne, Grease has a deep and abiding respect for everyone who serves in uniform, but never served himself. During the Vietnam war, he was attending Ithaca College in New York, and his draft number never came up.

Q: But Grease did serve as a policeman?

A: Yes, he did. While working at his gig in Florida, he worked as a reserve police officer on the night shift. Morning staffers would be jolted out of their bleary-eyed state by the sight of Grease doing his show in full uniform with a 44 Magnum strapped to his belt.

Q: Is Greaseman a bigot/homophobe?

A: Certainly not. Like the program "In Living Color" or even rec.humor.funny, Grease parodies what's funny in everyone, and winds up defusing hatred as a result. Grease respects all of his fans, and wishes well even those who don't like him.

Q: But there was that "Martin Luther King, Jr." incident in DC?

A: Yes, sometimes there's a fine line between parody and cruelty, and Grease crossed the line only once during his otherwise unmarred broadcasting career spanning over 2 decades.

Sometime in the late 80's, he was noting the passing of Martin Luther King Jr.'s birthday (which had then only recently become a national holiday). Grease said something about "killing 4 more and getting rest of the week off." Grease was suspended, and apologized for the incident on an "Editorial Rebuttal" on WRC-TV in DC.

Haven't the rest of you made mistakes or are you all perfect?

Q: What does AMF mean?

A: Adios my friend.

Q: What is the "Bit without an Ending?"

A: When Grease was working in Florida, he would be prevented from getting a good day's sleep after his morning gig by thoughtless model-airplane enthusiasts who would buzz their models outside his window.

Grease came up with a revenge skit with a model plane of his own that would shoot the others out of the sky. The plane became posessed by Damien and started chasing after him. Grease then got too deep into this bit without a way out (and tried to incorporate this into the bit). After fumbling with the sound-effects, and trying a foray South of the Border, and then calling in Big-Dick Brannigan, he finally gave up groping for a punch line. Grease can usually be counted on to do some of the most impressive ad-libbing and improvisation on the radio today, but at that time his talents failed him. The bit originally aired in the Fall of 1982 from WWDC FM Washington, DC/101.

It's considered a classic, and is on Vol. 1 of the "Best of Grease" tapes. He owns the rights to all his bits, and may rerun it on his current show from time to time.

Q: What stations carry the Greaseman?

A: City Station Time
==== ======= ====
Washington DC 106.7 WJFK 1900-2300

# 1792. Highwater #10 final programme

Newsgroup: rec.radio.broadcasting
Date: 1993-11-03 03:17:10 UTC
From: andyrose@netcom.com
Message-ID: <2b77rm$kh5@vixen.cso.uiuc.edu>
Source record: 42129

Length: 29 minutes
Mode: MONO
Description: A weekly human rights/ community action
news program. Articles mainly read from
the Internet newsgroup misc.activism.progressive.

Feed time: Channel 11, Wednesday AM 0100-0129 EST NPRSS

In-Cue: John 'Blackdog' Ridnell - "Spread The News" music

01:05 Amnesty International Update re: Somalia
03:00 Clinton proposes OAS military group to enforce NAFTA
04:00 Clinton's Official Position on Cuba - Mas Canosas
06:45 Stone Container Corp seeking to build in Costa Rica
19:45 Implied support for SLORC - Burma by Pepsico, Levi's Out
23:05 Guatamalans occupy congress peaceably
25:17 Women's rights in Zimbabwe
27:47 Massai forest threatened
28:47 Cancer causing food containers allowed by Clinton Admin.

Out-Cue: "Ya'll are doin' a great job, see you next week."

If you'd like to join our list, please send you land mail
address, if you can broadcast this show. Request local NPR
stations to carry Highwater report offered at 1 AM Eastern Time
Wednesday mornings for rebroadcast.

All the source articles can be found in misc.activism.progressive
or in ~ftp/pub/andyrose available through anonymous ftp to
netcom.com. This file is Nov93/Nov3

As you can see, the half hour radio show barely scratches the surface
of all the progressive news available.

# 1793. New Monitor Radio Interantional format

Newsgroup: rec.radio.broadcasting
Date: 1993-11-03 03:17:18 UTC
From: cee@wshb.csms.com
Message-ID: <2b77ru$kh9@vixen.cso.uiuc.edu>
Source record: 42130

DATE: November 1, 1993

TO: All Radio Staff

FR: Dave Cook

RE: MRI Press Release

Here is a press release on MRI which you may find informative:

On Monday, November 1, Monitor Radio International (formerly World Service) moved to a live, one-hour broadcast each weekday, starting at 14 UTC (9 a.m. EST).

Monitor Radio International (MRI) is the news and information, shortwave radio broadcast arm of The Christian Science Monitor, the Pulitzer Prize winning newspaper published by the Christian Science Church.

A taped version of the live program will rollover for 24 hours, until 2 UTC Saturday (9 pm Friday EST).

This weekly cycle begins each Monday at 14 UTC, following four, hourly broadcasts (starting at 10 UTC) of Monitor Radio's Early Edition, modified to include a daily religious article and frequency announcements, which will run after the conclusion of the Early Edition.

Monitor Radio, also a radio broadcast arm of The Christian Science Monitor, produces news and information programs designed for U.S. audiences.

These changes complete the transition, begun Sept. 26, 1993, of MRI from a two-hour program to its currrent one-hour format, designed to enhance the program's appeal for international audiences. The previous format consisted of one-hour of Monitor Radio's domestic shows (the Early and Daily Editions), followed by an hour of features intended for the shortwave audience.

The content of the new, MRI is assembled entirely with international listeners in mind. It includes original stories, features and international news roundups as well as stories filed for Monitor Radio by more than a dozen correspondents reporting from around the world. The Letterbox feature continues to occupy a regular and important slot in the show, bringing it to a close. The Monitor's daily religious article follows the news broadcast.

The show's Boston staff include Steve Leveille (host), Vince Winkel (producer), Dave Casanave (associate producer and director) and Patrick Timmerman (associate producer).

# 1794. Public Radio's Sound Money

Newsgroup: rec.radio.broadcasting
Date: 1993-11-03 03:17:26 UTC
From: <>
Message-ID: <2b77s6$khe@vixen.cso.uiuc.edu>
Source record: 42131

In the November 93' issue of Money magazine, there was an article about Minnesota's Public radio's weekly Sound Money show. It is carried live Saturdays at 10 a.m. central time on 83 public radio stations and broadcast on tape on 42 others around the country. Bob Potter is the show's host, and Erica Whittlinger is a regular on the show. According to the article, Whittlinger has built quite a reputation on show. Has anybody heard this show? If so, at what time, station, station frequency, city of broadcast?

If people e-mail me the pertinent info, I will make a list of all the public radio stations that broadcast this show and post it. I believe this program could help everyone, so PLEASE e-mail me if you have any info.

Thanks

Dan

# 1795. Public Radio's Sound Money

Newsgroup: rec.radio.broadcasting
Date: 1993-11-03 03:17:37 UTC
From: <>
Message-ID: <2b77sh$khl@vixen.cso.uiuc.edu>
Source record: 42134

In a recent issue of money magazine, there was an article about Public radio's "Sound Money" show. Bob Potter is the show's host and Erica Whittlinger is a regular, giving out specific investment advice to listeners. It sounds to me like it rivals Bob Brinker's "Money Talk". (I have listened to Brinker several times, and am somewhat disappointed because he doesn't cover specific stock issues)

Sound Money originated on Minnesota Public Radio and it is broadcasted live on saturdays at 10 a.m. central time on 83 public radio stations and on tape on 42 other stations across the country.

My question is: what are the public radio stations that carry this program. If people respond to my e-mail (with the station, frequency, city of broadcast, and time of broadcast), I will post a summary.

I believe this information could benefit everyone, so PLEASE RESPOND if a public radio station near you broadcasts this show!!

Thanks

## 1796. Joe Frank: Work in Progress

Newsgroup: rec.radio.broadcasting
Date: 1993-11-03 03:17:54 UTC
From: isler@gradient.cis.upenn.edu
Message-ID: <2b77t2$ki4@vixen.cso.uiuc.edu>
Source record: 42135

There used to be (is?) a program broadcast out of KCRW in
Santa Monica, CA called Joe Frank: Work In Progress. The programs
were put together by this radio performance artist, Joe Frank.
If anyone knows if he's still doing the program and/or where
I can get tapes, please post or send mail.

Thanks,

Sylvia Isler
isler@gradient.cis.upenn.edu

# 1797. Public Radio Satellite System DACS 1102

Newsgroup: rec.radio.broadcasting
Date: 1993-11-03 03:18:02 UTC
From: andyrose@netcom.com
Message-ID: <2b77ta$ki7@vixen.cso.uiuc.edu>
Source record: 42136

The Digital Access system available from Public
Radio Satellite System provides information regarding
todays programming available by Public Radio Satellite
uplink.

The Nov 11 posts are available from ~ftp/pub/andyrose/
DACS

They are considering an internet account there. Right
now, they have a 202 area code and 2400 bps. I think
they would like gopher.

# 1798. Top 40 station list for northern california (10-2-93)

Newsgroup: rec.radio.broadcasting
Date: 1993-11-03 03:18:10 UTC
From: newman@netcom.com
Message-ID: <2b77ti$kia@vixen.cso.uiuc.edu>
Source record: 42123

TOP 40/CHR STATION LIST FOR STATIONS THAT CAN BE HEARD IN NORTHERN CALIFORNIATOP 40 STATION LIST FOR NORTHERN CALIFORNIA
Note: KWIN is no longer on the list, they are now religious

CALLS FREQ CITY NAME
KEWB 94.7 Chico B 94-7
KWNZ 97.1 Reno Z-97
KHQT 97.7 San Jose Hot 97-7
KDON 102.5 Monterey K-DON 102-5
KHTN 104.7 Merced Hot 1-0-5

With KFIA doing very badly in the ratings, maybe they should consider going CHR/Top40 to replace the "void" now created in the Sacramento area with the departure of KWIN. KQBR in Davis should consider doing the same thing. An AM/FM combination with KQBR and KRAK-AM becoming a AM/FM Top40/CHR combo would really fill a void over northern california as KRAK-AM can be heard in 30 California counties including most of the 9 Bay Area counties. Both stations are doing poorly in the ratings and this could be the answer to them doing better in the ratings. An AM/FM combo with KFIA would also work because KFIA can also be heard over most of northern california.

>Just a guess....

yes to WWCD, but not WENZ or KNDD, which i would describe as "alternative" or
"new rock" or "top 40/modern." See this week's _Billboard_ magazine.
R&R in the past would have called AAA "eclectic AOR," which are typified
by KBCO and WXRT.

## 1801. Confused about city of license

Newsgroup: rec.radio.broadcasting
Date: 1993-11-04 07:05:51 UTC
From: slutsky@tesla.njit.edu
Message-ID: <2ba9kf$poj@vixen.cso.uiuc.edu>
Source record: 42139

I am confused about the FCC rules on the city of license of radio stations.
For example WYNY-FM (103.5) is licensed to Lake Success, NY which is a
bedroom community in Nassau County just over the city line. When WYNY
gives its legal ID they say "WYNY Lake Success - New York City"
They actually slur the Lake Success so one can barely make it out.
As far as I know there are no offices or other facilities in Lake
Success. Are they required to maintain a mailing address there?

Several New York City stations are licensed to Newark, NJ. For example,
WHTZ (Z-100) is licensed to Newark, but its facilities are in nearby
Secaucus, NJ. Are they required to "serve" the city of Newark. Should
they have public service programming for Newark?

On the other hand there are stations licensed to suburban cities or
counties that do appeal to a local audience. WFAS and WVOX in Westchester
County are examples.

I am just curious about knowing the exact FCC regulation on this matter
and how should radio stations adhere to it.

Bruce Slutsky

I have no stake in the radio business, I'm just an avid listener

pryack@mhc.MtHolyoke.edu (Paul Ryack) writes:

>What is the status of WVEI, Worcester, MA, which has been simulcasting
>WEEI? Do the Celtics own it, too? Is it included in the deal?
>Could those of us in western Mass. induce Group W to re-activate
>WBZA in Springfield, since they seem to be in an expansionistic
>mood ;-) ?

The Celtics do not own WVEI. It is owned by Xen Zapis, who also
owns WAAF-FM 107.3 (the stations began life as WAAB AM-WAAF FM).

WEEI leases the WVEI signal for $2 million a year...and I suspect
Westinghouse would not continue the practice. I think there are
other signal improvements we can afford to make.

[For those unfamiliar with the situation, WEEI's 590 kHz signal
is nulled very sharply to the west to protect WTAG-580 in
Worcester MA, 5 kw 45 miles to the west. In 1991, when WEEI
became all-sports, they began leasing AM-1440, then WFTQ, in
Worcester to simulcast their signal. Ratings have been poor
to nonexistent for 1440-WVEI.]

As for WBZA, current FCC rules would make it impossible to
reactivate. Do you have problems getting WBZ in Northampton?
I've gotten a crystal-clear stereo WBZ signal during the
day parked just underneath the old WBZA towers in Springfield,
100 miles west of Boston.

# 1803. WPXY AM Rochester becomes WHTK

Newsgroup: rec.radio.broadcasting
Date: 1993-11-04 07:06:03 UTC
From: fybush@world.std.com
Message-ID: <2ba9kr$poq@vixen.cso.uiuc.edu>
Source record: 42141

The subject line says it all. Pyramid's WPXY AM
Rochester, which had been simulcasting Pyramid's WPXY-FM (97.9) and
its CHR format, is now "Hot Talk 1280," WHTK(AM).

WHTK is being operated by the Lincoln Group (WHAM 1180 - WVOR 100.5 -
WEZO 93.3) and will be purchased by the Lincoln Group, pending FCC
approval.

WHTK carries Imus in the morning, Gene Burns in the afternoon,
Don and Mike at night, Liddy in middays, and Unistar news, along
with some local news from WHAM's newsroom. No decision has
been made as to whether WHTK will pick up WPXY-AM's Red Wings
(AAA) baseball contract.

WHTK operates on 1280kHz with 5000 watts, directional day and night, from
a transmitter at South Winton Road by the Barge Canal in
Brighton NY (less than a mile from my family's home).

The station went on the air in 1947 as WVET, owned by the Veterans
Broadcasting Company. In 1961 it and WVET-TV 10 (a shared-time
operation with WHEC-TV 10) bought out WROC-TV 8 and WROC-FM 97.9.
WVET-AM became WROC-AM; WVET-TV signed off. Studios moved at
that time from 17 S. Clinton to the WROC facility at 201 Humboldt.
WROC-AM/WPXY-FM were sold in 1980, moved to 55 St. Paul Street,
and the AM calls changed to WPXN. Format at that time was all-news.
It changed to big bands in 1982, and the calls changed to WPXY-AM
and format to CHR simulcast in 1984. In 1989 the format went
back to big bands, and in 1990 the format changed to "Kool
Gold" and the calls to WKQG. The calls changed back to WPXY-AM
one last time in 1991, when the stations moved to 30 N. Union Street.

Under pyramid, 1280 operated in stereo (it was Rochester's first
stereo station). I won't know until the next time I get back to
Rochester whether they're still in stereo. WHAM is stereo, so
I imagine they'll keep 1280 in stereo as well.

I have a tape of the WPXY-WHTK transition available for trade...
160 minutes unscoped.

The WCFL call was dropped over ten years ago when the changed their programming format from a top40 station to religious broadcasts. Now Chicago has another *@&!$& sports station, just what we need. As a result of the change, WLUP FM-98 is now mostly talk. Save us. Incidently Gene, 60 miles SW of Chicago there is a radio station at 104.7 FM with the call letters WCFL and the broadcast in the same format as the old WCFL you remembered back in the '70s.

:Interesting... When did they drop the WCFL call?
:
:(You can tell I havn't been in the area for quite a while :))

Hooo dogie! WCFL, "The Voice of Labor" and organ of the Chicago
Federation of Labor for many years, was sold to Christian broadcasters
in 1984. For three years they valiantly competed with Channel 38
for the honour, "Wackiest Broadcasting Outlet in Chicagoland," before
selling in April 1987 to Evergreen Broadcasting, owners of WLUP-FM
("the Loop") and now WBLZ-FM ("the Blaze") and being christened WLUP-AM.

For six years WLUP-AM cleaned up. At one point, with Jonathon
Brandmeier simulcasting to the AM and FM in the mornings, Kevin
Matthews middays, and Steve Dahl-Garry Meier in the afternoons,
AM 1000 had the second most lucrative audience (to WFMT, the
classical station) in the Chicago area. But Brandmeier went to
afternoons, Steve and Garry broke up, and AM management decided
to position the station as a 24-hour sports talker, hence the
new call letters, WMVP-AM.

Readers of r.r.b. wishing to track the latest news of the Loop
family (or soap opera, take your pick) are invited to send mail
to

looplist-request@uiuc.edu

They will be added to LoopList, a discussion group where people
with too much time on their hands, like me, post news and info
on the station.

Everyone keeps thinking that WCFL went from TOP-40 to religious. That
is not the case. There was a brief stint of 'easy-listening' music
followed by a well programmed, but terminally pretentious format
called 'Lifestyle Radio" which was like a radio-magazine for the
tragically trendy. When it flopped, then came the Jesus People.

As for the Wackiest format, you gotta tune in to WYCA 92.3 in Hammond.
They run the most bizzarre circus of preacers you ever have heard.
I exagerate not, Saturday Night Live and the National Lampoon would
have to go some distance to make 'satire' that is stranger than these
brokers on WYCA. It is unbelievable. I could not describe them and
I have NEVER heard a Christian station, brokered or not, that hosted
such an incredibly bizzarre troupe.

Oh, and "The Blaze is WWBZ.

} For six years WLUP-AM cleaned up. At one point, with Jonathon

Well, the LOOP will never be the same. But then again what ever is?
I still think they blew it by futzing around with the winning formula.
The AM-Sports is dry compared to THE SCORE (WSCR-AM 820) who has a
very lively and irreverent feel. Strange, the Score sounds more like
the old WLUP-AM then the current WMVP does.

Lets just hope they decide to uplink the FM format. It only costs
$1500.00 a month for a stereo, hi-fi SCPC channel on a satellite!
That is chumo-change to Evergreen Media.

Hi, all;

Just responding to Dan Krull's question regarding Sound Money. The program does, indeed, originate here at Minnesota Public Radio (out of D Control, two doors down from where I write, to be exact) on Saturday mornings at 10 am central time. If you have access to the Public Radio satellite system on Galaxy IV, it is on Channel 9. Bob Potter is a great host for this type of program (he is also our Morning Edition host) because it is strongly rumored that was the inspiration for Jack Benny's frugal miser character. (That's a joke, Bob...)

For more information on Sound Money, I would recommend writing to us here. The address is:

Sound Money
Minnesota Public Radio
45 E. 7th St.
St. Paul, MN 55101

I'll get in touch with Karen Tofte, the producer, and see what I can find out.

Cheers.

Unmentionable. The SF channel, 98.9 has never made money, according to reliable sources (except once when it was bought for $100,000 via a minority ownership preference ruling, then sold 3 years later for $3 million). Viacom, the current owner, has not done well with it, which accounts for its 3rd format change since your heard the "double 99" format. They're now KSRI/KSRY.

## 1813. Call Letters

Newsgroup: rec.radio.broadcasting
Date: 1993-11-04 07:12:38 UTC
From: barry@coyote.datalog.com
Message-ID: <2baa16$q0c@vixen.cso.uiuc.edu>
Source record: 42051

Having recently returned from vacation, I notice the call letter "meanings" postings continue (unabated?) and a variety of sources added, including a back edition of Bob Nelson's list from Compuserve.

The reason for this note is to make the point that a large number of calls were assigned in the early days in a sequential manner, and while slogans were adopted to match the calls, they were *not* always official. Sometimes, in researching the older stations, I have found that the "urban folklore" slogan may have differed from that the station used. In some cases, a name given by a competing station may have become attached.

So, when reviewing lists of calls, just be careful in stating "the calls meant *this*:" ... sometimes they didn't. They sound like they could have. But some owners were just not that connected.

Message-ID: <2baa1c$q0h@vixen.cso.uiuc.edu>
Source record: 42053

In a previous post, a reference was made to the DACS as being available on
a "202" phone number and 2400 Baud Modem. This is for registered users, ONLY!
This is in the category of Producer, stations, and other Public Radio people
who need access to this data service. The DACSREAD service that was listed,
provides a service for producers and a backup for stations that get the data
via satellite. The messages are not meant for the general public and the
system is password and user protected.
There has been some discussion of having access to this information on the
Internet, but no discussion on free public access, as most of the material
on the DACS is not really for the general public. If a system was developed,
it would probably be limited to press release and other information on
programs, rather than feed schedules. The Public Radio Satellite System does
require stations that take any of the programming to be registered. It would
be contrary to the by laws of the system to make all the feed information
public, as I think it would encourage access, at the expense of the stations
that pay the access fees (note NPR & APR are in addition to basic access fees).
In addition, the average person (home user) does not have the ability to pick
up the current SCPC feeds thatthe system uses, let alone the soon to be
implemented SCPC digital.

As a programmer who has "send" access to the DACS system, let me
join you in hoping they get Internet access. The system is not
only archaic, it is a royal pain to use. Any suggestions on how
to gently nudge them in the right direction?

I live in Waterloo and am a former resident of Cedar Rapids, which is 50 miles
away. I think that station was actually KWWL, and it is now known as KWLO.
The TV station here in Waterloo is still KWWL.

Does anybody in the Washington, D.C. area or anywhere know if Infinity Broadcasting bought WPGC-FM, and WPGC-AM. If you do know, will they change the format of WPGC-FM? I think I read in Broadcasting and Cable magazine that they did. Donnie Simpson who is a morning talk show host on WPGC-FM is suppose to go national, but this may change if WPGC-FM was bought....
Thanks..
Shon

# 1820. Radio Watchers -Boston

Newsgroup: rec.radio.broadcasting
Date: 1993-11-04 07:13:14 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <2baa2a$q1i@vixen.cso.uiuc.edu>
Source record: 42058

* On November 1st, Atlantic Radio Ventures of Manchester,Mass formalized its merger with Stoner Broadcasting of Annapolis,MD and MultiMarket Communications of Hartford to form American Radio Systems. Atlantic's 3 Boston stations(WRKO-AM,WHDH-AM and WBMX-FM) join stations in Hartford, Rochester,Buffalo, Dayton, Louisville, Des Moines to make ARS a top-20 broadcasting company. ARS consists of 20 AM-FM stations.

ARS is actively shopping for a second FM signal in the Boston market.

* According to published reports, another potential FM shopper appears to be Group W(owner of WBZ-AM and 'maybe' soon-to-be-owner of WEEI-AM) which seems to be looking to establish a strong FM-AM-TV presence.
If someone out there owns an FM station in the nation's 9th largest market, this is might be your time to cash in...:-)

* WHDH-850AM(NewsTalk 850) now rebroadcasts 3-hour Rush Limbaugh Show at 12midnight....

* Soft AC station WSSH-99.5FM(WISH 99.5) has added a nightly jazz show from 10pm-2a...It's called 'Boston's Nighttime Wish'. Boston hasn't had any kind of weeknight jazz show on a comercial station since Greater Media pulled a plug on a smooth jazz outlet WCDJ-96.9FM(now country WBCS) in early May of this year...Non-commercial WGBH-FM, WHRB-FM and WBUR-FM have daily jazz shows...Alternative rock station WFNX-FM and an AC outlet WMJX both have Sunday morning/afternoon jazz shows...

pryack@mhc.mtholyoke.edu writes :

> What is the status of WVEI, Worcester, MA, which has been simulcasting
> WEEI? Do the Celtics own it, too? Is it included in the deal?

WVEI(formely WFTQ) in Worcester is owned by Zapis Communications(the same company which co-owns the head-banging rock outlet WAAF 107.3FM). 'VEI in Worcester has a 1-year deal to simulcast 'EEI. I believe it expires in the spring.

I don't think we should we worry about the Celtics ever getting back into the broadcasting business.(Reportedly, the team will be sold after money-bleeding 'EEI and a money-making Fox-affiliated UHF station, WFXT-TV25 are both unloaded).

A report in this Tuesday's Boston Globe had indicated that Westinghouse has locked a sale price before the next(fall) ratings come out that might show another big surge by Imus and increse the station's(WEEI) value. The sale price is somewhere between $2 to $2.5 million. The letter-of-intent should be signed sometime this or next week. Westinghouse will take over WEEI operations as soon as that is done, prior to any kind formal approval by the FCC.

Speaking of Westinghouse/WBZ expansion in the Boston market,reportedly, WBZ's parent company will move WEEI from its studios in Charlestown into a newly-constructed additional studio space(to house 2 more radio stations in addition to WBZ-AM) at its historic Brighton location. Westingouse has also been shopping around for an FM staion in the Boston market.In January of 1982, Westinghouse sold WBZ-106.7FM to Greater Media which is now highly rated AC outlet WMJX.

WEEI's current GM Aaron Daniels(of WABC-AM fame) will not be asked by Group W management to come aboard when his contract expires at the end of this month.

In alt.censorship, mat@mole-end.matawan.nj.us writes:

>``The airwaves'' (propagation of energy in the electromagnetic spectrum)
>constitute a limited resource. This resource can only be used when the
>users cooperate. Establishing this cooperation is the purpose of such
>agencies as the FCC.

But the FCC is only one of many ways to establish cooperation. For example, for real estate, even for rare real estate such as in Manhattan, we use a system of public and private ownership and leasing.

This was the system in the U.S. from 1922 to 1925 and it worked well. See _Tribune Co. v. Oak Leaves Broadcasting Station_ (Cir. Ct., Cook County, Ill., 1926), reprinted in 68 Congressional Record 216 (1927) for an example of a court applying standard common law property principles to resolve conflicts (without the need for content control).

So why do we have an FCC instead of some alternate scheme? Well there was interference in 1926 and 1927, around the time the Radio Act of 1927 was being considered by Congress. Senator Key Pittman of Nevada suggested at the time that this interference was caused to pressure Congress. He said on the Senate floor on Feb. 18, 1927:

Oh, yes; of course the radio broadcasters of this country want this bill passed. Does anyone doubt that? Do not Senators know that nearly every telephone company in the United States in every little town is getting someone to send a telegram saying, "Pass this bill"? What do the senders of those wires know about it? Why was it that just recently broadcasting concerns of the West all changed their wave lengths, sometimes a hundred degrees, to have them conflict, and the next they said, "If you do not pass this bill, you will have that same condition for another year"? Why have we not had that for a year? Why does it happen just now?

Mr. President, I do not believe I am naturally suspicious, but when telegrams pour in from all over the United States to Senators from people who know nothing about this legislation, and cannot know anything about it, urging its passage, I know the stimulus comes from somewhere, and where should the stimulus come from of the passage of this bill?

The bill is fair to only one institution. It is fair to the monopoly that will be created under it.
[68 Congressional Record 4111 (1927).

Senator Robert B. Howell of Nebraska said at the time (on the floor):
"As this bill now stands, it is what the great radio interests want."

See Thomas Hazlett's article in the _Journal of Law and Economics_,
133, 145 (1990) for more evidence that the interference problems of
1926 were precipitated in principal part by government and by
cooperator broadcast industry efforts.

Why did Congress go along?

Again and again Representatives and Senators raised concerns not
about inference (which was in fact a secondary matter for those
debating the radio act) but about the pervasive, instantaneous, and
influential nature of the new medium. Congress appears to have been
fixated on the great promise of the medium, to have feared it use
as a political weapon against incumbents, and to have wanted to
prevent industry leaders from having the discretion to deny giving
political candidates access to the airwaves. [Regulations that
the FCC still enforces. -cmk]

Once again, those in power had set the stage for a recurrence of
the monopoly rent/content control _quid pro quo_ established in the
time of Henry VIII [with newspapers-cmk]. The only major difference
was in the sophistication of the dialogue. Unlike Henry VII, the
American politicians of the twentieth century had artfully covered
their true intentions with a more digestible public interest
coating.

# 1826. Nostalgia: when WCFL changed format

Newsgroup: rec.radio.broadcasting
Date: 1993-11-05 11:20:59 UTC
From: testnet!paul@pegasus.att.com
Message-ID: <2bdcur$sd4@vixen.cso.uiuc.edu>
Source record: 42064

(Was WLUP now officially WMVP)

Yes! I remember (and can re-remember, thanks to the magic of audio tape) when WCFL was about to change.

Whoever was on (Lujack? Winston?) was saying things like "stations around the area are listening in to see which radio station I will endorse. Well my endorsement goes to radio station KHJ (laughter in background). Now this may be a problem since KHJ is in Los Angeles. So I suggest you just keep it right here. Because WCFL is changing to a beautiful music format. Beautiful music is great to make love to. Now can I have a show of hands of how many of you like to make love? (pause) WELL! I can see that many of you will be staying tuned to AM 1000 ...."

Re the sports format: How late is WSCR on in the winter? New York sunset? Columbus sunset? Allnight with 10 watts? Dallas sunset?

# 1827. Re: Confused about city of license

Newsgroup: rec.radio.broadcasting
Date: 1993-11-05 11:21:09 UTC
From: GRATZ@MAINE.MAINE.EDU
Message-ID: <2bdcv5$sda@vixen.cso.uiuc.edu>
Source record: 42065

It's been a while since I've researched these F.C.C. rules, but, know-it-all th
at I am here goes: Broadcast stations are licensed to provide a certain qualit
y signal to a given area. A station licensed to Lake Success, NY doesn't have
to have any presence there, but its signal must cover (many stations licensed t
o New York City have transmitters in NJ) the area. Remote control being possib
le, studios and offices don't have to be (and often aren't) where the transmitt
ers are.
As for station ID's, the law says they have to contain the call letters a
nd the city of license, back-to-back (the frequency or channel can be in-betwee
n). They must be aired within two minutes of the top of this hour (as someone
mentioned in an earlier post) or at the closest natural break in programming.
If the station in question is slurring the real locale and tacking on something
else, they're violating the spirit of the law, but probably not it's letter.
I remember reading, lo, those many years ago, that calls that attempts to disgu
ise the area of operation, e.g.: Greater Cincinatti's W-A-A-
A. Covington were fround upon by the F.C.C., but as a radio listener you know t
hey've been turning the blind eye toward that kind of activity.

With the discussion on radio drama, NPR and other independent producers
are offering new dramas each year. Each week, NPR feeds four seperate half
hours of its NPR Playhouse. In addition, their are a lot of the "spoken word"
series, such as Selected Shorts.

The Star Wars series was also popular on WEOS. The 13 part series was produced
back in 1981 and is availble for purchase from Highbridge Audio on CD or
Cassette, who underwrote the re-release of the series.
The Empire Strikes Back, produced in 1983, starts in January in 10 parts.
It also will be offered for purchase. Check your NPR station for the series.
WE will air it SUnday Night at 730PM.

I also forgot to mention Joe Frank. He has a Thanksgiving type special and
a new series starting in January.

The Radio Hall of Fame now occupies permanent display space within
the Museum of Broadcast Communications located in Chicago's Cultural Center.
This year's black-tie induction ceremony will be held this Sunday in
Chicago [got a tux Bill?] and will be made available to stations by
Westwood One. In New York City it will be carried at 9 PM by WABC.
Larry King will be the host while inductees include the late Rick
Sklar, Rush Limbaugh, veteran Chicago air personality Wally Phillips
(of WGN) and Norman Corwin (great writer and producer behind "We Hold
These Truths" and other historic broadcasts). Previous inductees include
Don Imus, (can Stern be far behind) Paul Harvey, Mel Allen, Casey Kasem,
Bruce Morrow, and Charles Osgood.

# 1830. KAAM-1310 Dallas/Fort Worth to All-Sports

Newsgroup: rec.radio.broadcasting
Date: 1993-11-05 11:21:11 UTC
From: "Chip (C.D.) Kelley" <chipk@bnr.ca>
Message-ID: <2bdcv7$sdd@vixen.cso.uiuc.edu>
Source record: 42068

THE DALLAS MORNING NEWS reports that the new owners of KAAM-1310 Dallas will switch them from adult standards to all sports next month (12/15). They will become Dallas/Fort Worth's first all- sports radio station, and that will leave Houston as the only top 10 market without an all-sports station.

THE DALLAS MORNING NEWS reported last week that KAAM's new owners said that they would not change the format of KAAM. They also report former owners Bonneville are looking at buying another Dallas FM to go along with their classic rock KZPS-92.5.

Other Texas bits of news...

Group W has taken over KIKK-FM-95.7 Houston/KIKK-650 Houston to go along with their KILT-100.3/610 Houston. It gives them Houston's #1 and #2 radio station. As part of the changes, KIKK will carry Moby in the mornings from ABC 5AM-9AM (originating from country WKHX Atlanta). Moby used to be on in Houston on rock outlets KSRR-96.5 "97 Rock" and KLOL-101.1.

Also, as part of the merger, 19 KIKK employees were let go. KIKK's fine country oldies format has been scrapped and is now simulcasting KIKK-FM fulltime.
i

Also letting go of people is news KRLD-1080 Dallas, which let go of about 15% of their staff. They are rumored to be going for a more news/talk format. Crosstown WBAP-820 Dallas has dropped the remaing country music from its format except for their overnight truckers' show. WBAP's full-service country format made it #1 in the latest Arbitrons.

KYOK-1590 Houston and KJCE-1370 Rollingwood-Austin (formally KFGI) "K-Juice 1370" become the first Texas stations to carry SMN's new Urban Gold black oldies format.

The owners of Spanish KESS-1270/contemporary christian KLTY-94.1 Fort Worth are purchasing nearby KAND-FM-107.9 Corsicana. KAND-FM can be picked up in the southern part of the Dallas/Fort Worth area, but they are weak in the northern areas. I bet on a Spanish format (KLTY was Spanish at one point and Dallas has been without a full-power Spanish outlet since the change) - maybe even a FM-FM simulcast with KRVA-FM-106.9 McKinney like KRTS-92.1/KRTK-97.1 do in Houston so that one covers the southern area and one covers the northern area?

Chip

None of my local affiliates carried it either this past Sunday -- they
all were sports or some other talk.

The SCPC stations I recognized in the whole station list didn't have
the show either. Was there no airing this week (no show at all or
the time change messed up the show time)? It seems strange that
the 7-8 stations I checked didn't carry it at all Sunday.

I have previously posted regarding a cassette set containing the entire broadcast day of CBS affiliate WJSV, Washington, DC, on Sept. 21, 1939. This was produced by Greatapes in Minnesota.

Is anyone out there aware of any other recordings of this type in existence? This included every second (practically) of the broadcast, all the local inserts, tech difficulties, interludes, network programs, news, commercials, etc etc. It was put in the National Archives at the time, and I understand the original engineer who cut the transcriptions in '39 is still alive and in the Washington area.

Any extended pieces of old broadcasts/airchecks, transcriptions of broadcasts (not necessarily programs, but how the actual stations sounded in those days) around??? If anyone has anything, or just info, please E-mail. Thanks very much.

dk@crl.com (David A. Kaye) writes about Re: Subcarriers on TV?? :

>By the way, the TV subcarrier system is the way the BBC is distributed to
>its affiliates in North America. I had throught BBS was on C-SPAN's
>channel, though.

The BBC is on C-SPAN's channel *if* you are dealing directly with the receiving satellite dish, and this *is* how the signal is distributed to its NA affiliates.

You are confusing two ideas, though, satellite TV and Cable TV. Cable TV is identical in most ways to broadcast, whereby the video is sent in supressed sideband AM, and the audio in FM, with a few subcarriers to give you stereo, SAP, telemetry, field communications, etc. The difference between Cable and broadcast TV is the channel set.

Satellite TV, on the other hand is done by using one single FM signal per channel. This signal carries the video as the baseband, and the accompanying audio on a subcarrier. There is a lot of extra room for more than the necessary number of subcarriers, and they may carry (and often do carry) additional radio programming.

In the case of Greater Rochester Cablevision, what they have done (at least in Brockport) is take the signal from CSPAN's satellite subcarrier, and, for lack of a better place to put it, put it on a subcarrier on TNT, thus the move from channel to channel.

This is some of the neat stuff I've learned by listening to Signals on WWCR back when that was on. This program was carried by Let's Talk Radio and featured, amongst other things, about a five-minute segment devoted to satellite TV and radio.

Hope this helps.

It was published in the Washington Post a few weeks ago that Infinity Broadcasting purchased WPGC-AM&FM for $60 million. Donnie Simpson signed on to have his morning show distributed nationally by Unistar prior to Infinity's purchase of WPGC. To my knowledge, the plans to distribute Simpson's show are still on.
WPGC-FM is an urban contemporary station that is currently first in local radio ratings, located on 95.5. WPGC-AM is an all-business format located on 1580.

How does WVEI's audience get measured? The only time the WVEI call letters are
mentioned is in the quick hourly legal ID. I would think many listeners, even
though they are tuned to 1440 AM, would report they are listening to WEEI.

> If someone out there owns an FM station in the nation's 9th largest
> market, this is might be your time to cash in...:-)

This is not news. WBZ radio and television are completely renovating
our studios on Soldiers Field Road (just look at all the work-zone
mud on my car! :-) and the plans include space for at least 2 additional
radio stations. That was in the plans a year ago...and it's all you'd
expect from _any_ major group owner rebuilding a major market facility.

There are no major discussions going on right now with any FMs...and as
soon as there's something to announce, I'll let everyone know.

Some other sale news: WLVI-TV 56 Cambridge-Boston, an independent
station, has been sold by Gannett to Tribune for $25 million. WLVI
will be a key station in Tribune's new WB network. And Boston
University has taken control of independent WQTV 68 Boston. The
calls will become WABU-TV when the FCC says so. Rumor has it
that BU's noncommercial WBUR-FM will move in to the WABU space
further down Soldiers Field Road from WBZ.

Some time back, the BBC in their mad desire to replace radio 4 long wave with an all news channel, offered (or stated) that R4 was going to be put onto a commercial sattelite (ASTRA ?) as part of regular transmissions. (I think this was to keep all those people in Europe who listened to R4 long wave happy).

1. does anyone know whether these plans have been dropped (now that R5 is being butchered)
2. and if not, where the relevent piece of orbiting junk can be heard from ?

On Friday November 5 at 4:00am Central Time (I regularly wake up at
5am as I work out at the YMCA at 6), I heard what sounds like a legal ID:

"WMVP Chicago's Sports 1000 ...".

I thought a US station is required by the FCC to broadcast a legal ID
(call letters and city of license) at +/- 10 minutes within
the top of the hour. That was what was stated in the
AM/FM DXing FAQ on rec.radio.info/rec.radio.shortwave.

I stand corrected. Yes, Harvard Broadcasting's 3KW WHRB-95.3FM is
indeed a commercial station. Of course, no one could ever accuse them of
operating/programming just like any other commercially licensed station in
town...:-)
(The only exception to that might be Cambridge's 'beatiful music' WJIB-740AM(250 KW
during th day and meager 5 watts at night) which is a commercial station
but sells no ads).

I should've categorized 'HRB as a 'college' station along with others I mentioned
playing jazz music on a weekday basis.

that sounds legal, too.

>I thought a US station is required by the FCC to broadcast a legal ID
>(call letters and city of license) at +/- 10 minutes within
>the top of the hour.

i don't think the FCC specifies a particular time interval, only that the
station's legal ID be at the top of the hour or as close to it at a natural
break in the programming. Routinely I've heard stations give legal ID's
as far as ten minutes before the hour... in the middle of a stop set.

I was told that in a Sun Times article within the last few weeks that WCFL (104.7 FM) was being bought by another company and that the programing format of the station was going to change to a religious format. The station was having money problems. It would be interesting to see how successful the station would have been if it covered the entire Chicago Metro area. Its format is certainly unique to a radio market that is very segmented.

That may not have been a legal ID. The legal ID has to come within
five minutes of the top of the hour, and must consist of the call
letters and city of license, with only a frequency or channel no.
allowed to separate the two. It's very easy for a station to use
a legal-sounding ID most of the hour, like:

"Country 98, WCTK-FM Providence"

and then just hit the legal once at :55 or :56...

"Country 98, WCTK-FM New Bedford Providence."

<...snip...>

-=Scott Fybush - fybush@world.std.com=-

[Moderator's Note: Far be it from me to question you <grin>, but my
antiquated understandings were that it was 2 minutes either side of
the hour *or* at the first natural break in programming as close to
the top-of-the-hour break. No? Bill]

Gawrsh, I hear stations all the time slipping a quiet ID into their :50
break, using it as their only ID. WMGI/Terre Haute IDs this way, and uses
their "Magic 101" handle otherwise. WFXF/Indianapolis did the same while it
was still The Fox. WZZQ/Terre Haute recently began simulcasting on an AM
sister; they do a "WZZQ WBFX Terre Haute" during the :50 and then use their
Joe Kelly WZZQ-only ID at :00.

Does this count as "natural break in pgmg as close to the top of the hour?"
Or are these stations in violation?

Source record: 42088

In an earlier discussion on Chicago's WMVP and legal IDs, it seems that a clearification is needed on what constitutes a legal station ID. First, a legal ID must be presented hourly, as close to the hour as feasible, at a natural break in the program. The ID must consist of 1) the station's call letters, followed by the community or communities of license. The station's licensee as stated on the station's license may be inserted between the call letters and the station's location. No other insertion is permissible.

73.1201 Station Identification

(a) When regularly required. Broadcast station identification
announcements shall be made: (1) At the beginning and ending of each
time of operation, and (2) hourly, as close to the hour as feasible, at
a natural break in the program offerings. Television broadcast stations
may make these announcements visually or aurally.
(b) Content. (1) Official station identification shall consist
of the station's call letters immediately followed by the community or
communities specified in its license as the station location: Provided,
That the name of the licensee or the station's frequency or channel
number, or both, as stated on the station's license may be inserted
between the call letters and station location. No other insertion is
permissable.
(2) A station may include in its official station
identification the name of any additional community or communities, but
the community to which the station is licensed must be named first.

Various other sections in this area cover station identification
for simulcast operations and subscription TV stations. The above rule
is from my October 1, 1992 copy of the CFR.

My 1986 copy of the Rules says pretty much the same thing. My
1980 copy is substantially the same, but it required specific FCC
authority to include additional communities in the ID. When I got
started in all this (back in 1969), as I recall, we were required to run
an ID on the top and bottom of the hour, plus or minus two minutes,
unless such an ID would interrupt a speech or other performance.

Harold

Judging by the on-air IDs, WQTV 68 has become WABU already, but the
only change in programming I've noticed is that they run a different
cheesy home-shopping channel overnight. ;-)

And speaking of TV, has anybody mentioned WBZ TV 4's news deal? BZ's
news department has started producing a ten p.m. show for independent
super-station WSBK, called "WBZ News 4 on TV 38", giving dishowners and
_some_ cable viewers nationwide an opportunity to see a Boston newscast
five nights a week.

Back to VHF: now that WBZ's competitors have revamped their graphic
look, leaving BZ's hokey sky-blue set in the dust ("The anchors look
like they're reading the news to us from Heaven!"), will BZ be far
behind in ordering a new Miami look?

# 1854. Questions re: WBZ purchase of WEEI and Boston sports radio

Newsgroup: rec.radio.broadcasting
Date: 1993-11-10 04:40:49 UTC
From: <>
Message-ID: <2bprch$anb@vixen.cso.uiuc.edu>
Source record: 42092

Being an avid listener of AM radio in Boston, I've been following with interest the news in this group about WBZ 1030 AM's impending purchase of WEEI 590AM. I'm a news-sports junkie, so I tend to listen to these stations a fair bit.

Is it likely that WEEI's format will wander away from all-sports? Will WBZ's wander away from all-news+Patriots? Any thoughts?

Other related questions:

Is there a chance that WBZ may get the Boston College football games back? Why did they leave? Gill Santos does, IMHO, the absolutely BEST football play-by-play on radio, bar none! I miss him doing BC! Dale Arnold was very poor, and Dick Lutsk is OK (he's obviously been taking Gill Santos lessons), but I'd like to hear Gill doing them again...

BTW: Why is Lutsk on WEEI? I presume it's because BC picks and contracts the game announcers, not the station, yes?

Would they likely move the Bruins and Celtics to the 50Kw signal?

And what of the Red Sox? When is their contract with WRKO up for renewal? The game talent isn't too bad -- Joe Castiglione is locally-grown, and quite descriptive enough, though the other guy (whose name escapes me), is competent, but has too-smooth a style for the idiosyncratic Boston sports auidence, IMHO. [I'd like to hear Ned Martin back on Boston radio, but that's another story]

Did WEEI's poor ratings start after the conversion to all-sports? Or were they poor while they were all-news? [If that was the case, then why is WBZ such a leader? Does 50KW on a clear channel do so much for you that the programming is "easier" than if you've got a weaker carrier?]

Sorry for all the questions, but discovering this group has been like a kid discovering Toys "R" Us for the first time in his life...

Thanks,

John Francini

Isn't that where WCAS (Wikus Island Broadcasting, also in Cambridge) used to be?

Has WCAS finally given up the ghost?

Is this "WJIB" related to the WJIB-FM that became WCDJ and then W??? Country 97?

5 watts at night on 740???? I worked there back in the late 70s (when it
was alternative/folk WCAS) and when we signed off at sunset, the Canadian
on our channel came through loud & clear on the air monitor. I can just
imagine how well 5 watts would do. e

# 1857. China clamps down

Newsgroup: rec.radio.broadcasting
Date: 1993-11-10 04:41:11 UTC
From: jherman@uhunix3.uhcc.Hawaii.Edu
Message-ID: <2bprd7$ao4@vixen.cso.uiuc.edu>
Source record: 42095

Gang,
Just got this off the UPI newswire; I interpret it as meaning that up until now, there wasn't much coordination of radio frequencies within China, and that the government is reasserting its absolute control.

Jeff.
**********

BEIJING (UPI) -- China's highest leaders have issued new regulations restricting access to radio frequencies in the latest of a series of moves to assert control over media, a state-run newspaper reported Saturday.
The order, approved by President Jiang Zemin and Premier Li Peng, was designed to end ``disorder in the management of radio communications, the use of frequencies and establishment of radio stations,'' the official China Daily said.
``Those found operating radio stations and using radio frequencies without official approval will be subject to inspection and punishment,'' Wu Jichuan, minister of posts and telecommunications, told the newspaper.
The regulations legalize the state's monopoly over radio communications, including mobile telephones, pagers, telecommunications, and radio and television stations.
The article did not specify when the regulations would become effective.
``All radio stations, whether run by individuals or units, must obtain approval from radio management committees and observe the new 10-part regulations,'' the article said.
China's radio stations, including mobile communications, topped 2.5 million by the end of last year, growing at an annual rate of about 20 percent over the past decade, the article said.
Since mobile telephones were first permitted in 1986, the number of users has grown to 460,000, and China's 6 million users of radio paging networks put the country third in the world after the United States and Japan.
The regulations were the latest in a recent spate of edicts aimed at controlling both broadcast and print media.
On Oct. 8 the government banned unauthorized satellite dishes, estimated to number in the millions. If enforced, the ban would cut access of ordinary Chinese to television news and programming from Hong Kong and Western countries.

# 1858. Re: Confused about city of license

> n).

When I started out in radio, I got an earful from our station engineer because I id'ed the station by call, then frequency, then city of license. (We did live id's.) Can you truly put the frequency in the middle? I realize more than likely the engineer was just trying to drill how to do proper, unambiguous id's into the mind of this young pup, but still my curiosity is piqued.

# 1859. RE: Confused about city of license

Newsgroup: rec.radio.broadcasting

From: JOHN SCHMIDT <schmidt@auvax1.adelphi.edu>
Message-ID: <2bprdl$aoh@vixen.cso.uiuc.edu>
Source record: 42097

Well you might be!

The FCC rules have changed and become more liberal over the years.

When I was first involved in this business, the "main" studio location had to be within the community of license, except that it could be at the transmitter location, even if outside the city of license. The transmitter (for comm'l AM and FM stn's) could be anywhere that provided a "city grade" signal over the entire community of license (3.16 mv/m for FM, 5 mv/m for AM, 5mv/m covering 80% of community of license at nite.) (NCE stations never have had a signal strength requirement as far as I know).

As a part of de/re regulation the requirements for studio location were changed to allow the main studio to be anywhere in the "city grade" signal area, even if outside the city of license. For a class "B" or "C" FM, or a powerful AM, that covers a large area. Studios for FM's may also be at transmitter location of co-owned AM station licensed to same community (but not visa-versa).

You also can locate anywhere in the community of license even if outside city contour (due to 80% rule, waiver, borders of community changing, etc) and can locate anywhere even outside both city of license and city grade coverage "when good cause exists .... and that to do so would be consistant with the operation of the station in the public interest." In this case, you must file for a modification of CP or license.

The rules for multiple communities of license have been liberalized also, but I don't have them handy.

STATION ID's

The Station ID rule has been mis-stated here recently (by the Moderator, among others :-( ) The rule was for many years, + - 2 minutes of the hour, with some exceptions.

Here is a rather shortened version of 73.1201, Station Identification:

(a) When Regularly Required. ... (1) at the beginning and ending of each time of operation, and (2) hourly, as close to the hour as feasible, at a natural break in program offerings. .....(TV aurally or visually).

(b) Content. (1) Official station identification shall consist of the station's call letters immediately followed by the community or communities specified in its license as the station's location: PROVIDED, that the name of the licensee or the station's frequency or channel number, or both, as stated on the station's license may be inserted between the call letters and station location. No other insertion is permissible.

(2) A station may include in its official station identification the name of any additional community or communities, but the community to which the station is licensed must be named first.

(c)Channel: (1) general. Except as otherwise provided in this paragraph, in making the identification announcement the call letters shall be given only on the channel identified thereby.

(followed by several exceptions concerning simultaneous operation in the expanded (1605-1705) AM band, and for satellite stations., and finally an exception for scrambled STV stations.

Somehow, I seem to remember the Commission also issueing a policy that "deceptive" id's or id's which were inaudible or hidden in other program content were not permissible. This would conflict with (2) above, quite possibly, but usually, the rules have priority over policy.... I know that a local station was cited by one of the inspectors here for having an "inaudible" id, because he claimed the bed music under it was too loud, sometime in the mid '70s. I don't know how the station responded to the NOV, but I suspect it was along the lines of 'we will be more careful in the future'.

DISCLAIMER::: These rules were abstracted from our rules service rulebook, which has been found to be in error in the past. To the best of my knowledge they are current, but don't blame it on me if the FCC claims otherwise at YOUR station.....

I am not sure about the ASTRA thing (as I am only specialized in the
North American satellites - U.S., Canada, and Mexico satellites).

Radio 4 does show up on one of the North American birds -- it is
used as a filler for a backhaul circuit from London to Canada for CBC
radio. It sometimes gets interrupted for news feeds and other services
coming to Canada from London, but R4 is there for most of the time.

Message-ID: <2bpre7$ap7@vixen.cso.uiuc.edu>
Source record: 42000

I agree with MOST of what was posted by John Schmidt. However,

In article <2b76su$j9g@vixen.cso.uiuc.edu> JOHN SCHMIDT <schmidt@auvax1.adelphi.edu>
writes:
>
>I don't have my rulebook handy, but I don't think you can legally lease out
>the PRO channel. It is not anywhere near a full quality channel.
>
>There also is space for a telemetry subcarrier for transmitter remote control.
>
>There is no provision in the rules for an "SCA" type channel for leasing to
>others for non broadcast-related private use. There really isn't enough
>bandwidth, the sound carrier frequency is really too close to the edge of the 6
>MHz TV channel allocation. If you crammed anything more in there, the
>deviation would push you over into the next channel, or in the case of
>band-edge channels, interfere with the services in the adjacent frequencies.
>

73.665 allows use of TV aural subcarriers for the following
purposes: Stereo (biphonic, quadraphonic, etc.), "operational
communications" (to use a term from part 74 of the rules, which includes
relaying material to other stations, remote cueing and order messages,
and transmitter control and telemetry), pilot or control signals to
enhance the station's program service (such as signals to activate noise
reduction equipment, program identification, etc.) and subsidiary
communciations services.
73.667 defines subsidiary communications services as those that
do not enhance the main program broadcast services (such as stereo,
noise reduction activation signals, second language audio on an SAP
channel, etc.) or are not exclusively related to station operations
("operational communications" as discussed above). Suggested subsidiary
services include functional music, specialized foreign language
programs, radio reading services, utility load management, market and
financial data and news, paging and calling, traffic control signal
switching, and point-to-point or multi-point messages.
73.667(b) allows stations subsidiary communications services to
be private radio or common carrier in nature, with appropriate FCC
approval.
It's interesting to note that the FCC did not put the BTSC
stereo standard in the Rules. It is defined in FCC Bulletin OET 60 (of
which I do not have a copy). It's pilot subcarrier of 15.734 KHz is
protected by 73.682(c)(3).
Note that television stations also have the video blanking
interval available for "subsidiary" (or similar) communications. Use
of the VBI is discussed in 73.682(a)(22) and following sections. Lines

17 through 20 can be used for test and operational communications. Line 19 is to be used for the transmission of a video reference signal. Line 21 may be used for the transmission of program related data (such as closed captioning). When line 21 is not used for program related data, it may be used for other display information that is broadcast in nature (perhaps stock quotations or similar). In addition, lines 10 through 18 and 20 may be used for "telecommunications" as defined by 73.646. This section lists teletext, paging, computer softwae and bulk data distribution and aural messages as possible applications.

# 1863. Critical talk radio

Newsgroup: rec.radio.broadcasting
Date: 1993-11-10 04:41:54 UTC
From: Patrick Burkart <riotgirl@actlab.rtf.utexas.edu>
Message-ID: <2bprei$apm@vixen.cso.uiuc.edu>
Source record: 42001

Brecht introduced the question of the revolutionary potential of live theater to intermingle the roles of theater participant and theater observer. Actors, playwrights, and theater goers today still address Brecht's challenge of interactive theater. The boundary between passive spectator and active artist gives way in revolutionary theater.

I think that it is possible to speak in the same way about talk radio: the boundary between listener and programmer has to give way somewhere in every medium, and the rupture in radio is talk radio. But as we can hear by listening, the talk radio we hear is far from revolutionary, but strongly reactionary and neo-conservative.

The way talk radio is programmed on commercial radio stations nearly prevents a Brechtian approach to free and unrestricted performativity on the radio. The restrictions talk show hosts and producers put on speech are significant. It's not free speech because you can't say everything you might want to say over the air. Besides, commercial radio time is not free at all, but costly, and the petty tyrants behind every microphone cut callers short who don't play by their rigged rules or who don't sound perfectly normal. Uncritical talk show hosts working for commercial radio stations generally present themselves as free speech exercising populists who magnanimously give "the people" their say with a new, interactive technology. This is only a ruse and a commercial gimmick.

It's plain to see that talk radio could be democratic if it were a free resource available to everybody and under the management and directorship of a popular majority. While the popular national talk show hosts like to pose as benificent benefactors of a democratic technology which gives the radio to "the people," their programs are not really reflecting popular opinion at all. Instead, they are constituting the false appearance of a unified opinion. People with a radio or with radio access during the workday are privileged; people with a radio and a telephone have more access; managers with free time, a free phone, and a free radio have even more access; people with celluar phones and time to waste have the best access of all. Of course these technocratic elites are going to jam the lines to agree with what any managerially or bureaucratically minded host is going to say.

Moreover, disagreement and dissent are programmed out of talk shows as much as possible, leaving gullible listeners with the impression that there is a preexisting consensus which is confirmed with every single call and whch they should align themselves along should they choose to call. This is also called "groupthink" by sociologists. On popular talk radio, the "dittohead" phenomenon represents this problem very well.

The dittohead phenomenon is a threat to any society, community, or group which values democratic procedure in public debate and policy making.

I think that prank callers are the only hope for an entrenched, anti-democratic, technocratic talk radio elite which enjoy talk radio hegemony. Prank callers should preserve the interactivity of talk radio. There is no other format where consumers of live radio influence the programming with their own speech. Talk radio listeners consume their own speech, performing on live radio before an audience they believe is responsible for "public opinion."

Before talk radio, it was impossible to say that the listeners could actually participate in radio, except in the most demeaning and indirect of ways, like following the instructions of an advertiser or requesting a song. Listeners had no agency whatsoever in struggling to make radio over into their own product. Now, at least, it is possible to get your own eighteen seconds, or if you're good eighteen minutes, of talk radio fame, and reclaim ground snatched up by little talk show dictators.

In my next letter, I want to offer some tips to would-be prank callers.

You're all in my prayers,

RIOTGIRL

From: <>
Message-ID: <2buo1a$nck@vixen.cso.uiuc.edu>
Source record: 42010

Hi - I'm looking for information on what stations in the US broadcast the syndicated Gene Burns Program, a three-hour call-in talk show. Gene used to have a lock on the 10-2 midday talk market in Boston on WRKO 680 AM before he went for national syndication and greener pastures.

In Boston, his new show airs from 2000 to 2300 EST -- tape delayed five hours from it's live broadcast time of 1500-1800 EST.

I gather that the show originates in NYC. What station?

I'm interested in particular in knowing who airs the show on the west coast, preferably northern California.

Thanks,

John

# 1869. Highwater Independant Production seeks sponsorship

Newsgroup: rec.radio.broadcasting
Date: 1993-11-12 01:14:29 UTC
From: andyrose@netcom.com
Message-ID: <2buo1m$nd3@vixen.cso.uiuc.edu>
Source record: 42012

According to Pacifica's David Salniker (Executive Director), refering to recent attacks on public radio, "there will be another round of attacks on public broadcasting this spring, when CPB comes up for reauthorization. Conservatives are again aiming at discrediting and defunding any grants for programs they deem controversial."

"Right-wing talk radio hosts like Rush Limbaugh already spread racism and fear through the commercial airwaves. And the broadcast media as a whole, commercial and religious, has become steadily more conservative. The far right is planning to get US media in a hammerlock as a step toward recapturing political power."

Highwater reports are 1/2 hour weekly newscasts condensed from articles on misc.activism.progressive. We are in our twelfth week of production and deliver programs to over thirty unlicensed, independent, noncommercial, college, and short wave stations at no cost. Reports are aired by Radio Peace International, Berkeley Free Radio, Newsdesk Amsterdam, and by stations in Connecticut, Salt Lake City, Texas, South Africa, Hawaii, Washington DC, and others. Highwater reports have also been uplinked to Nat'l Public Radio Satellite since report #8.

Highwater is commited to providing int'l and nat'l news regarding US Gov involvement in human rights abuses, arms trades, labor struggles, ecological movements, women's rights and indigenous people's rights.

I'm asking you to make a special contribution to sustaining the Highwater report and allowing for a consistent weekly source of progressive news programming for stations unaffiliated with major media providers.

Our current costs per week are 50$ for tape stock and postage, 18$ fedex to NPR uplink and tape distribution, 37$ for NPR distribution and other costs.

Whatever contribution to this cause you feel is
appropriate would of course be appreciated. For
a contribution of 105$ or more, your name or
affiliation can be mentioned on a program as
a sponsor. If 26 broadcasters can sponsor
shows each will receive 26 reports for $105 or
about $4 per show.

Due to a series of urgent maintenance interventions on our 7,125 kHz transmitter, IRRS-Shortwave **might be** ***temporarily*** off the air during weekdays between November 8 and November 20, 1993.

We will try to schedule maintenance to our transmitter in order to have a minimal impact on all of our relay broadcasts, and a special effort will be made to guarantee regular operations during our main Saturday and Sunday transmissions.

Regular operations MON-FRI between 6-9:15 UTC, and 12-21:15 UTC, and SAT-SUN between 06-22:30 UTC (wintertime) will be resumed on Nov. 21, 1993.

For more information please contact our office in Milano. Thank You.

# 1872. Joe Frank: Work in Progr

Newsgroup: rec.radio.broadcasting
Date: 1993-11-12 01:14:32 UTC
From: michael.youndt@satalink.com
Message-ID: <2buo1o$nd8@vixen.cso.uiuc.edu>
Source record: 42015

I>There used to be (is?) a program broadcast out of KCRW in
I>Santa Monica, CA called Joe Frank: Work In Progress. The programs
I>were put together by this radio performance artist, Joe Frank.
I>If anyone knows if he's still doing the program and/or where
I>I can get tapes, please post or send mail.
I>
I>Sylvia Isler
I>isler@gradient.cis.upenn.edu

Seeing you are from Penn I would guess that you, like me, listened to Joe Frank on WXPN FM 88.5. They use to play it Fridays and Sundays at 10 PM, then went just to 10 PM Sundays (after their 2 hours of gay/lesbian programs "Amazon Country" and "Gay Dreams") although this time slot was coincidental, I guess. I loved this show. I made some tapes because I couldn't always stay awake the full hour (I'm an early riser) and I find now that I listen again and again to the 20 or so shows I taped. He has a very peculiar, surreal sense of drama and storytelling. I think his shows and monologues are available on cassette from Joe Frank c/o KCRW in Sanata Monica, the same place that does Harry Shearer's "Le Show". When WXPN took Joe off the air about 1-1/2 years ago I think they said he was taking some time off to persue other things. BTW I've always wondered if he was the one (although I doubt it) in the one-hit wonder group in the 70's _Hamilton, Joe Frank, and Reynolds_ ("Baby, Baby, I'm Falling in Love Again") Anyway, I would like to know if he is still being broadcast anywhere in the Phila./Baltimore/Washington area myself. I would also like to know anything about his backround or other artistic/performance work he has done or is doing. Is there a Joe Frank FAQ?

Bill....

Is it true that WEDC/WSBC/WCRW still share time there in Chicago?

Are they minority formats ... anything of interest in their stories?

Actually, now that I think of it, I wonder how many sharetimes still exist.

Got to do some research there!

take care
barry mishkind

barry@coyote.datalog.com

[Moderator's Note: Yes the stations still share a frequency, and two
of them now share facilities. WCRW has abandoned its building-top
tower near Diversey and Lake Shore Drive (NO ground conduction) and
is not using WEDC's tower on Chicago;s NW side. WSBC is co-owned with
WXRT-FM and WSCR-AM. Also, WVON (black talk) and WCEV (Ethnic) share
1450khz. Different studios, same tower site on Chicago's near SW side. Bill]

# 1874. Radio Watchers -- Kansas City

Newsgroup: rec.radio.broadcasting
Date: 1993-11-12 01:35:27 UTC
From: ucsd!tyrell.net!transvox@uunet.UU.NET
Message-ID: <2bup8v$p3r@vixen.cso.uiuc.edu>
Source record: 42017

Great American Communications of Cincinatti has filed a reorganization plan in federal Bankruptcy Court in Cincinatti. The chief financial officer of the radio and television broadcasting chain, Greg Thomas, said creditors have agreed to most of the details of Great America's Chapter 11 bankruptcy filing.

Great American owns WDAF(AM), KYYS(FM), and WDAF-TV in Kansas City. The Kansas City Star quoted WDAF-TV general manager Ed Piette as saying, "It will have no effect on WDAF."

Great American operates television stations in Cincinatti; Phoenix; Tampa; Birmingham, Alabama; and Winston-Salem, North Carolina. It owns radio stations in 10 markets besides Kansas City.

Thomas told the Star that all the company's stations are operating profitably, even though the company as a whole expects to show a loss for this year. Annual revenus for 1993 are forecast to reach $200 million.

The company has been crushed by heavy debt ever since its $1.5 billion purchase of Taft Broadcasting Company in 1987, led by financier Carl H. Lindner, Jr. Lindner owns 40 per cent of Great American and is its biggest shareholder.

Thomas said the bankruptcy court is expected to confirm the Chapter 11 reorganization plan on December 7.

---

Data on facilities mentioned:

WDAF(AM), 5 kw, 610 kHz, "61 Country", "The Flatlands Godzilla", non-directional day AND night, country format, #1 or #2 in Arbitron "vanity" numbers consistently.

KYYS(FM), full class C FM, album rock format, at one time a market leader but suffering from ratings declines in recent years.

WDAF-TV, channel 4, NBC affiliate.

WDAF(AM) and TV were sold by the Kansas City Star Company to Taft in 1958 (I believe) after the Justice Department showed that the Star was forcing newspaper advertisers to buy radio and TV time and vice-versa.

*** *** *** *** *** *** *** *** *** ***

WHB(AM) owner Mike Carter has apparently decided to make a run for a presence in Kansas City after all.

The Kansas City star reports that Carter is opening an office in the Livestock Exchange building and is hiring a Kansas City sales staff. The station's studios and offices have been in Carrollton, Missouri since Carter bought the station from Shamrock Broadcasting on September 26.

Carter has hired sales manager Clark Hart from a station (not identified by the Star) in Shenandoah, Iowa, and general manager Marjorie Abrams from Washington, D.C. Carter says, "That's the whole

Kansas City staff right now."
WDAF (61 Country) program director Ted Cramer tells the Star, "We just haven't felt them. They're just another country signal, and we've already got five of them."
Carter has hired former WDAF DJ Dan Diamond for a WHB Saturday morning country oldies show, competing head-on with WDAF's long-standing show.
Diamond said he plans to offer more variety on his show. "For instance, have you ever heard the song 'Blue Christmas' by Porky Pig?", he asks.
(WHB is at 710 kHz, 10 kW daytime, 5 kW nighttime, DA-2.)

The BBC service which is available to public stations such as KALW is the
BBC World Service and is essentially a satellite feed of the BBC's worldwide
shortwave service in English. American Public Radio (APR) is the
distributor of the BBC World Service to public stations in the U.S.

/* Written 5:20 pm Nov 10, 1993 by resystom in web:amarc.radio */
/* ---------- "La Voz Popular - Guatemala" ---------- */

News release 10 November, 1993

Guatemalan Rebel Radio Producer to Speak
========================================

Julia Batres Lemus is a producer with the
Guatemalan underground radio station La Voz Popular.
On November 18 at 7:30 pm she will be in Montreal to
speak about the station and about the severe
restrictions on the right to communicate in
Guatemala.

Throughout the over thirty years of Guatemala's
civil war the media have been censored or threatened
in order to prevent news of the war and the
repression from reaching the public. In 1987 La Voz
Popular was set up as part of an effort to get around
the government and military-imposed censorship and to
give a voice to the URNG, Guatemala's revolutionary
army.

Six years later La Voz Popular broadcasts
regularly to northwestern Guatemala from an outdoor
studio on the side of a volcano. Its programming is
in Spanish and Mam, one of the main indigenous
languages spoken in the region.

Before joining La Voz Popular three years ago,
Julia Batres Lemus spent twelve years fighting in the
resistance army.

She will speak at McGill University's Centre for
Developing Area Studies, 3715 Peel at the corner of
Pine Avenue. The meeting starts at 7:00 pm Thursday
November 18.

This seminar is the second of an ongoing series
that will examine the role and practice of
alternative radio in Quebec and around the world. The
series is organized by the World Association of
Community Radio Broadcasters (AMARC), the Association
des Radiodiffuseurs Communautaires du Quebec (ARCQ),
and McGill University's Centre for Developing Area
Studies.
```

Message-ID: <2bup97$p41@vixen.cso.uiuc.edu>
Source record: 42020

>From: norris@athena.mit.edu (Richard A Chonak)

> Judging by the on-air IDs, WQTV 68 has become WABU already, but the
> only change in programming I've noticed is that they run a different
> cheesy home-shopping channel overnight. ;-)

They officially became WABU-TV on Friday(11/5/93). The cheesy overnight
home-shopping network has been on-the-air since summer...Brand new
syndicated programming will start in January when rights to current
programming (Cannon,Streets of San Francisco,Hooker,Twilight Zone,etc)
expire...Speaking of Twilight Zone, starting January 1st it will
be exclusively shown only on USA Network's Sci-Fi channel...

> Back to VHF: now that WBZ's competitors have revamped their graphic
> look, leaving BZ's hokey sky-blue set in the dust ("The anchors look
> like they're reading the news to us from Heaven!"), will BZ be far
> behind in ordering a new Miami look?

Very possible. Myself, I kind of like Channel 7's new look. It looks
somewhat industrial yet very high-tech...I'm not sure whether it's a
'Miami-look' but CNN's Headline News has used this kind of set for
many years now(with brighter colors)...

> The order, approved by President Jiang Zemin and Premier Li Peng, was
>designed to end ``disorder in the management of radio communications,

[etc. deleted]

Your interpretation is correct. At least as recently as 1991, the
governing authority for radio licensing was the local Army unit. There
was no equivalent of the FCC, and frequency agile (amateur) 2m and 70cm
radios were for sale in the electrical supply stores. When I asked the
clerk what frequencies could be used, they just looked them up in the
manual for the radio. People I was working with over there wanted a
point-to-point vhf link and they just put it up, they said they went to
talk with the local Army folks and after several rounds of office shuffling,
they decided that so long as it wasn't in 30-88 MHz and didn't bother
the railroad radio, they could do what they liked. In 1983-4, it was
so primitive that they were still running 30 kHz deviation FM on vhf
high band for a weather network that basically consisted of people
yelling about which way the rain clouds were going.

Looking in the WRTH for years back shows the usual Radio Beijing and
provincial broadcasts plus dozens of PLA (People's Liberation Army)
stations. The Army has long been a main funding source for music and
drama productions, since they are almost fireproof politically.

>the use of frequencies and establishment of radio stations,'' the
>official China Daily said.
> ``Those found operating radio stations and using radio frequencies
>without official approval will be subject to inspection and punishment,''
>Wu Jichuan, minister of posts and telecommunications, told the

After searching wide and far for a national/international disc jockey organization....which I never found....I have decided to start one up myself...and since the best way I know of to get in touch with other disc jockeys around the world is through the internet, I have decided thats where I'll start.
International Disc-Jockey Conference

A Sure Sign of Quality In Entertainment

Is being formed now....serving as a networking/communication point for disc jockeys-national and international, new and old, mobile and club. The idea of this group is to allow disc-jockeys to communicate their ideas and get feedback on them, and also to give disc-jockeys an affiliation with a national organization that will serve to improve their image.

I am looking for other disc jockeys to help get this group rolling....and to be members. Membership criteria is in the process of being written, so if you are interested please reply to drfever@iastate.edu.

Please send a brief "dj history" of yourself and your company, details on equipment (light and sound), music, professional practices and anything else you can think of to drfever@iastate.edu.

> as far as ten minutes before the hour... in the middle of a stop set.

Yes, some PDs deem to think that "hiding" it in the middle of a newscast
a quarter hour from the top of the hour will make listeners think they
are somewhere else.

However, FCC personnel have stated in public that this is *not*
acceptable, and in an inspection, a NOV could be issued.

Desiring a segue of "ten in a row" does NOT eliminate the natural
breaks between cuts. The FCC expects the ID at the top of the hour.

From: 100020.1013@CompuServe.COM
Message-ID: <2bupaa$p4o@vixen.cso.uiuc.edu>
Source record: 42030

Hello There from Milano, Italy:

I just spotted a few messages on rec.radio.shortwave, expressing the interest of hearing National Public Radio (NPR) in Europe. I would be curious to know if there is **really** an interest in Europe to hear NPR. Any feedback from Europeans on the net?

If we could establish that there would be an interest, and could reach the right people at NPR, we might consider airing them on our shortwave station. We have just extended our schedule during the afternoon, and there would be plenty of room for NPR now (we are a sort of "public" / non profit radio).

P.S. I just heard that NPR is on the air for some hours a day/week on the Astra satellite (European DBS), but could not check that yet.

Please send in your comments to us here in Milano, and if you have any contact at NPR, just tell them that we could carry them ....

Alfredo

WOAH!! Excuse me, but I believe that you are under the mistaken impression
that talk radio is controlled entirely by a certain talk show host with the
initials RL. Don't be so naive. Talk radio was around long before this
Missouri conservative, and I seem to remember much of it being
not-so-conservative in its political nature. For every liberal cut off by
RL and the like, there is a conservative who was (and still is) cut off by
liberal-minded talk show hosts. You do have a point in saying that _some_
shows & hosts are very narrow-minded (both conservative and liberal), but I
know a few that aren't. Take WJR (Detroit) for example- the topics
generally discussed on their programs are less controversial than others,
and so they can present a more "democratic" slate of callers. It all

depends on who the host is. Please do not criticize all of talk radio when your real target is (or at least should be) a select few.

I don't know if WXZL in Annapolis (Graysonville, as it is oficially licensed) has been mentioned... not only do I think I'd have a hard time saying that, but most days I can't even remember it when talking about it. (They refer to themselves as "Rock 103 XZL" a lot of times.)

I always seem to want to throw a Q in there somewhere...

<more stuff deleted>

In 1979, Doubleday put KWK(AM) St. Louis back on the air at 1380 kHz. The signal was not good. They wanted an FM anyway. So badly did they want an FM that they referred to the AM as "AM 13.8" (13.8 WHAT? hectoHertz?)

So they bought 106.5, WGNU-FM, Granite City. But the other broadcasters in St. Louis objected when Doubleday sought the KWK-FM calls for the station.

Reason for the objection, of course, is that Granite City is EAST of the Mississippi River and hence was required to have a call starting with the letter W.

Solution: call letters WWWK. The stations simulcasted and were referred to as "Stereo WK."

I also recall a Detroit station from that same time with the calls of WWWW.

Also from the early 80's: top-40 station KZZC in Leavenworth, KS (Kansas City rimshot). Slogan was "ZZ99." This station is now KQRC(FM), 98.9 mHz.

A long-standing, somewhat tongue-twisting set of call-letters is KWIX(AM), Moberly, MO (1230). It _always_ refers to itself phonetically as "Kwix."

I gotta go untie my tongue now. ;-)

# 1886. Questions on WEEI's sale to WBZ

Newsgroup: rec.radio.broadcasting
Date: 1993-11-12 01:36:28 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <2bupas$p5a@vixen.cso.uiuc.edu>
Source record: 42026

> Is it likely that WEEI's format will wander away from all-sports? Will
> WBZ's wander away from all-news+Patriots? Any thoughts?

When the news of the potential sale first broke, the rumors were that
Westinghouse would keep the mostly-all-sports on 'EEI but would also add
a heavy 'BZ presence to the news.

SideNote : On January 11th of this year 'EEI began to carry Metro
Traffic news reports hourly from 11am to 6pm. Metro Traffic is the
largets traffic-watch organization in the world. It operates in 48
US cities as well as in London and Toronto. Boston office has about 20
staffers who feed traffic reports to 30 or so radio and TV stations
in the area. MetroTraffic doesn't charge a cent 'EEI for this service;
instead, they sell their own ads during its customized news feeds...

Longtime 'EEI newsman Bob Ames remains the morning-drive anchor during
Imus' show(6-10am). At night, 'EEI uses hourly feeds from ABC News.

Expect this set-up to change when and if 'EEI is finally taken over by 'BZ.
With 'BZ being the biggest radio news operation in New England, 'EEI
will certainly be a beneficiary of all-news sister-station...

> Other related questions:
>
> Is there a chance that WBZ may get the Boston College football games back?
> Why did they leave?

Money. And, regarding the games being on 'BZ again : Not likely.
Kelly Communications which produces the games for BC had sold the rights
to WHDH-850AM this year. However, WEEI-590 claimed that it still had
the contract with Kelly and 'EEI took Kelly to court over the summer.
'EEI won a decision to carry the games this seasson at least...

> BTW: Why is Lutsk on WEEI? I presume it's because BC picks and contracts
> the game announcers, not the station, yes?

Dick Lutsk works for WRKO-WHDH. So, when Kelly tried to switch games to
'HDH from 'EEI they picked him as the announcer with BC's approval of course.
There was not much 'EEI could do since BC would never approve 'EEI's
Dale Arnold to do the games again(BC brass wasn't too high on him)...
As the result, 'HDH produces all BC games which could be heard on 'EEI.
Weird stuff...

>
> Would they likely move the Bruins and Celtics to the 50Kw signal?

Another rumor : the Bruins and the Celtics would stay on 'EEI but
if there is a same-night conflict, *the Celtics* would shift to 'BZ.

Currently, some 2 dozen Bruins games are shifted from 'EEI to Greater Media's
WMEX AM1150. The Bruins were going to bolt to WHDH in the off-season but
it would've cost them an arm&a leg to get out of 'EEI's contract
and produced a good amount of legal hassle so they decided to stick at
'EEI for this season...

> And what of the Red Sox? When is their contract with WRKO up for renewal?
Their contract with 'RKO ended with this season. The Sox were very happy
with the job 'RKO did in the last 4 years in terms of production/promotion.
The Sox are likely to be back on 'RKO for the next few years....

> Did WEEI's poor ratings start after the conversion to all-sports?

Most definetly. On Labor Day,1991, the all-news audience was gone in a minute.
Also, a weak signal and many bad programming decisions(the worst morning
trio in the history of radio - Andy Moes, Suzanne Lee and Ron Buttery)
contributed to the sinking 'EEI ratings...To give credit where credit is
due, Imus brought back some respectability to the station as far as ratings
go...

> Or were they poor while they were all-news?

They weren't poor. They just didn't grow like with any all-news station
around the country...You can only reach a certain audience level with an
all-news operation...

> [If that was the case, then why is WBZ such a leader? Does 50KW on a
> clear channel do so much for you that the
> programming is "easier" than if you've got a weaker carrier?]

Signal strength is important. Plus 'BZ is investing money into the
all-news operation and they're doing it right. Plus, they have a
big brother news-oriented local TV station which gives them alot of
cross-promotion...The same could never be said about 'EEI in their
all-news days when they were owned by CBS Inc and then for the most of
1980's by Helen Broadcasting(owners of Papa Ginos Pizza chain).The
Celtics who were only interested in the bottom line when they bought the weak
signal 5KW station in April of 1990 and killed an expensive all-news
format a year and a half later, didn't really do anything to make money
on their investement. Instead, they hired alot of bad consultants and
lost a bundle with an all-sports programming(having Eddie Andelman do
the PM drive is insanity at its best...)

> From: hwcco@moray.chvpkh.chevron.com (Bill Corea)
>
> Isn't that where WCAS (Wikus Island Broadcasting, also in Cambridge)
> used to be?

Yessss, you're correct, Sir...

2 years ago. In September, 1991 local guy Bob Bittner acquired 740AM
for about $225,000. He changed the calls from WLVG-AM(formerly WCAS)
to WWEA and called it 'earth radio'. He played folk,country and acoustic
music. Then in 1992, he grabbed WJIB calls and started playing the kind
of music that had been associated with WJIB-96.9FM(now WBCS) before it
dropped the format and became smooth jazz WCDJ-96.9(now WBCS) in 1989.

One of the reasons why Bittner doesn't sell ads, aside from the fact
that station has no ratings,is because he views the station as a public
service and insists that beautiful music is a *public* service...Go
figure!

> Is this "WJIB" related to the WJIB-FM that became WCDJ and then
> W??? Country 97?

So yeh, 'JIB is somewaht related to the old 'JIB-FM as far as formats go...

> ------------------------------
>
> From: wgsmith@netcom.com (William A. Goldsmith)

> 5 watts at night on 740????

Yes, 5 watts. WJIB-740AM received the small power authorization eventhough,
as you've mentioned, there's is a 50,000 watt Canadian signal on the
same frequency that was grandfathered....Bittner claims that low
nighttime signal has a reach of 15 to 20 sq. miles...

# 1888. Radio AAHS (KIDS RADIO) expands again...

Newsgroup: rec.radio.broadcasting
Date: 1993-11-12 07:43:46 UTC
From: wdp@uiuc.edu
Message-ID: <2bveri$jrc@vixen.cso.uiuc.edu>
Source record: 42003
Cross-posted to: rec.radio.broadcasting,misc.kids,rec.radio.noncomm

Radio AAHS, the wonderful children's/family radio network, originating
from WWTC radio in Minneapolis, has just signed on another affiliate.
AAHS can now be heard in the St Louis metro area on 95.3, KLZE FM, a class-A
(3000 watts at 328 feet) in Owensville Mo., which, I guess, is a suburb
of St Louis. This is their first FM affiliate.

Interesting thing is that 95.3 is right next to 95.5, the frequency of
WFUN, in Bethalto Il, which programs 'FUN-RADIO' a locally programmed
AAHS-like format. WFUN does not cover well in the heart of St Louis,
though and perhaps the AAHS signal can pick up where WFUN leaves off.
As far as I know, this is the only city to have two competing 'Kids'
stations. Los Angeles has 2 stations, as does Washington DC, but in
both cases, they are both AAHS affiliates, not competitors.

Here is a list of AAHS affiliates, as far as I know.

CALLS METRO AREA FREQUENCY POWER (watts)
(DAY/NITE ANTENNA)

WWTC Minneapolis (flagship) 1280 (5000/5000 DA-N)
KPLS L.A. metro 830 (2500/1000 DA-N)
KCTQ L.A. metro 850 (500/250 DA-2)
WKDL Washington DC 1050 (1000/44 omni)
WKDV Washington DC 1460 (5000/5000 DA-2)
KIDR Phoenix AZ 740 (1000/292 DA-1)
KKDS Salt Lake City 1060 (10,000/1000 DA-N)
KYYD Abilene TX 1340 (1000/1000 omni)
KNRB Dallas TX 1460 (5000/5000 DA-2)
WMXH Scranton PA 750 (1600 days only omni)
WISM Eau Claire Wi 1050 (1000/500 DA-1)
KLZE St Louis 95.3 (3000 @ 328ft)

Affiliates are currently planned in ...

Milwaukee WI.
Grand Rapid Mi.
Idaho Falls ID.
Spokane Wa.
Baltimore MD.
...and coming to a radio near you!

In case you are not familiar with Radio AAHS, here is an excerpt from
my article this past spring (1993) on the subject....

*** Radio AAHS (OZ) brings imagination back to radio ***

---------- BEGIN QUOTED ARTICLE ----------

From: rrb@deja-vu.aiss.uiuc.edu (Bill Pfeiffer)
Subject: Radio AAHS (OZ) brings imagination back to radio.
Date: Fri, 23 Apr 1993 03:38:11 GMT

One of the highlights of my recent trip to Minneapolis (indeed one of the main reasons for going) was the opportunity to listen to and record what has to be the most unique, fresh and innovative radio format I have come across in years.

Starting a couple of years ago on a single 5000 watt radio station in Minneapolis, this new format has grown to satellite network status

[...]

The station is calls Radio AAHS (pronounced 'OZ", as in the Wizard) and bills it's self as 'kid's radio', but it is much more than that. When we hear the phrase 'kid's radio' we might envision an audio version of Sesame Street, or a stilted and condescending 'grownups preaching to kids' sort of thing. But nothing could be further from the truth where radio AAHS is concerned. At first listen, you might think you are tuned to "Doctor Demento", since AAHS plays a lot of novelty, and animated songs. But as you listen you begin to realize that this is much more than novelty music.

The sound is bright, clever, very positive and stresses both fun and responsibility in a very non-preachy and stimulating way. The music is king. Sure you have your staples of Kermit the Frog, Raffie, Fred Penner, etc., but it goes way beyond that. The music literally defies categorization, borrowing styles as far flung as rap, folk, country, techno-dance, reggae, blues, rock&roll, dixieland, and even classical, Radio AAHS is a potpourri of very interesting, and truly fresh stuff.

All of the music, regardless of style, carries with it the positive messages of self esteem, imagination, getting along with others, daring to be different and preserving the environment. To try and describe this mix would be virtually impossible, because it is so diverse. Some artists are well known in the pop/rock world (such as Paula Abdul doing Zippity Do Da, Little Richard doing a rocked out version of Twinkle Twinkle Little Star, Michael Jackson with Black or White and Heal the world, and many many others), but a larger percentage of the selections are from artists and groups that are not as well known on the pop/rock stations but none-the less create a marvelous sound that is sure to please kids from 5 to 75. Some of these artists are Tom Chapin, Tom Paxton, Parachute Express, The Teddy Bear Band, Rosenshontz, Cheech Marin, Lenny Graf, Tim Noah, Joe Scruggs Reggae For Kids, and a host of others too numerous to mention. They even play a version of 'Achy Breaky Heart" by the Chipmunks *with* Billy Ray Cyrus!

In addition to music, Radio AAHS has regular features such as Storytimes where an interesting story is read over the air, sometimes

accompanied by sound effects and such, the 'Brain Game' where a question is asked and callers try to guess the answer and win prizes, The good deed day where listeners nominate someone for a good deed, and if they win, they get prizes, and a lot of impromptu little stories and even jokes told by listeners. The DJ's are all different and they get involved with the music and the kids who listen. On the weekend is the 'Top 1o Countdown' where requests are tabulated and the top ten most requested songs are played.

Radio AAHS is not merely kid's radio. It is family radio in it's purest and best form. It is a station that Mom and Dad can listen to as easily as their kids and because it is not preachy, but instead fun, entertaining and subtly educational, kids do not grow tired of it. On weekday mornings, kids actually come in to read the newscasts! Radio AAHS has hosted many events including "KIDSTOCK", a one day 'festival' for family fun.

Currently CD Broadcasting, parent company of radio AAHS, is expanding and seeking affiliates. Everywhere that the signal is heard it is widely accepted and becomes an instant success. In Minneapolis, the station came in at number 4 in one rating sweep. Big name advertisers like Blockbuster video have produced commercials specifically for Radio AAHS. Even with a very restrictive commercial policy (No ads that are likely to be misunderstood by kids, no ads that appear too manipulative etc) they have a full commercial load and have advertisers waiting in line. For a niche format, Radio AAHS is a blockbuster in it's own right. Mainly because it is filling a void that is not being filled by mainstream broadcasters and they are doing it in a manner that is honest, fun and stimulating to the mind, heart and imagination.

So if you have kids, or if you are (like me) a kid at heart, you will probably love Radio AAHS. In this era of bland, dead-end, un-interesting repetitions of the same formats, Radio AAHS is a shining star indeed. I don't know which bird it's on, but it is discreet stereo (not SCPC or digital) so it should be easy to get on most, if not all, home satellite systems systems.

[...]

---------- END QUOTED ARTICLE ----------

So, how many of you have heard about this format? Any comments? They have enjoyed a great deal of press. Some of the national coverage includes...

CBS, ABC and CNN news programs...
Wall Street Journal (front page, Marketplace section <twice>)
Forbes
News and World Report
Ad Week
Broadcasting (and other trade pubs <numerous reports>)

Associated Press <numerous reports>
NPR
Time Magazine
Newsweek
Today Show
Entertainment Tonight
And several large newspapers in LA, Chicago and elsewhere...
... to name but a few.

---

*** NOTE TO BROADCASTERS ***

If you own or manage a station, or know of one which is dark, or in need of a fresh start, let me know and I will pass it along.
Or call them directly and mention the AIRWAVES RADIO JOURNAL. They will send qualified individuals a great media kit and even a CD or cassette of a 'telescoped' day of radio AAHS programming (60 minutes in length).

Qualified means that you are an owner, or manager, of a station which is interested in carrying the radio AAHS programming, or a person interested in advertising on the network. Requests for the CD should be sent on station letterhead, and will be mailed to the station address. Please refrain from asking for the CD/cassette unless you are actively interested in affiliation or advertising. I am sure they do not want to send out a thousand CD's to everyone, on the net, with a passing interest in the format.

*** DISCLAIMER ***

I am not affiliated with Radio AAHS, or its parent companies in any way, other than that of a supporter and fan of the format. I am not, in any way, financially compensated for any referrals which come through this publication.

Bill

I think it will be cool to see if they do make it on the
air.

Several months ago I asked about talk radio programming here
on rec.radio.broadcasting and the Don&Mike show was one of
the lesser suggestions. Well, I picked it up anyway and the
program has become a great success for us. It is growing
quickly into a quasi-cult among the 18 to 54 demo.

I set up a voice-mail box for listeners to call and leave
their impressions about the show. So far the call have been
about 20 to 1 in favor of Don&Mike. Although some of their
stuff is a bit off color...there seems to be a line drawn
in the sands of obscenity that so far they haven't crossed.
I've heard them hit the kill button more than once on
calleres that try to use the `S' word or the `F' word.

Also, some of the stuff is a bit mediocre but, for the large
part they are very entertaining and seem to have what it
takes to hold the listeners for good Quarter hour marks.

In other words....I glad I decided to affiliate.

My memory may be a bit rusty, but I believe that if you go back to the late 60s WJIB (96.6) and WCAS(740) were both owned by the same people, and if you go back even further (mid-60s) they were WXHR and WXHR-FM

Just to give you the (sorta) definitive word on the BBC World Service;

American Public Radio is the exclusive distributor of the BBC World Service in the United States. Minnesota Public Radio provides technical support for APR's distribution.

Here's how it works. The World Service signal originates from Bush House in London. It gets bounced across the Atlantic to NPR Washington. NPR Washington (The MOTC, or Main Operations Techincal Center - i.e., uplink types) then shoots it up to Galaxy IV to make it available to APR affiliates across the nation. NPR acts as a subcontractor in this case. Here at MPR we have various ways to redistribute the World Service signal if necessary - ranging from short wave (!?!) to SW56 digital feed, if it would become necessary to bypass Washington and uplink it ourselves.

If you have SCPC downlink capability, you too can tune into the Beeb - Galaxy IV at 99 degrees, transponder 2D, 62.7 mhz, wideband, 3:1 companding, 7.5 millesecond preemphasis.

If you're an APR affilate, and ever run into troubles with BBC, give us a call...maybe I'll get a chance to help you!

I am trying to do some project with a local station, but i am
confused casue i don't know who can help me with the equipment.
The situation is this:
We want to put 6 audio channels into a digital decoder in order
to have only one channel (data). Then we will transmit this data
channel thru a DSP-6000 to the transmitter site. At this point we'll
put the signal (one channel data) into the subcarrier of a local
station (exiter Harris) so the signal can be at the air like any
signal, the diference is that this signal will be DATA, thus if you
scan the frecuency of the subcarrier you will, here binary sounds.
To translate this data to its original 6 audio channels we want
the decoders, not only one but many of them (100 or 400 maybe).
The 6 audio channels may be 3 stereo studio sites, so it may be
feasible to charge a fee to anybody who want to listen 3 digital
quality radio without comercials. The only problem seem to be the
decoders (it have to be feasible, no more than $300 per unit).
I need 1 encoder and many decoder (all at the same frecuency, the
subcarrier frecuency). It is like MUSAK bussines but with digital
quality an 3 options.
I hope that you understand the main idea, and if have any idea,
that could help or any vendor phone number, please send it
to me.

Thanks in advance for your time.I will apreciate any comments.
PS- Sorry about my english :(

Oh for heaven's sake, it only costs $20 (at least the volume containing Part 73 does). Take up a collection among station staff.

From: "BREAK OUT THE FISH STICKS...IT'S TIME TO PARTY"
Message-ID: <2c74a0$g3t@vixen.cso.uiuc.edu>
Source record: 42034

Hi Bill--
I just want to make a quick correction to the Imus List...specifically about the sister AM/FM stations who are simulcasting this AWESOME talent. (You know, talent...what Stern needs bad) Anyhow, for the listings in Harrisburg, PA, one of the latest stations to carry Imus was listed as WIMX 93.3. This station, simulcasting the show with sister station WCMB 1460-AM, is ACTUALLY at 99.3 on the FM dial. WIMX-FM is one of those "MIX -- the station everyone at work can agree on" stations, with an AC/70's thru 90's mix from 9 AM on. If you want to catch the last hour of the show, you can catch it on the AM sister station, as they aren't concerned with switching over to the mid-day music format...they are all talk.

Just, once again, my $.02 worth...
Scott

# 1897. re: AM 1000 legal ID

Newsgroup: rec.radio.broadcasting
Date: 1993-11-15 05:32:59 UTC
From: testnet!pr@pegasus.att.com
Message-ID: <2c74ab$g3v@vixen.cso.uiuc.edu>
Source record: 42035

Instead of all this debate about did person A or person B hear
the official calls for AM 1000 Chicago, and "according
to official FCC rules" quotations of what constitutes a legal ID
(they may be doing no "legal" ID, within the strictest guidelines)
how about this:

someone in Chicago, please listen to AM 1000 continually from :50
to :10 and tell us what IDs the station gives.

It's possible they're saying WLUP Chicago at :55 and WMVP Chicago at :05
and you can choose which is the legal one. It's also been suggested
that they have to say both to get credit for those all-important DIARY
entries.

Others have pointed out how, regardless of rules, stations bury that
legal ID anywhere from 10 of till 10 after anyway. Is it really so
important to know if they have OFFICIALLY changed to WMVP?

STory on Tambuli for Inter-radio, photos to follow.

Philippines

sailing voices on fm airwaves

Surprisingly, the seas are more a carrier for communication than a barrier.
Around the island of Panay in southern Philippines, fragile bangkas (outrigger
boats powered by paddles, sail or diesel engine) brave the waves, carrying
produce and people, connecting communities and islands.

Through community radio, FM takes to the airwaves and carries ideas and
inspirations, and ways to turn goals into realities.

Humble farmlands of Aklan produce rice and vegetables. Small trader
and fishing boats ply the coast. People are hard working, but the means to
advance are not always available. Marketing is yet to be developed into a
paying industry. Tourism is a potential money earner, with fine-sand beaches,
most of them wild, but unbridled tourism risks polluting this most beautiful
legacy of nature.

In this context, the idea of using radio and a local newspaper to
propel ideas of social and economic development was proposed to the town of
Banga, the fifth community centre to be established under the Tambuli
```

Community Radio project. After long discussions and research preparation, a crash course was held on radio production for 13 volunteers. All made sacrifices to attend this course: Lyn Villasis had to close her beauty shop for three weeks, Bert Rala asked his wife to take over his butcher shop, Jemuel Garcia's tricycle was left idle. All of this meant giving up income or reducing it. The early commitment of these and the ten others was a good beginning sign.

These 13 trainees were to be the core of the new radio station DYTM, Tinig ng Manduyog, or Voice of Mount Manduyog, named after a little known Datu (chieftain) who fiercely fought and killed the more famous Datu Kalantiao during the pre-Spanish era. Evoking the name of Datu Manduyog was a challenge, as one trainee urged: "It has to be a fighting station if it is to live up to its name."

The crash course was organized by the Institute of Development Communication of the University of the Philippines, Los Baos, but also brought in practitioners from the local and national radio stations, thus fostering a brotherhood among the broadcasters.

The training introduced practical skills in handling microphones and recorders, preparing radio talks, writing scripts for various programme formats -- magazine, features, news, interviews, panel discussions.

Orly Punzalan, who took time off from his work in a major broadcast network, cautioned that the 21-day intensive program might be too short to learn what is normally offered in college as a four year communication course, but he added: "The eagerness to learn and to serve the community would be a main factor for the trainees. Their familiarity with their target audience is an outright advantage."

One programme innovation was Baranggayan sa Himpapawid (Community on the Air). This features songs, local compositions, poems, stories, vox pops, declamations, panel discussions and interviews done by the regular community members transforming them from mere listeners to programme producers. This type of production has been considered the flagship program of an earlier TAMBULI station set up in Laurel, not only because of its popularity but because it reflects the desire of the project to give the people the opportunity to express themselves socially, culturally, politically and spiritually.

Baranggayan sa Himpapawid opens up a ready forum to manifest people's wishes, aspirations, joys, sentiments, talents and pride. It is produced in people's homes or in public gatherings, not in the studio! Thus the familiar atmosphere evokes candidness among the participants and contributes to the programme's high level of participation and popularity. A special feature is the integration of the karaoke (taped music to sing by) which has stimulated many original songs and verses about development and community problems. The advantage is that many of these programmes can be made without the assistance of trained producers.

The Voice of Manduyog will be managed by a multi-sectoral community media council (CMC) taken from a cross-section of the population of Banga and the neighboring towns. Coming mainly from the grass-roots sector, the council shall formulate the policies and programming thrust of the radio station and newspaper, soon to be established.

Although thought by some to be a sleepy agricultural town, Banga has activated the region through the field work of Aklan State College of Agriculture (ASCA).

As most families in Banga and surrounding towns seek their livelihood from the fertile, rolling farmlands of the island, the College is their main resource for information, learning and new farm technology. Established as a small farm school in 1918 in response to the needs of the rural people, ASCA has accumulated a rich experience in participatory community-building and outreach activities. Baranggay Sibalew, for instance, which is 18 kilometers from the coastal road was formerly among the most depressed villages. It is now a model for the province, thanks to ASCA's introduction of high yielding vegetables and fruit tree varieties about a decade ago. Sibalew boasts of having an average family annual income of over P30,000 (a little over US$ 1,000). This is 10,000 pesos over the average for the whole province, but well below the average for rural households in the new take-off countries of Asia, which is around $2,000.

With the help of local engineers, an FM antenna will be set up on Mount Manduyog, a 100-metre steep mountain formation right at the heart of the Aklan Colleges campus. With the right power and antenna configuration, this height might allow FM signals to spill over to ten other municipalities 20 to 30 kilometers up and down the coast, and possibly reach the islands just across the sound, Sibuyan and Masbate. The sub-regional potential of Banga radio therefore cannot be underestimated. But it will be necessary to programme in such a way as to encourage meaningful interaction and participation among the communities.

As Dr. Helmar Aguilar, the President of ASCA said: "There can be genuine development only if people, especially the grassroots folks, become part of the process."

In the end, if development is people working together to improve their living conditions, radio is people talking with people to encourage this cooperation. TAMBULI only provides the setting for development to take place. The Voice of Manduyog is at least a first forum in which the community can ask its own questions and seek its own directions, and gradually take the steps towards development.

% Louie Tabing

Tambuli is the carabao horn used by the village captain to call the people together, to discuss problems, to arrive at decisions, to cooperate in work. Tambuli Community Radio calls the people over the community FM station. It is the open forum for wider and more relevant interaction among the people to turn their aspirations to reality. The project is coordinated by UNESCO and funded by the Danish International Development Agency.

# 1900. WHA-AM RECEPTION REPORT

Newsgroup: rec.radio.broadcasting
Date: 1993-11-15 05:33:01 UTC
From: RIELAND@vilas.uwex.edu
Message-ID: <2c74ad$g45@vixen.cso.uiuc.edu>
Source record: 42038

This is sort of a DX response card for Earl Higgens' reception of WHA-AM, 970KHz in Madison, WI on 10/22/93 from St Louis at 1805. I thought other IRJ subscribers would like to read my reply. WHA operates at five different power levels during our broadcast day, what with PSRA, STD and three flavors of PSSA. On the day in question, we were indeed doing our fall pledge drive. We signed on that morning at 0500 at our normal nightime power of 44 Watts (luckily we are in the middle of Madison in a marsh, the MSA barely knows!), at 0600 we switched to 434 Watts (PSRA), at 0715 we went to our authorized 4,340W. If Earl had received us after 1815, I would have been MORE impressed as we go to 265W (PSSA #1) then. At 1845 that day we switched to 95 Watts and at 1915 we dutifully dropped down to 44 Watts or 0.95 Amps into our 255' tower. We use a 1990 Nautel ND5 solid state transmitter which makes this all seamless and relatively simple, however we STILL are doing all this manually... We designed and built a switcher which we hope to install soon to both "automate" all this and lower our nightime distortion a bit. Thanks for the report!

Al Rieland, WHA Radio

I am a devoted listener of this network, and would just like to add
on thing to the list above - the two stations listed for Washington,
D.C. are actually located in Maryland (Silver Spring - WKDL, 1050)
and Northern Virginia (WKDV - 1460). This is a large metropolitan
area, and both stations call in to the one in Silver Spring, but
in order to broadcast and be heard over the larger area, they
have two transmitting frequencies.

6 reasonably high-fidelity audio channels would require a data rate of at
least 192,000 bps (7khz;4>1 data compression), while the most you'll be able
to reliably get from a standard FM subcarrier is 9600 bps (if you're *very*
careful - 2400 bps is more realistic). As you can see, this is not nearly
sufficent for your application.

I wish I could compile a station list for Gene. He (other than Rush)
is my absolute favorite talk show host. He is so great that it saddens
me to not be able to tell my friends about a satellite analog feed.

>I gather that the show originates in NYC. What station?

I think it is WWOR -- at least that is where the mailing address
points to.

In Albuquerque, he can be heard on 770 KKOB.

All Gene needs to do is get his network larger and have a SCPC
feed for my friends -- he is too good to not be that well recognized
and valued.

Wow, A D&M strand. I can attest to the fact that they are great guys. I played on a football team with them against the Redskins in a charity game for Children's hospital of Washington, D.C. The guys are just kids at heart.

BTW, forget their appearance on "Brisco County, Jr." They are appearing on either Star Trek--TNG, or Deep Space Nine. It depends on if it will be this season or next. It looks like a DS9 episode right now.

Live Long and Prosper, fellow D&M fans.

I don't think they're available in machine readable form right now except from Pike and Fischer, which sells Rules on Disk for a few hundred dollars. I'm THINKING of doing a Freedom of Information Act request with the FCC to get the rules in machine readable form. Then they could be archived somewhere and made available on disk cheap.

Al,

Why only 4340 and not the nominal 5000? Is it to protect a station,
or did you find that you blanket the desired coverage area with only
4340 watts, and decided to reap the electric bill savings for 660 watts

P. Mount, who has not heard WHA from NJ (thanks to WWDJ, WWSW, and CKCH)

# 1909. WJIB/740, Cambridge, MA.

Newsgroup: rec.radio.broadcasting

From: PGEORGE@LUCY.WELLESLEY.EDU
Message-ID: <2cbul0$404@vixen.cso.uiuc.edu>
Source record: 42047

I wish to pass along some little tid-bits concerning WJIB/740 in Cambridge Massachusetts, of which I am the Chief Engineer of. The present day WJIB came into existance as WTAO in 1948 as a daytime only station with 250 watts, the same authorization that we currently use. Studios and transmitter or located in the Fresh Pond area of Cambridge. Though the transmitter site has remained the same all along, the studios have changed several times. Eventually what goes around, comes around.....the studios are right back from where they started in 1948 on Concord Avenue in Cambridge just 40 feet from our Nautel Ampfet-400 AM stereo transmitter. We utilize the C-QUAM AM stereo system. Many station engineers in the Boston area say that JIB has some of the best stereo separation of any AM station in the market, something that were very proud of.

My boss and good friend Bob Bittner bought the station in 1991 after the station suffered eight long agonizing years in bankruptcy. Briefly for about a year, we operated with a mass-appeal format which basically covered the whole gamut from rock, jazz, folk, Caribbean and Solid-Gold. We even said..."You'll never know what you're going to hear next, right here on EARTH RADIO 740/WWEA". Though it was NOT a major player in the ratings war, our niche audience LOVED IT. But Boston needed something to help relax people in a city where stress is the norm. In came WJIB in October, 1992. Since WJIB-FM died in October, 1990 after 22 years as Boston's Beautiful Music Station at 96.9 FM, thousands of disinfranchised listeners where left without a paddle. It took two years to put Beautiful Music back on Boston radio.

Believe it of not, this is the second time that the WJIB call-letters were on 740. WTAO lasted until early 1960's when the station was bought by Harvey Radio Laboratories who bought the station along with WXHR-FM and and (the then silent) WTAO-TV/Channel 56. All three stations became WXHR-AM, FM and TV. In 1966, the WXHR stations where bought by Kaiser Broad-casting with 40% ownership with The Boston Globe. The Channel 56 station was off the air for nearly 10 years, except for a 6 month period where WXHR-TV operated as a experimental station to show the viability of UHF reception in the Boston market and paved the way for all-channel legislation to require all TV set manufacturers to include all TV's made after 1964 to include VHF/UHF tuners. This was the same period where the FCC operated WUHF-TV/Channel 31 in New York to do the same viabilty study. The radio stations WXHR-AM and FM became WJIB-AM and FM in May of 1967. WJIB-AM was just meant as a stepping stone so that the AM could be modified and made more modern. They were operating with equipment made from the stone-age. The simulcast lasted for about 2-3 months when the stations separated with their on distictive formats. WJIB-AM became WCAS (Watertown-Cambridge-Arlington-Somerville) better known as "Wickus Island". WJIB-FM went stereo in May, 1967 with is famous "ding-ding" signature and beautiful music format. WCAS toyed with various format for the next 15 or so years. It

was mass-appeal until 1971 when it went oldies "Good old days radio". Then is was the famous "folk-rock" format until 1978. Then it went album-rock, then gospel, then black, then gospel and finally "EARTH RADIO". Finally then the current day WJIB/740 Stereo with Beautiful music. The call-signs were WTAO (1948-1962), WXHR (1962-1967), WJIB (1967), WCAS (1967-1984), WLVG-"We LoVe Gospel music" (1984-1991), WWEA (1991-1992) and finally WJIB (1992- ).
I hope that this little story is of interest to you. WJIB has a solid core audience who stand by it. It will NEVER be the most-listened to station in Boston, of course not. But we are alive and WELL in the very competitive Boston market. We are DX'er friendly and issue QSL cards.

Thank you for you time and 73's.

And if you go back just a little before that, they were WTAO 740/Cambridge,
WXHR-FM 96.9/Woburn, co-owned, Harvey Radio, I think.
When a beautiful music format couldn't make it on TAO, they changed
call to XHR-AM and simulcast the classical format of XHR-FM, which
was one of the pioneer FMs in the Boston market.

Source record: 42049

The 740 frequency in Cambridge started out as WTAO in the early fifties. They also had the first UHF television station in the Boston area on Ch. 56. About the same time they added an FM outlet, WTAO-FM. After a few years of broadcasting to virtually no one, the UHF station was pulled off the air (circa 1956-57). The whole operation was sold to Kaiser/Globe broadcasting, in 1966. The calls were changed to WXHR AM and FM, and the dormant UHF channel was changed to WKBG. Ch. 56 returned to the air to stay in late 1966 and eventually was sold to Field Communications of Chicago, who changed the calls to WLVI. The TV station has since been sold twice since then. Meanwhile, WXHR-FM was renamed WJIB-FM and for years was the leading "beautiful music" station in Boston. The AM became WCAS, and was a news/ middle of the road format for a time before going folk/progressive rock. When Kaiser/Globe unloaded their Boston radio and TV properties, WJIB was sold to General Electric and WCAS was purchased by a group led by Daniel Murphy (former WTBS/WMBR person). The rest of this has already been covered.

Hello from Los Angeles.

Ratings:

Here are the top 48 overall ratings for Spring and Summer 1993.
I added the basic format of the station to the rightmost column.

Caveats: Since I'm not familiar with all the stations in the
market, I couldn't format all of them. Some of the formats may be
inaccurate if the station has changed since I last listened to it
(which in some cases may have been years ago). Since I don't speak
Spanish (which makes me a minority in this market) I didn't break
the Spanish formats down. All numbers are hand transcribed, so
errors may have occurred.

Newsworthy:

KACE made the news on CNN this weekend for taking a stand against 'bad' urban music. They have modified their format from straight urban/dance/rap by removing the songs they deem offensive or irresponsible. This includes songs that call women 'hoes', promote violence or drug use. Their basic statement was that playing this type of stuff was implying that it was 'OK' to degrade women, shoot each other and take drugs. They wanted to set an good example not promoting this type of activity.

Both the Assistant PD at KPWR, and an urban record company executive interviewed for the piece stated that they didn't think this type of music had any influence over how their audience acted.

Personal Opinion: Good for you, KACE! The comments by KPWR and the record exec typify the irresponsible 'party-line' that seems to be standard. Do your sales people sell to clients because you CAN'T influence your audience? I didn't think so.

I could prattle for hours about the fine line between ratings, responsibility and 'censorship', but I think I'll save the bandwidth and my blood pressure.

More later from your IRJ LA affiliate, Marty.

# 1915. Radio Aahhs in DC Area

Newsgroup: rec.radio.broadcasting
Date: 1993-11-18 05:32:20 UTC
From: Robert Carpenter <rc@cmr.ncsl.nist.gov>
Message-ID: <2cf1d4$b5r@vixen.cso.uiuc.edu>
Source record: 41953

Our esteemed moderator has posted a list of AAHS affiliates (Kids Radio).
Here area few of MY comments for the Washington/Baltimore area:

>CALLS METRO AREA FREQUENCY POWER (watts)
> (DAY/NITE ANTENNA)

>WKDL Washington DC 1050 (1000/44 omni)

I say: Silver Spring, MD. Good daytime coverage.

>WKDV Washington DC 1460 (5000/5000 DA-2)

I say: Manassas, VA. Has a five-tower array pointed AWAY from DC/Balto.
It's needed to protect WOL on 1450 in Washington, and WCEI on
1460 across the Chesapeake Bay in Easton, MD, about 75 miles away.

>Affiliates are currently planned in ...

>Baltimore MD.

I say: Last week's Broadcasting shows Kids Radio buying WFEL, Towson, MD.
This is a northern suburb of Baltimore. WFEL is on 1570 with 5kW
day and 236 W night, and presently has religious programming.

Apparently the sale of WITH (1230 kHz) to Kids Radio fell
through, since WITH is still playing Music of Your Life. Most of
the old WITH personalities moved to 1360 (now WWLG) when the sale
seemed sure, so now Baltimore has two good old-time music stations,
comparable to WQEW to my taste.

## 1916. KLZE not really a STL station

Newsgroup: rec.radio.broadcasting
Date: 1993-11-18 05:32:20 UTC
From: ucsd!TYRELL.NET!transvox@uunet.UU.NET
Message-ID: <2cf1d4$b5t@vixen.cso.uiuc.edu>
Source record: 41954

I had posted this previously, but apparently it did not get through
or was considered too long or whatever.

So I will re-state:

KLZE (95.3, Owensville, MO, my listings show as a class C2 station)
really is _not_ a St. Louis area station. Owensville is about 60
miles as the crow flies from the heart of West St. Louis County,
the intersection of I-270 and Highway 40.

There's no way it's going to penetrate the STL metro area very well.
There will be too much cross-modulation from the stations located
closer in, most of which are on a master antenna site in Shrewsbury, MO.

That's the problem with many of these niche formats. They are tried on
"rimshot" stations, thereby diminishing the chance they will be heard by
those who may otherwise be interested.

The Bethalto, IL kids-oriented station at 95.5 left the air for a while,
but it is back on the air as a listener-supported station.

---
Mark Roberts -- Kansas City, MO -- in an orbit of mine own....
E-Mail: transvox@tyrell.net, mark808@delphi.com V-Mail: coming sometime?!
I never met a technology I didn't like (except for 8-track cartridges).
---

Source record: 41955

} Our esteemed moderator has posted a list of AAHS affiliates (Kids Radio).
} Here area few of MY comments for the Washington/Baltimore area:

So nice to be esteemed (yeah, right :->)

} >CALLS METRO AREA FREQUENCY POWER (watts)

} >WKDV Washington DC 1460 (5000/5000 DA-2)
}
} I say: Manassas, VA. Has a five-tower array pointed AWAY from DC/Balto.
} It's needed to protect WOL on 1450 in Washington, and WCEI on
} 1460 across the Chesapeake Bay in Easton, MD, about 75 miles away.

I wonder why they try to call such a station a DC affiliate? With a
1450 IN DC and a directional antenna pointed AWAY from DC, seems like
a pointless thing. How far is Maassas from DC? Does this signal
cover a suburban area?

} >Affiliates are currently planned in ...
}
} >Baltimore MD.
}
} I say: Last week's Broadcasting shows Kids Radio buying WFEL, Towson, MD.
} This is a northern suburb of Baltimore. WFEL is on 1570 with 5kW
} day and 236 W night, and presently has religious programming.

That's the one. Wonder how IT covers Baltimore at night.

Sad that so many of these formats are in such lng distance signals.
Seems like a lot of people would listen if the could tune it in
clearly. WWTC is very strong in the metro of the Twin Cities.

I wonder how the L.A affiliates cover? Hey Marty, any reports?

## 1918. ORLANDO AAHS afilliate coming...

Newsgroup: rec.radio.broadcasting
Date: 1993-11-18 05:32:22 UTC
From: a.reninger@genie.geis.com
Message-ID: <2cf1d6$b5v@vixen.cso.uiuc.edu>
Source record: 41956

NewCity Communications buys WOMX-AM!

NewCity Communications, owners of Orlando radio stations 580-WDBO, K92-FM and B94.5 `Young Country' have agreed to purchase 950 AM, WOMX from Nationwide Communications. WOMX is currently simulcasting Mix 105.1 (FM) but will join the Radio Aahs `Children's Satellite Network,' based in Minneapolis. Radio Aahs targets the 2-11 age group with music and entertainment.

Current plan is to relocate the studio facilities of WOMX-AM to NewCity's John Young Parkway facility with a separate sales staff based elsewhere in Orlando.

From: newman@netcom.com
Message-ID: <2cf1di$b6a@vixen.cso.uiuc.edu>
Source record: 41958

WIth too many country stations in the Sacramento Metro Area (including Yolo, Yuba, Sacramento, Sutter, Placer,and Sacramento counties), some stations are finally figuring out that the area can not support so many stations

KQBR 104.3 FM is now "The Breeze" a light jazz station similar to the old KWVF in San Rafael (now KTID adult contemporary) and KLRS (now KSRY, half of "Star FM") in Santa Cruz. THe will fail just as bad as they did with country, the "lite jazz" formats on KWVF and KLRS, from what I heard, did not do "diddly" in the ratings. Foemer regligious station KFIA has switched to the same format, I do not think either station will do very well. I think they will blow it here. KKSF in San Francisco, also light jazz, does a lot better than KWVF or KLRS ever did, but I don't think they too high in the ratings. KKSF could make a KILLING if they switched to CHR.

KTRB 860 AM is now "Radio Labio", a spanish talk-radio station. THe folks at KTRB will have a winner here with the increasing spanish population in the area.

Any other country station considering switching formats could make a KILLING if they switched to CHR with no CHR stations at present in the San Francisco or Sacramento Areas.

Really cool!

That show was rebroadcast on a `Best Of' series the first
week that I had the show on the air. It was fortunate for me
to have a set of repeats running as Diana ran some of their
best stuff that week and it proved to be a good break-in for
my market.

Something very interesting I remember about that game was
the interview they did with the `Head Dude` fron the
hospital or childrens home the game proceeds were going to
support. These guys can be rude and are not really the thing
you would want your 10 year old listening to all the time.
They have garnered a reputation for making fun of people and
being quite CRASS. The dude in the interview talked with
them about that reputation and said he didn't give a damn

about it. He knew them...what they really stood for and
REALLY appreciated the fact that they had put this game
together for the sake of his charity. It was great.

I think that game netted somewhere around $20,000 bucks for
a very worthy cause. Anybody who hasn't heard the show...or
is considering something talkwise to run on their station
should give these guys a close look. It upped my billing by
20% so far...

See ya

>And the name is Arrow 93 - "All Rock and
>Roll Oldies". (My question is, where's the word for the "W"!?)

> Hey! I happen to like some of those deejays! The only thing that pisses me
>off is when they take cheap shots at each other, such as:

>- 93.1 KCBS-FM (Arrow 93): claims that there's no other station like it
> in Los Angeles. What the hell is KLSX, then!?

Arrow 93 is a cross between KLSX and KCBS. All stations nowadays try to
position themselves as unique... gone are the days when radio stations
tried to appeal to everyone (cf. Top 40, "Boss Radio")
Arrow 93 is more hit oriented than KLSX.

>- 95.5 KLOS-FM: claims that it is southern California's only rock and roll
> station. What the hell are Arrow 93 and KLSX, then!?

here, KLOS tries to label its competitors as "oldies" stations, i.e. stale,
not true rock and roll. (of course, KLOS plays its fair share of classic
rock, a la KLSX...)

>- 97.1 KLSX-FM: has new commercial playing the Stories' "Brother Louie"
> (meant to infer that the station is Arrow 93), then an excerpt from the
> the Grease Man's evening talk show on KLOS, then a "real classic rock song"
> on KLSX...one that both Arrow 93 and KLOS play as well. Give me a break!

KLSX is trying to position itself as the rock station with the most music.
Bad choice of song if the song that 'represents' KLSX is also heard on the others... but
perceptions, not reality, count...

>I wish these stations would stop capping on each other and concentrate on
>playing good music. So far, Arrow 93 is featuring the least amount of
>verbiage, but it also has a much smaller playlist than its competitors.

# 1928. 5oth Anniversary

Newsgroup: rec.radio.broadcasting
Date: 1993-11-18 10:08:18 UTC
From: billw68892@aol.com
Message-ID: <2cfhii$t3p@vixen.cso.uiuc.edu>
Source record: 41966

This year "The American Forces Radio and Television Service" is
celebrating its 50th Anniversary. The service is designed to provide
entertainment and a touch of home for American servicemen and women all over
the world. It has served Americans in uniform throughout World War II,
Korea, Vietnam, and most recently, the Gulf War.
Unlike other government broadcast services such as The VOA or Radio Free
Europe, AFRTS sounds much like a commercial stateside station, without the
commercials. It is manned by men and women from all the uniformed services,
Army, Navy, Air Force and
Marines. Some call it "the purple suit" service. Each local station provides
its own programming augmented by shows originated by AFRTS-Los Angeles.
Many well known personalities have donated their time and talents to
provide GI"s in uniform that special "touch of home". Gary Owens, Frank
Bresee, Ruta Lee, Wolfman Jack, and the infamous Dr. Demento have all
recorded shows in the AFRTS studios in Los Angeles for broadcast on the
network.
As you may well imagine, the network has a long and colorful history.
Its most famous World War II show was called "Command Performance" and
featured some of Hollywoods brightest stars including Jimmy Durante, Judy
Garland, Frank Sinatra, and Bob Hope. Many famous people have also served
with the network in uniform. Actor George Kennedy was an AFRTS station
commander,Broaderick Crawford(remember Highway Patrol?), served in Europe.
Gary Crosby, Tommy Cash(Johnnys brother), and Nick Clooney(Rosemarys brother)
have all done stints in front of an AFRTS mike while in military uniform.
The history of Armed Forces Radio has been well documented thanks to a
book published last year by Trent Christman whose career began with what was
to become "The Far East Network" in the early days of World War II. Called
"The Brass Button Broadcasters", the book is a lighthearted look at fifty
years of military broadcasting. I first met Trent when he was a station
manager in Nurenburg, Germany back in the 60"s. It is published by Turner
Publishing in Paducah, Kentucky and contains some great memories along with
pictures and stories about how GI broadcasters managed to keep on the air in
spite of the many difficulties that faced them.
I have a special love for AFRTS, having served with the network in
Germany, Belgium, Taiwan, Korea and Alaska over the years. The military
school for broadcasters is called "The Defense Information School".
Originally located at Ft. Slocum, New York, in the 60"s it was moved to Ft,
Ben Harrison, Indiana. I understand they are scheduled to move again
sometime in 1995, this time to Ft. Meade, Maryland.
Unfortunatly, because of military downsizing, many AFRTS stations have
closed or consolidated their operations. However, I"m confident that the men
and women serving with AFRTS will continue on in the proud tradition of
bringing a touch of home to American GIs
wherever in the world they may be stationed.

So here"s a great big SALUTE to all the men and women who have made
"The American Forces Radio and Television Service" a broadcasting legand.

# 1930. NAFTA vote - appropriate song and quote

Newsgroup: rec.radio.broadcasting
Date: 1993-11-18 10:08:30 UTC
From: Liron Lightwood <liron@zikzak.apana.org.au>
Message-ID: <2cfhiu$t3t@vixen.cso.uiuc.edu>
Source record: 41968

Bill (and anyone else who reads this).

As the vote on NAFTA draws near, where free trade vs protctionism,
here is a song which is quite appropriate - 'The border' by Little
River Band. Perhaps someone might want to use it as a memorable quote. or
request this song on the radio, etc.

The last lines of the song go like this:

They built a wall at the border
Not to keep us out, but to keave no doubt...
They're out of order.

The Little River Band were a mainstream Australian pop band who had some
US chart success in the early 1980's. 'The Border' was released as a
single around 1981 or 1982.

From: wdp@uiuc.edu
Message-ID: <2cftju$b1b@vixen.cso.uiuc.edu>
Source record: 41970

Dear RRB readers:

I have received several letters from people who have had trouble decompressing the gziped files in the AIRWAVES/IRJ archives.

So I have gone back to the standard Unix 'compress' utility since more people have it on their system. Gzip provided a slightly tighter compression, but too many folks don't have gzip and could not read the archives.

I hope this will be of some help.

Also, soon we are going to try an email-archive-server here for all of those without FTP access. You can, already, retrieve the index files for both the IRJ and AIRWAVES by sending email to the archive site - rrb@deja-vu.aiss.uiuc.edu with the subject of "INDEX IRJ" or "INDEX AIRWAVES". You should get the files back in return mail

Also, for the full 'charter' of the group, send to the same address with the subject "HELP".

Bill

Moderator Bill has posted (cocerning the Kids Radio station in Manassas, VA):

> I wonder why they try to call such a station a DC affiliate? With a
> 1450 IN DC and a directional antenna pointed AWAY from DC, seems like
> a pointless thing. How far is Maassas from DC? Does this signal
> cover a suburban area?

The station site SW of Manassas is 27 miles SW of the Washington Monument, by my measure. They are on the far SW edge of the densest population, though some suburbs lie farther out. The 1460 in Manassas had been off the air for a number of years. Out here in Rockville, MD (the NW suburbs of DC), I am also about 27 miles from their site. They are reasonably interference-free starting 1.5 to 2 hours after sunrise until a couple of hours before sunset; not very long in winter. But the Manassas Kids Radio station DOESN'T NEED good coverage over DC and the Maryland suburbs during the day since their 1050 kHz Silver Spring daytimer does just fine.

I'm only 8 miles from WWDC, 1260 kHz 5 kW day and night, and they suffer interference almost as much of the time...but not as bad. Clearly I'm in a deep null of WWDC-AM. In parts of Rockville you can see WTOP's towers, yet have trouble hearing them when they are on their night-time pattern.

I contend that (one of) the main reason(s) for AM's troubles lie(s) in the fact that much of the big cities's expansion has been outside their solid coverage area - especially true at drive-time in the winter. The NIMBY and environmental-impact business means that most stations can't move, even if they would still have enough sig in their city-of-license. I know that WTOP (1500 kHz 50 kW) tried to move near me a couple of decades ago. The neighbors stopped it, though the site near a large quarry probably wasn't so great at that. Then 'TOP tried to move into the Potomac River valley near Cabin John (just outside the Beltway). The neighbors there got the Navy's Ship Research & Dev facility nearby to say it would interfere with their instruments. 'TOP has trouble covering downtown DC at night at the present and can't go farther out.

WTEM-AM (570kHz 5kW day/1kW night) has built a facility WAY out at Germantown, but were not using it as of a few months ago. It is about 13 miles from the center of Bethesda (city-of-license) and 19 miles from the Washington Monument; about 9 miles farther out than their old site. Has it been neighbor trouble or inadequate coverage at night???

Enough...
Bob Carpenter w3otc@amsat.org

# 1935. Re: AM RECEPTION

Newsgroup: rec.radio.broadcasting
Date: 1993-11-19 04:01:23 UTC
From: Dan.Bammes@m.cc.utah.edu
Message-ID: <2chgej$nsf@vixen.cso.uiuc.edu>
Source record: 41973

If you want to get good reception on the AM band, there's nothing like a REALLY LONG wire to get the job done. If you can run it on the roof of an apartment building or under the eaves of your house, you'll do even better. Next, hook up a ground connection to the ground bus on your radio's circuit board. Tie it to a metal stake and pound it into the ground.

Good idea to have a lightning arrestor, too -- you can get those at Radio Shack.

[Moderator's Note: While a long wire is good, it doesn't offer any directionality, which comes in very handy while DXing. Somewhere in the archives is an article on constructing a large framed loop, which the author claimed was very directional. I would not be without a directional AM receive antenna for DX. Bill]

Beware of cheap carts. Call each manufacturer (check with the buyer's
guide issue from any broadcast or brodcast engineering issue) and ask for
a sample.

Please note:
to work correctly in a cart machine your carts should be in
good condition.
ideally you should use only one type of cart in the station
(they will work best if the cart machines are aligned
to one type of cart)
cheap carts generally have cheap tape, which will age quickly
and may not be suitable for stereo cart machines.
a simple cart mechanism (brakes and the like) will make reloading
carts easy.
there are firms which will reload and recondition old carts.

Call the CRTC in Halifax, they will give you the most up to date
information.

As far as I know there are no regulations which restrict religious
broadcasting as such, but every station must follow the CRTC general
regulations (balance, music content, Canadian content, programming formats
etc.).

## 1940. Detroit Duopoly

Newsgroup: rec.radio.broadcasting
Date: 1993-11-19 04:01:37 UTC
From: as779@yfn.ysu.edu
Message-ID: <2chgf1$nss@vixen.cso.uiuc.edu>
Source record: 41978

The first "duopoly" in the Detroit radio market was recently
announced. Greater Media, owners of Classic Rock WCSX 94.7 FM
and "Honey Radio" WHND 560 AM have announced intention to purchase
WRIF 101.1 FM, an AOR owned by Great American Broadcasting.
WRIF, formerly WXYZ-FM was at one time an ABC o-and-o, prior to
the CapCities buyout.

>True enough, but you can possibly manage to get 9600 bps on each of the
>two subcarriers of the FM station (although that's admittedly pushing it
>pretty badly with respect to isolation between the two subcarriers). Maybe
>even more with trellis modulation.

I've build subcarrier generators (direct FM at subcarrier frequency) and subcarrier demodulators (wideband hetrodyne up to 455 KHz where it is filtered and demodulated using a ceramic filter and ceramic FM demod). These are used to provide a voice grade circuit where we then run 1200 bps FSK (using Bell 202 tones) and occasional voice. I'm now thinking of making some "frequency shifters" to hetrodyne standard 2400 bps QAM (or higher speed dial-up modems) up to FM subcarrier (26 KHz to 92 KHz) or video subcarrier (4.5 MHz up to 10 MHz for use on microwave systems). This "frequency shift" approach would allow low cost mass market modems to be used to generate and demodulate the signals, then just shift them to where we have spectrum available. So far it's just a thought. Any comments?

Harold

## 1942. Digital Audio Delivery

Newsgroup: rec.radio.broadcasting
Date: 1993-11-19 04:01:48 UTC

Source record: 41980

The radio station I work at recently went through a major technology change. We have scrapped carts for Digital Audio Delivery. WNED-AM & FM in Buffalo recently moved into a new building, along with the public TV stations. We have brand new studios complete with DAT machines and computers. When we put stories together now, the computer does the recording and the editing.

The computers in the control rooms have touch screens, so when you want to play a cut, you just hit the appropriate "button" on the screen, and it plays. To save money, you operate the computers in the production studios with a mouse, but the screen displays look the same.

The screens have a left side and a right side. You can set it up so the left side records, while the right side plays back. Each side has a separate input on the board. If you want to record a news "wrap", you would set up the machine so it would play back your sound bite from the right side. You would start the recording on the left side, but you don't have to start talking immediately. When the time comes for the sound bite, you would tell the right side of the screen to start playing. When you're finished, you can edit the recording. You can simply tell the machine where to start and stop the playback, or you can actually cut and paste material. The machine will print out audio in bursts that look something like this: ||||||||||-------|||||||||||||. The longer the line, the higher the level of the sound. Pauses look like the dashed line. To edit, you would move the beginning cursor and the ending cursors to highlight appropriate areas.

There are a couple drawbacks to the system. If you have a problem with a cart, you can pretty much figure out why - dropouts, dirty heads, etc. With the computer, mistakes are much harder to pinpoint. The cuts are stored by number in the computer. It is easy to load the wrong number by mistake. With a cart sitting on top of copy, that was easier to avoid. Lastly, all terminals are connected together. It is possible for someone to erase a cut in one room, that someone is about to play on the air. The person in the on-air studio would not know, until the cut doesn't play for some strange reason.

The sound quality is very good, but it has been scary going through the first major technology change since I've been in broadcasting.

If you are posting to this group....you very probably can
send e-mail as well. If you know what their address is...it
should be no problem to do so. I think I heard Mike say that
they had a Compuserve account. If that is the case...the
internet gateways into Compuserve very easily.

If you can find out where or what they are on...we will help
you to get there.

Don&Mike newsgroup...hmmmmm. Maybe if they stretch out to a
few more cities we'll have enough people to get one going.
I'm not sure whether we have 100 Don&Mike listeners with
Internet access at present.

From about 4:30 PM till about 6 PM there was a mail outage
while the admins at deja-vu fixed a security hole in sendmail.

If you send an article and did not get an auto reply,
resend it now.

Everything works as it should. It was only for an hour and a half,
but if you did send then, it would be lost with no mailer daemon sent
back to you.

So if you didnt get an autoreply, resend now.

Thanks

"Ellis P. Carter Jr." <epj2@Ra.MsState.Edu> writes:

>1)
>The last definition of the classes of FM broadcast stations I read was in
>the 1977 rules and regs, Class A, B, C, and noncomm. I did not see the
>AM broadcast station classes.

>The definitions seem to have changed since then (this is NOT news for most
>of you). Could someone please post the different classes of AM, FM (and
>TV, if there are classes in this category) broadcast stations. Or mail
>will suffice. I am interested in limits on ERP and antenna height, although
>I would appreciate all information you can provide.

The old definitions:

Class A: no more than 3000 watts at 300 feet AAT
Class B: no more than 50kw at 500 feet AAT
Class C: no more than 100kw at 1000 feet AAT

Class A stations could be assigned anywhere on the country on 92.1, 92.7,
93.5, 94.3, 95.3, 95.9, 96.7, 97.7, 98.3, 99.3, 100.1, 100.9, 101.7,
102.3, 103.1, 103.9, 104.9, 105.5, 106.3, 107.1 MHz. Class B and C stations
were on the other FM channels from 92.3 on up to 107.9. Class B stations
were allotted to Zone I, essentially the Northeast, and to Zone I-A,
essentially California. Class C stations were allotted in Zone II,
the rest of the country. There were a few grandfatered operations with
more power.

The new definitions:

[remembering that any class of station can now be placed on
any frequency between 92.1 and 107.9]...

Class A: 100 to 6000 watts at up to 100 meters (both zones)

ZONE I and IA only:

Class B-1 3100 to 25000 watts at up to 100 meters AAT
Class B 25100 to 50000 watts at up to 150 meters AAT

ZONE II only:

Class C3 6100 to 25000 watts at up to 100 meters AAT
Class C2 25100 to 50000 watts at up to 150 meters AAT
Class C1 51000 to 100000 watts at up to 299 meters
Class C 100000 watts at 300 to 600 meters AAT

Note that stations not meeting the new Class B and C criteria were
downgraded to Class B1, C2, or C1. Note also that both then and now,
a station with tower height higher than given here may adjust
power accordingly to cover the same distance.

>2)
>Does anyone know of an application being filed for a new FM station license

Just when we thought it was safe to turn on the radio...
On the heels of the WLLZ-Greater Media buyout of Great American's
WRIF comes the announcement of Detroit Duopoly II.
Broadcast Partners, owners of Adult Top 40 WKQI 95.5 FM
intend to purchase WNIC 100.3 FM, licensed to Dearborn/Detroit.
WNIC, which bills itself as "Detroit's Nicest Rock"
(guess the format), is owned by Fairmont Communications.
Both stations' demographic target is the 25-54 Female market.
(Info culled from Detroit Free Press, November 19)

I think Boston's WBZ-AM went through that a couple of years ago. I have no idea what there system is, but there was a teething period for several months where there'd be screwups and two or three ads, promos, etc. would play simultaneously, or there'd be nothing when there should be an ad (the dreaded Dead Air).

Subject: Radio Action - Haiti
Status: RO

RADIOACTION

RADIO UNDER FIRE IN HAITI

PORT-AU-PRINCE, NOVEMBER 1993 - Broadcast journalists in
Haiti are having to take unprecedented risks in their efforts to
inform the public about what is going on in the country.

Ever since the coup that ousted Haiti's president, Jean-
Bertrand Aristide, more than two years ago, military and para-
military organizations have targeted the media in violent
campaigns. In one case a journalist with Tropic FM, a progressive
radio station in Port-au-Prince, was kidnapped while covering
live the arrival of the UN special envoy to Haiti last February.
Colson Dorme was held in a cell and beaten for seven days before
dumped on a sidewalk without a word of explanation.

Threats and violence directed against the media have
escalated since early October. The following are only a few
examples:

1) On October 12th armed members of the pro-coup Front for
the Advance and Progress of Haiti (FRAPH) took over the national
television and broadcast anti-Aristide programming.

2) On October 25th soldiers closed Radio Provincial and
Radio Celestin International in the city of Gonaive. Studios and
offices of both stations were vandalized in the attack and a
journalist, a technician and an announcer were arrested.
According to the military the stations were closed for music with
"social content".

3) On October 30th armed civilians in Jacmel shot at
journalist Lick Francois.
```

4) On November 5th Emmanuel Laurent, a journalist with Tropic FM, was approached by 4 armed men who demanded the address of the director of the Agence Haitienne de Presse. When Laurent turned and ran the men shot, hitting him in the hand.

Faced with this escalating repression, many of Haiti's journalists have been forced underground in order to continue their work. Radio Soley-Leve, a tiny clandestine station, is one of the few ways that journalists are able to continue their work and that people are able to express themselves publicly about recent events in Haiti. However, Soley-Leve has been targeted by the pro-coup parliamentarians, by the Raoul Cedras, Commander in Chief of the Armed Forces and by para-military organizations.

On November 16th, the general coordinator of Haiti's National Press Union called for an end to the escalation of acts of intimidation and violence against journalists and demanded that freedom of the press in Haiti be respected.

The Solidarity Network of the World Association of Community Radio Broadcasters is requesting that letters or faxes be sent to Raoul Cedras, Commander in Chief of the Armed Forces. Your message may mention the following:

1) That you condemn the ongoing campaign of violence and intimidation directed against Haiti's journalists.

2) That you demand that freedom of the press be respected in Haiti.

3) That you support the work of the journalists of Radio Soley-Leve who have been forced underground by the repression and that you request that the army and para-military organizations cease all operations against the station's personnel.

Lieutenant General Raoul Cedras
Commandent en chef des Forces Armees d'Haiti
Quartier General des Forces Armees d'haiti
Porte-au-Prince
Republic of Haiti

Fax: +(509) 239007

Hi everyone. I've been reading RRB for awhile now but never see anything about southeastern New England in it. Here's a small sampling of Providence FM radio:

88.7 WJMF - Bryant College - Varied Format
90.3 WRIU - University of Rhode Island - Varied Format
91.3 WDOM - Providence College - Varied Format
92.3 WPRO - Top 40
93.3 WSNE - Soft Rock
94.1 WHJY - Album oriented Rock
95.5 WBRU - Progressive
97.3 W??? - Portugese programming
100.3 WOTB - Newport, Contemporary Jazz
101.5 WWBB - Oldies
103.7 WWRX - Classic Rock
105.1 WWLI - Soft Rock
106.3 WWKX - Urban Contemporary/Top 40

I was at WDOM from 1985-87 (non-student) and at WALE-AM in 1993.

If you're talking about Daniel Schorr, the NPR commentator, then...
he was a longtime CBS correspondent. I think he made Nixon's Enemies List.
In the 50s, if memory serves me correctly, he was CBS' Moscow correspondent
after Cronkite left to go back to the United States.

(If memory of HISTORY serves me correctly, not personal memory; I was born
in 1957. I shouldn't make myself older than I am.)

I've always liked his commentaries. I don't think he ever worked for
the government -- he's too flinty a man. I've always liked his indepedence
and toughness of mind.

Subject: Daniel "Schorr"

By the way, I believe the correct spelling is Daniel SCHORR, not Shore.
Just thought you'd like to know.

I don't know the specifics of Mr. Schorr's career, but I know he's been
around a long time, and as I recall he left CBS under less than ideal
circumstances. Maybe it wasn't CBS, but at some point in his career
back then, he was at the center of some sort of controversy.

He's now one of those "experts" who routinely pops up to analyze
various political events. I heard him most recenly on NPR's coverage
of the Perot-Gore debate.

Daniel Schorr spent most of his long career in broadcasting with CBS News. He did all kinds of general assignment work with CBS, but in the 70's he was covering Congress at the time of the CIA assassination hearings and other big stories.
Somehow in the mid-70's he got his hands on a CIA report that CBS didn't want to run as a story. Schorr sold the report to the Village Voice, which published it. Schorr donated the money to charity, but even so, CBS suspended him, and that effectively ended his career there. I once asked David Brinkley what he thought of the whole Schorr business, and he sniffed and said Schorr had "behaved like a pig."

Nonetheless, Schorr still has a lot of experience covering all kinds of news everywhere in the world, and NPR's given him a title something like "Senior News Analyst." He lives in the Washington DC area, and he's semi-retired at this point. I think he's in his early to mid-70's.

I enjoy listening to Schorr's on-target analysis, but what some might mistake for sure-footed handling of tough issues I think is simple arrogance. I have yet to hear Dan Schorr admit, in any context, that he might have been wrong.

Dan Bammes

Mr.Schorr was also at one time the target of former CIA Director
William Colby's wrath. Colby, after an adverse court ruling triggered
by Schorr's work, physically attacked Schorr on the courthouse steps,
shouting "Killer Schorr!" Dan Schorr has also often been on the
"hit "list of the Conservatives, who often have felt Dan dis not
slant things to their liking.

In rec.radio.broadcasting you write:

> Does anyone know anything about this guy?

> Does he work(ed) for the United States Government in any fashion?

It's Schorr, for one thing, and I heard him speak at Harvard's Kennedy School of Government just last night.

The program from his speech lists the following professional credentials:

World War II -- Christian Science Monitor, NY Times

1953-1974 -- CBS, including three Emmy Awards for covering Watergate

1974-1979 -- took some time off to write a book and a newspaper column, and to teach at UC Berkeley

1979-1985 -- Senior correspondent, CNN

1985-date -- Senior news analyst, NPR

Unless you consider NPR "the government," Mr. Schorr has always worked for private firms.

A fascinating speaker...go see him if he comes to your area!

# 1962. Question/comment about WBZ's new IDs

Newsgroup: rec.radio.broadcasting
Date: 1993-11-20 08:50:32 UTC
From: <>
Message-ID: <2ckloo$b92@vixen.cso.uiuc.edu>
Source record: 41900

I have a question. How frequently, on average, do stations change their music on their IDs, program intros, etc? Even when the programming is exactly the same except for the intro music?

I ask because WBZ-AM (mostly all-news) changed their top/bottom-of-the-hour news intro music. In the past their previous music was always ear-grabbing and left no doubt that "here was the NEWS!" I'm not sure I like the new music as much.

I'm also not too sure I like the new IDs either. They've started really pushing the fact that they are a 50,000-watt clear-channel station -- as if the listenership cares. [I do, but I suspect I'm in the minority.] Some of the new IDs make the station sound "full of itself", such as:

"You've made the right choice. Boston's 50,000 watt clear-channel news station, WBZ AM 1030."

Or, something like: "This is it. Boston's 50,000 watt powerhouse news station, WBZ AM 1030".

They used to advertise their various personalities and programs in the ID before -- seemed much less aggressive.

Comments?

# 1963. TEXAS List 11/20 - Part 1 of 3 (news, 540-1420)

Newsgroup: rec.radio.broadcasting
Date: 1993-11-22 16:24:22 UTC
From: "chip (c.d.) kelley" <chipk@bnr.ca>
Message-ID: <2cqp3m$69e@vixen.cso.uiuc.edu>
Source record: 41901

KAAM-1310 Dallas to become sports KTCK "Ticket"; KJCE-1370 Rollingwood-
Austin and KYOK-1590 Houston pick up SMN's new urban oldies format.

Howard Stern picks up a new affiliate in Texas: KAMZ El Paso, who flips
from hot AC to classic rock and Unistar's Adult Rock & Roll.

ABC's Moby picks up their first TX affiliate: KIKK-95.7/650 Houston/
Pasadena. Moby previously worked at KLOL-101.1 and the old KSRR-96.5
"97 Rock" there. The move is part of the merger with KILT-100.3/610.
KIKK will now simulcast KIKK-FM except for Larry Galla's midday classic
country show. Group W cancelled it as part of taking over KIKK, but
restored it after the resulting uproar by fans.

WBAP-820 Fort Worth and KEEL-710 Shreveport LA make their final evolutions
from full-service (country on WBAP; standards on KEEL) to news/talk. WBAP
will keep Bill Mack's overnight country/trucker show. Temporarily, WBAP
also keeps country music Sunday afternoons.

Long-gone stations back from the grave: KFON Austin (on KMOW-1490) and
KBUC-FM San Antonio (on KBUC-FM-98.3)

The two stations set to sign on next year time-sharing 91.7FM in Austin
got their calls this month. Austin Cooperative got their hoped-for KOOP
call letters. UT got KAEM. According to the AUSTIN AMERICAN-STATESMAN,
UT will seek to have KAEM replaced with KVRX since KAEM looks too much
like A & M - as in rival Texas A & M. The rest of the story (not mentioned
in the paper): Texas A & M has a student run cable FM station on the
Bryan/College Station cable system called KANM, that has an alternative/
free-form lineup. UT started a cable FM station in Austin a couple of
years ago called KTSB. Like KANM, KTSB is student-run and alternative.
The goal is to move KTSB onto an over-the-air frequency. However, since
KTSB is held already assigned to a station in Iowa, UT can't have them.

Aggie-conspiracy at the FCC? Probably not; the calls look to have been
randomly generated based on that week's call change list. For example,
another station without calls was assigned KAEK (104.9 Eatonville WA).

Chip Kelley
chipk@bnr.ca
My opinion's, not BNR/NT's

# 1966. Great DX catch (IMHO)

Newsgroup: rec.radio.broadcasting
Date: 1993-11-22 16:43:51 UTC
From: rrb@deja-vu.aiss.uiuc.edu
Message-ID: <2cqq87$7ut@vixen.cso.uiuc.edu>
Source record: 41903

This morning ar 6:00 am I was laying in bed (here in Chicago) tuning around on my Sony SRF-A100 (great radio) when I decided to see what was on 880khz. Figuring that WCBS would be gone and perhaps a semi-local daytimer would be coming in.

Well I heard country music faintly in the background and thought it might be KRVN (Lexington Nebraska) or KGHT (Sheridan Ark). At the top of the hour I heard "you are listening to AM 880 WRR?" I checked my handy M-street guide and found the only WRR? station on 880 was WRRZ in Clinton North Carolina with 1kw daytime.

I called the station and sure enough, it was them. Through his studio monitor in one ear and the radio in the other I could tell they were the same song.

It was 7AM there and broad daylight. It was after dawn here too.

I had a nice discussion with the DJ there and he is having his engineer send me a verification and perhaps other station stuff.

Not a bad catch, huh? Keep in mind that this is right next to local 50kw WLS which was on the air at thge time!.

Bill

# 1967. Arrow 94.7 Wash, DC

Newsgroup: rec.radio.broadcasting
Date: 1993-11-22 16:43:53 UTC
From: HDGW06A@prodigy.com
Message-ID: <2cqq89$7v4@vixen.cso.uiuc.edu>
Source record: 41904

I just noticed tonight that W-lite (WLTT) in Washington
is now Arrow 94.7 (WARW) "All Rock 'N Roll Oldies". Given
that they are owned by CBS it must be a similar format to
the other Arrow stations that CBS owns.

I don't know when they changed formats. I tried calling the studio
line, but they didn't answer. The format sounds almost identical to
Classic Rock WCXR in Washington. Given that WCXR has had horrible
ratings over the last several years I can't imagine why CBS thinks
they would be succesful with this format in Washington. Two similar
sounding stations dividing a 2.5 share doesn't sound like a recipe
for success to me.

True. I've never tried the CompuServe address but I have written to
him, and recieved responses, using the America On-Line address. I
have also heard him say that he has (or had) a Prodigy account, but
was not happy with that system.

# 1970. LOCALISM & ETHNIC RADIO

Newsgroup: rec.radio.broadcasting
Date: 1993-11-22 16:44:32 UTC
From: "Leslie A. Clingman" <37KHR4R@CMUVM.CSV.CMICH.EDU>
Message-ID: <2cqq9g$82d@vixen.cso.uiuc.edu>
Source record: 41907

ATTENTION PERSONS INTERESTED IN THE TOPICS OF LOCALISM & ETHNIC RADIO:

I am a second year graduate student in the Broadcast & Cinematic Arts Department at Central Michigan University where I am embarking on the task of beginning by Plan B paper (an independent research project).

I am still working on defining the parameters of my research, although I know I am interested in researching some aspect of local, ethnic radio, in particular, those stations which broadcast American Indian language/cultural programming.

According to the 1993 Broadcasting & Cable Yearbook, the following stations broadcast at least 10 hours/weekly American Indian language-news-historical-music-and/or cultural programming:

ALASKA: Nome - KICY 850 AM

ARIZONA: Tuba City - KGHR 91.5 FM
_ KTBA 1050 AM
Whiteriver - KNNB 88.1 FM

CALIFORNA: Hoopa - KIDE 91.3 FM

NEW MEXICO: Alamo Community - KABR 1500 AM
Farmington - KNDN 960 AM
Gallup - KGAK 1330 AM
Ramah - KTDB 89.7 FM
Tse Bonito - KHAC 880 AM
Zuni - KSHI 90.9 FM

OREGON: Warm Springs - KWSO 91.9 FM

WISCONSIN: Reserve - WOJB 88.9 FM

If anyone out there either works at these stations, is familiar with them, or just shares an interest in the topic of localism & ethnic radio; I would appreciate any 'feedback', information, or thoughts you may have on this subject.

Thank you in advance for your cooperation!

Source record: 41909

} bernie.wu@cdreams.com (Bernie Wu) WRITES:

} -> the sister AM/FM stations who are simulcasting this AWESOME talent.
} -> (You know, talent...what Stern needs bad) Anyhow, for the listings
} -> in Harrisburg,
} I don't understand Imus. i listened to him and he says what a loser
} Howard Stern is while stern is getting twice his ratings, has a hit book,tv

I have never heard Imus, but I have heard Stern.

While anyone with Stern's success could hardly be called a loser, that
does not mean he has 'talent'. Stern appeals to a very base level in
people, and in many markets, he is the best they have.

He could not cut it in Chicago, however, and I am glad he is gone.

But he is certainly not a loser, not by a long shot.

Remember that Rush has a radio show, a TV show and TWO hit books out :-).
While I disagree with Rush on a lot of things, he is much more
entertaining at his WORST, than Stern is at his best (IMHO).

Stern's TV show (the original 'creative' one) is history and he does
not do a good Barbara Walters on the 'E' channel IMHO.

# 1973. Hello from Providence

Newsgroup: rec.radio.broadcasting
Date: 1993-11-22 16:44:43 UTC
From: Anthony_Pelliccio@brown.edu
Message-ID: <2cqq9r$84v@vixen.cso.uiuc.edu>
Source record: 41910

Hi everyone. I've been reading RRB for awhile now but never see anything about southeastern New England in it. Here's a small sampling of Providence FM radio:

88.7 WJMF - Bryant College - Varied Format
90.3 WRIU - University of Rhode Island - Varied Format
91.3 WDOM - Providence College - Varied Format
92.3 WPRO - Top 40
93.3 WSNE - Soft Rock
94.1 WHJY - Album oriented Rock
95.5 WBRU - Progressive
97.3 W??? - Portugese programming
100.3 WOTB - Newport, Contemporary Jazz
101.5 WWBB - Oldies
103.7 WWRX - Classic Rock
105.1 WWLI - Soft Rock
106.3 WWKX - Urban Contemporary/Top 40

I was at WDOM from 1985-87 (non-student) and at WALE-AM in 1993.

Speaking of WBZ in Boston, can someone please tell me what happened to Larry Gl
ick?
I listened to him for years, why they took him off the air is beyond me...

Thanks..

## 1975. Three A's

Newsgroup: rec.radio.broadcasting
Date: 1993-11-24 12:17:18 UTC
From: ak927@Freenet.carleton.ca
Message-ID: <2cvjce$r4@vixen.cso.uiuc.edu>
Source record: 41914

I've been hearing a lot about the new triple-A or A-3 format in the States. None of the 20 local stations have adopted it yet, but I'd like to get a better idea of the extent of the A-3 playlists. Can anyone e-mail me the types of artists I might hear on an A-3 commercial (ie, non-campus) station? Many thanks.

## 1976. hi

Newsgroup: rec.radio.broadcasting
Date: 1993-11-24 12:17:19 UTC

You wanted to know how I heard about the list. A friend of mine at the Voice of America forwarded some stuff to me on your list about WLUP; I wondered what happened to my only source of Dr. Demento as well as the format, etc.

I'll be asking what happened to John Landecker from WLS, by the way.

Looks like a good time ahead!

jack

# 1978. Re: Two country stations gone in Sacramento Metropolitan Area.

Newsgroup: rec.radio.broadcasting
Date: 1993-11-24 12:17:20 UTC
From: gbsaylin@ucdavis.edu
Message-ID: <2cvjcg$r8@vixen.cso.uiuc.edu>
Source record: 41917

WHAT SACRAMENTO ALSO NEEDS IS A STATION TO CARRY THE OZ RADIO NETWORK.
THIS IS VERY CREATIVE 24 hours a day/7 days a week Children's programming.
I heard it for the first time this weekend on a clear channel station (830
AM) out of Los Angeles. The Format is incredibly ecclectic similar to the
feel of underground FM radio stations of the 60s. I don't know much about
it, but do know it would serve an educational purpose for the children of
this area. Adults will love it for its sheer diversity and positive feel!!

Gary

Charles E Newman (newman@netcom.com) wrote:

: WIth too many country stations in the Sacramento Metro Area (including
: Yolo, Yuba, Sacramento, Sutter, Placer,and Sacramento counties), some stations
: are finally figuring out that the area can not support so many stations

: KQBR 104.3 FM is now "The Breeze" a light jazz station similar to the old
: KWVF in San Rafael (now KTID adult contemporary) and KLRS (now KSRY, half of
: "Star FM") in Santa Cruz. THe will fail just as bad as they did with country,
: the "lite jazz" formats on KWVF and KLRS, from what I heard, did not do
: "diddly" in the ratings. Foemer regligious station KFIA has switched to
: the same format, I do not think either station will do very well. I think
: they will blow it here. KKSF in San Francisco, also light jazz, does a lot
: better than KWVF or KLRS ever did, but I don't think they too high in the
: ratings. KKSF could make a KILLING if they switched to CHR.

: KTRB 860 AM is now "Radio Labio", a spanish talk-radio station. THe folks at
: KTRB will have a winner here with the increasing spanish population in
: the area.

: Any other country station considering switching formats could make a KILLING

# 1979. Indecency and safe harbor

Newsgroup: rec.radio.broadcasting
Date: 1993-11-24 12:17:31 UTC
From: "James D. Morrow" <3X7RHRS@cmuvm.csv.cmich.edu>
Message-ID: <2cvjcr$ra@vixen.cso.uiuc.edu>
Source record: 41918

In a previous discussion a question was raised on what time is it safe to air foul language. The FCC (and the courts, so far) have created a "safe harbor" between Midnight and 6:00 a.m. for this type of programming (for NONCOMMERCIAL stations that sign off at midnight, safe harbor begins at 10:00 p.m.). Remember however, that historically the Commission has recommended times when there is little risk of children in the audience. In past cases such as KPFK (Pacifica Foundation) and KCSB (Univ. California) the FCC has gone by arbitron ratings of the market to determine how many children were present at the time the program was aired.

To complicate matters further, there seems to be a vague definition of the term "indecent". The FCC applies a definition set forth in Pacifica (7 Dirty Words) to determine for the most part if material is indecent. The "generic" definition of indecency used is: "Language or material that depicts or describes in terms patently offensive as measured by contemporary community standards for the broadcast medi, sexual or excretory activities or organs." The FCC ruled d that such indecency will be actionable if broadcast at a time of day when there is a "reasonable risk that children may be in the audience."

Most importantly, do not confuse the term obscene with indecent. Any material found obscene is a violation of Title 18 of the U.S. Criminal Code Section 1464 and is punishable by fine and/or imprisonment.

To top it off, the Commission has attempted to clarify its definition recently, do to the popularity of certain radio programs (Howard Stern and others). To do this, the repeated use of double entendre and sexual innuendo may also come into play, depending on the overall context in which it is used.

I don't know if this answers any questions. It appears as though the courts will once again have to deal with the subject. Until that time comes, I guess we'll just have to be on our toes!

Because of the constraints on my time, especially
impedances created by the court system and
the need to pay US $ for food and shelter, I
have to take a break from news activism.

If anyone would like to take my lead and read
news onto a tape or into .WAV files, I can
ask my subscribers to listen to your stuff.

Anyone who broadcasts consider using
net sources like misc.activism.progressive to
create positive, creative news without that
brutal edge (TM :)

Anyone who has 30 or 60 megabytes available for
FTP service would be greatly appreciated if
that space was made available for .WAV files
or some other compressed form of audio. This
way, files which are read aloud can be archived
somewhere where anyone can get them, order
them anyway they like, record out to a tape
or play out directly onto the air.

} bernie.wu@cdreams.com (Bernie Wu) WRITES:

}I don't understand Imus. i listened to him and he says what a loser
}Howard
}Stern is while stern is getting twice his ratings, has a hit book,tv
}show. And he did a Beavis and Butthed bit while most of his old
}audience have never seen B&B.I could stand listening to him but I
}wouldn't
}say he has talent

Imus never said stern was a loser, he said he was a "dirty-mouthed little punk" which from my exposure to stern is about right.

As for stern's ratings Imus freely admits he is not number one in the ratings but WFAN is the top billing station in NY city, I doubt that is because of the all sports format.

Imus' demographics are 25-54 so I suspect some of his listeners have been exposed to the awsome talents of B&B, all you have to know about them is they are idiots and the comic bits work for Imus' show.

Possibly talent is in the eye of the beholder, if you listen to stern you have heard him whine about how Imus stole all his bits, a some what suspect claim at best. You may not think Imus has talent but he certianly has "juice". How many times has Bubba Clinton been on with stern? Not to mention an array of Governers and Senators that are heard regularly on Imus in the Morning.

A note to the moderator: I haven't heard anything about Imus coming to Chicago they are concentrating on the big markets right now, soon in Portland, Maine Souix City, Iowa and El Paso, Texas ;-)

The other night I came across Radio Oz(or is it Oz Radio) which is a 24 hours/7 days a week Children's Radio network. It is simply the most refreshing and diversified radio format I have heard in over 20 years. I live in Northern California and can't find a station that carries it. I heard a station in Los Angeles (clear channel) at 830 Am. Does anyone know about this syndicated radio format? Its been around for a few years now. Please e mail info.
Thanks!!!!!

I (and others on this list) have written quite a bit about Radio OZ
(actually spelled "Radio AAHS"). I wholehearted;y agree that it is a
wonderful format and I would love to have an affiliate in Chicago.

It originates in Minneapolis Minn at WWTC radio, and is on ANIK-1 (I
believe) satellite. The LA affiliate is hardly a clear channel,
though. The 830 spot is 2500 watts days and 1000 at night. It is in
Orange Calif (KPLS). There is also an 850 in Thousand Oaks with
500/250 which also carries AAHS.

If you know of a dark station, or one nearly dark, let AAHS know.
They are adding affiliates right and left these days.

Enjoy

Bill

Source record: 41923

From: rcoffey@magnus.acs.ohio-state.edu (Rebecca A Coffey)
>
> Speaking of WBZ in Boston, can someone please tell me what happened to Larry Gl
> ick?
> I listened to him for years, why they took him off the air is beyond me...
>
They didn't take him off the air. Larry Glick got a little too big
for his head a few years back(late '80s). He signed a 3-year deal with
Sconnix Broadcasting, then the owner of a rival WHDH-850 which was doing
all-talk.(Sconnix also owned WBOS-92.9FM, the last station to play country
music in Boston until it resurfaced on 2 stations earlier this year).
Anyway, after quitting 'BZ Larry stayed home for a year and collected
a 6-figure salary because of a non-compete clause in his 'BZ contract
which prevented him from working at a competing station in the same market...
Larry Glick always struck me more as a personality talkmaster(we have
plenty of those in Stern,Imus,Rush, Tom Leykis and Howie Carr) rather
than an intelligent conversationalist like David Brudnoy(WBZ,7pm-12am)
or Gene Burns(WRKO 8-11pm).

Needless to say, his WHDH years were a disaster as far as his ratings
went. His 'loyal' night-time WBZ audience didn't follow him to the left
of the dial. He was let go after his deal had ended and hasn't been on
the Boston air since... As far as I can tell, 'BZ is doing a hell of
a job with Bob Raleigh and Norm Nathan on overnights...

Back to WBZ :
As far as their new WBZ station promos/intros go, I personally don't care
one way or another. Just because some high-paid radio consultant in
Iowa decides that '50,000 watts of power' is an ear-catching lingo good
enough to be aired on a major AM station in Boston, it doesn't really
have to have make sense to the rest of us...'BZ is still a great station
at what they do and how they run things...
A little self-hype hasn't hurt anyone, especially, when the radio product
consistently remains to be of the highest quality...Guess where I'll be
getting my traffic updates "On The 3's" on Thursday morning while traveling
on Mass. TurnPike? Of course, by that time I'll be sitting in one big traffic
jam around Sturbidge,Mass with some of you...:-)

>I listened to him for years, why they took him off the air is beyond me...

Larry hasn't been at BZ for years. He left for WHDH in the mid-80s, and worked there for several years before retiring (semi-voluntarily) about two years ago.

Larry's still living in Dedham, and is occasionally seen in local theater productions.

# 1987. WLTT Bethesday/Wash. D.C. changes format.

Newsgroup: rec.radio.broadcasting
Date: 1993-11-24 12:18:00 UTC
From: Tom Lacko <LACKO@ENH.NIST.GOV>
Message-ID: <2cvjdo$rp@vixen.cso.uiuc.edu>
Source record: 41925

On Friday, November 19, CBS owned WLTT (W-lite) dropped it's lite rock/ less talk format in favor of ..... OLDIES! Augh!! This city needs another oldies station like it needs another Congressman. But that's just my humble opinion. They're calling themselves ARROW 94.7. All Rock and Roll Oldies (ARRO) from the 60's & 70's. They do offer variety that most oldies or classic rock formats don't. I guess it's actually a marriage of the two formats.

They kicked their format off with the Rolling Stones' START ME UP at 2 p.m. Friday. They claim to play the best rock & roll oldies without the doo-wop sounds. They'll play songs like Badfinger's FEEL LIKE MAKIN' LOVE which the oldies stations won't touch. And they'll play Linda Ronstadt's WHEN WILL I BE LOVED which the classic rock stations won't touch.

Will this format work? The almighty ratings will give us the answer in the future. For me, 20 years is too limited. That means no Bruce Hornsby, no Billy Joel songs after the GLASS HOUSES album and so on.

Arrow 94.7's competition is: WBIG oldies 100 FM; WXTR, Xtra 104 FM (oldies); WARX oldies 106.9 FM; WCXR 105.9 FM (classic rock); WWDC 101.1 FM (classic rock /rock).

The real kicker is how they handled their format change today. At 10 AM they switched their music to Jazz & New Age. The female jock was reading liner cards that said something like: "HERE'S THE REFRESHING MUSIC CHANGE YOU'VE BEEN WAITING FOR ..... CD 94.7 FM". This continued until the 2 PM switch to oldies. Needless to say, fans of the Contemporary Jazz and New Age format were furious with this midday tease. The area lost it's full time Contemporary Jazz outlet in June when WJZE was sold and the new owners created WBIG and their oldies format. WRC TV covered the story on the evening news and station management said the reason for the midday switch to Jazz was just to throw off the competiton. The news story did not mention if any staff members were let go.

Subj: Re: Digital Audio Delivery

In rec.radio.broadcasting you write:

>I think Boston's WBZ-AM went through that a couple of years ago. I have no
>idea what there system is, but there was a teething period for several
>months where there'd be screwups and two or three ads, promos, etc. would
>play simultaneously, or there'd be nothing when there should be an ad (the
>dreaded Dead Air).

Careful about those assumptions!

Everything at 'BZ, save for some commercial _production_ over the last
few months, is still played off magnetic tape.

What you've been hearing problems with is our touchscreen system, in place
since 1991. With the touchscreen, the talk host or news anchor faces
a touchscreen with the station's log on it, looking something like this:

NEWS

TRAFFIC SOUNDER CART

TRAFFIC METRO

KOKO BOODAKIAN RUGS :30 CART [a spot]

and so forth. At the appropriate moment, the anchor will touch the
appropriate spot on the screen, and the appropriate source, be it a
live feed from CNN or ABC or CNBC or Metro Traffic, or a phone line,
or a cart, or what have you will play.

Most of the carts (except for news actualities) are played off
two large Instacart machines in master control. On rare occasions,
the touchscreen system will accidentally fire both Instacarts at
once. Since both come through a single pot on the master control

board (hey, I didn't design it!!!), both are heard on the air at once.

Fortunately for the sanity of all concerned, this happens less
often these days.

When we move into our new newsroom next year, it's likely that the
news actualities will all come off a new digital-editing system
such as D-CART (already in use at ABC Radio News in NY).

# 1991. DIGITAL RADIO

Newsgroup: rec.radio.broadcasting
Date: 1993-11-25 11:54:58 UTC
From: x740902@tiuk.ti.com
Message-ID: <2d26ei$7t1@vixen.cso.uiuc.edu>
Source record: 41928

Digital Radio Broadcasting of Stereo Audio is due to begin sometime this decade, well in the UK at least.
In addition to terrestrial channels there are a multitude of satellite channels or spare bandwidth on existing
satellite TV channels to fit in a lot of digital audio.
I wonder if we are likely to see the adoption of some form of data reduction for digital audio such as Philips' PASC
or whether some other technique will be used when transmitting digital audio on the airwaves.
For CD quality sound, and using the existing Philips-Sony format for encoding or Digital stereo at a sampling
rate of 44.1 khz and a bit rate of 16, the bandwidth required would probably be prohibitive for broadcasting
unless we are to see a considerable restriction in the number of available channels.
I guess it is just up to governments as to which frequencies are allocated, and it is up to engineers to devise
methods of making the most economical use of these frequencies.
After all it has been demonstrated in the UK that up to four digital TV channels can be fitted into the bandwidth
already used by one existing analogue TV channel - surely the same could be done for audio.
Maybe in the future , the fate of good formats wont be decided soley by market forces, and we may see
those who make decisions on new formats both locally and internationally reach agreement on the BEST
of available formats. It was sad to see the demise if DMAC as a standard, and all those ideas before it like
Betamax etc etc.

# 1992. Information Sought on Early Radio Broadcasting

Newsgroup: rec.radio.broadcasting
Date: 1993-11-25 11:54:59 UTC
From: kramer@sosc1.sosc.osshe.edu
Message-ID: <2d26ej$7t2@vixen.cso.uiuc.edu>
Source record: 41930

From: kramer@sosc1.sosc.osshe.edu (Ron Kramer)
Organization: Jefferson Public Radio
Southern Oregon State College

I am working on a research project involving the history of broadcasting in our region and have been researching broadcast operations in the pre-Federal Radio Commission (1927) era. Records from the Department of Commerce's administration of broadcasting stations from 1920-1927 are scarce and it would seem that Uncle Sam has a difficult time locating these types of files.

If we have any really senior pioneer broadcasters on line, I am looking for some information on a couple of topics.

First, in contemporary federal regulation a station needs to notify the FCC, and secure permission, to go off the air for any significant period of time. However, prior to the FRC's spectrum reorganization in 1928, complicated share time arrangements were in effect to permit other stations on the same frequency to operate. Moreover, any one who wanted a station license could get one. Therefore, what type of expectation, if any, existed at the federal level that a station which was licensed would actually operate? Could someone secure and hold a license from 1922 - 1926 and be silent for several years and would there have had to be any reporting of silent status to the Department of Commerce or anyone else?

Second, I have secured a copy of a Department of Commerce station license issued in 1926. The Radio Division of DOC licensed both a sending wave and a "receiving wave". What was the purpose of licensing a receiving wave length? Given the fact that a station was required to identify the receiving equipment it possessed, there was obviously some type of monitoring expectation but what was it that was supposed to be monitored?

If anyone can shed some light on these points, I'd be grateful!

# 1994. FM Question

Newsgroup: rec.radio.broadcasting
Date: 1993-11-25 11:55:11 UTC
From: "Christopher J. Bessert" <343GRPW@CMUVM.CSV.CMICH.EDU>
Message-ID: <2d26ev$7tk@vixen.cso.uiuc.edu>
Source record: 41932

I know this is a simple question and is probably in some FAQ
somewhere, but nevertheless, I'll ask it.
I need to know how to figure out the area over which an FM
station's signal is best heard. I know it involves tower height
and signal power, but after that, I'm lost.
Is there some kind of equation you plug these two values into
or something like that? Any help will be greatly appreciated.
Thank you in advance. Post answer here or e-mail - either is
fine.

Chris Bessert

Source record: 41933

As many of you experienced DXers know FM reception can be extended up to several hundred miles by a condition called tropospheric(sp) ducting also known as temperature inversion. Temperatures generally drop as you go up in the atmosphere, but not in the inversion case. Does this tropospheric ducting have directional properties or are stations heard from all directions? If there are directional properties then what factor(s) determine the direction

Source record: 41934

One of the men who shaped radio news coverage in Buffalo died Sunday. Jim McLaughlin, age 59, died in his Buffalo home after a long illness. After starting at KFOG San Francisco, he came east to New York, working in Rochester for a short time before establishing a radio news department at WYSL in 1967. In 1970 Jim moved to the 50 kW giant WKBW, where in addition to being news director he worked closely with morning man Dan Neaverth, supplying voices and characters such as Ward LaFrance, "always glad to hear my voice", from "WQPK, Sweetwater New York".
In addition to the fun side of radio, McLaughlin took the news business seriously. He was one of the few reporters allowed inside the Attica prison riot of 1971. He was the first Buffalo news director to hire a female on-air reporter, and after building a top notch news team during the early and mid 70s at KB, moved on to WBEN in 1978. Once again he built an award-winning news department, still one of the top news sources in Buffalo, and again he had fun adding his characters to afternoon drive jock Stan Roberts' program. McLaughlin retired from WBEN in 1987 due to failing health, and that bad health claimed Jim on Sunday.

I never had the good fortune to work with Jim, but some of my colleagues did, and I did nejoy listening to his work on KB and WBEN over the years.

## 1997. pop/alternative radio

Newsgroup: rec.radio.broadcasting
Date: 1993-11-25 11:55:24 UTC
From: vicke004@maroon.tc.umn.edu

Hi--a question for you radio types out there: I am trying to help a local artist get his CD around to radio stations. We figure our best chance is probably with college/non-commercial stations. The consensus is that this person fits into a pop category. My question is: is there any sort of listing or database of pop/alternative or mixed format radio stations that can be accessed?

Any help or replies via e-mail are greatly appreciated.

Thanks!
Wendy Vickers

(Because of difficulties in posting this article, this article has
been re-posted. We apologize for any duplicate postings which may
appear in this newsgroup.)

!!! ATTENTION JAZZY 100 FAMILY MEMBERS AND JAZZ FANS !!!

As some of you are already aware, this past weekend, Washington D.C.
jazz listeners lost yet another radio station which featured radio
programming that was enjoyed by a number of former JAZZY 100 listeners.
Last Friday, WLTT WLITE-94.7 FM changed its radio format which featured
approximately 60 hours of their 'Nite-Lite' and 'Sunday Jazz Brunch'
progressive-jazz programming during the weekday evenings and on Sunday
Mornings to the now all Classic Rock 'Oldies' WARW 94.7 FM. (You may
register your complaints and comments with the new CBS-owned 'ARROW
Oldies' by calling their offices at 301-984-6000).

For those who are again dismayed and outraged at the loss of yet another
source of progressive-jazz music for the Washington D.C. area to an
'Oldies' radio format, I am happy to announce that the Committee to
Bring Back JAZZY 100 is now working even *harder* to get the JAZZY 100
multi-cultural, progressive-jazz radio format back on the FM dial where it
belongs. Currently, the Committee is working with a number of influential
individuals and organizations in the Washington D.C. area who are also
interested and who are committed to the goal of getting the JAZZY 100
format back on the air.

The Committee is also continuing to keep the spirit of JAZZY 100 alive
and well in the Washington D.C. area. In addition to a new affiliation
with Kemp Mill Records and with the help of organizations such as
Warner Bros. Communications, the Committee to Bring Back JAZZY 100 is
looking forward to providing Washington D.C. progressive-jazz listeners
with even *more* great JAZZY 100 music events and activities. To keep
up with the latest in progressive-jazz music, new releases of progressive-
jazz CD's and tapes, and what's going on in the jazz clubs in the
Washington D.C. area which feature JAZZY 100's unique blend of multi-
cultural progressive jazz music, pick up your *free* copy of the *NEW*
Bob Linden "JAZZY MUSIC SCENE" newsletter at all 36 Kemp Mill Record
stores in the Washington Metropolitan area.

Bob Linden, you may recall, was the former program director of WJZE-
JAZZY 100. He was quite amazed by the strong reaction of former JAZZY 100
listeners who refused to accept the loss of their format and who have
joined together to get their music back on the air. In his many years
of experience with radio he has seen nothing like it and, having been
affected by the energy and enthusiasm of the thousands of loyal
listeners, he has stayed on in the DC area to work with the Committee

and to explore all possible avenues which would work towards getting the JAZZY 100 format back on the air.

To find out more about what the Committee to Bring Back JAZZY 100 is doing to keep you, our JAZZY 100 Family members, informed as to what is happening in progressive-jazz music in the Washington D.C. area, the new JAZZY 100 Club, information on JAZZY 100 Commemorative items such as JAZZY 100 sweatshirts and bumpers stickers, the new Committee to Bring Back JAZZY 100 petition, and to help support the effort of getting the JAZZY 100 format back on the air, please contact us at our

* NEW 24-hour Hotline Number*

> Oldies (ARRO) from the 60's & 70's. They do offer variety that most oldies
> or classic rock formats don't. I guess it's actually a marriage of the two
> formats.
> 

The article in the Washington Post on the format change said CBS had
considered going all light jazz, but decided there is more long term growth
potential in the "non doo-wop" oldies market.

They also said the station manager went to a local music store and charged
$1,000 worth of CDs to get the new format going. Let's see, average CD
price, with tax, is about $13 (at least) - they started with 75 or so CDs!
I guess they had some left over from WLTT that meet the ARROW format.

This digital audio delivery is very interesting! Is there an archive site where people have actually converted talk shows or whatever into a digital format? Has anyone thought of actually distributing this format through the networks? Is there a standard digital audio format amongst machines?

With technology advancing so fast with compression schemes and what not... wouldn't it be great to be able to listen a broadcast you missed?

One issue I guess to overcome would be the copyright... but that could be imbedded in the file, right? I mean you can order the transcripts from 60 Minutes... why not order them in the digital audio format?

Hi gang,

I am part of a group of volunteers who are fighting the mainstreaming
and professionalization of our radio station. I have obtained your
addresses from information send to me by frank haulgren of the
radio resisters bullitin. I am seeking any and all info pertaining
to free radios battle with the corporate sell outs. Our resistance
effort here in Columbia has only begun to organize since learning
thru the net that we are not alone. I feel that net/national info
is crucial to our getting a handle on this problem. Our station is
no longer going to represent the minority community, it wants to
compete with commercial stations for 30% of the 25-45 aged affluent
listeners.
I am interested in any micro-radio info, since we may loose.
I do not yet have usenet access from our freenet site, so
please send me internet radio journal, and as many archives as
you have time to.

Please folks, when in doubt, send,send,send. The more info the better.

thanks,
jay

P.S. I am also interested in any related email addresses. Is there
an email address for pacifica?

:has "juice". How many times has Bubba Clinton been on with stern? Not to mention
:an array of Governers and Senators that are heard regularly on Imus in the
:Morning.

In fact, a great many of the younger jocks give Imus credit for making personality radio such a big-money bidness. I just heard Garry Meier say as much the other week on WLUP. Imus and Larry Lujack are considered by many to be pioneers for bringing some much-needed scepticism and crankiness to the airwaves. (Lujack, in particular, taught a whole generation of broadcasters, including Jonathon Brandmeier, Rush Limbaugh, John Records Landecker, Bob Sirott, and yes, David Letterman, that if you were having a lousy morning, refusing to fill the air with a lot of senseless chatter, rocking continually on your squeaky chair, crumpling paper, etc., people would eat it up anyway. There's more to good radio than that, of course, but ambience counts for something.)

WFAN was WHN (country), and when they changed formats there was a big hullaballo because WHN had a solid 5.0 share. A flat share but a solid one nonetheless. Well, WFAN was sputtering. Then WNBC went on the block, and WFAN bought it and moved down the dial to a nice boomy signal on a clear frequency. They got Imus as part of the deal, and they've never looked back. So you could *say* it was the signal and the NBC listeners, whatever: the point is since Imus came on board, WFAN has been a big hit. Their PM said not too long ago in the sports pages of a Chicago daily that its success is directly attributable to the high visibility of Imus.

Here in Chicago we saw Steve Dahl and Garry Meier take on a clearly addled and fading Larry Lujack and drive him into pasture. Lujack demanded Dahl and Meier's afternoon slot; about that time their 5-year deal was up. They flew, took listeners with them, and Lujack lasted a year at PMs before Cap Cities bought out his contract.

In New York, by contrast, Howard Stern took on Don Imus, called him an old geezer and said he was stealing his (Stern's) material. As Meier has suggested, Imus's icon status is all the rebuttal Don needs to make. Anyway, Imus did *not* lose steam, was not on the fade, and

when Stern jumped to K-ROCK Imus just kept going and now is arguably
the second most visible radio jock in the country behind Stern.

So all in all I would have to say the ol' geezer's doing pretty well.

The following news item should be of interest to many of you.

Jeff (amateur radio: NH6IL)
**********

USA TODAY Update
Nov. 24-25, 1993
Source: USA TODAY:Gannett National Information Network

TV PROGRAMMING RULES ARE EASED:
The federal government's attempts to restrict indecent TV and radio programming got another slap in the face Tuesday. Several Federal Communications Commission rules banning indecent programming on broadcast and cable TV are unconstitutional, said a U.S. Court of Appeals. A ban on indecent television and radio from 6 a.m. to midnight was lifted, as were other rules.

## 2007. Indecency stayed.. Again!

Newsgroup: rec.radio.broadcasting

From: WEOS-FM <BLACK%HWS1@HWS.bitnet>
Message-ID: <2d27ln$8so@vixen.cso.uiuc.edu>
Source record: 41945

Yesterday, the US Court of Appeals has rejected the FCC's arguments on
the new, stricter midnight to 6am safe harbor. The standard will still be
the 8PM-6am hours the FCC is currently sticking to.
However, while the court felt the FCC was too broad in its defintions of when
children were in the audience, it upheld their right to channel indecency to
hours when they are not in the audience. THerefeore, the FCC will once again
say, "We'll Be Back." You can add your own Arnold accent to make this sound
more authentic. Have a safe holiday weekend.

# 2008. Re: Indecency and safe harbor

Newsgroup: rec.radio.broadcasting
Date: 1993-11-25 12:15:52 UTC
From: skmurphy@phoenix.princeton.edu
Message-ID: <2d27lo$8sp@vixen.cso.uiuc.edu>
Source record: 41946

Looks like we're back to the drawing board...today's New York Times had a front-page story on yesterday's DC Circuit ruling that there was no constitutional basis for banning indeceny on broadcast media. The three judges ruled on a TV case specifically, but the ruling applies to radio as well. The midnight to 6am "safe harbor" has not really been enforced yet, due to repeated appeals in the DC Circuit. The FCC will not prosecute any case of broadcast indecency which takes place between 8pm and 6am for the time being...they're still trying to gather evidence to support a midnight-to-six ban since the courts have denied the Jesse Helms-inspired 24-hour ban.

So, the courts continue to protect indecency, even if they can't conclusively define it. A small, but important step for broadcasters.

//na--i/, na--i

WASHINGTON (UPI) -- A federal appeals court in Washington Tuesday overturned federal regulations that prevented radio and television stations from airing ``indecent'' material except during late night hours.
The three-member panel threw out the Federal Communications Commission regulations, which prohibited broadcasters from airing ``indecent'' material between the hours of 6 a.m. and midnight, on ground they infringed on the First Amendment rights of broadcasters.
First Amendment advocates, entertainers and broadcasting groups challenged the ban, which had not taken effect pending the court review.
The FCC indecency regulations cover language or material that may be offensive to community standards, such as ``sexual or excretory activities or organs.'' The regulations overturned by the court did not cover obscene material.
Radio shock jock Howard Stern has waged a public battle with the FCC against the guidelines.
Infinity Broadcasting Corp., which owns Stern's syndicated show, has been fined more than $1.2 million for violations of the policy. Infinity officials did not comment on the ruling.

## 2014. Clear channels, do they exist?

Newsgroup: rec.radio.broadcasting
Date: 1993-11-27 23:24:03 UTC
From: rrb@deja-vu.aiss.uiuc.edu
Message-ID: <2d8nij$pjq@vixen.cso.uiuc.edu>
Source record: 41852

Is there still such a thing as Clear, Regional and Local (AM) channels with respective power limits? Used to be that on a regional channel, the power limit was 5kw. Now I see in M-Street stations like WMCA New York (570) and WTMJ Milwaukee (620) with CP's to go 50,000 watts days and (like) 10,000 at night, directional. No mention of a frequency change in these CP listings.

Now I know that FM channels are all different as to power/antenna etc, and I know that the old power levels of 50kw, 25kw, 10kw, 5kw, 1kw, .5kw and .25kw are a thing of the past on AM, some stations using 42watts at night, so I was just wondering are the hard limits of 5kw on regional channels just another piece of regulatory history?

Bill

Christopher J. Bessert (343GRPW@CMUVM.CSV.CMICH.EDU) wrote:
: I need to know how to figure out the area over which an FM
: station's signal is best heard. I know it involves tower height
: and signal power, but after that, I'm lost.

All sorts of factors: tower height, the terrain profile between the transmitter and the receiver, the power of the transmitter, the sensitivity and selectivity of the reciever, etc. For most purposes, though, just the transmission-related factors are considered: power, directionality (if any), antenna height.

: Is there some kind of equation you plug these two values into
: or something like that? Any help will be greatly appreciated.

Bruce Elving (FM Atlas, Box 24, Adolph MN 55701) sells easy-to-use nomographs -- i.e., coverage curves that let you quickly figure out the radius of the transmitting area (assuming the station transmits in a perfect circle, which few actually do, but it is a simplifying assumption). He used to charge $4 for them.

He also prints the annual (more or less) FM Atlas, for which he already figures out the primary coverage radius of each station in kilometers. (That's how the FCC does it. Wonder if the FCC nurses take their employees' temperatures in Celsius? ;-)

Others still in the business and more technically adept than I might have other sources of info, too.

: radio resisters bullitin. I am seeking any and all info pertaining
: to free radios battle with the corporate sell outs. Our resistance
: effort here in Columbia has only begun to organize since learning
: thru the net that we are not alone. I feel that net/national info
: is crucial to our getting a handle on this problem. Our station is
: no longer going to represent the minority community, it wants to
: compete with commercial stations for 30% of the 25-45 aged affluent
: listeners.
<remainder omitted>

I have heard rumors that KOPN was about to go to a commercially oriented AAA (adult alternative-style) format, in part because of financial difficulties.

I run the risk here of prattling on, because I am a Columbia native, and was involved in radio there in the late 70s and early 80s, first at KCOU, then KBIA, and finally KFRU. I was frequently a guest on some of KOPN's public-affairs programs in my capacity as KFRU's news director.

I always thought of KOPN as a "safety valve" for constituencies that had not reached the critical mass necessary to have their own media of expression. When I say "critical mass," I refer to both the size of a population, and its economic position relative to other groups in the community.

For instance, every Saturday afternoon on KOPN since I can't remember when has been programmed by and for Columbia's African-American community. Even though about 8-10% of Columbians are black, black Columbians had no other voice other than KOPN's Saturday programming.

Speaking only as an observer, I think KOPN's problems have been caused by a tendency toward infighting and a tendency toward forgetting that Columbia is not like the rest of Central Missouri. You get five miles out of town, and you're back in another world. KOPN tended to get isolated and not reach out to constituencies other than those it was already serving.

Enough lecture. What are some points you can bring out in KOPN's favor?

(1) KOPN is licensed as a non-commercial educational station, in the non-commercial educational portion of the FM band (89.5). How can a station whose commercial enterprises are limited to underwriting announcements

effectively compete with others who have no such restrictions?

(2) The Columbia metro area is served (loosely speaking) by ten other commercial signals and four other non-commercial signals on the FM band, plus a "legacy" AM station. What can KOPN provide that the other stations can't?

(3) KBXR (106.1) has just gone on the air with an adult-alternative format. It is allied with (though not owned by) a successful, shrewd, locally owned broadcaster. Does KOPN risk being a "me too" broadcaster (and one with many more restrictions on commercial content and a lower-power signal)?

Moreover, KOPN will face at least two LMA's: KCMQ/KCLR and KFRU/KARO/KBXR. Can KOPN really compete effectively in the commercial arena?

(4) Non-commercial radio in Columbia has taken some real hits lately. KCOU is on a restricted schedule, according to my sources. KWWC, again according to my sources, has significant financial concerns. KBIA has become a yupscale classical-'n-NPR operation with heavy underwriting. Are there gaps in the non-commercial band that KOPN can pick up (especially with the problems KCOU and KWWC suffer at the moment)?

(5) What is KOPN's purpose? Will the money that is raised with a more commercially oriented format go to improving its niche programming? Or will it go to more salaries and facilities?

(6) How does this affect KOPN's CPB status? Will it lose CPB money by no longer carrying certain programs?

(7) What would Lorenzo Milam think? After all, I think you're still using KDNA's old transmitter (KDNA was a St. Louis open-access station that was sold by Milam (its founder) in 1973. KOPN got the transmitter.)

: Please folks, when in doubt, send,send,send. The more info the better.

Good luck. I never much cared for much of what KOPN broadcast (especially the radical feminist crap), but I always realized that it was performing a service to its communities.

Background for those of you not familiar with the market...
Columbia and Boone County is a metro area of 120,000 or so people.
It is just north of the state capital of Jefferson City, which is somewhat smaller.

The five noncommercial signals in the market are KCOU (88.1, college music, currently in political turmoil and on restricted schedule), KJLU (88.9, Jefferson City, Lincoln University, soul music), KOPN (89.5), KWWC (90.1, Columbia, Stephens College, jazz days, disco nights), KBIA (91.3, University of Missouri, NPR, classical, jazz, new age, etc.).

The commercial signals are KWWR (95.7, Mexico, Mo., country and farm), KCMQ (96.7, country), KFMZ (98.3, AOR), KCLR (99.3, country), KJMO (100.1, Jefferson City, oldies), KARO (101.5, hot AC), KRES (104.7, Moberly, Mo.,

country and farm), KZZT (105.5, Moberly, Mo., AC), KBXR (106.1, AAA), KTXY (106.9, Jefferson City, AOR but a change is rumored), and, on AM, KFRU (1400, news/talk).

Columbia also "supports" two daily newspapers -- it may be the smallest city in the country to do so. One of them is owned by a trust in conjunction with the University of Missouri School of Journalism.

Also due to come on the air within a year are two FM signals at 93.9 and 102.3.

Doesn't sound like a fun market to try to sell time in, does it?

! GENERAL NEWS !
-------------------------------------------------------------------------
F-C-C To Enforce Rules Banning Indecency, But Not For Late-Night Programs
-------------------------------------------------------------------------

(Washington) -- Government regulators are returning to their
policy banning indecency on radio and t-v airwaves between 6 a-m
and 8 p-m.
The Federal Communications Commission is reducing hours for the
restriction in response to a court ruling that threw out broader
rules.
A federal appeals court upheld the government rationale that
restrictions are needed to protect children. But the court rejected
an extension of the indecency ban until midnight.
An attorney for a coalition of broadcasters that challenged the
latest regulation says the ruling should invalidate one-point-two
(M) million dollars in fines against the employer of controversial
disc jockey Howard Stern.
But F-C-C Chairman James Quello says Stern's violations occurred
between 6 a-m and 8 p-m, and thus fall under the old rule.

My father and mother moved from the NY area to Florida some
years ago. My father tells me the thing he misses most from NY
is the great radio shows in NY.

I think he would love NPR but I don't think he knows of it. Does any
one know their broadcast frequency in the West Palm Beach area of
Florida? This area of Florida also includes Port St Lucie, Palm Beach,
Jupiter, Tequesta and is due north of Boca Raton, Ft Lauderdale and Miami.

Anyone know an NPR member station in the general area?

Thanks in advance...

Joe

# 2023. Introduction to rec.radio.broadcasting (11-1-93)

Newsgroup: rec.radio.broadcasting
Date: 1993-11-27 23:38:08 UTC
From: wdp@airwaves.chi.il.us
Message-ID: <2d8od0$qcf@vixen.cso.uiuc.edu>
Source record: 41861
Cross-posted to: rec.radio.broadcasting,rec.radio.info

Greetings:

Rec.radio.broadcasting (r.r.b) is a Usenet newsgroup which
was founded in April of 1992, in order to provide a forum for
discussion of topics pertaining to 'domestic broadcast radio'.
Already in existance was rec.radio.shortwave, which centers around the
International radio scene, and rec.radio.noncomm who's focus is,
obviously, non-commercial radio. Rec.radio.broadcasting was intended
to 'fill the gap' between these groups.

The Airwaves Radio Journal (Formerly Internet Radio Journal)is a
periodic email digest consisting, mainly, of articles found in the
newsgroup. It is intended for people who either cannot access the
newsgroup from their system or for some reason prefer a digestified
format for reading. Subscriptions to Airwaves are free, and available
to anyone who wants one, and who is equipped with some form of email service.

-=*=- DOMESTIC BROADCAST RADIO -=*=-

By domestic, we mean broadcasts which are intended, primarily,for
reception in the same country/nation in which they originate. R.r.b
is an international newsgroup, though, and the term 'domestic' should
not be taken to imply 'USA' or even North American. Readers in other
nations are encouraged to participate.

-=*=- SUBJECTS -=*=-

If it has to do with broadcast radio, and not _specifically_ international
shortwave, it is welcome here. Occasionally an article which IS
primarily about shortwave will be posted if the subject seems broad
enough that the readership of r.r.b might be interested, or be able
to assist the poster in some way.

Generally, if a subject 'seems' like it would be of interest to the
broadcasting community (which includes those involved in creating,
transmitting or listening to broadcast radio) will be published.
These subjects include (but are not limited to)..

1) Formats and programming.
2) Engineering & technical matters and interests.
3) DXing (long distance reception) on the standard broadcast bands
4) Community broadcasting (including non-commercial and clandestine stations).
5) Pirate broadcasting (especially non-shortwave, domestic pirates).
6) Legislation affecting the industry, and its 'offspring' industries.
7) Technologies affecting the industry, and its 'offspring' industries.
8) General station information. Who is going on and off the air, and why.

9) Radio's historical and cultural significance.
10) Radio's current and future trends.
11) Political and news coverage and its impact.
12) Job openings and help to those seeking work in the industry.
13) Information on equipment and techniques involved in transmission and reception of broadcast radio signals.
14) The International Scene and how broadcast radio is shaping up in the various nations of the world.
15) Gabfesting and all matters of general interest to those involved in, or interested in, the general subject of domestic radio broadcasting.

-=*=- POSTING -=*=-

1) Post to rrb as you would any other Usenet group. The software does the rest.

2) Email your article directly to rrb@airwaves.chi.il.us. Using other addresses to post will needlessly delay your article. You might consider installing an alias in your mailer for emailed articles, especially if you post a lot of stuff. See the end of this file for all applicable addresses.

-=*=- POSTING GUIDELINES -=*=-

* If you post a question that is of potential interest to others in the group, ask that replies be posted, instead of emailed to you. We all would like access to the answers If you do receive email replies, post a summary to the group. This forum is only as good as it's posters and readers. Keep the info flowing.

* If you email an answer to a question, send a Cc: to the group's submission address, rrb@airwaves.chi.il.us, so we can all learn from your knowledge. When id doubt... POST POST POST! :-).

* PLEASE edit quoted text to a minimum! Most users of this group are fairly regular readers and do not need, or want, to read the entire text of a recent article in every reply. Of course, if the thread is less current, more quoted text may be appropriate. Use your brains (and your editor :->).

* If your message is basically a one or two line "Me Too" or "I disagree" post, consider emailing it to the poster. However if you go into some details as to WHY you agree or disagree, then please post it.

* If you are replying to an article in the Airwaves Radio Journal, simply use your mailer's reply feature, and again, edit the text to ONLY the article you are replying to, and include the article's name in the Subject field. Subjects of "Re: Airwaves Radio Journal" are confusing and may result in needless delays.

* If you post about a local radio station or personality, realize that 95% or more of the readers will know little or nothing about it. Offer a little background, like location, station format, type of

music played etc.

* Last but not least, avoid flames and personal insults. R.r.b has a high percentage of broadcast professionals among it's readers. We try to maintain a reasonably high brain to bulls*it ratio here. It is perfectly fine to say "I think that what you said is the stupidest bunch of crap I have ever heard", instead of "YOU are the stupidest jerk I have ever heard". If you *must* make personal attacks, do it in email.

-=*=- MODERATION -=*=-

AIRWAVES and rec.radio.broadcasting, are _very_ loosely moderated group. Normally, all legitimate articles will be posted to the group. Matters that may cause an article to be rejected by the moderator include...

---

* Articles which are not on (or reasonably near) the stated charter and scope of the group (domestic radio broadcasting) or pertain to 'non-broadcast' radio services, such as cellular, two-way, ham, citizens-band, and such.

* Articles that are too long for submission as-is. If your article is longer than 10k (10,000 bytes), consider splitting it into two parts, or better yet, edit it down to a more reasonable size. Check to see if you can eliminate any quoted text. If you believe that your article is of an especially urgent or informative nature, and you also feel that you cannot reduce the size without damaging the content, let me know and I will try to work with you.

* Articles which are merely multiple repetitions of an identical answer which has already been offered several times. Often these will be bundled together into a single article to conserve bandwidth and increase readability.

* Articles which contain 'miles' of quoted and multiple quoted text followed by a few lines or less of original text. Please edit quoted text to a minimum and try to adhere to the *50% rule*, that is 51 (or more) percent of original text to 49 (or less) of quoted text. If the thread is not current, more quoted text is appropriate. Only the worst offenders are omitted, usually I will edit quoted text myself, when I have time.

* Articles that solicit for funds or contain blatant commercial content. (see next section on this)

* Articles which are unwarrantedly offensive, abusive or contentious for the sake of contention. Personal attacks and ridicule are considered such. Discussion, even argument, of issues and opinions are welcomed and encouraged. Flame-wars and such are not. We have discussions here, not shouting matches.

Note: All articles are auto-replied to as they arrive, to indicate that we have received them. Each piece of mail to the submission

address(es) will generate a separate auto-reply message. Most articles which appear reasonable and on topic are published in the Journal/newsgroup. However the Editor/Moderator reserves final judgment on matters of acceptance or rejection of submitted material. When possible, rejected submissions will be returned with a note explaining why the submission was rejected.

-=*=- NO SOLICITATION POLICY -=*=-

Rec.radio.broadcasting and the Airwaves Radio Journal maintain a non-solicitation policy. Articles which appear to contain substantial 'commercial content' or which appear to blatantly solicit funds from readers for a 'cause' or a 'project' are generally rejected.

I generally * DO * accept..

o Product reviews: ... provided they are objective and informative and contain little or no 'motivational' language. Prices should be reduced to a price 'range' and all inquiries must be directed to the poster -or- an address of the manufacturer/distributor.

o Personal items: Such as old time radio tapes, a specific piece or two of equipment etc. sold at a low, hobbiest price.

o Radio-related items for barter/trade: Self explanatory.

o Announcements for non-commercial workshops, conventions, radio related flea-markets, etc. Pricing <other than small admission charge> and other specifics (like 'we take your credit card') are considered commercial content. If you want to publicize here, then you must deal with the followup mail/calls yourself.

o Personal recommendations of a product/company that appear legitimate. Especially when it is in response to another poster's inquiry.

---

In general I will take an 'err on the side of permissiveness' approach to this. In other words, if your article is credible, informative, reasonably intelligent, broadcast related, and has something to offer, I will do what I can to pass it along to the readers. I will only reject the worst of the lot. the rest I'll try to edit as necessary.

-=*=- ARCHIVES -=*=-

Archives of past Airwaves Radio Journals are kept for anonymous FTP at deja-vu.aiss.uiuc.edu . They can be found in the directory /misc/rec.radio.b-cast. In that directory you will find several sub-directories. They are plainly labeled INTERNET_RADIO_JOURNALS (which contains issues through 300) and AIRWAVES_RADIO_JOURNAL which contains issues 400 to present. The Journals are arranged in sub-directories of about 100 issues each. In each main sub-directory is a file called 00-INDEX, which contains the issue numbers of all

Journals, and the title of each article contained within. The
archives are updated every week or so. To determine when the last
update was, look at the date on the file called "<-Archive Last
Updated At".

If you need help with FTP, write me.

Journals are in gzip (.z) format. Gzip is the GNU zip format and can be
'unzipped' using the command 'gunzip <file>'. The gzip and gunzip
utilities are available free from many FTP sites for Unix, DOS and
Macintosh platforms. Remember that compressed files should
always be sent using the "binary" mode. If you have trouble accessing
anything, or if you have any questions about the archives, send email
to rrb@deja-vu.aiss.uiuc.edu. If you appreciate the archives, send
your notes of appreciation to the site admin, C. Lance Moxley
<lance@deja-vu.aiss.uiuc.edu>. He has been very gracious in his
willingness to store our archives on his machine.

* Please do not bother the system admin with problems, direct those to me. *

-=*=- EMAIL SERVER -=*=-

We are in the first stages of building an email archive server for
AIRWAVES. Currently you may obtain this help file at the INDEX files
for either the Internet Radio Journal, -or- the AIRWAVES RADIO JOURNAL.
You can also send for the file -COMMANDS-, which is updated as new
features are added. To access these servers, send email ti the
archive site address <rrb@deja-vu.aiss.uiuc.edu> with one of the
following commands as the SUBJECT of your message. The body of the
letter is ignored by the server.

** COMMANDS **

HELP - - - - - - - - Sends the latest version of the file you are reading now.
INDEX IRJ - - - - - Sends the 00-INDEX file for the Internet Radio Journal.
INDEX AIRWAVES - - - Sends the 00-INDEX file for the AIRWAVES Radio Journal.
COMMANDS - - - - - - Sends out a list of commands which the server will accept.

Soon we will be expanding this service to permit email access to the
entire archive site. Stay tuned for further developments.
Remember that only mail addressed to the archive
address will be processed by the server.
- rrb@deja-vu.aiss.uiuc.edu
-

-=*=- ENJOY THE GROUP! -=*=-

I hope you enjoy the group. Remember, it is only as good as it's
contributors. So don't be shy :-). If you have a question, or answer,
even if you are not sure, post - post - post.

I am open to suggestions on how to improve this group. Send them via e-mail
to wdp@airwaves.chi.il.us -or- rrb@deja-vu.aiss.uiuc.edu.

Thanks to all who have, and continue to, participate.

We now return you to your regularly scheduled newsgroup :-).

>
>I've been hearing a lot about the new triple-A or A-3 format
>in the States. None of the 20 local stations have adopted it
>yet, but I'd like to get a better idea of the extent of the
>A-3 playlists. Can anyone e-mail me the types of artists I
>might hear on an A-3 commercial (ie, non-campus) station?
>Many thanks.
>

The station I work for - KPIG - gets classified as A-3, although only about
half of what we play makes the national A-3 charts. Some of the 'core' A-3
artists (at least here) are: John Hiatt, Shawn Colvin, Dylan, Jackson Browne,
Roseanne Cash, Taj Mahal, - Why can't I ever think of this stuff without some-
thing to refer to??

If you forward your fax # or snail address, I'll send you a KPIG playlist.

Thats a *very* interesting idea. Do you know what kind of filtering is used on the output of standard dial-up modems? Is the output of the tone multiplexer bandpass-filtered to 300-3k or do they let the telco stuff deal with that?

If you decide to pursue this, I'd love to hear the results. If I get a chance to play around with it, I'll forward the results.

Add to the list KTNN - Window Rock, AZ 660 AM

This is a 50kw DA-N station owned by the Navajo Nation. The program mostly
country music with announcements & ads in a mixture of English & Navajo.
Mornings are all-Navajo & throughout the day they play Navajo chants once
per hour after the news. I hear the station easily at night here in Califor-
nia & I heard it just about everywhere on the reservation when I was last
back that way.

->While anyone with Stern's success could hardly be called a loser, that
->does not mean he has 'talent'. Stern appeals to a very base level in
->people, and in many markets, he is the best they have.
yes in biggest markets like NY and LA whre there is lots of
compitition

->Remember that Rush has a radio show, a TV show and TWO hit books out
:-).
->While I disagree with Rush on a lot of things, he is much more
->entertaining at his WORST, than Stern is at his best (IMHO).
In my opinion Rush is ok but his tv and radio show do sowell because
they compete against nothing. His radio show is on in the midday and
his tv show is on against infocommercials. But you shouldnt compare
the 2.

->Stern's TV show (the original 'creative' one) is history and he does
->not do a good Barbara Walters on the 'E' channel IMHO.
i've seen of few of the e! shows and he is no Babrbar walters. He
has his own unique style of interviewing. Why would anyone want to
be like Babara???

The number of postings about "Radio AAHS" stirs up a question in my mind.

How long can an AM station stay dormant before it loses its license and gives up its rights to the frequency?

In the Kansas City area, KJLA (1510, daytimer) and KFEZ (1190, formerly KJLA) were "dark" for a year or more but eventually returned to the air.

In Topeka, WREN (1250), was off the air for two years or more, but has returned to the air. However, its nighttime pattern seems to be different than before.

At present, KCXL (1140, licensed to Liberty) has been dark for nearly a year and a half. A CP for a fulltime station at 890 licensed to Gladstone, Mo. has never been activated but, as far as I know, has not been deleted, either.

The 1140 facility is a dog--500 watts, daytime-only. But 890 is fulltime with 1.1 kW, and in KC's northern suburbs.

Ironic note: the KCXL studios are on 63rd Street, not far at all from where I live. The plastic sign with the station's logo looks like it's been punched in.

>not against it... don't get me wrong, I am just curious as to whether
>their license is up for renewal? Are they ready to make another change?
>Buy another station on the West Coast so they can simulcast and have 50 states?

Well, actually, WBZ's corporate parent, Westinghouse Broadcasting Corp.,
better known as "Group W," already owns stations that can be heard in at
least 45 states (AK, HI, and the Pacific Northwest are iffy). The stations
are: WBZ-AM-TV Boston, WINS-AM/WNEW-FM New York, KYW-AM-TV/WMMR-FM
Philadelphia, KDKA AM-TV Pittsburgh, WJZ-TV Baltimore, WMAQ-AM Chicago,
KILT-AM-FM/KIKK-AM-FM Houston, WLLZ-FM Detroit, KFWB-AM/KTWV-FM Los Angeles,
KPIX-TV San Francisco, and pending FCC approval, AM1550 and FM95.7 in San
Francisco. Of these, WBZ, WINS, KYW, KDKA, and WMAQ are all 50 thousand
watt clear-channel stations.

As far as I know, there are no major changes planned at WBZ (at least I
HOPE not ;-). What the new stagers and image spots (heard at :08 and :38
during the day) are designed to do are simply to remind New Englanders
what they're listening to. It seems many people are using WBZ as a
utility, but forgetting to mention it in their ratings books. At least
that's management's belief. Go figure...

DAB - realising the nightmare

I fear I am something of a heretic when it comes to 'high' technology, and a few other things besides. In a less enlightened age, I should have been burnt at the stake long ago...

For instance, I thought that to extol RDS as 'the greatest invention in radio since the transistor' was putting it a bit strong. I reckoned that RDS would end up being about as important to the radio listener as teletext is to the TV viewer - i.e. not very.

Yes, RDS has its uses, but it's hardly set the world alight, has it? Now we have this thing called Digital Audio Broadcasting - DAB - looming upon us. Will DAB be another RDS? Or another MAC? Or another HDTV, still gestating after goodness knows how much money and argument has been spent on it? Or will Digital Audio Broadcasting overturn the world-as-we-know-it while we watch?

And if DAB does cause a revolution, what sort of impact is it going to have on the UK radio broadcasting industry and is it a welcome one? We need to face these questions now, before plans are set in concrete for the technical progress of radio well into the next century. Everybody, not just the wide-eyed technophiles, should take a close look at the effects of DAB on the structure and pattern of services which broadcasters can set up.

Radio is never going to be as free as publishing, where the market rules and anyone who can fund a publication can start one. Always the expansion of the industry is going to be constrained by the fact that the amount of spectrum available is finite.

It is never quite as finite as one is led to believe by those with the power to dish it out in our name, but, yes, ultimately there comes a point when even the pirates cannot jam any more stations in!

Spectrum Efficiency

Any new invention which uses spectrum more efficiently than an older technology without sacrificing any of the older technology's good points must clearly be a Good Thing.

Now DAB comes into its own with national networks. Proposals include six BBC and six independent networks occupying 3.5 MHz at Band III, around 230 MHz. This is much more efficient for

network planning than the current state of affairs on FM, where a 2.2 MHz slab of spectrum is used up by each BBC network.

So country-wide, national networks can use DAB to good effect - since it is technically suited to this sort of transmission. The smaller and more localised the service you want, the less attractive DAB looks. DAB is not capable of providing 'stand alone' services in smaller markets and rural localities in an economic manner. You have to buy, and plan for, local services six at a time.

This is going to make the prospects for developing identifiably local DAB services to locations outside the big metropolitan areas very bleak.

And DAB is going to cost broadcasters and listeners alike a lot of dosh, with no payback in sight for much longer than the current eight-year licence period.

Next week, I shall fill in some facts and figures about DAB. Until then, please keep in touch by calling 0273 684172 with your technical news and views...

# 2032. DAB for beginners: part Two

Newsgroup: rec.radio.broadcasting
Date: 1993-11-28 15:17:19 UTC
From: normac@epunix.sussex.ac.uk
Message-ID: <2dafdv$kj4@vixen.cso.uiuc.edu>
Source record: 41869

What is DAB?

DAB stands for Digital Audio Broadcasting. It is a way of transmitting radio programmes, either from terrestrial transmitters or from a satellite.

What are the benefits of DAB?

Compared to current-day FM broadcasts, DAB claims to offer the following advantages:

* sound quality comparable to CD;

* reliable reception for all;

* more efficient use of spectrum;

* simple push-button selection
- no tuning;

How does it work?

In essence, DAB takes six stereo channels, converts them into an economical stream of digits, and then spreads them about in frequency and time over a 1.5 MHz bandwidth. Because the signals are spread about a wide chunk of spectrum, the frequency-specific signal nulls which occur with mobile and portable FM reception, causing pops, crackles and fades, only affect part of the DAB signal, and it is rugged enough to be able to tolerate this.

The digits are transmitted on some 1500 low data rate carriers, such that for any one carrier the data is sent sufficiently slowly for multipath reflections to add to the detected signal rather than mangling it, because they occur within the guard band between one digit and the next. Moreover, national or wide-area network transmitters carrying the same modulation can all use the same frequency band - all the signals just add up with DAB. How much will it cost?

I am indebted to Mike Thorne, of NTL, for providing me with what I would stress are projected costs for putting DAB in at an established transmitting site. This assumes that there is space for the antenna on the existing mast, and room below for the apparatus. Costs include a pair of DAB transmitters to provide back-up (since if the thing fails six services will all be off at once), a new antenna, and installing six BT stereo lines and input equipment.

For a single transmitter running 1kW into an omnidirectional aerial, the capital cost of going on the air is put at 450,000, plus 70,000 annual running costs, including use of mast and rent for the building, electricity, BT lines, and maintenance. The price for an NTL 'Total Broadcast Contract', including the running costs mentioned earlier and paying back the capital cost over 8 - 10 years, comes to 25,000 pa per service. This is less than half the comparable FM costing.

However, better service and more efficient frequency use can be obtained by using a number of transmitters in a single frequency network (SFN). The cost of a network of five lower power transmitters (250W) is around double that of the single transmitter, which puts it on roughly a par with FM.

DAB Receivers - the down side

Current DAB receivers are substantial racks of equipment designed for professional investigations. No-one is presently able to produce a DAB receiver for less than several thousand pounds. A portable DAB receiver running off batteries is still unheard of, awaiting another generation, at least, of chip

# 2033. DAB for beginners: part three

Newsgroup: rec.radio.broadcasting
Date: 1993-11-28 15:17:20 UTC
From: normac@epunix.sussex.ac.uk
Message-ID: <2dafe0$kj5@vixen.cso.uiuc.edu>
Source record: 41871

FREQUENCY IMPLICATIONS

There are two frequency bands where it is proposed to operate DAB. One is towards the upper end of what used to be the TV band III, around 226 MHz, where current BBC tests are being carried out.

The other is what used to be referred to by the military as the 'L' band - just below 1500 MHz. The former Band III frequencies are looked on as a 'parking' band, for terrestrial transmissions, while the latter band is more likely to be employed for satellite transmission.

The intention is that in the year 2007 DAB transmissions will be moved out of the 'parking' band to take over space in the familiar Band II (87.5 - 108 MHz) after certain FM stations have been closed down.

FM STATIONS TO CLOSE DOWN

It's this latter proposal which should ring alarm bells if it were likely to come about, although frankly I don't think it will. The prospect of unplugging non-DAB equipped listeners from services they currently enjoy could only be contemplated when their numbers were very small indeed.

Remember our history. Look how little impact FM broadcasts made during the first fifteen years of their existence, from 1955 to 1970, say. FM offered superior audio quality and sold a number of sets to readers of Hi-Fi News, but outside that small community FM conspicuously failed to catch on.

I suspect one reason was that you couldn't get either Radio 1 or the offshore pirates on FM, nor could you get Radio Luxembourg or any other foreign stations.

Another reason for FM's failure to take off was that sets with FM were expensive, relatively scarce, and often didn't work nearly as well as they were supposed to. Add that to the fact that all you got on FM were duplicates of three BBC AM networks, plus one local BBC station for the favoured few, and the whole affair was a sorry flop.

Indeed it wasn't until the late eighties, a few years after previously-simulcasting AM and FM transmitters split programmes so that FM offered an expanded choice, that FM became the majority listening medium for radio. That's more than 30 years

after the FM service started and sets first became available.

There are some who seem to think that all DAB need do is rebroadcast current programmes in pristine CD quality and sets will sell like hot cakes. I doubt it.

Unless a significant number of extra programmes are available ONLY on DAB, I fear the whole thing will be a repeat of the early decades of FM. There would be no question of DAB reaching the level of penetration of the market that would make it politically acceptable to switch FM radio off to let DAB take its place, until such time as enough expensive DAB sets had been sold to allow the development of a cheap DAB radio.

Make no mistake - millions of pounds has been spent developing DAB even so far, and this is not charity work. The development costs will have to be recovered from the first purchasers of the sets. Whoever buys the first DAB radios will be in the same position as the people who copped the first mobile phones or the first fax machines not so many years ago. They will be paying an arm and a leg for them. So DAB have got to offer more than the same old songs, hasn't it?

I wasn't around then, but as I recall reading, all broadcast
stations were required to monitor the 500 KHz ship's distress frequency.
I think all broadcast stations also had to be able to transmit on that
frequency to respond to an emergency. Very unsure of this, but seem to
remember reading something about it.

What would the FCC charge if they ever decided to license Micro-radio? Micro Radio would give me a chance to start my own CHR station someday, In the part of the country where I am, I could make a KILLING with a CHR station, as there are no CHR stations anywheres near Sacramento. I could start out with Micro-Radio level license, then graduate to higher-power licenses as the station made more money. I would then take the profits from the first CHR station and buy a station in San Francisco and turn that into a CHR station, stations I would love to get my hands on include KJAZ 92.7, KRQR 97.3, KBAY 100.3, KKSF 103.7, KMEL 106.1 and KEAR 106.9, among these, KKSF, KMEL, and KEAR are the best because they all can be heard for well over 100 miles.

Insight On Rules #71

10 November 1993

The Fairness of Spectrum Leases?

by Harold Hallikainen
San Luis Obispo, CA

We're going to take a short detour from our normal path of trying to keep the local FCC inspector happy. Instead, let's take a short look at where broadcasting might be heading. I hope to provoke some discussion on the future of broadcasting.

The First Amendment

I see the first amendment's provisions for freedom of religion, speech and the press as an expanding sphere of freedoms. It starts with freedom of thought, freedom to express that thought, then allows the use of the available technology to further express that thought. At the time of the writing of the constitution, "the press" was the only mass communications medium available, yet the constitution was written to not restrict it, as they may have been tempted to because of its power. As additional media have been introduced, some have argued that these new media need governmental control (content regulation) because of their poweful influence, the "scarcity of voices", or because of the use of a public resource (the electromagnetic spectrum).
As just discussed, it appears that the "powerful influence" argument justifying governmental regulation of content didn't seem to be a strong enough argument for the framers of the constitution to put content control on the print media. Although a free press may be dangerous, it is necessary for a free society. It appears the same argument could be used to support the government staying out of broadcast content regulation, the current "powerful medium".
The second argument in favor of broadcast content regulation is that there are only so many broadcast channels to go around. While each of us could start a newspaper with a circulation of five or ten, economics tends to limit the number of print

publications. By decreasing broadcast station power, a larger number of stations could be supported by the spectrum without interference, each with a "smaller circulation." We can get a rough idea of the relative scarcity of the various media by checking the yellow pages of the phone book. Here, in San Luis Obispo County, about 22 radio stations are listed. Six television stations are listed. For those subscribing to cable, probably another 30 to 40 signals are available. Without cable, perhaps 28 "voices" are available. Checking under newspapers, we find about the same number (28) publishers. Is there more "scarcity" of voices in the electronic media than in the print media? If there were, would that justify overriding the first amendment?

The third argument in favor of government content regulation (use of a public resource) seems to have some merit. The Lowest Unit Rate rules seem to be an attempt at getting broadcasters to pay the public for use of the spectrum. It does seem, however, that a much more direct solution to this problem is available. That solution would be for broadcasters to pay for use of the spectrum. Perhaps if such payment were made, there would be no strong argument in favor of content regulation (whether through lowest unit rate, fairness doctrine, or whatever).

Spectrum Leasing

Broadcasters are typically buying spectrum, as it currently stands. If they buy an existing station, they pay the previous licensee for the channel. If they apply for a new channel, they end up paying substantial legal fees and buying out other applicants in an effort to show they are the most qualified applicants.

Another approach would be to offer a fixed term lease on a channel (perhaps 20 years). These leases would then be auctioned off. At the end of the lease term, the current leaseholder would be welcome to rebid for the channel. A leaseholder could also sell the unused term of a lease to another wishing to get into broadcasting. Existing "antimonopoly" rules available for all business could be applied to keep one broadcaster from taking over all the stations in one market. I don't believe the costs involved in such a leasing arrangement would be substantially different from prices currently being paid for stations. A major difference would be, however, that the public, rather than a private individual or corporation, would be paid for the use of the spectrum. This should remove the "need" for governmental regulation of content, giving broadcasters full first amendment rights. Such a radical change would certainly disrupt the existing station trading market. It could, however, be introduced several years in the future (perhaps ten years) to avoid "changing the rules in the middle of the game".

MicroBroadcasting?

Spectrum leasing could perhaps result in full first amendment rights for broadcasters. MicroBroadcasting could allow a multitude of voices, allowing broadcasting to serve very small specialized audiences (a sort of neighborhood radio) as "zines" serve small specialized audiences in print. We'll look at MicroBroadcasting next month. I'll look forward to your comments!

# 2039. Re: Clear channels, do they exist?

Newsgroup: rec.radio.broadcasting
Date: 1993-11-29 23:04:27 UTC
From: rerickso@cwis.unomaha.edu
Message-ID: <2ddv5r$1to@vixen.cso.uiuc.edu>
Source record: 41877

At one time the FCC held up new stations on the AM because
there was some unsettled situation with 750 kW allocations for
then Class A1 clear channels. I recall that was settled
in the early 1980s.

The last I knew, the FCC is now allocating higher than 5 kW on
regional channels when it fits their current allocation
standards. At one time even if a station was licensed to 5 kW and
they could not justify running that power because of interference,
they might add a power dissipating resistor in a tuning network
to drop it to less than what the transmitter was allowed to
feed the array. Technically, they would be 5 kW but in reality
they might be 2600-watts fed into the radiation part of the
antenna array. That might be the case to some extent with
the 50 kW stations. They might have very inefficient antenna
systems by design so it all looks good on paper and to
advertisers.

Here in Sacramento, KIOQ 1030AM has been dark since November of
1987, in only 1 1/2 years of operation, the station has 3 different formats,
country, CHR, and standards, none of these formats ever made any money,
and the station just simply went dark. Say, this would be a good place
to license micro-radio if the FCC ever approves of it.

I've recently done three articles for Radio World that look at
microbroadcasting. The first appeared in the 10 November issue. It
looks at the concept of spectrum leasing and first amendment rights.
The second article, due out 8 December, questions the FCC's decision to
not authorize local origination on FM translators, authorizing a low
power FM service, just as they did for television. The third article,
appearing in January, discusses possible ways of allowing for license
free microbroadcasting.
It seems to me that if the FCC were to fully buy my scheme (very
unlikely!), stations would be licensed to get interference protection.
They'd either be a full-power station (as currently authorized) or an
LPFM station. Each licensed station would lease the channel for so many
years. This lease payment would buy them interference protection.
Unlicensed low power stations would have to protect licensed stations
but would not receive interference protection. These unlicensed
stations would not have to pay any spectrum fees.
I'll look forward to any comments!

Harold

My wife has been in radio sales for 13 years. Her last job which ended because of a duopoly buy was in Washington DC at WCXR/CNN radio, and she was the local sales manager.
She's interested in radio opportunities in Europe because of their commercialization. Any ideas on which news group or mail list we should be looking at to find out what's going on in European radio?

With all due respect...maybe years ago they owned an AM station at 1600
but in the 80's Sconnix acquired 850 from Blair Comm. Sconnix then
sold WHDH to New England Television Corp. in 1989. In 1991, NETC suffering
heavy losses from its TV operation(WHDH-TV 7) sold WHDH 850 to Atlantic
Radio Ventures(now American Radio Sytems) in order to pump some much needed
cash into its VHF station...

From: "chip (c.d.) kelley" <chipk@bnr.ca>
Message-ID: <2dej7t$r9s@vixen.cso.uiuc.edu>
Source record: 41885

Following KCBS-FM Los Angeles, KLRX Dallas, and WLTT Washington DC (now WARW), CBS flips AC KLTR-93.7 Houston to "all rock and roll oldies" KKRW.

KLRX, by the way, finally flips to more meaningful calls: KRRW.

Spanish KESS-1270/contemporary christian KLTY-94.1 take over country KAND-FM-107.9 Corsicana, south of Dallas, and took it to Spanish Tejano "Kick" Sunday. Requested calls for the new Kick are KICI. KESS/KLTY are also buying news/talk KDNT-1440 Denton. KESS/KLTY also lease Spanish KMRT-1480 from KOAI-107.5. I assume that when they take over KDNT, they will have to stop leasing KMRT since that would violate the 2-per-market rule. Maybe KMRT will go back to big band/nostalgia, especially when KAAM-1310 Dallas gives it up in a few weeks to become sports KTCK "the Ticket."

## 2049. Cleveland airchecker wanted

Newsgroup: rec.radio.broadcasting
Date: 1993-11-30 04:47:09 UTC
From: fybush@world.std.com
Message-ID: <2dej8d$ra8@vixen.cso.uiuc.edu>
Source record: 41887

Hello anyone who lives in or near Cleveland!

I'm looking for anyone who can record WAKC-TV 23 from Akron on
VHS or 8mm. This station has just been sold to ValueVision,
and will shortly switch from ABC network affiliate to home
shopping. I'm looking for someone who can document WAKC
as it is now, and perhaps grab the transition as well.

I'll trade for Boston video/audio airchecks, or I'd
be happy to provide blank tape and postage.

(David Sobol, are you listening? :-)

-=Scott Fybush - fybush@world.std.com=-
Next stop: Fort Wayne, Indiana...airchecks available next week!

# 2050. Re: Imus correction

Newsgroup: rec.radio.broadcasting

In a previous article, bernie.wu@cdreams.com (Bernie Wu) says:

>Imus quoted a boston paper saying the ABC station there dropped
>the NYC marathon after the Hoard Stern wannabee Don Imus did commentary. Imus then went on to say "Howard stern what a loser"

I have to jump in here...if the paper called Imus a "Howard Stern wanna-be", then they are far afield of the facts. Imus has been broadcasting in his unique style for about 25 years or so, probably about the time when Stern was just discovering his "private parts"...there's no way that Imus could be a Stern "wanna-be". As stated previously in the thread, Imus is one of the architects of modern morning radio. I just recently acquired a copy of his 1973 RCA LP, "One Sacred Chicken To Go", which includes bits taken from his classic WNBC (now WFAN, argh) show. No idea how old Stern is, but do the math...that's at least 20 years, and at a network flagship station, not some dinky rural starter position! Stern, if he's anything, is a fad and will be around for a few years and then will fade away. He's been on in NY for quite a while, yeah, but he's been dropped already by a few stations if I'm not mistaken...

There are in fact two different audiences between Imus & Stern, but Imus has the talent, not just the shock value, and is FUNNY> I've listened to Stern, and he's just not FUNNY.

## 2051. Re: Inactive frequencies

Newsgroup: rec.radio.broadcasting
Date: 1993-11-30 04:47:22 UTC
From: BDM2@psuvm.psu.edu
Message-ID: <2dej8q$raq@vixen.cso.uiuc.edu>
Source record: 41889

Hmmm....890AM in Gladstone would be full time at 1.1 kW? Wouldn't that interfere with 890 WLS-AM from Chicago at night? Usually in the KC area (I'm a former resident of Lawrence, KS), WLS comes in clearly at night. Also, how has 1250 WREN Topeka's nighttime directional changed. I remember several years ago they broadcasted at 5000 watts day and night (I think), but at night they seemed to beam their power to the west so that it came in weaker in the Lawrence or KC area, but stronger in central or western Kansas.

# 2052. IRRS-SW maintenance

Newsgroup: rec.radio.broadcasting
Date: 1993-11-30 04:47:23 UTC
From: "Alfredo E. Cotroneo" <100020.1013@CompuServe.COM>
Message-ID: <2dej8r$ras@vixen.cso.uiuc.edu>
Source record: 41890

Due to a series of urgent maintenance interventions to our 7,125 kHz transmitter, IRRS-Shortwave is ***temporarily*** off the air as of Monday Nov. 29, 1993. Our engineers are at work in order to resume transmissions as soon as possible. Our regular broadcasts on 7,125 kHz were discontinued temporarily for a series of transmitter failures last week, which brought us off the air during most of the scheduled times. Spare parts are due to arrive by Friday Dec. 3, and every effort will be made in order to re-start regular operations as of Sunday Dec. 5, 1993.

Investigations on the cause of the failures to our transmitter, revealed that surges induced by the local electricity on the 380 Volt power lines which feeds our station, caused severe damages the transmitter's power supply modules, to the automatic tuning system, as well as to computer peripherals used for transmitter monitoring and control. Surge suppressors installed earlier this summer, were defeated by the spikes on the three phase AC line, and exploded in flames.

As of Moday Nov. 29, at 22:30 UTC, however, most of such damages have been successfully repaired, and our transmitter was brought into operation during a series of short tests. For safety reasons, however, it has been decided to wait for original manufacturers spare parts and new surge suppressors to arrive and installed before regular operations are resumed. In the meantime, we are considering taking legal action vs. the electricity company which caused these damages, both in order to recover costs, damages, and assure a more reliable power distribution in the future.

IRRS-Shortwave can be heard (when on air) MON-FRI between 6-9:15 UTC, and 12-21:15 UTC, and SAT-SUN between 06-22:30 UTC (wintertime) on 7,125 kHz. For more information please contact our office in Milano, or stay tuned to the next edition of our <Hello There> program.

And wish us good luck!

73.

> I have about 4 months experience on college radio, and loved it. I'd like to
> know were I could go to get into commercial radio, and format wouldn't matter
> much. Any help would be greatly appreciated!
>
Well you could probably get a job at Y-107 driving the prize
van looking for people with the bumper sticker on their car,
in the dead of winter

Or maybe you'd like to parlay your 4 months of experience
into a research assistant job. Duties: Answer the request
line and log all requests plus demographics.
(Yes boss I just had 87 calls in a row for either Janet Jackson or
Mariah Carey, all of them were 8-16 years old, but I love my job!)

If you could stand to do this on a fulltime basis you might
make close to $10,000 a year.

This is not a personal attack. It is an indication that starting
salaries in radio are not much to live on.

Printed salary surveys show that experienced fulltime jobs in smaller markets
aren't much better.

Re: WHN in another posting, I"m sorry but they had no 5.0 share when
they switched to WFAN! (unless maybe you're talking 25-54, their 12+
numbers were just not that high. Try 2.0)

```
::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::
:: UKI44 ::
::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::
Time : November 26-28th, 1993
QTH : Uusikaupunki, Finland
Listeners : Risto Kotalampi (RKO) & Petri Mattila (PMA)
Equipment : Yaesu FRG-7700 & Icom IC-R71E
Antennas : Longwires to 250, 255, 260 and 280 degrees

The last pedition to Uusikaupunki this year was spent in white
Uusikaupunki. Very rarely there is so much snow seen in Uusikaupunki.
But conditions on AM were not very good. To find new stations from
UK was a difficult job - nothing very special was heard.

EUROPE:
603 27.11. 0815- RTL Oldies Sender is now also here //1440.
675 27.11. 0942 NOS NOZEMA.
828 27.11. 0743 R Modern.
918 27.11. 1000 Open R, Moscow. BBC -1000 and VOA 1000-.

BRITISH ISLES:
1161 27.11. 1030 Great Yorkshire Gold, Hull. Local news this time
to Yorkshire-North Lincolnshiren area.
1458 27.,28.11. 0759 BBC R Devon. News with Dorset FM.
1458 27.11. 0805 BBC GMR.
1548 27.11. 0635 R City Gold, Liverpool.
1584 28.11. 0718 KCBC.

Other stations identified: 774 BBC R Kent, 828 Super Gold 828, 855 BBC R
Norfolk, 1026 BBC R Cambridgeshire, 1035 BBC R Kent, 1035 North Sound,
1152 GNR, 1152 R Broadland, 1161 R Tay, 1170 GNR, 1332 WGMS, 1359 Breeze
AM, 1368 Manx R, 1368 BBC R Lincolnshire, 1431 Breeze AM, 1458 BBC R
Newcastle, 1521 County Sound, 1530 Great Yorkshire Gold, 1548 Capital
Gold, 1548 MAX-AM, 1584 R Tay, 1584 BBC R Nottingham.

NORTH-AMERICA:
1410 27.11. 0618 CIGO Port Hawkesbury NS. A long wire beaming to
North America was uninstalled by UKI42 because
"there was no use for it". Thank a lot! Damn it.

Mea culpa, mea maxima culpa! :-)

I was not in this market during the Sconnix-WHDH years, and had in
fact forgotten that interlude. And a brief interlude it was...
Sconnix bought WHDH in 1987, just after unloading WBOS-FM to
Ackerley. Blair also sold WZOU 94.5, ex-WCOZ, ex-WHDH-FM at the
same time, to Ardman Broadcasting (that staion is now WJMN).
In all, Sconnix owned WHDH for just two years before
NETC took over. It was not exactly a halcyon era in Boston broadcasting.
Then again, neither was the NETC-WHDH era. Come to think of it, neither
is the ARS-WHDH era... ;-)

A TV note from Boston: Boston University (owner of *90.9 WBUR-FM)
recently bought 68-WQTV (now WABU-TV) Boston, and 58 WCVX Cape Cod.
Today they announced their purchase of 21 WNHT-TV Concord NH. This
will put them on must-carry cable from the Canadian border all
the way out to Nantucket...not half bad!

Surprisingly, one of the local silent stations just fired up their signal and have begun regular broadcasting on AM. They had been off the air for almost five years . It's the same ownership....

My question.... How can they do that? After a given time period don't they lose their license? I didn't even see any traffic on change of studio location when they turned their xmtr site into a full studio/xmtr.

I am not going to name the station just yet.... (It may be a bootleg in a sense.....)

What puzzles me about the proponents of microbroadcasting is their emphasis on the transmitting facilities. Generally, those are among the lowest costs a broacaster has to deal with. Staff and programming are the budget items that destroy most broadcast operations -- so tell me how they're different for microbroadcasters?

# 2058. Indecency review

Since Howard Stern is on in most markets from 6AM until he feels like he's done, the infractions occurred between the 6AM - 8PM "enforceable Safe Harbor" That the FCC has been going after all along. They dropped cases filed on stations airing material in the 9 - 11 slot (remember the TV stations that were being cited for airing uncut R rated movies?). Until the FCC & the courts come up with a compromise, the 6AM - 8PM rule still exists, as the courts have not overturned that authority (yet) to enforce the rules.
Remember, all along the courts have agreed with the FCC that protection of children is legal and has not chosen to overturn either the language or the concept of Safe Harbor. They have not been able to agree with a time. While the FCC and conservatives want 24 hours, it looks like they may have to settle on a 6AM to 8PM or 9PM safe zone. If this eventually passes, than the fight will be to interpretation of the FCC definition. That is another court case.
In the meantime, as I have had to tell our students, the rules stand, and our policy will stay in effect (we have a 10PM -6AM window for indecency)

Hey. though I never posted before, I am always reading to see what is written on this network. I am a student at Lehigh University and am active in the school station WLVR. I have been a DJ for two years and am now the Assistant Business Manager. I am looking for an internship with a radio station doing anything I can. I was wondering if anyone can offer me any suggestions with this procedure. Thanks.

I think subleasing could do more than leasing in promoting free expression in broadcasting. A station owner/leasee should be allowed to sell airtime on a common carrier basis. With common carrier a broadcaster sells time to any able buyer and is not liable for the buyers' content. Currently the only people who can legally buy airtime on a common-carrier like basis are politicians. That is not fair.

Imagine what the telephone would be like if the phone company was liable for everything anyone said.

Imagine what UPS would be like if it was liable for all the printed material anyone shipped.

Imagine what meeting halls would be like if their owners were responsible for the content of every speech given in them.

Think about what broadcasting is like.

Seems to me that a radio station needs to transmit enough power to be listenable to enough people to make it viable to sell enough comercials to pay the jocks, engineers, and sales and management types and still have enough money left over to make it worthwhile for an owner to have bothered in the first place. As DJs and other staff have to be paid at least the going rate for their services (at least minimun wage!), this implys that the number of listeners to support the station has to be at least larger than some critical mass. The FCC knows this and wants to license stations with enough power to reach enough listeners to survive. And have enough stations to be around to broadcast in emergencys to a public that decided to buy radios to listen to entertaiment on the radio and are thus equiped to recieve the emergency info (floods, hurricanes, nuclear war, etc).

I suspect that micro radio won't cut it here.

Believe it or not, there are those of us who _could_ stand to do this on a full-time basis! Granted, we should probably have been sent to the funny farm a long time ago, but (speaking for myself) I'm so enamored by radio that the dirty work won't bother me.

> This is not a personal attack. It is an indication that starting
> salaries in radio are not much to live on.

Heard this one a million times over. Not that I don't believe it (oh, do I believe it!), but for most of us starting out in radio, we're too set on our futures in radio to care. When the light at the end of the tunnel is very dim, you do a lot of squinting. To those of you who want to flame me with naysaying, let me tell you that I'm not naive. My father had a brief career in radio, and is now a computer systems analyst. I'm sure his experience in radio helped slightly (believe it or not). Failure in radio can lead to success in another field. And success in radio... well, that's paradise.

> Printed salary surveys show that experienced fulltime jobs in smaller markets
> aren't much better.

Same argument applies. After working in radio for 2 years on a volunteer basis, I'd be happy just to get paid! To be able to work in radio _and_ get paid for it, that seems like a sweet deal. Again, maybe I should be committed. We'll see.

## 2063. recording radio shows

ABOUT a month ago a visited a Sony products display center in Chicago and asked them about the new AM stereo Walkman and they confirmed that they were still expecting its arrival. I have also visited several electronics stores and they have been getting numerous customer requests about this new Stereo Walkman. Haven't been able to get much details about the new unit (ie model number, features etc.) from the stores I've visited. I am keeping a constant check for this new unit as I do my Christmas shopping. As soon as I find it available I will post to this newsgroup.

Seems as if the Sony AM Stereo/FM Stereo Walkman we've been waiting for is the "SRF-42". Described in Sony's latest "Style" Catalog as "New AM Stereo/FM Stereo, receives Motorola C-Quam transmissions, operates on two AA batteries". The unit is pictured with the AMAX stereo logo on the black body, with an analog tuning scale on top. Suggested list price $34.95. Sony at (800) 342-5721 describes the units as currently shipping, although it wasn't listed in the computer at Sony Plaza, NYC. display center.

PRESS RELEASE

** FOR IMMEDIATE PUBLICATION **

ALBANY HILL, CALIFORNIA -- Stephen Dunifer had to cut short his usual Sunday evening Free Radio Berkeley (FRB) broadcast due to "technical difficulties." Shortly before being knocked off the air, three marked Albany police cars ascended the eucalyptus lined lane to the summit of Albany Hill as several unmarked low profile vehicles circled the area. Apparently, not wanting to be apprehended on a night with an eclipsing full moon, Stephen was seen crouched down in the back seat of his common blue foreign sedan doubling as his mobile station, with his driver briskly moving the studio down the hill.

The Albany officers were responding to a El Ceritto High School gathering at the top of the hill. Apparently, they were protesting RFB's use of 88.1 MHz as a transmitting frequency, as it interferes with KECH, the student operated station at El Ceritto High. Too much beer and Steven's choice of music led to their eventual downfall. This reporting crew was compelled to maintain a very low profile as it was not certain if there would be a mini-riot of police and high school students versus Free Radio Berkeley. However, a participant, who wished to remain anonymous stated, "Hey man, it's cool to broadcast what you want, but you gotta do it on your own turf, you get it? I mean I thought the B in FRB stands for Berkeley -- he should stay on his own ground -- this hill, it's ours." He then was heard mumbling something about "wideband FM capture effect." Another person, also wishing to remain anonymous had only one question, "Stephen, why were you outside the Republic of Berkeley?"

It appears from this latest incident that neither side is willing to back down. Of course, with our sophisticated techniques, we will be able to bring you further updates on the trials and tribulations of FRB. One potential hint of further activity was garnered by a scrap of paper found near the scene of the incident. Written on the paper was the following:

listen for us on Christmas 88 - 108
a thousand transmitters ....(: KAOS ;)....

We anxiously await the events of Christmas

[Moderator's Note: Most of you know that I basically support micro-radio, as a concept. But one has to wonder why Stephen would choose to broadcast in a town that already has a licensed station on the same frequency. It is behaviour like this which Micro apponants point to when micro-radio people seek support. Bad move, Stephen. Bill]

# 2067. Re: DIY Broadcasting

Newsgroup: rec.radio.broadcasting

From: scotta@netcom.com
Message-ID: <2dmihi$slb@vixen.cso.uiuc.edu>
Source record: 41805

DIY broadcasting, the current issue of MONDO 2000 covers it fairly well. MONDO 2000 is a publication from Berkeley (not U. of Berkeley) which is centered around technology. However, it covers a larger range of subjects, but basically anything to do with tech. However, it's not as, well, "refined" as many of other, more well-known magazines are.

The magazine is not widely distributed, but is available in many bookstores in the Bay Area and larger bookstores outside of Ca. The address is as follows:

MONDO 2000
P.O. Box 10171
Berkeley, CA 94079

It's $24 for a U.S. subscription, $27 US funds for Canada, and $50 US funds for international for 5 issues a year.

This IS NOT intended as an advertisement, but just to provide info for those who might be interested in it.

A good method for long recordings is to get a Beta (yes, Beta) Hi-Fi VCR.
The stereo recordings made this way are very high-quality (I was part of a
remote recording service and we did a lot of collegiate concerts and
speakers) Don't know about VHS hi-fi yet, as the person who owned the
service swore by Beta, so that's what we used. Just take your amp outs to
the audio in's of the VCR, set input for "line" (if I remember correctly)
and go. Use L-750's for the most time but don't record on the slow speed,
try middle or high for quality (or low if you don't need that much clarity,
either way it's pretty good)

Good luck.

Look for autoreverse decks by Sony and Pioneer that take two to six cassettes.

I've connected the audio input of my VCR to the output of my tuner and used it to record single programs over an hour in length. Unfortunately there's no way to adjust the tuner. I'm looking into whether I can program the tuner on a video overlay board I have (Hauppauge WinTV) to receive FM frequencies, but if I didn't already have the board it would be an awfully complex and expensive way to solve this problem.

***** BUSH RADIO UNDER ATTACK IN SOUTH AFRICA *****

4 October, 1993

AMARC Solidarity Action Network received this urgent demand today from Bush Radio, a community radio project in Cape Town, South Africa.

An Action Alert was first issued in support of Bush Radio when its equipment was seized in May. For a copy of that Alert, send a request to amarc@web.apc.org.30th September, 1993

OPEN LETTER RE: PROSECUTION OF BUSH RADIO

To Bush Radio's Members, Users Friends and Supporters

Bush Radio is being prosecuted for starting a community radio station. We are charged on three counts:
1. illegal broadcasting
2. illegal possession of broadcast apparatus, and
3. obstructing the course of justice.

These charges are being levelled at two of our members, who face stiff penalties: R10,000 and/or 3 years imprisonment each on the first two counts alone.

The first court appearance is set for October 13. We now need your support to stop the victimisation of genuine community radio before it even gets going.

Bush radio is a community radio initiative, owned and controlled by its membership, a wide range of organisations and individuals. For more than two years we planned and talked about going on air. Our attempts to get a broadcasting license from the Ministry for Home Affairs were repeatedly frustrated, and our membership

eventually decided that we should go ahead without one.

So from 4 - 8 pm on Sunday April 1993, listeners on the Cape Flats heard a mix of programmes produced and presented by our "networkers" (volunteer producers from the community). Scores of other people were there, and all of them had a chance to go on air, most of them for the first time in their lives.

In the week that followed the state seized our transmission equipment, effectively silencing us on the eve of our second broadcast, scheduled for May 1st. About six weeks later we were warned that the state was considering laying charges against us. Last week charge sheets were served on our lawyers, to appear before a regional court on October 13th.

For the state to take such action at this time seems to contradict their professed commitment to a more open South Africa. We are being charged in terms of laws inspired by apartheid at the very same time that new legislation passes through parliament - including bills for the transitional Executive Council and an Independent Broadcasting Authority, drawn up by parties at the negotiations.

The enforcement of these charges could have serious consequences for us at Bush Radio. For an organisation which employs a staff of only two people, we do a disproportionate amount of work, and can ill afford to be spending time on defending unnecessary legal action. Bush Radio runs a range of training programmes aimed at bringing new voices into the broadcasting environment. We work with a number of organisations, producing programmes that are distributed either on audio-cassette or on other radio stations. Substantial time and energy is invested in building up a network of volunteers, the backbone of a truly participatory community radio. A lot of time is spent providing support to others who want to start radio stations in their own communities.

Despite our modest resources, Bush radio has become something of a "flagship" for the emerging community radio sector in SouthAfrica. For us to be criminalised could weaken the growth of this new sector which holds such real potential for communities wanting to control their own development.

We were always open and peaceful in our methods, and feel that this treatment is misplaced. To drag us through the courts is a waste of time and money, not only for Bush Radio but also for the taxpayer who foots the bill.

We hope the charges might be dropped, and seek your support in making our case. What can you do?

At this stage we ask that you write letters. They should be:
"To whom it may concern,"

The content of your letter would depend on your relationship with Bush Radio.

If you are a member, we'd like you to say why you think it's inappropriate for us to be prosecuted, and include a statement of solidarity.

If you are a client, we'd like you to say why you think it's inappropriate for us to be prosecuted, and include a statement of solidarity.

If you are a client, we'd like to hear about the value of service you have derived from Bush Radio, and we would like you to be specific about what we did together.

If you are a friend, or supporter, please write whatever you feel is appropriate, and we'd appreciate comments on how this kind of action undermines confidence in the nature of change in our country.

Please send these letters to:
BUSH RADIO at fax no.:
+(27-21) 448-5451

and send originals to:
P.O. Box 13290
Mowbray, 7705
Cape Town, South Africa

We should receive these letters by Friday 8th October, or as soon as possible thereafter.

Thanking you in anticipation,

JEANNE DU TOIT
Secretary for the Coordinating Committee

***** FREEDOM OF COMMUNICATION *****

>From Zeke Teflon's book - Complete Manual of Pirate Radio

Freedom of communication is a basic human right. Like all rights, free- dom of communication consists of being able to exercise your abilities with- out interference. Government cannot give you your abilities, but it sure as hell can (and will) interfere with you when you exercise them. Government cannot give you rights. It can only take them from you. If all governments (goons with guns forcing others to follow their dictates through violence and co- ercion) were to cease to exist, human rights would certainly not cease along with them.

The naive objection could be raised that while governments cannot give you rights, they can protect them by preventing your fellow citizens from in- terfering with you. That's the theory. In practice, governments rarely 'protect' citizens' rights, and then only when it suits their political purposes. Invari- ably, when governments feel the least bit threatened, they place their own 'security' needs above the human rights they supposedly safeguard. Through- out history the vilest and most consistent violators of human rights have been governments. Governments, along with their bedfellows, organized religions, have been responsible for the overwhelming bulk of human rights violations in every human civilization.

We cannot look to government to protect our rights. We have to do it ourselves, and an effective means of doing that is by exercising our rights. Use 'em or lose 'em.

---

***** Connecting to the Net *****

One of the best tools for the immediate transfer of news, information and discussion is the Internet. With any basic computer and a modem, world wide access is just a few keystrokes away. In the Bay Area one of the best Interest access providers is CRL, for a flat rate of $18 per month you will have all the Interent resources available to you. Resources include the ability to send email to anyone else in the world who is on the net as well, check out hundreds of news groups for the latest and weirdest happenings, send breaking news and information to other community broadcasters, etc.
At the moment we are working on a way to digitally record and compress 5 to 15 minute audio spots into a computer file which can be sent anywhere in the world where there is a computer to receive it. With an inexpensive digital recording and playback card which plugs into any basic PC system, micro power broadcasters will be able to send and receive these spots to and from anywhere in the world. This completely bypasses the rather expensive satellite feeds and makes for a much more decentralized system of distribution. If you are interested in this project please contact us.
To reach CRL in regards to an Internet account give them a call (415) 381-2800.
---

***** MICRO POWER BROADCASTING, TECHNOLOGY FOR THE PEOPLE *****

With circuit board dimensions of 2" x 4 1/2", a five
watt FM micro power transmitter is capable of covering a community
3-5 miles in radius. Such compact and inexpensive technology has
the possibility of giving each and every community its own voice. Stephen
Dunifer with Free Radio Berkeley has been designing and developing
this unit along with a series of other transmitters, amplifiers and
antennas over the last year. Mass produced RF transistors and
communications IC's have made it possible to design and build stable and
clean transmitters and amplifiers for a fraction of the cost of brand name
type accepted equipment. Even the entry level 5 watt kit, using only three
transistors, is very stable once tuned and set up.
Even more sophisticated phase lock loop (PLL) frequency
control designs are not that much more expensive to design and produce. At
this moment, several individuals are working on low cost PLL designs
which should meet current FCC requirements for frequency stability. When
these designs are finished they will be available in kit form and
assembled as well (for shipment outside US only).
What does it take to put a micro power broadcasting operation
on the air ? First off, less than $500. A basic 5 watt FM transmitter,
output filter (very necessary to reduce output harmonics), coax cable
(50-100 ft RG8), antenna and power supply (battery or 12 volt regulated
and filtered unit) is going to cost about $125-150. This is assuming
assembly of kit and antenna. Next, a VHF power meter ($30-$40 at
Radio Shack), a dummy load (make from resistors or $19 at Radio Shack)
and a frequency counter ($50-150) are needed for tuning and keeping
things optimized. Beyond those requirements one sort of audio source
(line level -10 dbm, .3 volts) or another is needed to feed the
transmitter. This source can be a walkman type cassette unit, a mixing
board, tape deck, etc. Granted this is not a professional studio but for
low budget community operations, it does not take top end gear. Creativity
and determination as shown by many community stations can certainly make
up the difference.
Once all the equipment has been assembled and arranged,
a suitable place needs to be found for the operation and setting up
the antenna. With FM, which is line of sight transmission, the higher
the antenna the better. Depending on the regulations and political
climate of the country in which you live, your operation may need
to be portable for rapid set-up and break down. That seems especially
true here in the United Corporate Snakes of America.
At the core of this is the potential to set up loosely
coupled autonomous networks of communication around entire planet,
outside the grasp of corporate/government control. This is the goal
of the Free Communications Coalition, the umbrella organization which
is being formed to support, defend and encourage micro power broadcasting.
Micro power technology makes this possible through a
combination of low power. inexpensive FM, AM, TV and shortwave
transmitters. Free Radio Berkeley, San Francisco Liberation Radio and
other interested parties will be placing an international shortwave station
on the air (100-300 watts initially at 40 meters - 7.4 to 7.5 Mhz range,
increasing to 1000) sometime in November, 1993. If we had to use
tube designs, doing such an operation would be impossible due to the

portability requirements. Instead, relatively inexpensive transistor designs allow to us build linear shortwave amplifiers capable of output powers exceeding 1000 watts while running off a bank of lead acid batteries. Certainly, within the normal definitions, 100 to 1000 watts on shortwave is definitely beyond the usual micropower definition. However, when right wing evangelical ranters are running 100-500 KW it could be considered to be micropower. At the moment, Free Radio Berkeleyis offering an entire line of transmitter and amplifier kits for FM broadcasting along with antenna and equipment designs. Assembled units are available for sale outside the US only. A rather effective antenna can be built using common hardware store parts for about $10. Our work will be expanding to include UHF & VHF TV, AM and shortwave designs. We would like to find other engineers and technically inclined people to help increase these efforts since we are a rather small design and development operation. Further, we need such technically inclined people to act as advisors and faciltators in the process of helping people build, test, tune, and setup their transmitters and antennas. That way, we can create a pool of people across the country and world who will be available to lend a technical hand to those who wish put micropower broadcasting operations on the air.

Let a thousand transmitters bloom

Stephen Dunifer
Free Radio Berkeley / Free Communications Coalition - the People's FCC

---

Freedom of Broadcasting in Italy

Just for you to know, back in 1974/75 Radio Milano International in Milano (not associated with us) started as the first private-pirate FM station in this country, operating from a van which kept moving around the town to avoid the PTT authorities (equivalent of the FCC). RMI brought the first regular stereo programmes to Italy, good music not heard before on state channels, as the other stations which came after them did. They also went to court and fought for "free", private radio and freedom of speach over radio and won against the old Postal law which considered broadcasting as State Monopoly. Today RMI is one of the major national radio networks with hundreds of repeaters all over the Italian peninsula, while thousands of private radio and TV stations obtained authorizations to broadcast legally over the years.
If you have a story to tell on pirate radio, or information to share (voice/paper/email), pse get in touch with us. On shortwave we reach also many European Pirates who would love to hear from you. (We indeed carried "legally" some of the pirates programmes in the past in order to offer them better coverage to their "alternative" programmes. Something we would also like to do again the future.)

Please send email to 100020.1013@compuserve.com, including a phone number and times when we can call possibly you from Europe for an

interview. We will gurantee anonymity if so desired, since our Shortwave transmissions may also be heard in the USA. We'll love to hear from you! 73, Alfredo --- Alfredo E. Cotroneo, President, NEXUS-International Broadcasting Association PO BOX 10980, I-20110 Milano, Italy phone: +39-2-266 6971 | fax: +39-2-706 38151

---

Notes from the Net on the FCC

One person writes about his FCC bust on the Usenet newsgroup alt.radio.pirate:

When I was busted in 1984, the FCC used a tan-colored buick passenger car. The passenger seat had been ripped out and was replaced with a rack of receiving equipment--nothing special, just commercially-available stuff. In the trunk was a pair of batteriesdriving inverters. The engine had a second alternator to charge the batteries. Beneath the vinyl roof was a direction-finding antenna array that was connected to an indicator on the dashboard. They'd just drive in the direction indicated until they reached the transmitter. That car served 3-4 states in the Northwestern US. How do I know all this? After the guy finished writing me up, I asked him to show me his equipment. After all, I showed him mine. He started to say no, but then changed his mind since there was nothing secret involved.

Don Hackler responds:

When I was engineering an directional AM broadcast station, the station was inspected by two FCC engineers driving a similar car. The roof had been removed and replaced with a fiber glass replica of the original. The antennae were embedded in the new roof, and there were no indications of anything `special' about the roof, inside or out.
I was given a ride in the car to go check some of the monitor points with a field-strength meter. The passenger bucket seat had been replaced by a 3 foot tall rack on a swivel mount, so the driver or a passenger in back could operate the equipment. The rack had a slip cover made of upholstry vinyl that matched the car's interior. They refused (nicely) to let me see the equipment, but said it was just standard equipment; i.e. a spectrum analyzer and some general coverage receivers.
I never understood why they didn't allow a peek, but I assumed it was probably some policy they were following. That was my first, and so far only, FCC inspection.

***** Why Support Micro-Power Broadcasting? *****

Number One: The issue is freedom of speech. It's truly
shocking what the Federal Communications Commision has allowed to
happen. Media access is becoming too restricted for regular people
to get their message across. As each day passes, radio, television,
and newspaper media gets gobbled up pac-man style by big outfits like
Sony/CBS, GE/NBC, ATT, ABC, Time-Warner Communications, Hearst, Gannett,
Disney, Ted Turner, or even Fox. Our local media mogul, James Gabbert,
owns an AM, FM, and television station in the same area. Middle America
gets bombarded with religious broadcasters and urban areas get millions
of watts of commercial crap beaming out from huge towers. Arbitron
and Neilson decide which stations have what percentage of the listening
audience. This situation must be changed so that truly free communication
can have a chance to survive. In the 90's we need some space on the
broadcast bands for community radio and television. Cable TV is promising
hundreds of channels to choose from, but most of this stuff will be
generated by the existing media networks. The problem here is that
minority opinions are not heard. Censorship can not be tolerated
in a democratic society. Freedom of information is what we need.
Number Two: The technology has changed.It used to be very expensive
to run a radio station. With modern electronics, however, small radio
stations can be on the air with a minimal investment. In fact, people
in Japan have been doing micro-power broadcasting for years. Most
people in the U.S. just have AM, FM, and TV receivers. To reach these
people, you usually have to buy advertising time on a commercial station.
That's assuming some station is willing to broadcast your tape! What wewant is true public
access to the airwaves for everyone, not just
the rich and powerful. The cloud of secrecy about broadcasting has
lifted and now we know that media power has been stolen by our own
government, and sold to the highest bidder. People need media access
because human beings have a natural need to communicate with each
other. Cable TV and Audio service should feature input from the
community at large. The old concept of standing on a soap box and
calling out to your fellow citizens will not work in the computer
age.
Number Three: Health Concerns about Radio energy, in large doses,
it is considered by some to be a real health hazard. Incidence of
leukemia and cancer runs high among men who work on high power transmitting
towers. People in San Francisco get blasted with literally millions
of watts of energy coming from Sutro Tower. This is because some
radio and television stations want to be picked up 100 miles away.
Scientific opinion on the effects of exposure to radio waves varies quite a
bit, but if you're one of those people living up near Sutro Tower, maybe
you should move. Micro-power is the sane way to use radio and tv. The
space on the radio and tv dial should be spread around to all interested
parties, not just a small group of companies. Broadcast power levels
for all stations should come down to safer levels.

-Paul Griffin

---

***** KITS FROM FREE RADIO BERKELEY *****

First, a word from our legal department:

For educational purposes only. These kits are offered for the furtherance of one's knowledge regarding radio frequency design and principles. At all times during operation the assembled unit must be connected to a dummy load. Part 15 of the FCC rules prohibits an antenna being used with these units. All responsibilities for the ultimate use of these kits are born solely by the builder and/or operator.

KITS AVAILABLE NOW !

All kits are complete and come with professionally manufactured, drilled and tinned PC boards. All coils are pre-wound. Each unit, unless specified, requires 12 volts for proper operation. Full instructions and diagrams included.

5 Watt FM Transmitter - $45

An improved version of the Panaxis 5 watt design with a much more rugged output transistor capable of producing 6-7 watts. Oscillator is a stable FET based VFO.

6 watt RF Amplifier - $25

Uses the same output transistor as above. Will produce 6 watts for 1/2 watt input drive. Easy, quick assembly.

15 watt RF Amplifier - $35
Uses a very high gain (14dB) RF transistor to boost a 1/2 watt input to 15 watts. Complete with PC Board and all required parts.

25-30 watt RF Amplifier - $35

Will produce full power with an input drive of 4-5 watts.

1/2 to 1 watt Amplifier - $18

1/2 to 1 watt output for an input power of 10 mw. Great for boosting lower power VFOs.

Output Filter Kit - $5.00

A seven element low pass filter, composed of 4 coils and 3 capacitors, to flatten those harmonics. Specify cutoff frequency desired.

COMING REAL SOON !

1/2 - 1 watt Stereo Broadcast Transmitter - $35

A vast improvement over the Ramsey FM-10. It uses the BA1404 IC as a stereo modulator only to modulate a FET vfo, buffer and amp chain. Better audio input filtering and bypassing. IC voltage regulation for the 2.5 volt supply for the BA1404. A very rugged output stage and collector voltage bypassing make this unit stand out from all other transmitter designs using the BA1404 chip.

Stereo Audio Processor - $Price to be determined

A combined stereo generator using the BA1404 coupled with compandor ICs for compression and limiting of audio signals

If you have any other particular requirements please let us know. Custom design and fabrication services are available including PC layout and production. Full CAD services as well.

Proceeds from the sales of these kits go to the furtherance of micro power broadcasting, bringing a voice of empowerment to every community.

Please add $3.00 for handling and shipping for each kit.

Payment to be made out to cash or to Stephen Dunifer, we are still working out the bank trip. Send to:

Free Radio Berkeley
1442 A Walnut St., #406
Berkeley, CA 94709

Voice mail: (510) 464-3041

---

On the Air

Free Radio Berkeley - Sundays from 9 PM to 12 Midnight at 88.1 FM. Call their voice mail # (510) 464-3041 for further information. Or write them: 1442 A Walnut St., #406, Berkeley, 94709.

San Francisco Liberation Radio - Wednesdays & Saturdays from 8 PM to 10 PM at 93.7 FM. Call their voice mail # (415) 487-6308 for further information and to help out. Or write them: San Francisco Liberation Radio, 350 7th. Ave, Box35, San Francisco CA, 94118.

Southern Marin, San Rafael Area - schedule not known at this time, try 87.9 FM.

Southern Marin, Sausalito - left end of the dial most every night, try 87.9 FM.

Mission District, SF - LaRaza station, schedule not known, try 87.9 FM

Santa Cruz - Either on the air or soon to be, schedule & frequency not known at this time

More stations taking to the air all the time, look for a whole network to be happening in Berkeley. An attendee of the New York City workshop is on the air in Connecticut with 5 watts as Ragged Mountain Liberation Radio. Phone calls are coming in from around the country, keep those calls and letters coming.
From San Francisco Liberation Radio: Each SFLR program closes with the words: "Fascists are like cockroaches. Shine a light on them and they scurry away. And together, you and I can be the light." Richard Edmondson of SFLR, author of that slogan, said, "Well, first and foremost of all it seemed like a truism, and it seemed like the sort of phrase to end a radio program with - catchy."

Stephen Dunifer with Free Radio Berkeley added, "Yes, but cockroaches do not carry guns". One of Free Radio Berkeley's favorite tag lines is "Are you going to contiue to live the lie or are you going to act the truth ?
Both San Francisco Liberation Radio and Free Radio Berkeley have been carrying a lot of very diverse and interesting programming ranging from Food Not Bombs Radio Network programs to Jello Biafra declaring that Urinalysis is Freedom to local street interviews to an interview with the former program director at Pacicifa station WPFW in Washington, DC. If you are interested in producing programs, conducting news gathering and interviews, etc. or have tapes of your band, performance piece, etc. or wish to help out in any other way, please contact either Free Radio Berkeley or San Francisco Liberation Radio. Tapes may be mailed to the return address on this newsletter in care of Free Radio Berkeley. Let your voices and performance art be heard !

---

In the Media

Within the last few months, a considerable amount of media attention has been focused on Micropower Broadcasting. Articles have appeared in the East Bay Express, SF Weekly, Bay Guardian, Oakland Tribune, San Jose Mercury, Daily Cal, SF Chronicle, Berkeley Voice and New York Daily News. CNN put together a news story about Free Radio Berkeley which aired nationally and was picked up and rebroadcast by Channel 2 in Oakland. More coverage is expected to be forthcoming. An article may appear in the New York Times. KQED radio is working on a story. A fifteen page article on guerilla media will be in Mondo 2000, due out the first of November. Channel 31 (Marin County) is covering one of the broadcastoperations in San Rafael. A press and info packet is going to be sent out around the country. Any help you can offer in the area of community and media outreach would be greatly appreciated. It is our intent to build an international movement and coalition. Contact the Free Communications Coalition (510) 464-3041

---

FUND RAISING VIDEO PARTY

Featuring: Pump Up the Volume, Medium Cool and videos from Black Liberation Radio

Saturday, November 13 - 8 PM
809 B Allston Way, Berkeley

(two blocks south of University Ave., between 5th and 6th streets)

$5-? donation. Free popcorn provided. Help us pay our operational expenses.

---

HELP TAKE BACK THE AIRWAVES
FREE COMMUNICATIONS COALITIONN MEETING

Saturday, November 13 - 5 PM
809 B Allston Way, Berkeley

With the dramatic increase in publicity (Free Radio Berkeley made the front page of the Sunday New York Times - Oct. 24) and response we have experienced in the last month or so, it is rather important that all of us who aer concerned with the defense, support and promotion of micro power broadcasting come together to plan and create a strategy which will lead to the Free Communications Coalition (the Peoples' FCC) becoming an international umbrella under which micropower broadcasting can flourish.

To that end, you are invited to attend the meeting of the Free Communications Coalition on Saturday, November 13 at 5 PM. It will be held at 809 B Allston Way (between 5th & 6th streets) in Berkeley. This will be a pot luck dinner meeting, bring a vegetarian dish to share. Following, at 8PM will be a video benefit, see above for further details.

# 2075. Rec.Radio.Broadcasting Archive Improvements

Newsgroup: rec.radio.broadcasting
Date: 1993-12-03 20:10:10 UTC
From: wdp@uiuc.edu
Message-ID: <2do6f2$189@vixen.cso.uiuc.edu>
Source record: 41821
Cross-posted to: rec.radio.broadcasting,rec.radio.info

New Development for archive users.

The rrb/AIRWAVES/IRJ archive site is now available via gopher.

This will allow you to look through the entire archive and retreive
files withoug the hassle of FTP.

Also, gopher will automatically UNCOMPRESS the files for you as it
transfers them, so you never have to worry about whether your system
supporte UNIX compress.

To use gopher, just type...

gopher radio.aiss.uiu.edu 7070

Then follow the menus. It is real simple and fast.

Also, FTP users can now FTP to 'radio.aiss.uiuc.edu' instead of (or in
addition to) the old address of deja-vu.aiss.uiuc.edu. You will still
have to 'cd' to /misc/rec.radio.b-cast, and then into the correct
sub-directory.

Try gopher and please report your findings to me.

Bill

# 2076. Robert Morrow's "Christmas Fantasies"

Newsgroup: rec.radio.broadcasting
Date: 1993-12-03 23:56:49 UTC
From: kraack@mitre.org
Message-ID: <2dojo1$mh8@vixen.cso.uiuc.edu>
Source record: 41813

Every year at Christmas time I look for some audio tapes of an old radio program I used to love. It was called "Christmas Fantasies" and it was narrated by Robin Morrow. I can't find a book of the stories or the tapes in our Public Radio Catalog. If anybody out there knows how to get ahold of these radio stories or if they even exist, please let me know. I would love to know if anybody else even remembers them.

I remember listening to them on WGN out of Chicago and some local Indiana Public Radio stations would rebroadcast during the Holiday Season. Any info would be greatly appreciated.

Thanks,

Stephen T. Kraack

***** BUSH RADIO UNDER ATTACK IN SOUTH AFRICA *****

4 October, 1993

AMARC Solidarity Action Network received this urgent demand today from Bush Radio, a community radio project in Cape Town, South Africa.

An Action Alert was first issued in support of Bush Radio when its equipment was seized in May. For a copy of that Alert, send a request to amarc@web.apc.org.30th September, 1993

OPEN LETTER RE: PROSECUTION OF BUSH RADIO

To Bush Radio's Members, Users Friends and Supporters

Bush Radio is being prosecuted for starting a community radio station. We are charged on three counts:
1. illegal broadcasting
2. illegal possession of broadcast apparatus, and
3. obstructing the course of justice.

These charges are being levelled at two of our members, who face stiff penalties: R10,000 and/or 3 years imprisonment each on the first two counts alone.

The first court appearance is set for October 13. We now need your support to stop the victimisation of genuine community radio before it even gets going.

Bush radio is a community radio initiative, owned and controlled by its membership, a wide range of organisations and individuals. For more than two years we planned and talked about going on air. Our attempts to get a broadcasting license from the Ministry for Home Affairs were repeatedly frustrated, and our membership

eventually decided that we should go ahead without one.

So from 4 - 8 pm on Sunday April 1993, listeners on the Cape Flats heard a mix of programmes produced and presented by our "networkers" (volunteer producers from the community). Scores of other people were there, and all of them had a chance to go on air, most of them for the first time in their lives.

In the week that followed the state seized our transmission equipment, effectively silencing us on the eve of our second broadcast, scheduled for May 1st. About six weeks later we were warned that the state was considering laying charges against us. Last week charge sheets were served on our lawyers, to appear before a regional court on October 13th.

For the state to take such action at this time seems to contradict their professed commitment to a more open South Africa. We are being charged in terms of laws inspired by apartheid at the very same time that new legislation passes through parliament - including bills for the transitional Executive Council and an Independent Broadcasting Authority, drawn up by parties at the negotiations.

The enforcement of these charges could have serious consequences for us at Bush Radio. For an organisation which employs a staff of only two people, we do a disproportionate amount of work, and can ill afford to be spending time on defending unnecessary legal action. Bush Radio runs a range of training programmes aimed at bringing new voices into the broadcasting environment. We work with a number of organisations, producing programmes that are distributed either on audio-cassette or on other radio stations. Substantial time and energy is invested in building up a network of volunteers, the backbone of a truly participatory community radio. A lot of time is spent providing support to others who want to start radio stations in their own communities.

Despite our modest resources, Bush radio has become something of a "flagship" for the emerging community radio sector in SouthAfrica. For us to be criminalised could weaken the growth of this new sector which holds such real potential for communities wanting to control their own development.

We were always open and peaceful in our methods, and feel that this treatment is misplaced. To drag us through the courts is a waste of time and money, not only for Bush Radio but also for the taxpayer who foots the bill.

We hope the charges might be dropped, and seek your support in making our case. What can you do?

At this stage we ask that you write letters. They should be:
"To whom it may concern,"

The content of your letter would depend on your relationship with Bush Radio.

If you are a member, we'd like you to say why you think it's inappropriate for us to be prosecuted, and include a statement of solidarity.

If you are a client, we'd like you to say why you think it's inappropriate for us to be prosecuted, and include a statement of solidarity.

If you are a client, we'd like to hear about the value of service you have derived from Bush Radio, and we would like you to be specific about what we did together.

If you are a friend, or supporter, please write whatever you feel is appropriate, and we'd appreciate comments on how this kind of action undermines confidence in the nature of change in our country.

Please send these letters to:
BUSH RADIO at fax no.:
+(27-21) 448-5451

and send originals to:
P.O. Box 13290
Mowbray, 7705
Cape Town, South Africa

We should receive these letters by Friday 8th October, or as soon as possible thereafter.

Thanking you in anticipation,

JEANNE DU TOIT
Secretary for the Coordinating Committee

The Solidarity Action Network is an initiative of AMARC, the World Association of Community Radio Broadcasters.

Action Alerts are posted in the conference amarc.radio carried by many members of the APC Network.

Email users who do not have access to the APC Network can receive Action Alerts directly by contacting AMARC.

***** FREEDOM OF COMMUNICATION *****

>From Zeke Teflon's book - Complete Manual of Pirate Radio

Freedom of communication is a basic human right. Like all rights, free- dom of communication consists of being able to exercise your abilities with- out interference. Government cannot give you your abilities, but it sure as hell can (and will) interfere with you when you exercise them. Government cannot give you rights. It can only take them from you. If all governments (goons with guns forcing others to follow their dictates through violence and co- ercion) were to cease to exist, human rights would certainly not cease along with them.

The naive objection could be raised that while governments cannot give you rights, they can protect them by preventing your fellow citizens from in- terfering with you. That's the theory. In practice, governments rarely 'protect' citizens' rights, and then only when it suits their political purposes. Invari- ably, when governments feel the least bit threatened, they place their own 'security' needs above the human rights they supposedly safeguard. Through- out history the vilest and most consistent violators of human rights have been governments. Governments, along with their bedfellows, organized religions, have been responsible for the overwhelming bulk of human rights violations in every human civilization.

We cannot look to government to protect our rights. We have to do it ourselves, and an effective means of doing that is by exercising our rights. Use 'em or lose 'em.

---

***** Connecting to the Net *****

One of the best tools for the immediate transfer of news, information and discussion is the Internet. With any basic computer and a modem, world wide access is just a few keystrokes away. In the Bay Area one of the best Interest access providers is CRL, for a flat rate of $18 per month you will have all the Interent resources available to you. Resources include the ability to send email to anyone else in the world who is on the net as well, check out hundreds of news groups for the latest and weirdest happenings, send breaking news and information to other community broadcasters, etc.
At the moment we are working on a way to digitally record and compress 5 to 15 minute audio spots into a computer file which can be sent anywhere in the world where there is a computer to receive it. With an inexpensive digital recording and playback card which plugs into any basic PC system, micro power broadcasters will be able to send and receive these spots to and from anywhere in the world. This completely bypasses the rather expensive satellite feeds and makes for a much more decentralized system of distribution. If you are interested in this project please contact us.
To reach CRL in regards to an Internet account give them a call (415) 381-2800.
---

***** MICRO POWER BROADCASTING, TECHNOLOGY FOR THE PEOPLE *****

With circuit board dimensions of 2" x 4 1/2", a five
watt FM micro power transmitter is capable of covering a community
3-5 miles in radius. Such compact and inexpensive technology has
the possibility of giving each and every community its own voice. Stephen
Dunifer with Free Radio Berkeley has been designing and developing
this unit along with a series of other transmitters, amplifiers and
antennas over the last year. Mass produced RF transistors and
communications IC's have made it possible to design and build stable and
clean transmitters and amplifiers for a fraction of the cost of brand name
type accepted equipment. Even the entry level 5 watt kit, using only three
transistors, is very stable once tuned and set up.
Even more sophisticated phase lock loop (PLL) frequency
control designs are not that much more expensive to design and produce. At
this moment, several individuals are working on low cost PLL designs
which should meet current FCC requirements for frequency stability. When
these designs are finished they will be available in kit form and
assembled as well (for shipment outside US only).
What does it take to put a micro power broadcasting operation
on the air ? First off, less than $500. A basic 5 watt FM transmitter,
output filter (very necessary to reduce output harmonics), coax cable
(50-100 ft RG8), antenna and power supply (battery or 12 volt regulated
and filtered unit) is going to cost about $125-150. This is assuming
assembly of kit and antenna. Next, a VHF power meter ($30-$40 at
Radio Shack), a dummy load (make from resistors or $19 at Radio Shack)
and a frequency counter ($50-150) are needed for tuning and keeping
things optimized. Beyond those requirements one sort of audio source
(line level -10 dbm, .3 volts) or another is needed to feed the
transmitter. This source can be a walkman type cassette unit, a mixing
board, tape deck, etc. Granted this is not a professional studio but for
low budget community operations, it does not take top end gear. Creativity
and determination as shown by many community stations can certainly make
up the difference.
Once all the equipment has been assembled and arranged,
a suitable place needs to be found for the operation and setting up
the antenna. With FM, which is line of sight transmission, the higher
the antenna the better. Depending on the regulations and political
climate of the country in which you live, your operation may need
to be portable for rapid set-up and break down. That seems especially
true here in the United Corporate Snakes of America.
At the core of this is the potential to set up loosely
coupled autonomous networks of communication around entire planet,
outside the grasp of corporate/government control. This is the goal
of the Free Communications Coalition, the umbrella organization which
is being formed to support, defend and encourage micro power broadcasting.
Micro power technology makes this possible through a
combination of low power. inexpensive FM, AM, TV and shortwave
transmitters. Free Radio Berkeley, San Francisco Liberation Radio and
other interested parties will be placing an international shortwave station
on the air (100-300 watts initially at 40 meters - 7.4 to 7.5 Mhz range,
increasing to 1000) sometime in November, 1993. If we had to use
tube designs, doing such an operation would be impossible due to the

portability requirements. Instead, relatively inexpensive transistor designs allow to us build linear shortwave amplifiers capable of output powers exceeding 1000 watts while running off a bank of lead acid batteries. Certainly, within the normal definitions, 100 to 1000 watts on shortwave is definitely beyond the usual micropower definition. However, when right wing evangelical ranters are running 100-500 KW it could be considered to be micropower. At the moment, Free Radio Berkeleyis offering an entire line of transmitter and amplifier kits for FM broadcasting along with antenna and equipment designs. Assembled units are available for sale outside the US only. A rather effective antenna can be built using common hardware store parts for about $10. Our work will be expanding to include UHF & VHF TV, AM and shortwave designs. We would like to find other engineers and technically inclined people to help increase these efforts since we are a rather small design and development operation. Further, we need such technically inclined people to act as advisors and faciltators in the process of helping people build, test, tune, and setup their transmitters and antennas. That way, we can create a pool of people across the country and world who will be available to lend a technical hand to those who wish put micropower broadcasting operations on the air.

Let a thousand transmitters bloom

Stephen Dunifer

Freedom of Broadcasting in Italy

Just for you to know, back in 1974/75 Radio Milano International in Milano (not associated with us) started as the first private-pirate FM station in this country, operating from a van which kept moving around the town to avoid the PTT authorities (equivalent of the FCC). RMI brought the first regular stereo programmes to Italy, good music not heard before on state channels, as the other stations which came after them did. They also went to court and fought for "free", private radio and freedom of speach over radio and won against the old Postal law which considered broadcasting as State Monopoly. Today RMI is one of the major national radio networks with hundreds of repeaters all over the Italian peninsula, while thousands of private radio and TV stations obtained authorizations to broadcast legally over the years.
If you have a story to tell on pirate radio, or information to share (voice/paper/email), pse get in touch with us. On shortwave we reach also many European Pirates who would love to hear from you. (We indeed carried "legally" some of the pirates programmes in the past in order to offer them better coverage to their "alternative" programmes. Something we would also like to do again the future.)

Please send email to 100020.1013@compuserve.com, including a phone number and times when we can call possibly you from Europe for an

interview. We will gurantee anonymity if so desired, since our Shortwave transmissions may also be heard in the USA. We'll love to hear from you! 73, Alfredo --- Alfredo E. Cotroneo, President, NEXUS-International Broadcasting Association PO BOX 10980, I-20110 Milano, Italy phone: +39-2-266 6971 | fax: +39-2-706 38151

Notes from the Net on the FCC

One person writes about his FCC bust on the Usenet newsgroup alt.radio.pirate:

When I was busted in 1984, the FCC used a tan-colored buick passenger car. The passenger seat had been ripped out and was replaced with a rack of receiving equipment--nothing special, just commercially-available stuff. In the trunk was a pair of batteriesdriving inverters. The engine had a second alternator to charge the batteries. Beneath the vinyl roof was a direction-finding antenna array that was connected to an indicator on the dashboard. They'd just drive in the direction indicated until they reached the transmitter. That car served 3-4 states in the Northwestern US. How do I know all this? After the guy finished writing me up, I asked him to show me his equipment. After all, I showed him mine. He started to say no, but then changed his mind since there was nothing secret involved.

Don Hackler responds:

When I was engineering an directional AM broadcast station, the station was inspected by two FCC engineers driving a similar car. The roof had been removed and replaced with a fiber glass replica of the original. The antennae were embedded in the new roof, and there were no indications of anything `special' about the roof, inside or out.
I was given a ride in the car to go check some of the monitor points with a field-strength meter. The passenger bucket seat had been replaced by a 3 foot tall rack on a swivel mount, so the driver or a passenger in back could operate the equipment. The rack had a slip cover made of upholstry vinyl that matched the car's interior. They refused (nicely) to let me see the equipment, but said it was just standard equipment; i.e. a spectrum analyzer and some general coverage receivers.
I never understood why they didn't allow a peek, but I assumed it was probably some policy they were following. That was my first, and so far only, FCC inspection.

***** Why Support Micro-Power Broadcasting? *****

Number One: The issue is freedom of speech. It's truly
shocking what the Federal Communications Commision has allowed to
happen. Media access is becoming too restricted for regular people
to get their message across. As each day passes, radio, television,
and newspaper media gets gobbled up pac-man style by big outfits like
Sony/CBS, GE/NBC, ATT, ABC, Time-Warner Communications, Hearst, Gannett,
Disney, Ted Turner, or even Fox. Our local media mogul, James Gabbert,
owns an AM, FM, and television station in the same area. Middle America
gets bombarded with religious broadcasters and urban areas get millions
of watts of commercial crap beaming out from huge towers. Arbitron
and Neilson decide which stations have what percentage of the listening
audience. This situation must be changed so that truly free communication
can have a chance to survive. In the 90's we need some space on the
broadcast bands for community radio and television. Cable TV is promising
hundreds of channels to choose from, but most of this stuff will be
generated by the existing media networks. The problem here is that
minority opinions are not heard. Censorship can not be tolerated
in a democratic society. Freedom of information is what we need.
Number Two: The technology has changed.It used to be very expensive
to run a radio station. With modern electronics, however, small radio
stations can be on the air with a minimal investment. In fact, people
in Japan have been doing micro-power broadcasting for years. Most
people in the U.S. just have AM, FM, and TV receivers. To reach these
people, you usually have to buy advertising time on a commercial station.
That's assuming some station is willing to broadcast your tape! What wewant is true public
access to the airwaves for everyone, not just
the rich and powerful. The cloud of secrecy about broadcasting has
lifted and now we know that media power has been stolen by our own
government, and sold to the highest bidder. People need media access
because human beings have a natural need to communicate with each
other. Cable TV and Audio service should feature input from the
community at large. The old concept of standing on a soap box and
calling out to your fellow citizens will not work in the computer
age.
Number Three: Health Concerns about Radio energy, in large doses,
it is considered by some to be a real health hazard. Incidence of
leukemia and cancer runs high among men who work on high power transmitting
towers. People in San Francisco get blasted with literally millions
of watts of energy coming from Sutro Tower. This is because some
radio and television stations want to be picked up 100 miles away.
Scientific opinion on the effects of exposure to radio waves varies quite a
bit, but if you're one of those people living up near Sutro Tower, maybe
you should move. Micro-power is the sane way to use radio and tv. The
space on the radio and tv dial should be spread around to all interested
parties, not just a small group of companies. Broadcast power levels
for all stations should come down to safer levels.

-Paul Griffin

***** KITS FROM FREE RADIO BERKELEY *****

First, a word from our legal department:

For educational purposes only. These kits are offered for the furtherance of one's knowledge regarding radio frequency design and principles. At all times during operation the assembled unit must be connected to a dummy load. Part 15 of the FCC rules prohibits an antenna being used with these units. All responsibilities for the ultimate use of these kits are born solely by the builder and/or operator.

KITS AVAILABLE NOW !

All kits are complete and come with professionally manufactured, drilled and tinned PC boards. All coils are pre-wound. Each unit, unless specified, requires 12 volts for proper operation. Full instructions and diagrams included.

5 Watt FM Transmitter - $45

An improved version of the Panaxis 5 watt design with a much more rugged output transistor capable of producing 6-7 watts. Oscillator is a stable FET based VFO.

6 watt RF Amplifier - $25

Uses the same output transistor as above. Will produce 6 watts for 1/2 watt input drive. Easy, quick assembly.

15 watt RF Amplifier - $35
Uses a very high gain (14dB) RF transistor to boost a 1/2 watt input to 15 watts. Complete with PC Board and all required parts.

25-30 watt RF Amplifier - $35

Will produce full power with an input drive of 4-5 watts.

1/2 to 1 watt Amplifier - $18

1/2 to 1 watt output for an input power of 10 mw. Great for boosting lower power VFOs.

Output Filter Kit - $5.00

A seven element low pass filter, composed of 4 coils and 3 capacitors, to flatten those harmonics. Specify cutoff frequency desired.

COMING REAL SOON !

1/2 - 1 watt Stereo Broadcast Transmitter - $35

A vast improvement over the Ramsey FM-10. It uses the BA1404 IC as a stereo modulator only to modulate a FET vfo, buffer and amp chain. Better audio input filtering and bypassing. IC voltage regulation for the 2.5 volt supply for the BA1404. A very rugged output stage and collector voltage bypassing make this unit stand out from all other transmitter designs using the BA1404 chip.

Stereo Audio Processor - $Price to be determined

A combined stereo generator using the BA1404 coupled with compandor ICs for compression and limiting of audio signals

If you have any other particular requirements please let us know. Custom design and fabrication services are available including PC layout and production. Full CAD services as well.

Proceeds from the sales of these kits go to the furtherance of micro power broadcasting, bringing a voice of empowerment to every community.

Please add $3.00 for handling and shipping for each kit.

Payment to be made out to cash or to Stephen Dunifer, we are still working out the bank trip. Send to:

Free Radio Berkeley
1442 A Walnut St., #406
Berkeley, CA 94709

Voice mail: (510) 464-3041

---

On the Air

Free Radio Berkeley - Sundays from 9 PM to 12 Midnight at 88.1 FM. Call their voice mail # (510) 464-3041 for further information. Or write them: 1442 A Walnut St., #406, Berkeley, 94709.

San Francisco Liberation Radio - Wednesdays & Saturdays from 8 PM to 10 PM at 93.7 FM. Call their voice mail # (415) 487-6308 for further information and to help out. Or write them: San Francisco Liberation Radio, 350 7th. Ave, Box35, San Francisco CA, 94118.

Southern Marin, San Rafael Area - schedule not known at this time, try 87.9 FM.

Southern Marin, Sausalito - left end of the dial most every night, try 87.9 FM.

Mission District, SF - LaRaza station, schedule not known, try 87.9 FM

Santa Cruz - Either on the air or soon to be, schedule & frequency not known at this time

More stations taking to the air all the time, look for a whole network to be happening in Berkeley. An attendee of the New York City workshop is on the air in Connecticut with 5 watts as Ragged Mountain Liberation Radio. Phone calls are coming in from around the country, keep those calls and letters coming.
From San Francisco Liberation Radio: Each SFLR program closes with the words: "Fascists are like cockroaches. Shine a light on them and they scurry away. And together, you and I can be the light." Richard Edmondson of SFLR, author of that slogan, said, "Well, first and foremost of all it seemed like a truism, and it seemed like the sort of phrase to end a radio program with - catchy."

Stephen Dunifer with Free Radio Berkeley added, "Yes, but cockroaches do not carry guns". One of Free Radio Berkeley's favorite tag lines is "Are you going to contiue to live the lie or are you going to act the truth ?
Both San Francisco Liberation Radio and Free Radio Berkeley have been carrying a lot of very diverse and interesting programming ranging from Food Not Bombs Radio Network programs to Jello Biafra declaring that Urinalysis is Freedom to local street interviews to an interview with the former program director at Pacicifa station WPFW in Washington, DC. If you are interested in producing programs, conducting news gathering and interviews, etc. or have tapes of your band, performance piece, etc. or wish to help out in any other way, please contact either Free Radio Berkeley or San Francisco Liberation Radio. Tapes may be mailed to the return address on this newsletter in care of Free Radio Berkeley. Let your voices and performance art be heard !

---

In the Media

Within the last few months, a considerable amount of media attention has been focused on Micropower Broadcasting. Articles have appeared in the East Bay Express, SF Weekly, Bay Guardian, Oakland Tribune, San Jose Mercury, Daily Cal, SF Chronicle, Berkeley Voice and New York Daily News. CNN put together a news story about Free Radio Berkeley which aired nationally and was picked up and rebroadcast by Channel 2 in Oakland. More coverage is expected to be forthcoming. An article may appear in the New York Times. KQED radio is working on a story. A fifteen page article on guerilla media will be in Mondo 2000, due out the first of November. Channel 31 (Marin County) is covering one of the broadcastoperations in San Rafael. A press and info packet is going to be sent out around the country. Any help you can offer in the area of community and media outreach would be greatly appreciated. It is our intent to build an international movement and coalition. Contact the Free Communications Coalition (510) 464-3041

HELP TAKE BACK THE AIRWAVES
FREE COMMUNICATIONS COALITIONN MEETING

Saturday, November 13 - 5 PM
809 B Allston Way, Berkeley

With the dramatic increase in publicity (Free Radio Berkeley made the front page of the Sunday New York Times - Oct. 24) and response we have experienced in the last month or so, it is rather important that all of us who aer concerned with the defense, support and promotion of micro power broadcasting come together to plan and create a strategy which will lead to the Free Communications Coalition (the Peoples' FCC) becoming an international umbrella under which micropower broadcasting can flourish.

To that end, you are invited to attend the meeting of the Free Communications Coalition on Saturday, November 13 at 5 PM. It will be held at 809 B Allston Way (between 5th & 6th streets) in Berkeley. This will be a pot luck dinner meeting, bring a vegetarian dish to share. Following, at 8PM will be a video benefit, see above for further details.

## 2078. Radio Guide?

I do not want to start a word war, but it seems to me that the FCC is always going after manufacturers of illegal kits for CB and other services, under the umbrella that "these are for educational purposes" guideline. One can learn the priciples of an amplifier from a 5 watt amp, just as one could from 30 watt amp. I'm sorry, but 30 watts is more power than a lot of class D stations had (or still have) and they have the legal right to be on the air. While Stephen's cause may be right, he is showing irresponsibile actions that can ruin the whole idea and not only have the FCC on his back, but the NAB and other broadcast organizations. Sorry, but under the circumstances, I hope the FCC nails him.

## 2080. "Re:Recording Radio Shows"

Newsgroup: rec.radio.broadcasting
Date: 1993-12-03 23:57:03 UTC
From: Robert Carpenter <rc@cmr.ncsl.nist.gov>
Message-ID: <2dojof$mhe@vixen.cso.uiuc.edu>
Source record: 41817

There has been a discussion of recording long-form radio shows. I have been recording ALL of a Saturday-evening Jazz show for the past nine (9) years. I started using Beta Hi-Fi, but since Beta is dying/has died, I converted to VHS Hi-Fi about five years ago. Both Beta Hi-Fi and VHS Hi-Fi represent the highest quality home recording medium you rae likely to find for many years to come. While home recording of DAT may claim a slightly better S/N, the 80 or so dB of the Hi-Fi formats is good enough for me, and DAT is/will be limited to about two (2) hours, not enough for long-form programs. The frequency response of the Hi-Fi formats is also exceptional, independent of the recording speed. I have always used to slowest speed available on both Beat and VHS; after all, most of the head speed is from the spinning drum, not the tape motion.

The other advantage of VHS is that the tape is VERY cheap. I always use the low end of a NAME brand, say Sony, Maxell, 3M, Kodak. This runs around $2.35 a cassette at the grocery store. I have only once had trouble with a cassette. While I normally use T-120 cassettes, I buy a T-160 cassette when I will be away two consecutive Saturdays, which allows me to record two (2), four(4)-hour shows on a single cassette.

To recapitulate, VHS Hi-Fi has been a very satisfactory medium for me, even better than Beta Hi-Fi because of the longer running time.

Regards, Bob Carpenter w3otc@amsat.org

Many people use videotape, i.e. a VCR connected to the outputs of your
receiver. You can get up to six hours (more?) of uninterrupted recording
that way.

Should be interesting. I was hoping for a unit that featured synthesised tuning and station presets. Maybe that'll come later on. I assume that the SRF-42 is capable of tuning the new extended AM band, many other current models do. On the subject of AMAX, I am still waiting for the AMAX/noise blanker chipset which will probably not make it into walkman type products.

# 2083. *CORRECTION* Rec.Radio.Broadcasting Archive Improvements

Newsgroup: rec.radio.broadcasting
Date: 1993-12-04 05:32:18 UTC
From: wdp@uiuc.edu
Message-ID: <2dp7d2$gid@vixen.cso.uiuc.edu>
Source record: 41820

An address contained a typo, it has now been fixed.
---
New Development for archive users.

The rrb/AIRWAVES/IRJ archive site is now available via gopher.

This will allow you to look through the entire archive and retrieve
files without the hassle of FTP.

Also, gopher will automatically UNCOMPRESS the files for you as it
transfers them, so you never have to worry about whether your system
supports UNIX compress.

To use gopher, just type...

gopher radio.aiss.uiuc.edu 7070

Then follow the menus. It is real simple and fast.

Also, FTP users can now FTP to 'radio.aiss.uiuc.edu' instead of (or in
addition to) the old address of deja-vu.aiss.uiuc.edu. You will still
have to 'cd' to /misc/rec.radio.b-cast, and then into the correct
sub-directory.

Try gopher and please report your findings to me.

Bill

>.If you want to get good reception on the AM band, there's nothing
>.like a REALLY LONG wire to get the job done. If you can run it on
>.the roof of an apartment building or under the eaves of your house
>.you'll do even better.
Bernie - ...on the roof. When it rains, or otherwise precipitates,
you are SOL! Under the eaves is much better, or you can run the
wire around the baseboard molding of a room or two in your apt. Very
inobtrusive that way. Also, if you have paneling, you can put up a
long strip of aluminum foil behind the paneling and staple or clip
your wire to it. Works great. Please be advised, if you run your
antenna outdoors, you REALLY DO need to have a lightning arrester
on that wire. Protects your equip, plus less likely to do a roast
on your residence.
>.Next, hook up a ground connection
>.to the >ground bus on your radio's circuit board. Tie it to a
>.metal stake >and pound it into the ground.
Right idea, but let's refine it a little. First, be VERY sure just
which connection inside that rig is really a ground. The 4th could
come early this year. You can use a COLD water pipe indoors, or I
have used the radiator pipes, but not quite as good. Needless to
say, the cold water pipe should be copper or iron. If there is
for some inexplicable reason, a joint of plastic or pvc (not all
that uncommon to find it in some old apartments with cheap land
lords), your results may vary! You can buy an 8 or 10 ft. copper
plated ground rod at hardware stores for not too many $$. If your
rig is AC powered, I do not recommend that you try a ground if you
are not sure the power mains are isolated properly by the radio's
circuitry. A possible work-around is to put a .001 microfarad
disk capacitor rated at at least 750 volts in SERIES with your ground
connection AT THE CHASSIS OF THE RADIO. It will be a reactance to
any 60 Hz power which may get into the line you want to use as a
ground, but this is not really all that safe for a beginner to try.
>.If i hook up where my receiver says GND to the 3rd prong on an
>.electrical outlet, is that like a ground or will that blow up my
>.stereo?
Bernie, or should I say Burnie - do you really have a death wish?
All things being equal, and assuming the electrician wired your socket
correctly, the 3rd prong of your electrical outlet connects directly
to the ground buss at the breaker box, and hence to the meter cabinet,

and on to a hard wired ground rod at the electrical entrance. BUT, if any one of the above is not connected correctly, or has been damaged, or otherwise just ain't right, once again - the 4th will come early this year. The other very real problem is that it will put your ground at the end of a VERY LONG run of wire bundled in with the hot and neutral leads of the circuits powering such things as blenders, sweepers, hair dryers, microwave ovens....get my drift? You are going to be tieing all of these noise sources directly into the receiver in which you are trying to sift out that 500w daytimer in Pocatello,ID. Much better results to run your own ground, paying proper attention to all the details. Suggestion: go to your city or university library and get a copy of the Amateur Radio Handbook, among others. It will provide you with some beginning information which may prove helpful. Best wishes, and happy holidays.

Lionel.

It would have been during his show somewhere between 6am and 10am. These
times vary depending on the time the local station airs his show.

Hey

This is my first time posting to this network, but I've been reading it for a few months now. I have a question for anyone who can help me. I am a Disk Jockey and Business manager for a station in Bethlehem, PA. It is a college (Lehigh University)"public" station with a large broadcast area. I was wondering if anyone can help me on suggestion on how to get "into" the field. I am applying forsummer internships in the area. If anyone has any info/suggestions it would be greatly appreciated.

Thanks ,
Alan Bezoza

## 2091. John Landecker

Newsgroup: rec.radio.broadcasting
Date: 1993-12-07 04:38:18 UTC
From: WIDNER@LIBRI.EDINBORO.EDU
Message-ID: <2e11bq$ql@vixen.cso.uiuc.edu>
Source record: 41829

This falls into the category of "Whatever happened to..."

John Landecker? The Johnny Peshtigo show, nicest man in the universe? A great entertaining show on WLS those times. I found some old tape of him "breaking in" an intern; it must have been the ultimate test, berating this poor woman to sing her college song while he had the reverb up to "great hall" level, then saying "ooh wow, you know, if anyone tuned in about now they'd be saying 'this is AM radio? Man, what are they doing, mushrooms or something?'" I wonder if she went on to work in radio; she probably can handle anything now! Or those phone calls he was so good at. I also remember one contest call where the kid was asked "What were the last three words that were spoken by Christ on the cross?" and the kid said "I give up" which was missed by all of them for a few seconds before that reply sunk in!

In the time that he left & WLS changed formats, I was in my own upheaval, so I have no idea what happened to him. So can you Chi-town historians help me out?

last year, I remember hearing a WLUP ad that said they were bringing back the "legends" for a day, and he was one of them. Is he still in radio?

And on the subject of WLUP, since they no longer carry Dr. Demento on the AM outlet, does anyone know if the good Doctor is on in the Cleveland-Pittsburgh area, and if so what times?

Thanks, and I enjoy reading Airwaves!

I do not want to start a word war, but it seems to me that the FCC is always going after manufacturers of illegal kits for CB and other services, under the umbrella that "these are for educational purposes" guideline. One can learn the priciples of an amplifier from a 5 watt amp, just as one could from 30 watt amp. I'm sorry, but 30 watts is more power than a lot of class D stations had (or still have) and they have the legal right to be on the air. While Stephen's cause may be right, he is showing irresponsibile actions that can ruin the whole idea and not only have the FCC on his back, but the NAB and other broadcast organizations. Sorry, but under the circumstances, I hope the FCC nails him.

In article <2dh6db$fh3@vixen.cso.uiuc.edu> 43wendel@cua.edu (Greg Wendel) issues forth from his keyboard:
I am interested in taping radio shows, such as Howard Stern, Rush Limbaugh, Bruce Williams and Don and Mike. Can someone let me know where I can get some type of system to record for relatively long periods, such as three hours. I am currently limited to 60 minutes. Any help would be greatly appreciated.
Greg Wendel

There are ways to hook your VCR up to your stereo to record audio. Look for the standard RCA jacks on the back of your VCR. Your VCR may need a video signal to properly record; in that case, you'd have to hook the video signal up to some channel or other on your TV.

Obvious benefit is length of VHS tapes.

Many people use videotape, i.e. a VCR connected to the outputs of your
receiver. You can get up to six hours (more?) of uninterrupted recording
that way.

## 2095. "Re:Recording Radio Shows"

Newsgroup: rec.radio.broadcasting
Date: 1993-12-07 04:38:31 UTC
From: Robert Carpenter <rc@cmr.ncsl.nist.gov>
Message-ID: <2e11c7$qr@vixen.cso.uiuc.edu>
Source record: 41833

There has been a discussion of recording long-form radio shows. I have been recording ALL of a Saturday-evening Jazz show for the past nine (9) years. I started using Beta Hi-Fi, but since Beta is dying/has died, I converted to VHS Hi-Fi about five years ago. Both Beta Hi-Fi and VHS Hi-Fi represent the highest quality home recording medium you rae likely to find for many years to come. While home recording of DAT may claim a slightly better S/N, the 80 or so dB of the Hi-Fi formats is good enough for me, and DAT is/will be limited to about two (2) hours, not enough for long-form programs. The frequency response of the Hi-Fi formats is also exceptional, independent of the recording speed. I have always used to slowest speed available on both Beat and VHS; after all, most of the head speed is from the spinning drum, not the tape motion.

The other advantage of VHS is that the tape is VERY cheap. I always use the low end of a NAME brand, say Sony, Maxell, 3M, Kodak. This runs around $2.35 a cassette at the grocery store. I have only once had trouble with a cassette. While I normally use T-120 cassettes, I buy a T-160 cassette when I will be away two consecutive Saturdays, which allows me to record two (2), four(4)-hour shows on a single cassette.

To recapitulate, VHS Hi-Fi has been a very satisfactory medium for me, even better than Beta Hi-Fi because of the longer running time.

Regards, Bob Carpenter w3otc@amsat.org

## 2096. taping with VCRs

Newsgroup: rec.radio.broadcasting
Date: 1993-12-07 04:38:32 UTC
From: WIDNER@LIBRI.EDINBORO.EDU
Message-ID: <2e11c8$qs@vixen.cso.uiuc.edu>
Source record: 41834

One observation on recording radio broadcasts with a VCR; does your VCR have an audio volume control? I know they have ALCs in most of them, but do the VHS hi-fi recorders that are out have them?

I have an older BEta hi-fi that has such a control, yet another reason why Beta is so superior....such a control is certainly valuable for me in copying certain tapes or in a mastering context.

Wouldn't you have to consider the source signal? I have a RS AM stereo tuner that I run thru my stereo system; without that volume control on the VCR, the signal wouldn't be the best I could get from such a setup.

Does anyone know of a VHS hi-fi with a recording volume control?

## 2097. Ohio State sports network

Newsgroup: rec.radio.broadcasting
Date: 1993-12-07 04:38:32 UTC
From: Chris Gay <KU4A@LEXVMK.VNET.IBM.COM>
Message-ID: <2e11c8$qu@vixen.cso.uiuc.edu>
Source record: 41835

It would appear that WLWA (550, Cincinnati) has left the Ohio State sports network. They were not broadcasting the November 29 Ohio State basketball game. Can anyone confirm that this is a permanent programming change? None of the other Ohio State network stations are audible here at nighttime.

By the way, I have a complete list of radio stations carrying the basketball games of each of the Big Ten schools. It is in hard copy, but if anyone has specific questions about it, let me know and I'll try to answer them.

# 2098. VOA Station For Sale

Newsgroup: rec.radio.broadcasting
Date: 1993-12-07 04:38:33 UTC
From: Les Reeves <lreeves@crl.com>
Message-ID: <2e11c9$r0@vixen.cso.uiuc.edu>
Source record: 41836

VOA TO CONSIDER SALE OR LEASE OF STATION IN BELIZE

Washington, D.C. November --,1993 -- The Voice of America, the international radio broadcasting organization of the United States Information Agency, announced today that it will solicit offers for the purchase of its broadcasting facilities in Belize, Central America.

In September, 1993, the Voice of America announced that closure of the Belize Relay Station was required to meet budget limitations in Fiscal Year 94 and beyond. Plans are to cease scheduled radio broadcasting no later than March 31, 1994, and to end VOA's presence in Belize no later than September 30, 1994.

The Belize Relay Station is located at Orange Point on the Gulf of Honduras immediately to the southwest of Punta Gorda, Belize. It transmits programs, originating in Washington, DC, in Spanish and English to Honduras and Guatemala. The station, occupying approximately 240 acres leased from the Government of Belize, is equipped with two 100 kiloWatt medium wave (amplitude modulation) transmitters, two directional antenna arrays, an on-site diesel power plant, satellite terminal equipment, and control and monitoring equipment.

Plans are to determine if there is interest in acquiring the Voice of America facilities, including the buildings, power generating and distribution systems, radio transmitters, antennas, etc. While currently employed for medium wave broadcasting, the site also has the potential for use as a short wave or frequency modulation (FM) station.

While sale is the preferred method of disposal, the possibility of lease or a lease-to-purchase arrangement may be considered. It was emphasized that any arrangement with a new tenant is subject to approval of the Government of Belize.

The offer to sell the Voice of America facilities does not include the land itself nor any right or license to broadcast radio signals from that location. A separate agreement must be concluded between the Government of Belize and any new tenant for land lease fees, broadcasting license, frequency authorizations, etc.

Details of the offer and procedures for submitting proposals will be released in early December, 1993. All arrangements will be in accordance with U.S. Government policies for the disposal of overseas properties, and will require that interested offerers post

a deposit of five per cent of their total offer. The U.S. Government reserves the right to reject any and all offers for any reason whatsoever.

All inquiries on this topic should be addressed to the Washington offices of the Voice of America, and not to the station in Belize.

The Voice of America is the international radio broadcasting service of the United States Information Agency, broadcasting more than 1,000 hours of programming weekly in 48 languages. Around the world, VOA supplies news, news-related, and feature material to hundreds of radio station affiliates in addition to its direct broadcasts to tens of millions of listeners.

Should be interesting. I was hoping for a unit that featured synthesised tuning and station presets. Maybe that'll come later on. I assume that the SRF-42 is capable of tuning the new extended AM band, many other current models do. On the subject of AMAX, I am still waiting for the AMAX/noise blanker chipset which will probably not make it into walkman type products.

| One company has had a monopoly on daily newspaper production in
| Kansas City for many years. And now, thanks to recent changes in
| federal broadcast regulations, news-talk radio in Kansas City has
| largely come under the control of a single corporation.
| Bonneville International Corp., a subsidiary of the Church of Jesus
| Christ of Latter-Day Saints (a.k.a. the Mormon church) has owned news-talk
| station KMBZ-AM since 1967.
| This fall, it also bought KMBZ's main competition, KCMO-AM, from media
| giant Gannett Corp. ...
| There is a third news-talk station in the Kansas City area--KNHN-AM,
| a.k.a. CNN 1340--but KNHN is dwarfed in both ratings and signal power by
| the two mid-dial brothers.
|
| When Bonneville bought KCMO, a series of consolidations ensured.
| Several news, sales, and support staffers were fired from KCMO. ...
| The liberal-flavored Alan Colmes Show was dropped from the 2-3 p.m. slot
| on KMBZ, where it followed the conservative Rush Limbaugh Show. And,
| apparently, the changes are not over yet.
| A new program director for KCMO and KMBZ, Mike Elder, formerly of
| KTOK in Oklahoma City, has come on board. KCMO/KMBZ general manager Ron
| Carter has said he wants to avoid having the two stations competing
| against each other for listeners--thus the dumping of KCMO's Sportstalk
| in favor of a general interest call-in show. And a distinction between the two stations'
| emphases was hinted at in a recent company press release which tagged KMBZ
| as "NewsRadio" and KCMO as "TalkRadio."
| <...>
| [T]he full spectrum of American political thought is hardly
| represented in the programming of local news-talk radio. Aside from
| the barbs KCMO morning man John Boss squeezes in between weather and
| traffic reports, there is not a liberal voice to be found on news-talk
| radio in Kansas City. Limbaugh dominates KMBZ's day. KCMO has conservative
| Dave Dawson in mid-morning, and angry populist Chuck Harder in the
| evening. And KNHN has the GOP team of Jerry Fogel and Mike Shanin
| in the morning and former Nixon and Reagan aide Pat Buchanan in
| mid-afternoon.
| <...>
| Andrew Schwartzman, executive director of The Media Access Project,
| a public interest communications law firm in Washington, D.C., said
| he believes the trend toward concentration of ownership of radio
| stations at the local level is "unfortunate."

| "The thing you describe is especially troublesome, especially
| with a company that has the particularly pronounced political and
| social perspectives that Bonneville (as an arm of the church) does,"
| he added.
| <...>
| Problems could come, Leathers said,
| "if they limit the amount of talk and discussion, because Kansas City
| desperately needs more talk on the issues--local issues."
| "We probably have as limited an amount of talk as any major city
| in the United States," Leathers said.

Don't get too excieted about noise blankers for AM stereo reception. A
noise blanker is useful for digging DX out of ignition noise, but is
ineffective on almost all types of noise heard on moderately strong AM stations.

# 2103. WBEZ (Chicago) Programming Changes

Newsgroup: rec.radio.broadcasting
Date: 1993-12-07 04:55:41 UTC
From: mglass@fnalo.fnal.gov
Message-ID: <2e12cd$1so@vixen.cso.uiuc.edu>
Source record: 41841

Do other people have the same unpleasant feeling that I do about WBEZ program changes?

I heard their new program director on one of their talk-to-management shows about a month ago. He did not inspire confidence. It seemed to me that, soft voice notwithstanding, he is bent on cancelling that which is eclectic and interesting about WBEZ.

The Commonwealth Club, City Club, etc. lectures at 2:00 are sometimes amazingly good, as are Soundprint etc. Except for the occasional lecture broadcast on WFMT, there are few outlets on Chicago radio for smart, articulate, long attention span material.

The key is selection. For the 2:00 hour to be successful, someone at WBEZ must daily sort through all the available sources, such as Alternative Radio, Horizons, Chautauqua, and so on, and pick the ones that work. WBEZ has done a pretty good job of this in the past.

Robert Feder's report that WBEZ is going to cancel all that and substitute "Talk of the Nation" is highly disturbing to me. I would rather hear fully developed lectures by Susan Faludi or James Lowery, to take two recent broadcast examples, than hear the same people give one-sentence answers to simplistic questions as one-panelist-among-many on a call-in show.

Production values are not the issue here. Programming values are the issue.

I feel that firing Stuart Rosenberg is part of the same mindset. My guess is that Artistic License and Backstage Pass will be the next to go, followed perhaps by Aaron Freeman. Heaven forbid that our airwaves be filled with knowledgable, engaged programming! Far better that we go for nationally distributed well masticated predictibility.

Someday soon we will turn on WBEZ and hear only the audio portion of the McGoofy Group, perhaps interrupted occasionally by a cooking show. AARGH!

-- Michael Glass | WBEZ, for those who don't know, is mglass@fnalv.fnal.gov | Chicago's public radio station. 91.5 FM.

## 2104. House of Blues Radio Hour?

Newsgroup: rec.radio.broadcasting
Date: 1993-12-07 04:55:52 UTC
From: mbutts@netcom.com
Message-ID: <2e12co$1sr@vixen.cso.uiuc.edu>
Source record: 41842

The December Monitoring Times' "American Bandscan"
column says CBS Radio is syndicating a
weekly one-hour blues program, called the
_House of Blues Radio Hour_, and hosted by
Dan Aykroyd as Elwood Blues from the
Blues Brothers movie. It says the program is
available to any station in any given market,
not necessarily the CBS affiliate, and that
it is on WNEW-FM in NYC.

What is the best way to find out if any station
in my area has picked it up? Call every station
in town? Or is there an address or phone for
CBS Radio that could get me the info in one call?

Thanks in advance.

# 2106. Robert Morrow's "Christmas Fantasies"

Newsgroup: rec.radio.broadcasting
Date: 1993-12-07 04:55:54 UTC
From: kraack@mitre.org
Message-ID: <2e12cq$1su@vixen.cso.uiuc.edu>
Source record: 41848

Every year at Christmas time I look for some audio tapes of an old radio program I used to love. It was called "Christmas Fantasies" and it was narrated by Robin Morrow. I can't find a book of the stories or the tapes in our Public Radio Catalog. If anybody out there knows how to get ahold of these radio stories or if they even exist, please let me know. I would love to know if anybody else even remembers them.

I remember listening to them on WGN out of Chicago and some local Indiana Public Radio stations would rebroadcast during the Holiday Season. Any info would be greatly appreciated.

Thanks,

Stephen T. Kraack

# 2107. Computer controllable radio reciever

Newsgroup: rec.radio.broadcasting
Date: 1993-12-07 04:55:54 UTC
From: sujo@netcom.com
Message-ID: <2e12cq$1sv@vixen.cso.uiuc.edu>
Source record: 41849

Hi,

I'm looking for an AM/FM/Shortwave stereo radio reciever which can be digitally tuned via software from an IBM-PC clone. I've seen similiar IBM-PC pluggable TV tuner cards, but none for radio.

>From whatever little I know about the state-of-art, it would likely be a single chip device, with probably an input port that can be written into for software tuning. It's OK even if it is a board that can plug into an IBM-PC 8-bit slot, or can interface to the PC via the serial or parallel port.

Another desirable feature would be a built in A/D converter so the audio from the tuner comes out digitized thru another port and can be read by software. But this feature is not a must-have.

Thanks much in advance.

# 2110. Re: RECLAIMING THE AIRWAVES

Newsgroup: rec.radio.broadcasting
Date: 1993-12-07 04:56:09 UTC
From: Dan.Bammes@m.cc.utah.edu
Message-ID: <2e12d9$1t5@vixen.cso.uiuc.edu>
Source record: 41845

Here's an assertion that's sure to get me flamed: All this noise about microbroadcasting amounts to nothing more than electronic masturbation for those involved. The simple fact is -- no one's listening.

If any of these microbroadcasters can demonstrate an audience greater than one listener for every ten dollars they've spent on equipment, I'll change my mind. I don't think they can.

The most successful radio stations in major markets are lucky to reach six percent of the potential audience. I suspect most of these microbroadcasters could reach a larger group of people by picking up the telephone and calling everybody in their Rolodex.

The rest of the equation looks like this: No audience=no influence. Go xerox a ream of flyers and pass 'em out on the street. You'll reach more people that way.

# 2111. The WEEL & AIR

Newsgroup: rec.radio.broadcasting
Date: 1993-12-07 04:56:20 UTC

Does anyone have any information concerning The WEEL? I believe this is the acronym for Whole Earth Electronic Length. I was just told about it today ... that it is a bulletin board service. From what I was told, it sounds very interesting (contains a radio producers conference) and I would like to know more about it.

I was also told about AIR, which I believe stands for Association for Independent Radio. Again, if anyone has any information concerning this, I would appreciate your passing it along.

Thanks!

# 2115. FCC / FRB / 9th Circuit Court

Newsgroup: rec.radio.broadcasting
Date: 1993-12-10 09:21:57 UTC
From: Frank Haulgren <haulgren@henson.cc.wwu.edu>
Message-ID: <2e9f3l$eq6@vixen.cso.uiuc.edu>
Source record: 41760

From: frbspd@crl.com (Stephen Dunifer)
Subject: FRB: FCC Served With Show Cause Order by 9th Circuit Court

Contact:
Stephen Dunifer, Free Communications Coalition - (510) 464-3041
Luke Hiken, NLG Committee on Democratic Communications - (415) 705-6460

FCC Put on the Defensive
by Micro Power Broadcasting

Hit With Show Cause Order
by the 9th Circuit Court of Appeals

In an unexpected move, the 9th Circuit Court of Appeals served an order on the Federal Communications Commission to respond to briefs filed in support of two micro power broadcasters, Bill Dougan and Tom Reveille. Bill Dougan's case appears before the 9th Circuit Court on December 14. The order states "Plaintiff-Appellee United States of America and Respondent Federal Communications Commission shall each file a supplemental brief addressing Petitioner Dougan and Defendant-Appellant Reveille's challenge to the Federal Communications Commission's licensing regulations, 47 C.F.R. 73.201, et seq. as applied to micro power broadcasts. See Petitioner Dougan's Opening Brief at 19-34. The court is interested in the way these regulations serve public convenience, interest and necessity and the government's interest involved in precluding micro power broadcasts."
Luke Hiken, attorney for Free Radio Berkeley (FRB) and San Francisco Liberation Radio (SFLR) and member of the National Lawyers Guild Committee on Democratic Communications (CDC), commented on this order, "The CDC and FRB & SFLR are pleased that the court has seen fit to question the FCC's total prohibition of micro radio broadcasting. The court order reflects an awareness that the FCC appears to have totally exceeded its authority as a regulatory agency and, instead, has come perilously close to being an arm for government censorship - an institution which serves to stifle democratic communication."
Not only has the Federal Communications Commission engaged in a de facto campaign of censorship, they have failed to preserve the air waves as a public medium of communication as mandated by the Communications Act of 1934. Instead, they have allowed the corporate media outlets to place a stranglehold on the free flow of information, news, ideas & cultural/artistic expression. Further, corporate underwriting of public broadcasting has undermined and subverted any notion of independent, community broadcasting. Rulings by the Federal Communications Commission such as the one requiring cable operators to carry the Home Shopping Channel because it is in the public interest, show their allegiance to corporate media monopolies.
In fact, the Federal Communications Commission has engaged in a

campaign of selective enforcement and harassment against micro power broadcasters based upon content of broadcasts. Just recently the Federal Communications Commission granted a waiver to Kent Jewell in Lincoln Beach, Oregon broadcasting at 1/3 of a watt, well above the claimed legal limit. His broadcasts consist of big band music, whereas, for example, Free Radio Berkeley and SF Liberation Radio, who have both been cited by the Federal Communications Commission for $20,000 and $10,000 respectively, are public free speech forums that broadcast a variety of programs some of which are not necessarily sympathetic to corporate interests. Andrew Yoder, another victim of harassment, has received an apology from the Federal Communications Commission and has had all charges and a fine of $17,500 against him dropped after they conducted a malicous and slanderous media campaign against him. Indeed, it is the contention of the Free Communications Coalition (The People's FCC) that the Federal Communications Commission was never supposed to have the overly broad regulatory authority it now wields. In the last few days, the Supreme Court ruled the Federal Communications Commission's ban on obscenity unconstitutional. Prior to that ruling the Federal Communications Commission was handing out $5000 to $30,000 fines for mere sexual innuendos. Under current law the Federal Communications Commission can enter anyone's home, night or day, without a search warrant and demand to inspect any FCC Part 15 device. A part 15 device is any piece of equipment designed to or capable of emitting radio frequency energy. This includes cellular phones, cordless phones, computers, microwave ovens, remote car alarm triggers, etc. If inspection is refused, the Federal Communications Commission can levy an $8000 fine on the individual refusing inspection.

We further contend the Communications Act of 1934 does not give the Federal Communications Commission the legal authority to regulate broadcasts of a non commercial nature which do not cross state lines, as in the case of low power FM and TV broadcast signals. If there are interference problems they can be resolved at the community level through a conflict resolution process or at worst case, some sort of tort action. As an organization we stand ready to offer the necessary technical support required to anyone engaged in micro power broadcasting to mitigate as much as is technically feasible any interference problems which might arise. Assertions by the Federal Communications Commission that such operations pose a danger to air traffic constitute a red herring designed to hide the real issues involved since it is not the intention nor the desire of micro power broadcasters to interfere with air control signals. The most likely point of interference would be with TV channel 6 or 7, and this can been resolved with simple filtering techniques.

Until the Federal Communications Commission recognizes the legitimacy of micro power broadcasting as a protected free speech activity and a basic human right we will continue our campaign to reclaim the airwaves by encouraging massive electronic civil disobedience. Let a thousand transmitters bloom.

A joint press conference and demonstration of support for Micro Power Broadcasting will be held on Tuesday, December 14th. outside the 9th Circuit Court of Appeals starting at 12 noon.

NATIONAL LAWYERS GUILD
COMITTEE ON DEMOCRATIC
COMMUNICATIONS

One Sansome Street, Suite 900
San Francisco, California 94104
(415) 705-6464

FOR IMMEDIATE RELEASE For more information,contact:
November 30, 1993 Peter Franck

"U.S. COURT OF APPEALS PUMPS UP THE VOLUME"

In an historic move, the U.S. Court of Appeals has ordered the Federal Communications Commission to address the issue of whether Americans have the right to broadcast from their own "micro" radio stations. The case of William Dougan v. the United States of America and the U.S. Federal Communications Commission will be heard by the Ninth Circuit Court of Appeals at 121 Spear Street, 4th Floor, San Francisco on Tuesday, December 14, 1993 at 9:00 a.m.

Dougan has been fined $17,500 by the FCC for broadcasting from his Phoenix, Arizona backyard with a one-quarter-watt trasmittor, which the FCC claims violates its regulation outlawing FM radio broadcasts of under 100 watts. In a catch-22, the government requires a license to broadcast, yet its regulations state that no license shall be granted to such stations under 100 watts.

The National Lawyers Guild's Committeee on Democratic Communications (CDC), has spearheaded the fight for peoples' right to utilize radio as a means of grassroots communication. Peter Franck, an attorney and CDC member, has likened micro radio to the leaflets and pamphlets of another era. "Micro radio is the pamphlet of the 90's and beyond," Franck declares.

Briefs in the Dougan case raise the Constitutional issues of First Amendment freedom of speech and prior restraint. There is also a Fourteenth Amendment equal protection argument, which the court did not address in its special order, in that most citizens are unable to afford the $100,00 to $200,000 required to broadcast with 100 watts.

While the government had based its brief before the Court of Appeal on technical licensing violations, the court has ordered the parties to address the specific Constitutional issues

in a supplemental brief.
Members of the CDC are representing local micro radio practitioners in San Francisco and Berkeley facing the same charges as Dougan. Luke Hiken, the attorney for Free Radio Berkeley and San Francisco Liberation Radio, commented on the Court of Appeals' order: "The CDC and Free Radio Berkeley and San Francisco Liberation Radio are pleased that the court has seen fit to question the FCC's total prohibition of micro radio broadcasting. The court order reflects an awareness that the FCC appears to have totally exceeded its authority as a regulatory agency and, instead, has come perilously close to being an arm for government censorship--an institution which serves to stifle democratic communication."
The court's ruling in the Dougan case will have a major impact on the outcome of these cases and on the right of Americans to communicate with their fellow citizens.

I recently saw a blurb in _Radio World_ saying that political satirist Chris Manion would be a regular feature on "Floyd Brown's Talk Back to Washington." I've never heard the show, but the piece said it debuted in Oct. on 24 stations. Anyone have a station list? I'd love to listen.

John Records Landecker is back in town. After a self-imposed exile to Cleveland for a year or three, he returned as the morning man at Oldies 104, WJMK, as slap-happy as ever, but unfortunately confined by his station's 10-commercial-free-songs-in-a-row format of the same 114 oldy songs. (Kind of like the station in the movie _Groundhog Day_.)

I don't listen or I'd have more details. He's probably safe for a while. Word got around fast, the ladies luv him, and JMK's ratings can't go down much further.

Long before WLS became Talk Radio (the voice of Rush) in Chicago, John Landecker was there to tell the truth. So were Steve Dahl and Garry Meier, but that's another story.

Aaron

John "Records" Landecker has a morning program on WJMK 104.3 FM, which
plays oldies from a conservative playlist. WJMK has also featured current
radio programs by other DJs who were popular on the boss top-40 AM radio
stations in the 60's & 70's. When Larry Lujack left the Chicago airwaves I
think his contract said that he couldn't reappear on another chicago radio
station for a specified period of time, which may be over now.

# 2126. Heard mystery long distance FM station from OZ/NZ

Newsgroup: rec.radio.broadcasting
Date: 1993-12-15 02:31:18 UTC
From: <>
Message-ID: <2elstm$ih8@vixen.cso.uiuc.edu>
Source record: 41764

Here in Melbourne Australia it is Summer, and due to tropospheric ducting (an atmospheric condition that allows long distance FM reception to occur), I was able to pick up some FM statiions from over 900 miles away earlier today. Trouble is, there was one particluar (hit music?)station I couldn't identify on 94.5, and as far as I could tell, it is either in Perth on the other side of Australia (KYFM 94.5), or in Picton, New Zealand (Sounds FM 94.5). I would like to know which station it was.

DETAILS

A few minutes after 7:30 pm Australian Eastern Daylight Time, that's
9:30 pm New Zealand Daylight Time, or
4:30 pm Western Australian Standard Time, or
08:30 UTC

I tuned my radio across the FM band, and noticed an extra station next to another local one. I tried this on another radio with a digital readout and it said that the frequency was 94.5.

Anyway, the station faded in and out, and played a dance song, I think it was 'All That She Wants' by Ace of Base. After a while, that station faded out and another station faded in, featuring a talkback show with the compare quizzing the (female) caller.

This station faded out and the music station faded back in again, but now it was playing another pop/dance song, 'The World is Turning Right' by Yothu Yindi. The two stations faded in and out in turn for a while, then they disappeared. After a few minutes, the talkback station came back, but the music station didn't, and I haven't heard the music station since.

After awhile, I identified the talkback station as 94.5 ABC Regional Radio in Lismore, New South Wales, over 900 miles (1400 Km) away. However, when I tuned to other parts of the FM band around 8:00 pm, I picked up many other stations from the same area (Northern NSW and south-east Queensland).

I picked up ABC Fine music on 95.3, also from Lismore. On 90.9, I picked up SEA FM from the Gold Coast, about 90 Km (55 miles) south of Brisbane. I also picked up other ABC stations on other parts of the dial, 4CRB on 89.3 from the Gold Coast, and 2NCR on 92.9, from Lismore. I even picked up a station on around 99-100 Mhz that could have been an ABC Radio National station from the area, or it could have been 4AAA from Brisbane.

After another 5-10 minutes, the stations all faded away and I haven't heard them since.

I have practically all of it on tape.

WHAT IS THE UNIDENTIFIED MUSIC STATION ON 94.5?

As far as I know, it could only be one of two stations, both of which are over 1500 miles (2300 Km) away! They are:

94.5 KYFM Perth, Western Australia
94.5 Sounds FM, Picton, New Zealand

The station sounded like a hit music station. As far as I know, KYFM is is an older people's station, so it surely wouldn't play Ace of Base and Yothu Yindi. Or could it?

QUESTIONS

* Did KYFM change its format recently to a hit music format?
* Based on the above music, is it likely to be Sounds FM in NZ?
* Are there any other stations on 94.5 in Australia or New Zealand?
* Did anyone else in the Australia/New Zealand notice any long distance reception at this time

Please reply by email and I will summarise.
Thanks in advance

P.S. This effect might happen again same time tomorrow, or it may not. You might also want to try around Sunrise as well.

I used this technique for getting a cheap SW radio to pull in some stuff. It worked well - I used it as an ANTENNA instead of a ground, though. You should buy one of those circuit testers that you plug in to an outlet to see if it has an open or hot ground - costs about $6. If it tests OK, I say use it if you have nothing else. Noise wasn't a problem for me because I usually did this late at night when nothing was going on.

## 2128. Computer-Controlled Radio

Newsgroup: rec.radio.broadcasting
Date: 1993-12-15 02:31:20 UTC
From: Robert Carpenter <rc@cmr.ncsl.nist.gov>
Message-ID: <2elsto$ihb@vixen.cso.uiuc.edu>
Source record: 41766

Almost all amateur radio transceivers now have computer control. I suppose that the receive-only versions also do. These transceivers generally receive from 100 kHz (or thereabouts) to 30 MHz, with no breaks. They never have FM broadcast reception. Various IF bandwidths are standard/optional.

USE OF THESE TRANSCEIVERS FOR >>TRANSMISSION<< REQUIRES AN APPROPRIATE CLASS OF AMATEUR RADIO LICENSE.

They are not cheap, starting in the vicinity of $800, maybe less for any receive-only versions. Weel-known manufacturers are ICOM, Yaesu, KENWOOD (in the USA, TRIO elsewhere).

He was at Power 108 in Cleveland for a couple years. Did the morning show
with Maria Farina, I think 1989-1991 or something like that. I believe he
also did "Open House Party" under the name John Garabidian, which was
syndicated by Westwood One and originated from Power 108. (It sounded like
the exact same voice...)

The RTA buses used to have "CleveLandecker" written all over them... :)

Quoted From: cpaulus@clark.net (Chris Paulus)
>Question: I heard this th1s moring when I switched
>between the two frequencies...104 is
>simolcasting 106.5 here in Baltimore, MD.

When I first read this post, I didn't believe it. Just figured it was some kind of freaky frequency shift. But, I checked it and it's true. They are even announcing that "The two stations have merged" and that 104 will have a new format soon. However, they didn't say what the format will be.

I have a few questions ...

Isn't it illegal for one company to own two FM's in the same market?

Isn't it illegal for two FM's in the same market to simulcast?

What is the purpose of two stations in the same market simulcasting?

Why are they giving only the station I.D. for WWMX (Mix 106) and not giving the WVRT (Variety 104) station I.D. top of the hour (at least I didn't think I heard it)?

Jeff

# 2135. WWMX simulcast on 104.3 Baltimore

Newsgroup: rec.radio.broadcasting
Date: 1993-12-15 02:31:46 UTC
From: testnet!pr@pegasus.att.com
Message-ID: <2elsui$ij9@vixen.cso.uiuc.edu>
Source record: 41773

As Chris Paulus noted, Baltimore's WWMX-106.5 is
being simulcast on the former WVRT-104.3 (once
a good top 40 station, B-104, but I digress).

According to a call to the old WVRT phone # (410 466 9272)
which is answered "Capitol Broadcasting, how can I help you"
Capitol bought WVRT and is simulcasting. The woman gave
me a phone number to call for more information:
410 481 9993.

Dialing this number gave a recording repeating that
Capitol bought WVRT from Scripps-Howard and that the
simulcast will continue until January first, when
"a new music format" will be announced.

I take that to mean a change from the Adult Contemporay Mix.
I don't necessarily take it to imply "new music" ie "new wave"
"alternative" "modern rock" although it would be nice...
sort of a top 40 / modern rock mix like Z-100 in New York is doing.

I'm not surprised to hear that the "mix station" has taken over
the "variety station". When I was in the Baltimore area in April, each
station was using the phrases "mix" and "variety" in their self-promotions.

10.WSSH-99.5 FM "Easy Favorites of Yesteday and Today. WISH 99.5"(soft AC)

In 25-54 group :

1. WMJX-106.7FM
2. WBMX-98.5 FM
3. WBCN-104.1 FM
4. WODS-103.3 FM
5. WXKS-107.9 FM
6. WBOS-92.9 FM(Soft Rock)
7. WBZ-AM 1030
8. WZLX-100.7FM(Classic Rock)
9. WRKO-AM 680
10. WSSH-99.5 FM

* After 2 full ratings periods, the undisputed winner of the country music race is Fairbanks' WCLB-105.7FM. Greater Media's WBCS-96.9FM is distant second and hurting...

* A local radio scribe predicts that 3 major FM signals - Ardman's WJMN-94.5FM, CBS' WODS-103.3FM and Fairbanks' WCLB-105.7 - might have new owners come 1994. Also, 3 distant FMers - WAAF 107.3FM(Worcester,MA), WCGY-93.7FM(Lawrence,MA), and WLYT-92.5FM(Haverhill,MA) are all possibly available...Major FM shoppers are : Westinghouse(WBZ-AM and soon-to-be-owners of WEEI-AM), American Radio Systems(WRKO-AM,WHDH-AM and WBMX-FM) and Pyramid Broadcasting(WXKS-FM,WXKS-AM)...

* Howard Stern should finally be heard in the mornings come 1994(or at least by the start of the most important Spring rating period)... When he takes over FOX's late-night spot, Infinity will go to the bank with its high-visibility personality jock...Charles Laquidra should be retiring from the Boston air soon and Stern's emergence as the savior of the Boston's legendary rock radio station will make things quite

intersting on the FM side... WBCN sources and Charles himself keep planting stories(all true) on his upcoming retirement in the local press as to keep the listeners ready for the BIG change...And the change is in the air...

* The voice behind the new WBZ stagers/intros is no longer the exclusive voice behind VH-1...VH-1 has a new kinder, gentler voice thesedays...:-)
* I hope when WBZ owners finally take over troubled WEEI-AM, Eddie "I in 'EEI stands for I" Andelman will be retired from Boston radio for good...

The closest to what you want would be to take a AR3000 programmable receiver (a great radio - sensitive and selective) and mofify for stereo FM and stereo AM. You can tap off of the IF to a single-chip stereo demod circuit for stereo (have an x-y scope multipath output to boot).

The AR3000 has a super computer control package - Scancat - and offers a built-in spectrum display mode. Neat...

# 2139. Duopoly question

Newsgroup: rec.radio.broadcasting
Date: 1993-12-17 22:41:12 UTC
From: "James D. Morrow" <3X7RHRS@CMUVM.CSV.CMICH.EDU>
Message-ID: <2etci8$aqv@vixen.cso.uiuc.edu>
Source record: 41777

The question was asked in a earleir post if it was illegal for one
company to own two FM stations in the same market. First it depends on
what size of market the stations are located in. In 1992 the FCC eliminated
the doupoly rules for radio. Currently, a single owner may own the following:
In market with 15+ stations..four stations, 2 AM and 2 FM not having more
than a 25% combined audience share.
Markets with 7-14 stations...3 stations, provided they are not all of the
same service.
Owners in small markets may own one AM and one FM.
Any Local Management Agreement is considered ownership.
Baltimore would of course allow 4 stations to be owned by the same owner.
There are many reasons, both economical and programming, why a owner would
acquire more stations. This is happening in many markets around the country and
is one of the prime causes of the loss of jobs in the radio industry. While I
am not faulting group owners for doing this, I do believe that it is a fact
that most people choosing radio as a career should be well aware of.
In the future, the duopoly rules for TV might also be eliminated.

With all the DX tests scheduled last weekend, I decided I HAD to make some time for mediumwave (AM) DX. I was not disappointed. Despite only spending about two and a half hours at the dial, I logged eight new stations. The last time I logged eight new ones in a day was January 5, 1992!

Loc: Saint Louis, MO, USA
Equipment: Sony ICF-2010, barefoot

num call freq yy mm dd CST location
==========

844 WDFB 1170 93 12 04 2355 USA KY Danville
DX Test: good, Morse Code IDs over/under HJNW in KVOO null.
This DX Test was run late; I believe it was scheduled for
2300-2330 but it was not noted then. Later check produced
this code ID only. Colombia was a real problem; really
rolling in tonight //810 which was positively local like
at times.

845 WEKY 1340 93 12 05 0000 USA KY Richmond
fair, legal ID & mention Madison County over/under
unneeded WBIW (Bedford, Indiana) full data s/off while
looking for KXXY DX Test. (Drum roll...)

846 KXXY 1340 93 12 05 0005 USA OK Oklahoma City
DX Test: fair briefly, Test Tone and lower pitch Morse
Code IDs o/mess of stations, then gone for good. In 16
years of serious BCB DX, this is my first positively IDed
graveyard DX Test!

847 WLOK 1340 93 12 05 0030 USA TN Memphis
fair atop mess quickly, legal ID by man after promo while
looking for end of KXXY DX Test.

848 WQHK 1380 93 12 05 0100 USA IN Fort Wayne
fair/poor in tight KASP null, call and "The Hawk" IDs
over hour. First station logged through nasty local KASP.

849 YVKS 750 93 12 05 0115 Venezuela Caracas
good in WSB semi-null, local news bites,
"Radio Caracas Radio" between some.

850 CM?? 890 93 12 05 0115 Cuba Where????
good in WLS null, Reloj pips/news, audio cut abruptly
@0118, carrier @0119. S/off or problems?

851 YVLL 670 93 12 05 0120 Venezuela Caracas
strong o/Cuba, WMAQ null, w anncr, AST TCs,
"Rumbos Informativo", music. YV's on 670, 750, 780 (Coro)
strong tonight.

--- KSD 550 93 12 05 0205 USA MO Saint Louis
local, running a DX Test. Continuous Morse Code IDs,
test tones, verbal IDs, mentions International Radio
Club of America, etc. Went nondirectional at 0215 CST.
Of course, unneeded but interesting nonetheless.

Only disappointment was NOT getting the WGEA DX test - it may not have
run; anybody hear it?

73 and Good DX,

Earl Higgins

From: twl2@po.cwru.edu
Message-ID: <2etcia$ar2@vixen.cso.uiuc.edu>
Source record: 41779

The expanded AM band was open to current AM licensees' to file a intention
to operate at 10 KW ND day and 1KW ND night until 7/1/93. At this time
the FCC is ranking the stations that did file in preference to reduce
interference on their current channel and their intention to broadcast
in AM Stereo. Results expected the second quarter of 1994. Selected
stations would simulcast on their current channel and the new allocation
for a period of up to five years, the old then abandoned channel would
not be released. Directional stations nearby (co-channel, first adjacent,
etc.) may file at that time to fill in coverage under more stringent
interference rules.

I am investigating the feasability installing a low power AM broadcast station for use to disseminate emergency and other information to the employees at my company. The company is situated in the foothills of a metropolitan area and has a campus -like setting that spawls over many acres.

I have heard other Traveler Information service stations located directly below and above (i.e. 530 & 1610 Khz) the AM broadcast band , especially near airports and forest areas.

Does anyone on the net have experience with these stations?
Is a license required?
Equipment suppliers?

Thanks in advance

Are there any pirate radio stations in the Sacramento Area?

Note: I tried posting this from my own home system, but it got lost somehow. My system does not support "moderators" for posting, and thus sent the message directly onto the newsfeed instead of to the moderator. I use UNIX for most stuff, but the "postnews" program does not work, thus I have to have WAFFLE under DOS to allow users to post news articles, and WAFFLE does not support moderators.

>either way it's pretty good)
>
VHS hi-fi decks work perfectly well for this purpose. Not CD quality, but certainly better than cassette. Beta decks are no longer in production.

There is no quality difference between 2 hour & 6 hour speed. However, tapes made at the 2 hour speed are more likely to play back properly on another deck. If you're playing back on the same deck, use the 6 hr. speed. It's actually cheaper than cassettes.

# 2148. WBZ's "50,000 Watt" ID

Newsgroup: rec.radio.broadcasting
Date: 1993-12-17 22:42:00 UTC
From: SEDV1.acd4.acd.com!jwg@acd4.acd.com
Message-ID: <2etcjo$asd@vixen.cso.uiuc.edu>
Source record: 41786

I happened to think about it this morning, and dialed up 1030 to hear WBZ's "50,000 Watt" ID. Caught it at 7:00. My reaction: Sounds self-congratulatory and reminds the listener of nothing that would encourage more listening. "Wow, WBZ broadcasts at 50,000 watts, I'll listen to them because of it!" I think not!

Just after the ID, some station in Corpus Christi, TX signed on and blasted WBZ out of the sky.

Bonneville International's takeover of KCMO(AM) continues
with Bonneville's decision not to renew the contracts of two talk show
hosts.
Bonneville, the long-time owner ofKMBZ(AM) and KLTH(FM), bought
KCMO-AM/FM from Gannett Co. earlier this year. Both KMBZ and KCMO are
news/talk stations.
KCMO general manager Ron Carter is quoted in the Kansas City Star
as saying the contracts of morning show host John Boss and midday
host Dave Dawson will not be renewed.
Carter told the newspaper,
"We're just wanting to head in a little bit different direction.
We don't exactly have the direction -- we can't tell you names or
addresses or anything -- but it just didn't make sense to renew a
multiple-year contract and we just took the option to inform both
of them frankly that we would not be taking those options.
The only talk show host remaining on KCMO after Bonneville's
purchase will be long-time KCMO afternoon personality Mike Murphy.
Carter said Murphy would still be with the station after the
start of the year.
Dawson told listeners about his impending departure last week
on his talk show. Boss has kept quiet about it until now, but he
told the newspaper that he would be gone from the station before
the end of the year. Boss said Dawson might leave a few days
before Boss does.
(Powers/frequencies: KCMO, 810 kHz, 50 kW days, 5 kW nights, DA-N.
KMBZ, 980 kHz, 5 kw day/night, DA-N.)

Message-ID: <2eu8l8$dn4@vixen.cso.uiuc.edu>
Source record: 41788

A recent post concerning reception of FM-band signals from New Zealand in Australia proposes tropospheric propagation as mechanism. I think Es (Sporadic E) propagation is far more likely. It is most common in the late Spring and summer, with a lesser peak at opposite time of the year. The optimum distance is almost exactly the 900 miles quoted in the post. For more information concerning Es propagation on the FM broadcast band, I refer you to "Eleven Years of Sporadic E", by Pocock and Dyer, in the March 1992 issue of QST, the American amateur radio magazine. This article reports Pat Dyer's many years of almost continuous monitoring of the FM BC band. The analysis of result is reasonable, except that the 5-day cycles are viewed sceptically by many.... Note that the months shown in the article apply to the Northern Hemisphere; add six or subtract six months for OZ / NZ .

Send me e-mail if you can't find the mag.

A previous poster said...

>>I still am having a problem with my announcers mispronouncing names during
>>our classical music programming. I have purchased a Websters Biographical

I have what may be the definitive worst audition tape in existence...passed
on from a friend to a friend etc...it may even be a joke tape but I
understand it's serious...

Supposedly a gentleman went into a Midwest public station to audition for a
classical announcing spot, reading a dissertation on how music lovers are
justified in resenting mispronunciation of classical names & terms, however
foreign in origin...then he goes on to slaughter every name in the book, it
is a scream.

He talks of Russian masters Eye-gore Stramovitz and Peter......Toscanini,
French school composers Belzod, Flanck, Saint-Sarens, Bizzett, Massinett,
and Claude Day-osbey, "whose atmospheric use of the old Greek whole tone
scale ushered in a new school" (HUH?!?!), also the "oriator" of G.F.
Hannibel and the romantic grand opera of Karol Marie von Webel...this is absolutely
hilarious, he just keeps going
and going.

Thought you'd like to know of this recording...again not sure if it's a
joke or serious, but it's great.

ORGZ: NONE
This was a post in AIRWAVES #466 concerning a radio combination in
Baltimore (WWMX's purchase of WVRT):

*When I first read this post, I didn't believe it. Just figured it was
*some kind of freaky frequency shift. But, I checked it and it's true.
*They are even announcing that "The two stations have merged" and that
*104 will have a new format soon. However, they didn't say what the
*format will be.

*I have a few questions ...

*Isn't it illegal for one company to own two FM's in the same market?

*Isn't it illegal for two FM's in the same market to simulcast?

*What is the purpose of two stations in the same market simulcasting?

On September 16, 1992 the FCC allowed radio station owners to purchase own
two stations of the same service in the same market under the revision of
the "duopoly rule" in the multiple ownership rules. Here is the text of
the FCC's language:

$73.3555 (a)(1)(i) In radio markets with 14 or fewer commercial radio
stations,
a party may own up to three commercial radio stations, no more than two of
which are in the same service (AM or FM), provided that the owned
stations, if
other than a single AM and FM station combination, represent less than
50
percent of the stations in the market. (ii) In radio markets with
15 or more
commercial radio stations, a party may own up to two AM and FM commercial
stations, provided, however, that evidence that grant of any
application will
result in a combined audience share exceeding 25 percent will be
considered
prima facie inconsistent with the public interest.
7 FCC Rcd 6406; 47 CFR Ch. 1 (10-1-92 Edition) p. 320.

It is also permissable for stations to simulcast a portion of their
programming under the revised rules:

$73.3555 (a)(1)No license for an AM or FM broadcasting station shall be
granted
to any party (including all parties under common control) if the grant
of such

license will result in overlap of the principal community contour of that
station and the principal community contour of any other broadcasting station
directly or indirectly owned, operated, or controlled by the same party, except
that such license may be granted in connection with a transfer or assignment
from an existing party with such interests, or in the following circumstances:
(2)(i) Where the principal community contours of two radio stations overlap and
a party (including all parties under common control) with an attributable
ownership interest in one such station brokers more than 15 percent of the
broadcast time per week of the other such station, that party shall be treated
as if it has an interest in the brokered station...regardless of the source of
the brokered programming supplied by the party to the brokered station.
7 FCC Rcd 6406; 47 CFR Ch. 1 (10-1-92 Edition) pp. 319-320.

Basic reasons why stations are "duopolizing" and entering LOcal marketing
Agreements (LMAs) is to reduce overhead and increase revenues. I'll be
visiting several of these duopolies in January to interview owners and managers as
part of my dissertation research. Will share some of this information of a
general nature with readers in the future. Hope this answered your questions Jeff.

NONE <S72UKOE@TOE.TOWSON.EDU> writes:

> Isn't it illegal for one company to own two FM's in the same market?

Not anymore.

> Isn't it illegal for two FM's in the same market to simulcast?

Not that I know of.

> What is the purpose of two stations in the same market simulcasting?

Well, in Columbus, the owners of radio station WWHT in Marysville
(about an hour north of Columbus) started simulcasting over WTLT in
Circleville (south of Columbus) because the signal from WWHT isn't very
strong and they had trouble reaching the entire market. There may be other
reasons.

However, I believe you yourself said that they were going to change the
format on WVRT, so the simulcast is probably a temporary situation.

> Why are they giving only the station I.D. for WWMX (Mix 106) and not
> giving the WVRT (Variety 104) station I.D. top of the hour (at least I
> didn't think I heard it)?

well, legally speaking they should give each id on the appropriate frequency,
but if they're simulcasting and they're going to get rid of WVRT anyhow,
perhaps not... getting back to the Columbus example, they give the calls and
frequencies of both stations at the top of every hour, but then they are not
planning on making any changes to either station.

No, within the last couple of years the FCC changed the rules
and now allow one company to own 2 FM stations AND 2 AM stations
in the same market.

>
> Isn't it illegal for two FM's in the same market to simulcast?

Don't know about that but suspect owners have that choice if that's
what they want to do with their stations.

>
> What is the purpose of two stations in the same market simulcasting?

Maybe there is interference blocking the signals in some areas so
by sumulcasting from different locations they can reach more
listeners.

The station just signed. The I-man was not on the air this
morning and will not be on the air until 3 January 94. (according to
the station).

Rob

# 2158. Imus in Portland/WVNJ-1160 on

Newsgroup: rec.radio.broadcasting
Date: 1993-12-18 06:42:12 UTC
From: attmail!prmount@pegasus.att.com
Message-ID: <2eu8o4$do4@vixen.cso.uiuc.edu>
Source record: 41797

Imus in the morning will be joining WZAN-970 Portland Maine
starting on January 3. He will be aired live from 6-10 am.

WZAN is formerly WYNZ. The M Street Radio Directory shows
WGAN-560/WMGX-93.1 as also owning the 970/100.9 facility.
A phone number to reach the station is 207 774 4561.

WVNJ-1160 Oakland NJ is on the air. The first day was 12/13.
They are airing Christmas music or International programs
from 6a-6p and gospel from 6p - midnight.

It doesn't look like the station will be an easy target
for DXers to the west of the station, it is highly
directional East to protect such cities as Chicago/Salt Lake
City, and Lakewood, NJ. The daytime signal is almost completely
gone near Union NJ to the South.

## 2159. Landecker and Garibedian

Newsgroup: rec.radio.broadcasting
Date: 1993-12-18 06:42:17 UTC
From: dhs6@po.CWRU.Edu
Message-ID: <2eu8o9$dob@vixen.cso.uiuc.edu>

>
> John Landecker? The Johnny Peshtigo show, nicest man in the universe? A

> In the time that he left & WLS changed formats, I was in my own upheaval, so
> I have no idea what happened to him. So can you Chi-town historians help
> me out?

>>>He was at Power 108 in Cleveland for a couple years. Did the morning show
>>>with Maria Farina, I think 1989-1991 or something like that. I believe he
>>>also did "Open House Party" under the name John Garabidian, which was
>>>syndicated by Westwood One and originated from Power 108. (It sounded like
>>>the exact same voice...)

>>>The RTA buses used to have "CleveLandecker" written all over them... :)

I was in Chicago last weekend and listened to Mr. Landecker spinning Oldies
on WJMK.

I don't think open house party is him (John Garabedian) though. We still
hear that show here in Cedar Rapids.

Speaking of Chicago Legends... I served coffee to Fred Winston this morning
at 4am in the studios of KRNA, Iowa City. He was consulting, and I was fixing
a phase error in the air monitors. My friend thinks he looks like a "fun
cousin of Stalin's". Slight resemblence... VERY cool guy.

Hello everyone,
I thought this group might be able to lend a hand.
I'm here in Ottawa, Ontario and I haven't got
a clue on how to locate a favorite radio show I used
to catch in Boston. The show is simulcast all over
North America and subject to controversy. I think it
comes out of New York city.

Because the show is offensive to many people, I'm not
sure it would be allowed in Ontario. But how could I
find out if it was. Please write to me at:

Matthew Simpson
054340@acadvm1.uottawa.ca

## 2162. New "modern rock" station in NYC area "X107"

From: wa2ise@netcom.com
Message-ID: <2eu8pa$doq@vixen.cso.uiuc.edu>
Source record: 41700

I was back in the NJ and NY Westchester county area around a week or 2 ago,
and found that WRNW Briarcliff Manor changed to "X107, today's rock".
Didn't get the new callsign other than it has an "X" in it.

Gives me something to listen to when WDRE is playing commercials, but
WDRE is a more polished station.

## 2163. Music supply for Radiostations

Hello There from Milano, Italy, and best seasons's greetings to all:

You may be interested to know that between Dec. 20, 1993, and Jan. 2, 1994, our week-days program schedule will be slightly changed to include some old time radio recordings that we have collected during the years, some original not previously aired material, and some we have used in the very first years of IRRS-Shortwave.

Our programs around Christmas and the New year, will also include a special three-part program on the *Beat Generation* featuring original music and interviews on that very special movement dating back to 1950-70, as well as a lot of old time US radio comedy classic, featuring George Carlin, Red Skelton, Rodney Dangerfield, Hudson and Landry, Jack Benny, Abbot & Costello, Arch Oboler, and others.

All that will be broadcasted during our week-day transmissions from 07-22 CET (06-21 UTC), between Dec. 20, 1993 and Jan. 2, 1994, on 7125 kHz Shortwave. On Dec. 24 and Dec 31, our very long transmissions will be continue after 21 UTC, and then until signoff on the following day at 21 UTC. So there might be also a good chance for our distant listeners to catch some of these programmes during the night, since we discontinued our 02-03 UTC transmission recently. United Nations and UNESCO radio programmes will be heard at the usually scheduled times during these two weeks. Our schedule will remain unchanged during Saturday and Sunday operations, for all religious programmes.

With very best wishes to all for a Merry Christmas and a Joyful New Year,

73,

Alfredo

>Does anyone on the net have experience with these stations?
>Is a license required?
>Equipment suppliers?

I think the only way you can do it is with carrier current. While there have been some rules changes allowing low-power AM with true antennas, as far as I know it only applies to educational institutions. The rule is that you can have as much power within the school's boundaries as you like, but it has to drop off to a prescribed level within a certain distance from the campus boundary. Of course, it cannot interfere with any licensed carrier whose contour includes your campus.

Carrier current is much easier to deal with. You put a transmitter in each building, it is "coupled" to the building wiring, which it uses as its "antenna." Run an audio line to each transmitter from your studio facility and you're done. Or, if you're looking to cover outdoor areas, you can bury wire or "leaky" coax which has intentional holes in the shielding to allow the signal to radiate from it. Terminate one end and hook up the other end to the transmitter and off you go.

The equipment runs $1200 to $1500 for each transmitter/coupler set, and falls under part 15 of FCC rules (no license required as long as there's no "real" antenna, maximum signal strength is below some threshold outside the intended coverage area, etc).

There are at least two companies who make the equipment. LPB (Low Power Broadcasting) and Radio Systems, Inc. We use the Radio Systems equipment here at U of P and I have been very impressed with both the quality of the equipment and the knowlege of their staff. RS started out as a LPB dealer, then decided to make their own gear.

One of their bigger installations is the Nike World Campus here in town.

Radio Systems, Inc.
110 High Hill Road, PO Box 458
Bridgeport, NJ 08014-0458
(609) 467-8000

As a rule most of their sales are through dealers, but the Carrier Current part of the business is still direct, since the equipment is custom built (you can specify the frequency you want). Gerrett Conover has been my contact there and has been very helpful over the years.

Sorry I have no information on LPB, but I do know a number of facilities use their gear with good success, as well.

I have no other connection with Radio Systems except as a very satisfied customer...

# 2170. WNCN goes to hard rock format

Newsgroup: rec.radio.broadcasting
Date: 1993-12-19 08:26:45 UTC
From: testnet!pr@pegasus.att.com
Message-ID: <2f1385$il3@vixen.cso.uiuc.edu>
Source record: 41708

GAF's WNCN-104.3 New York City has switched from a classical format
to hard rock / heavy metal as of midnight, Friday night December 17.
Sources of the tip included Inside Radio and WINS radio (I heard it
from people who heard it from sources).

New York has been without a hard rock station since WZRC-1480 dropped
SMN's Z-rock on May 27, 1993. I would expect the new station, WAXQ,
"Q104.3" to do better than WZRC because:
a)it's FM. Does the target audience know AM exists?
b)it has a solid signal in the entire metropolitan area, while
WZRC is weak, distorted, and/or interfered with in many
of the suburbs due to its directional pattern at night.
c)WZRC at best had a 0.3 rating. It wouldn't take much success to
beat a 0.3!

So far they are doing AC/DC A-Z. They've also had some promos indicating
they'll be playing the hard end of "alternative" rock, ie Pearl Jam,
Stone Temple Pilots, which I never thought of as alternative anyway,
but MTV 120 Minutes and New York's Z-100 seem to think so.
The station is reportedly being consulted by John Parikhal, and radio
people seem to think the format is here to stay, rather than a smokescreen
for something else (classic country, fulltime modern rock, FM News/talk, etc)

What follows is a transcript of the announcement made by Randy Bongarten
after the last classical piece was aired at 11:45 pm.

"Symphony #45 in F sharp Minor, the Farewell" by Franz Josef Haydn
(3 1/2 minutes of spots)

"This is Randy Bongarten, President and General Manager of WNCN
Tonight at 12 midnight WNCN is permanently leaving the air,
and this radio station will no longer broadcast
classical music. We are deeply aware that WNCN's rich
tradition in classical music will be missed by many in
in the New York area. The decision to make this change
was very difficult, and only arrived at after much
deliberation and consideration. It is clear that the needs
of the New York metropolitan area radio audience have changed
over the years. The audience for classical music, which
was never large, has been eroding, and its diminishing size
can no longer support the number of existing classical stations.
At the same time, new music has been developing, that hundreds
of thousands of people want to hear, but is generally
unavailable on the radio. It is to this unserved audience,
listeners of current rock, that the new radio station, Q104.3
will address itself. There are two other major radio stations

that air primarily classical music WQXR and WNYC. These are
both excellent radio stations, and serve the classical music
audience well. There are several smaller stations which also
program classical music. WNCN's departure may even enhance
the chances for success of these remaining classical
music stations. On behalf of the entire staff and management
of WNCN, I would like to to thank you for your loyal listening.
You may find classical music on your radio dial by tuning to
WQXR at 96.3 FM or to WNYC at 93.9 FM. Thank you.
(62 seconds of silence, 12 minutes of clock ticking)
3:39 ticking starts break 12:33 resumes to 15:33
"And now we say good bye to WNCN New York, (guitar riff) and
hello to WAXQ-104.3 New York's pure rock. The new Q104.3"

(Then the AC-DC fest began).

Paul Richards
testnet!pr@pegasus.att.com and yes, I taped it!

## 2171. New rock station in NYC?

Newsgroup: rec.radio.broadcasting
Date: 1993-12-19 08:26:54 UTC
From: jmora@netcom.com
Message-ID: <2f138e$il4@vixen.cso.uiuc.edu>
Source record: 41709

WNCN has flipped to rock, with the handle Q104.3. As i'm not in NY,
i have my spies listening :-)

WNCN was classical, but with a 'commercial' approach... playing movements
instead of complete pieces, an upbeat morning show, and the like.
WQXR, the New York Times owned station, is the sole 'concert' classical
left.

# 2172. Santa Sighted In Boston (And it wasn't Scott).

Newsgroup: rec.radio.broadcasting
Date: 1993-12-19 08:27:09 UTC
From: Paul_Munafo.LOTUS@CRD.lotus.com
Message-ID: <2f138t$il7@vixen.cso.uiuc.edu>
Source record: 41710

During the past two weeks, a man dressed as Santa Claus has been sighted throughout the city of Boston handing out Christmas cards containing $50 bills, with the script saying "Yes Massachusetts! There Is A Santa Claus!". After eight days the Santa called a press conference to announce his identity. As it turns out, Santa ended up being WAAF-FM's morning man Greg Hill. The station, in a desperate attempt to win the favor of Boston radio listeners, decided that the publicity stunt, which cost the station ten grand, garnered about a quarter million dollars worth of advertising.

'AAF, a heavy metal/AOR station regularly places at the lower end of the Boston ratings scale, and with good reason. They are located in Westborough MA, licensed to Worcester MA, and are trying to be a major player in the Boston market with a weak signal and very little promotion. WAAF currently sits at 22nd in the market. (according to the Boston Globe)

The response to this promotional stunt has been varied at best. The majority of the public think it was a nice idea, done very poorly. Which is how 'AAF has usually done things. It's not a bad station musically, but their jocks tend to be very juvenile. Their afternoon drive talent (used loosely) refers to herself as "The Creamcheese Bitch".

In the city of Worcester, where AAF is licensed to, the mayor has criticized the station for ignoring the less fortunate there. According to Mr. Levy, WAAF "..is not regarded in the upper echelon of this community." He goes on to list other Worcester stations (WSRS, WXLO, WTAG) as major contributors to various charities in Worcester, but says that 'AAF has never been one of them. The opinion in Worcester is that WAAF has always been "a Boston wannabe!"

Just some info I thought I'd pass on to Airwaves!

## 2173. Texas notes (the Ticket, Amarillo shifts)

>Yup, I'm looking at one at this moment. It's a Mitsubishi HS-U57.

I've never seen a HiFi VHS without record level controls,
separate for left and right. These sometimes/sometimes don't
have any effect on the linear track(s).

Quality of audio recorded on the linear track(s) varies wildly
from one HiFi VHS to another. I've been impressed with the
linear performance of a Magnavox, and dismayed by the linear
performance of an Akai, which has much nicer features otherwise.

# 2175. Audio recording with HI-FI VHS VCRs

Newsgroup: rec.radio.broadcasting
Date: 1993-12-19 08:27:25 UTC
From: Jay Teutenberg <jteutenb@bigcat.missouri.edu>
Message-ID: <2f139d$ila@vixen.cso.uiuc.edu>
Source record: 41713

In airwaves #467, someone wrote to use your hifi vcr on 6 hour mode,
but I dont agree, I hear a definite difference in 2 to 6 hour mode.

Also, about using hifi vcrs, there are advantages over cassettes, yes.
The first is higher quality reproduction (when the heads are clean).
Second is the real time counter. It enables you to pick 2 or 3 cds
which add up to just under 2 hours and 3 minutes, which means less
end of tape wastage or cutoff problems. 2 hours of tape also means
that you dont have to jump up every 45-50 minutes to flip the cassette.
Third, its programmable, so if you want to dub from the radio when
your not home, itll do it. Fourth, since its got a remote control,
you can be even lazier on your couch.Fifth, it saves money by being
multipurpose, (movies/audio), and then you dont have to buy the
overpriced cds, you just borrow and tape from freinds.

The downsides of hifi vcr audio recording is CLEANING THE HEADS.
In general the average person doesnt watch 2 movies per day, but if
your tape collection is on vcr, its not hard to listen to 2 or more
tapes per day. If you are renting movies, they will dirty up
your heads even faster. (porno movies are probably the worst).
Rental movies also can damage your heads permanently if they have been
'eaten' by a previous customer. I have cleaned my heads 4 times in
a year, and thats not enough. I use swabs and some cleaning fluid
from MCM, pulling off the case and manually cleaning all the surfaces.
Head cleaning tapes are not as good. When a hifi deck has dirty
heads, it drops out of hifi mode into stereo mode, which is
extremely annoying. Clean heads are much more important on a
hifi vcr. hifi dropouts are the main drawback.
Secondly, there are no level input knobs, so if you want to record
at levels other than what cd is recorded at, you have to put a
cassette inbetween the cd player and vcr, which means a loss
in sound quality. Sometimes, cds are recorded too loud and you have to
use a cassette deck, but not very often. The third drawback is
deteriation. Cassettes seem to maintain quality longer.
Fourth drawback is you cant play vcr tapes in your car.
(I am not crazy about cd players in cars either, they mess up alot).

Unless you are making a temporary recording, I would stongly
recommend using 2 hour mode. If its worth recording, its worth
2 hour mode. I use maxell hgx-gold from sams club.

It's significantly cheaper than cassettes, and much better
quality, but if you're being paid to record then I'd recommend
against the 6 hr speed, especially the last 45 minutes or so
of the tape. HiFi dropouts are much more common at the lower
speeds, and even one dropout will make your recording look much
less professional. (louder, hissier: shional)

# 2177. AIRWARE (tm) , The PRODUCER (tm)

Newsgroup: rec.radio.broadcasting
Date: 1993-12-21 08:29:02 UTC
From: coreyd7470@aol.com
Message-ID: <2f6c4e$hnc@vixen.cso.uiuc.edu>

I've developed a few applications to help out radio personalities. One is called AIRWARE (tm) and the other is The PRODUCER (tm). If you'd like a demo of these, please feel free to download them from my BBS: 804-227-3348.
The Demo file available on my BBS is about 180,000 in size.
The BBS is 24 hours. AIRWARE (tm) and The PRODUCER tm) are both for IBM/TANDY compatibles only.

AIRWARE (tm) is a showprep environment which offers a built-in Comedy Calendar and Comedy Library. Also a "brainstorming area", phoners section, personal library, and other utilities to create show prep, bits, etc.

The Producer (tm) is designed to help a personality or producer keep track of where bits are, what kinds of bits they have (recorded, scripts, etc.) contest pigs, prizes, upcoming appearances, technical phone numbers, staff phone numbers, etc.

# 2178. West Coast Weekend reborn! West Coast Live

Newsgroup: rec.radio.broadcasting
Date: 1993-12-21 08:29:08 UTC
From: stoll@OCF.Berkeley.EDU
Message-ID: <2f6c4k$hnd@vixen.cso.uiuc.edu>
Source record: 41716

Hot ziggity -- West Coast Weekend with Sedge Thompson
is being reborn as WestCoast Live.

It's one hotdamn live radio theatre broadcast from
the San Francisco wharf, with local music, gossip, and interviews.
Apparently there was a parting of the ways between the show and
KQED radio, so it'll now be heard on KALW radio, 91.7,
Saturday mornings from 10 AM to Noon.

They're net-active, too: send a saturday morning adventure to
sedge@netcom.com. Better yet, come over to the auditorium
and catch the show live (and maybe a bagel).

Here's the best part -- it's now on the NPR Satellite, so other radio
stations can carry it. In the past, the only way for
people in the hinterlands to discover the magic of the
digital optical aquaphones was to swim over to San Francisco
Bay and climb up the pier. Now, thanks to the wonders of
vacuum tubes, radio waves, and modulation transformers,
West Coast Live will show up around the continent.

Last year, they interviewed me on the show (scary? you bet!).
Sure enough, the folding chair collapsed on the air and Sedge
Thomson had to work his way around this on-stage disaster.
Conducted the interview while I was flat on my back. You don't
get that on pretaped shows.

Saturday mornings find my radio tuned to West Coast Live.
The best reason to own a radio!

-Cliff Stoll stoll@ocf.berkeley.edu
(and for tasty rf in Buffalo, tune to WBFO. But that's another story.)

## 2179. Some questions...

I came across an entry for the ART MDC-2001 Stereo Compressor in a copy of Musician's Friend magazine, and some of the features listed I am familiar with, such as noise gating, de-essing, siblance, and peak limiting. However, I am not familiar, other than just hearing of them, with a couple of other terms listed. What is referred to by "expansion" (expansion of WHAT? dynamic range? the stereo image?), and signal enhancement exciter? And, what is the difference, if any, between de-essing and siblance correction? Thanks in advance for your help.

Please mail me back at: jcsmouse@mailhost.ecn.uoknor.edu

In <2f1385$il3@vixen.cso.uiuc.edu> testnet!pr@pegasus.att.com writes:

>GAF's WNCN-104.3 New York City has switched from a classical format
>to hard rock / heavy metal as of midnight, Friday night December 17.
>Sources of the tip included Inside Radio and WINS radio (I heard it
>from people who heard it from sources).

Does anyone have any idea how they managed to do this without any advance
warning?

As far as I can see they had to arrange to:

1) Hire a new PD, announcers, etc.
2) Acquire a new record library
3) Sell commercial time on the new station
4) Apply for a call letter change from the FCC

How could all of this possible have been done without someone in the media
figuring out what was happening and leaking the story?

Jay Teutenberg <jteutenb@bigcat.missouri.edu> writes:

>Also, about using hifi vcrs, there are advantages over cassettes...
>...Second is the real time counter. It enables you to pick 2 or 3 cds
>which add up to just under 2 hours and 3 minutes, which means less
>end of tape wastage or cutoff problems....

Very few consumer VCR's have real-time counters. The professional ones
have an extra stationary head which can read the control track when the
tape is forwarding/rewinding (when it's not wound around the main
rotating head). Home models just have a counter on the take-up reel
spindle which is anything but accurate.

> ... I have cleaned my heads 4 times in
>a year, and thats not enough. I use swabs and some cleaning fluid
>from MCM, pulling off the case and manually cleaning all the surfaces.

Don't use cotton swabs on the heads. The actual heads are so small thay will
catch on the cotton fibers and cause problems. Chamois sticks or chamois
cloth should be used, dipped in 90% isopropyl alcohol.

>Head cleaning tapes are not as good.

Very true, they're usually abrasive, and will help your short-term problems,
but will destroy the heads over time.

>Secondly, there are no level input knobs, so if you want to record
>at levels other than what cd is recorded at, you have to put a
>cassette inbetween the cd player and vcr, which means a loss
>in sound quality.

Some VCR's have input level control (mine doesn't). I have mine patched
through my cassette deck, not because I want level control, but because
I don't have enough inputs on my receiver. However, I refuse to believe
that the deterioration in sound quality caused by the linear amps in my
cassette deck is even closely comparible to the deterioration in sound
caused by the VCR.

I do agree, however, with everything else Jay writes. I use 2-hour mode if
I want to tape a 2-hour program, and 4-hour mode if I want to tape a 4-hour
program. I re-use tapes, so there is a significant number of dropouts anyway.
I mostly use it as an aircheck, for listening to myself on the radio, and
listening to other people on my station when I can't be near a radio.

While it sounds great at home. I don't think I'd trust using one OTA.

*** VIRUS ALERT *** [Feel free to repost as necessary]

We have just received a warning by fax from Bob Zanotti of Swiss Radio International that the computer diskette containing the latest ILG (International Listening Guide) database produced by Bernd Friedewald in Germany contained a ParB virus.

Bernd Friedewald has been alerted of the problem, and considering Bernd's good reputation there is no evidence of the fact that the diskette might have been intentionally contaminated.

Given the extremely fast service of the Swiss Postal Administration, there are reasons to believe that Bob Zanotti could have been one of the first to receive the diskette, and first to discover the problem. Hope this message get to you on time to take all necessary measures. You have been warned!

(e.g. DO NOT attempt to either read, or write on the diskette, unless you are sure that you got a good copy, or you know how to deal with computer viruses. Contact your nearest computer expert or system administrator for advice or Bernd Friedewald to know if yours is a good copy. In any case it is always a good practice to check every "unknown" diskette with a most recent anti-virus program before using it)

Thanks to Bob Zanotti for the alert!

# 2186. NEW CANADIAN LOW POWER LICENSING POLICY

Newsgroup: rec.radio.broadcasting
Date: 1993-12-21 21:50:30 UTC
From: resystom@web.apc.org
Message-ID: <2f7r36$h5p@vixen.cso.uiuc.edu>
Source record: 41724
Cross-posted to: rec.radio.broadcasting,rec.radio.info

[Note: This was received by the moderator of rec.radio.broadcasting and was felt to be of sufficient intereste to cross-post. Bill]

[In Canada] Non-profit broadcasters have gained an advantage when applying for Low Power radio allotments in congested areas with a new CRTC Policy announced last summer.

Public Notice 1993-95, entitled "A Licensing Policy for Low Power Radio Broadcasting" establishes guidelines for the allotment of unprotected allotments of less than 50 watts ERP. This policy does not affect licensees or applications for protected class allotments of greater than 50 watts.

The Comission initiated a review of Low Power policies in 1991 in response to the growing requests for LP frequencies, especially for non-conventional services in congested areas. The NCRA's comments to the Commission calling for preferential treatment for conventional non-profit services and severe limits on non-conventional services was well reflected in the new policies.

The notice establishes two tiers of priority services for low power frequncies in congested areas. This means that some types of services will have priority over others when the commission makes licensing decisions. The Commission notes congested areas to currently include the Montreal area, Southern Ontario and the lower mainland / Island of British Columbia.

The new heirarchy of service places conventional not for profit radio services (community, campus, native, etc.) at the top of the first tier, followed by originating private broadcasters, local private rebroadcasters and distant rebroadcasters (including CBC rebroads). The second tier will include non-profit public information services (i.e. traffic/weather info services) and commercial announcement services (real estate / talking billboards).

The Commission also established a policy of issuing a call for competiting applications upon receipt of any application for a low power drop in allotment in areas where frequencies are scarce. This will include applications from non-profit broadcasters. The commission noted that, in addition to the priority heirarchy, the duration of the proposed service, the proposed power and the availability of alternate delivery means may be used in assessing competing applications.

The new policy also places a general requirement on all LP licensees to adhere to all existing policies for other services. However, the

Commission notes that individual applications for exemptions
from specific policies will be dealt with on a case by case basis.

## 2187. Expanded band AM rankings are out

Newsgroup: rec.radio.broadcasting
Date: 1993-12-24 01:26:37 UTC
From: twl2@po.CWRU.Edu
Message-ID: <2fdggd$7d6@vixen.cso.uiuc.edu>
Source record: 41725

In a Public Notice dated December 3, 1993 the FCC ranked all AMs'
that applied for the expanded band. Stations were rated according
to the amount of combined day and night interference that would be
removed form the current band if these stations moved above 1610khz.
It is anticipated that around 200 allocations would be made by early
spring 1994. The document is 11 pages long. I will answer individual
requests for ranking of a specific station or whether it applied as
time permits.

## 2188. Comments on the demise of WNCN

Newsgroup: rec.radio.broadcasting
Date: 1993-12-24 01:26:37 UTC
From: slutsky@tesla.njit.edu
Message-ID: <2fdggd$7d7@vixen.cso.uiuc.edu>
Source record: 41726

Since I am not a fan of classical music, I do not feel qualified to comment on the demise of WNCN. Tim Page, classical music critic of New York Newsday made the following comments in yesterday's newspaper. Tim hosted WNYC's "New, Old and Unexpected" from 1981 to 1992.

Some excerpts from the column:

"It is hard to imagine anyone who really loves classical music shedding tears about the demise of what WNCN had become-little more than Muzak for people who were too proud to listen to Muzak. To put it another way, we mourned for WNCN long ago.

The New Hampshire Association of Broadcasters is out with a new book on the 70 year history of broadcasting in the Granite State, written by longtime NH broadcaster Ed Brouder.

I just got my copy last week, and I can't recommend it enough...more than 100 pages packed with photos, anecdotes, and technical details of everything that's ever gone on the air in NH.

I wish every state would put one of these out...

If you're interested, the book is called "Granite and Ether," and is available for $10 plus $2 p/h from the NH Assn of Broadcasters, 10 Chestnut Drive, Bedford NH 03110. Call +1 603 472 9800 for international ordering info.

Also, Bruce Elving's wonderful (if quirky) FM Atlas is now out in its 15th edition. It's $15 all-inclusive this year, from PO Box 336, Esko MN 55733-0336. If I could just find editions 3, 5, and 6, I'd have a complete set myself...

-=Scott Fybush - fybush@world.std.com=-
Satisfied customer and nothing more...

## 2191. Hard Disk Production?

Source record: 41729

I have been using notator on an atari for a few years now, and have recently got to a point where I would like to do radio production work. This means that I have to expand my resources a little beyond MIDI to include some heavy duty sampling for the voice overs.

I have recently upgraded my atari to a mac powerbook 165C. Can anyone recommend software or suppliers/hardwre that I should look at. Four channels wouls be sufficient, and I's like the system to be able to:

Record music beds from CD and allow voice overs with facility to edit out breath, and extend a read to 30 seconds without pitch alteration (if the initial recording is too short)

Use software to add reverb effects etc.

Network to studios to allow presenters to play announcements from a terminal.

ANY suggestions welcome!

90 miles, I believe. There's a big marker at the southernmost point of
Key West that has the mileage on it.

>I assume Cuba radio stations come in
> well in the lower keys.

Cuba radio statious come in well in most of Florida. I don't think
they're limited to 50 KW and they blow your ears off half the time.

> Can anyone let me know which
> stations can be heard? What frequencies? Favorite
> programs/times of day to listen. Much appreciated.

Just tune your AM dial. About 1/3 of the band (I lived in Melbourne, about
200 miles north of Miami) was Cuban. They broadcast in Spanish. I don't
know how much of America they intend to reach using that technique. I
found the MW band there to be really obnoxious... It's always the same
thing - there's a man reading stuff (most likely news) in Spanish, and
in the background there's something that sounds like WWV without the
tones - a tick every second and a tone every minute. All the time. The
same news on 12 different stations. Sometimes there's music, but not
much.

Radio Havana comes in pretty well up here in Ohio...

Wow! What's been the reaction, if any, from the New York press and from classical music fans?
This reason I ask is that WNCN, of course, was involved in one of the more publicized---and quickly reversed---format changes in New York City history in the mid-70's when they attempted to switch from classical to rock. One of you will probably have the details at hand (please correct me if I misstate something!)...but I believe William F. Buckley's Starr Broadcasting purchased the station and changed it to a rock format with the calls WQIV. Protests from the public...pickets, letters, press, and legal action, I believe...forced another ownership change, to GAF which returned the station to classical and its previous call letters, WNCN; GAF may have PROMISED to keep it classical...but you can keep promises in broadcasting only so long.
I loved how the station statement made it sound as if the return of a Z-Rock format to New York was being done as a public service!

# 2196. Osgood for Nordic Track

Newsgroup: rec.radio.broadcasting
Date: 1993-12-24 01:27:03 UTC
From: e-brmbrg@uiuc.edu
Message-ID: <2fdgh7$7dj@vixen.cso.uiuc.edu>
Source record: 41733

Listening to a CBS Radio newscast today, I was surprised to hear a taped commercial for Nordic Track delivered, with a strong endorsement, by CBS News' Charles Osgood (note: Osgood was NOT anchoring the newscast).
Now I know Osgood is primarily a radio "commentator," and that may give him more leeway in the public mind (if not in his contract) to do a commercial. But he has anchored the CBS-TV newscasts before, and has filled in for Charles Kuralt on TV's "Sunday Morning." Assuming he still does these other duties from time-to-time (perhaps he isn't anymore?), these activities take him out of the commentator role.
I find it surprising, therefore, that: a) he would do a commercial at all; b) that he would do a commercial in which he so clearly endorses a product; c) that CBS would permit him to do this; and d) that CBS would permit it to run within its own radio newscast.
Has anybody else heard this, and shared my view that it's surprising, out-of-place, and out-of-character?

YOUNGSTOWN STATE UNIVERSITY

COLLEGE: Fine and Performing Arts/Department of Communication
and Theater
RANK: Assistant Professor/ SALARY: 32,000

MINIMUM QUALIFICATIONS:
Ph.D. required

DATE AVAILABLE: SEPTEMBER 15, 1994

OTHER INFORMATION RELEVANT TO THIS POSITION:
Assistant Professor. Tenure Track. Ph.D. Required. Starts
September 15, 1994. Should be specialist in telecommunication
management, and either audio production or electronic media
performance. Will teach courses in BA/Telecommunication Studies
program. Commitment of liberal education is necessary, a
knowledge of emerging technologies is desirable. Will engage in
academic advisement, program development and other academic
activities. Performance is systematically evaluated on the
basis of teaching, scholarship and university service. Salary
$32,000. Screening of candidates will begin after 2/28/94.

Send letter of interest, resume, official transcript, and names,
addresses, and telephone numbers of three references to Dr.
Alfred W. Owens, Chairperson, Youngstown State University,
Youngstown, OH 44555-3631. YSU is an Affirmative Action/ Equal
Opportunity employer.

YSU is an Affirmative Action/Equal Opportunity employer.

CLOSING DATE FOR APPLICATIONS: Review of applications begins
February 28, 1994. Search will continue until position is
filled.

## 2198. Wanted NPR Star Wars Episodes 1 and 2

Newsgroup: rec.radio.broadcasting
Date: 1993-12-24 01:27:05 UTC
From: jdsb@egr.duke.edu
Message-ID: <2fdgh9$7dm@vixen.cso.uiuc.edu>
Source record: 41736

National Public Radio has been playing Star Wars: The New Hope radio drama here in Durham, NC on Fridays at 7:30 pm. However, I missed the first two episodes. Does anyone have these first two episodes that I could borrow and listen to?

Please respond by email to jdsb@ee.duke.edu.
I'm not sure I've got this to the correct group. Please let me know if you know of a more appropriate group. I have posted this to the triangle, NC area. If it gets out of North Carolina, it is the software's fault.

Sterling

## 2199. Baltimore's Variety 104.3 (Current Status)

Newsgroup: rec.radio.broadcasting
Date: 1993-12-24 01:27:15 UTC
From: cpaulus@clark.net
Message-ID: <2fdghj$7dp@vixen.cso.uiuc.edu>
Source record: 41739

Capital Broadcasting purchased the broadcast frequency of 104.3, formally WVRT, which is no longer on the air as of this writing. To recap, they simolcasted WWMX 106.5 (just up the dial.)

As of midnight on Dec 20, they switched to a 5-song format, with each representing a different music format. Between each record, they're playing a cart with machinery in the background. It says, "Format under construction at 104.3. If you want variety, turn to mix 106.5 now.

The 5 songs are:
"You Light up my Life" -- DEBBIE BOONE (SP?), "Copa Cabana", some rap song, "Achie Breaky Heart", and a Def Leppard hit. This is all comeriial free.

Two questions:
1. Why would they do this? Do they want to get rid of every single listener, thus starting fresh/from the bottom up with a new format?
2. What will be the new format? Does everyone/anyone know what their plans are?

Chris

# 2200. Re: Audio recording with HI-FI VHS VCRs

Newsgroup: rec.radio.broadcasting
Date: 1993-12-24 01:27:16 UTC
From: fybush@world.std.com
Message-ID: <2fdghk$7dq@vixen.cso.uiuc.edu>
Source record: 41738

Ted Young writes that while he enjoys using his hi-fi VHS VCR at home,
he wouldn't want to use one on the air...

Ted, tune in WJIB-AM 740 over there in Cambridge any night after about
6pm. They run their automated beautiful-music off two hi-fi VHS VCRs...
one set to trigger as soon as the first one stops. A cart machine trips
at the top of the hour to place the ID over the music. It's not
high-tech...and it's not very exciting to listen to (all 5 watts of it :-),
but hey, it works. 'JIB's owner tells me he's had almost no reliability
problems with it.

'JIB's CE is known to read this newsgroup (hi Peter!)...he might have more
to add.

From: essmjf@netcom.com
Message-ID: <2fdghl$7dr@vixen.cso.uiuc.edu>
Source record: 41737

Cliff,
I'm told that the new WestCoast Live will be live at 10:00am to Noon starting on January 8, 1994, but that the satellite uplink won't happen until noon. That means the rest of the world won't hear the show live (at least until we can get a live uplink). Call (415) 664-9500 for more information.
Signed, The Lone Liberal

# 2202. Boston RADIO - A YEAR IN REVIEW(long)

Newsgroup: rec.radio.broadcasting
Date: 1993-12-27 10:03:53 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <2fmbu9$fil@vixen.cso.uiuc.edu>
Source record: 41740

1993 was a wacky year in the Boston radio. Here are some major
highlites and lowlites that took place over the past year :
**********

December 18,1992 : WBOS-92.9FM's parent firm,Granum Communications,
agrees to purchase soft AC WSSH-99.5FM from the Noble Broadcasting Group
for $18.5 million. Granum purchased soft rocker WBOS earlier in 1992.

December 18,1992 : FCC commissioners voted 4-1 to grant the application
to assign the license of WZLX-100.7 from Cook Inlet to Infinity Broadcasting.
WZGC-FM in Atlanta and WUSN-FM in Chicago were also included in the same
$100 million purchase. As part of the deal, Infinity signs an agreement
with the FCC that prohibits Howard Stern's show from ever airing on
any of the 3 stations involved in the purchase...

January 11,1993 : Celtics' owned and operated all-sports station WEEI 590AM
began carrying customized newscasts by world's largest traffic-watch
organization - Metro Traffic(now known as Metro Networks). Metro Traffic
reports air hourly from 11am to 6pm.

January 1993 : Soft rock station WBOS-92.9 hires a blues expert Holly
Harris to host its weekly "Blues on Sunday" show from 10pm to midnight...
January 1993 : Rumors about soft jazz WCDJ-96.9FM changing formats began
to circulate as Greater Media was awaiting FCC approval to buy the station
from Emmis Broadcasting for about $13 million...

February 1: Infinity officially takes over classic rocker WZLX-100.7FM.

February 12 : Fairbanks' AC WVBF-105.7FM changes calls and formats and
becomes WCLB-105.7("Hot New Country") featuring tunes by Reba, Dwight,
Lyle,etc...

February 24 : November-January ratings show Group W's all-news WBZ-1030AM
sitting pretty at the top of 12+ audience, Pyramid's CHR/Top 40 outlet
WXKS-107.9 in front in the 18-34 group and Greater Media's AC WMJX-106.7
dominating lucrative 25-54 crowd...

February 28 : Infinity's legendary AOR powerhouse WBCN 104.1FM holds
25th Anniversary bash at Hard Rock Cafe in Boston as Howard Stern's
footsteps are heard around town...

March 1 : Fairbanks begins simulcasting its new Boston country WCLB-105.7FM
on the AM sister station WKOX AM 1200 in Framingham...

March 1 : I make an "exclusive" post to the RRB announcing Howard
Stern's upcoming arrival to Boston....

March 3 : A historic day in Boston radio...Howard Stern's weekday morning show finally makes it to Boston via 13-hour tape-delay on WBCN-104.1FM. The show is heard from 7pm till somewhere after 11pm...WBCN withholds official info on Stern's debut ~10 hours before the first show is to hit the air...

March 5 : Pyramid Broadcasting(WXKS-107.9FM and WXKS 1430AM) and Atlantic Radio(WRKO-AM680,WHDH-850AM,WBMX-98.5FM) terminate a merger deal which was first announced in September of 1992...Pyramid's difficulty in selling Chicago's light jazz WNUA-FM(asking price : $30-$40 million) to raise needed cash killed the deal...

March 8 : Atlantic Radio decides to compete with an all-news authority WBZ and introduces its station WHDH 850AM as the "The Information Station" by adding two all-info programs : "Boston This Morning"(5:30-10am) hosted by a former local TV personality Eileen Prose and "Late Afternoon Edition"(3-6pm) hosted by Rich Shaffer. Former WBZ program chief and WHDH program manager David Bernstein was the mastermind behind the move... Marjorie Clapprood who hosted a morning show on WHDH for more than a year is let go to(she'd be rehired later in the spring to host a morning drive show on Atlantic's other AM station WRKO)...

March 8 : A familiar voice to Boston's CHR listeners(from the old HIT 103,WHTT days) DJ Dallas Kincaid comes back to Ardman's WZOU-94.5 to host 3-7 show and becomes an assistant PD. He replaced Tom Jeffries who bolted to the West Coast...

March 26 : After 6 months of working and wondering if and when the ax would fall, it finally happened...the new Infinity management cleaned house at a classic rock station WZLX-100.7 by firing morning drive-time DJ Annalisa, midday jock Jeff Gonzer and sports/news director Greg Madden...(Gonzer after a short stint at WHDH moved to do weekends and fill-ins at Greater Media's LA outlet KLSX)

April 9 : After 14 months as a program director at a struggling AOR outlet WCGY-93.7 in Lawrence(outside Boston) Steve Becker resigns. Becker got really frustrated of never being able to break into the Boston market...'CGY regularly gets 2% audience share in the Boston market in the 12+ ratings. The market leaders are 3 to 4 times that total...He'd be later replaced by Dave Cooper from a Bangor,Maine station..

April 21 : January-February-March ratings are released...WBCN,with the help of Howard Stern, rules 25-54 listeners, WXKS-107.9 moved into first place in the 12+ group and still has a hold of 18-34 crowd...

April 23 : Granum officially takes over WSSH-99.5FM. John Laton becomes GM for both Granum properties - WSSH and WBOS. Former 'SSH GM Jenny McCann decides not stick around with the new bosses and joins Atlantic Radio's Hot AC WBMX-98.5 in the same position...She spent 10 years at WSSH...

May 4 : Greater Media takes over light-jazz WCDJ-96.9FM at 1pm and kills that format by starting to simulcast its sister station WMJX-106.7FM... Greater Media's AM station WMEX-1150 is simulcasting 'MJX as well...

May 6 : A couple days later after the takeover of 96.9FM, Greater Media introduces a second country signal to the Boston market in less than 3 months known as "Country 96.9", or more officially as WBCS-96.9FM... The introduction took place around 4pm...
Greater Media also says that 'BCS would be commercial-free through July 4th...

May 10 : Atlantic Radio replaces Janet Jeghelian and Mike Cuthbert morning drive show with Marjorie Clapprood and Pat Whitley combo on its all-talk WRKO 680AM. Cuthbert is let go and Jeghelian takes over as the host of the afternoon(3-6pm) info show("Late Afternoon Edition") on a sister station WHDH...Also on 'RKO Tom Leykis takes over 10am-2pm from Herald's columnist Howie Carr and British talkshow hostess Victoria Jones... Jones originally replaced Gene Burns who moved to WOR in NYC in the fall of 1992 to host a national talk show...As some of you know, Boston doesn't take well to the outsiders and Jones was no exception. An eloquent talker with not much local/regional knowledge her schtick never caught on in the Boston market. Also, Gene's shoes were simply too huge to fill....

May 11 : Ardman's WZOU-94.5 decides that a long-running CHR war with Pyramid's CHR leader WXKS-107.9 is totally unwinnable and switches direction... 94.5 goes with rhythm-driven dance music. WZOU becomes known as 'JAM'N 94.5' caters to 18-29 crowd only. WXKS' prime target is women 25-54 who love to shop and spend, work out at fitness centers and go out to Top 40 clubs...

June 23 : Atlantic Radio(WHDH,WRKO,WBMX) based in Manchester,Mass, together with Stoner Broadcasting of Annapolis,MD and MultiMarket Communications of Hartford,CT, announces a merger and a formation of American Radio Systems Inc.

June 25 : WZOU-94.5 become WJMN-94.5(or Jamn 94.5 if you will..."Today's Hottest Hip-Hop and Dance")

July 12 : Another historic day in the Boston radio...Don Imus' syndicated morning radio shows makes its way to a troubled all-sports WEEI 590AM...'EEI also slightly reshuffles its midday and weekend line-up...

July 16 : Spring ratings are released. Pyramid's WXKS is #1 in every major rating category : 12+, 18-34 and tied for 1st in 25-54. WMJX-106.7 was tied for first with WXKS in 25-54....Also, Howard Stern has a full control of 12+ nighttime audience with 9.3 rating. WXKS was second with a distant 8.1...

July 26 : Long-time WBCN midday voice and a veteran of Boston radio Ken Shelton takes over morning drive on an Infinity sister station WZLX 100.7FM...WBCN night-time personality Bradley Jay who was bounced from his 7pm-12am shift by Howard Stern takes over Ken's 10-3pm slot at 'BCN...

September(while I'm going thru the best parts of Europe) :
Noble Broadcasting introduces "Talk America" network. Its Boston station WSSH 1510 is the flagship...Lame talk for lame listeners...

September 24 : An all-sports radio WEEI fires its controversial night-time host Jimmy Myers...Myers spent 2 years at 'EEI and often spoke his mind regarding racial issues inside the Boston Celtics on a Celtics-owned outlet...

September 24 : Eileen Prose is fired from "Boston This Morning" show on WHDH 850AM...Former WVBF(now WCLB) newsperson Karen Grace takes over 5:30-10am slot...

October 1 : WMJN's nighttime(7pm-12am) personality Kid Valentine who was with the station for 2 years leaves Boston to become an evening jock at Dallas' KHKS-FM...Overnight DJ Marc Clark takes over Valentine's spot..

October 3 : WMJN brings back a familiar voice to the Boston airwaves - John Garabedian's syndicated Sunday night show "Street Jam" begins to air on the station...

October 4 : Boston Herald columnist Howie Carr takes over 3-7pm slot on WHDH 850 replacing Janet Jaghelian's short-lived "Late Afternoon Edition". Jaghelian later announces her intentions to run for a senatorial seat against Ted Kennedy in next year's election.(She leaves the station in November). Gene Burns moves over to WRKO at night(5-hour tape delay). Pete Rose's syndicated show follows Burns' show at 11pm...

October 7 : Summer ratings are out....WXKS-107.9 still rules 18-34 and 12+. WMJX is in the sole possession of the top spot in 25-54...Imus makes WEEI 590 AM a contender in the morning drive. He doubles morning ratings..'EEI's overall ratings also zoom up...Ardman's WMJN also makes waves by jumping into second place behind crosstown rival WXKS in a 18-34 group(WJMN's main target)...

October 14 : Pyramid Broadcasting merges with Vestar Capital Investments, a NYC-based investment group. Vestar pumps much needed cash($125 million to be precise) into Pyramid. On the same day Pyramid acquires 2 FM signals(WAQQ and WAQS) in Charlotte and later adds another FM station in Buffalo...Pyramid is also actively seeking a second FM signal in Boston....

October 28 : Pyramid announces that its # 1 morning radio man at WXKS-107.9FM Matt Siegel will host a syndicated Saturday morning show starting in mid-January '94. The show will be heard in Boston,Chicago, LA. NYC signal was also ready to make a leap...SJS is the syndicator...

October 29 : Boston radio circles are buzzing about a potential sale of 5,000watt WEEI 590 AM to the owners of 50,000Watt WBZ AM 1030, Group W Broadcasting...Reported sales price is $2.5 million...

November 1 : Atlantic Radio(WRKO,WHDH,WBMX) officially becomes American Radio Systems operating 20 stations in markets such as Hartford,Buffalo, Rochester,NY Des Moines, Dayton,Louisville...ARS becomes a Top 20 broadcasting company...

December 13 : September-October-November Arbitrons are released... WBZ AM 1030 with "50,000 watts of power" knocks off WXKS 107.9FM from the top spot in the 12+ race...WMJX is still a winner in the 25-54 group and WXKS-107.9 dominated the younger 18-34 crowd...

December 16 : American Radio Systems names WHDH 850AM("NewsTalk 850")
its flagship and introduces a new morning drive show called "News All Morning"
hosted by a Boston veteran newsman Rod Fritz and Pat Caroll, who
most recently was morning anchor of sister station WRKO.

December 18 : I receive an e-mail note from one of the WBZ staffers
cautioning me not to label WEEI takeover by a 'BZ parent firm Group W as a done
deal in my regular posts to the AIRWAVES. WEEI deal was probably the
worst kept secret in town thanks to the same group of slightly misinformed
WBZ staffers who kept leaking 'rumors' to the two daily papers on regular
basis over the past 2 months.(All that 50,000 watts of power must be
pretty heavy stuff). The following day, a 'reliable' WBZ source is
quoted in the Boston Globe as saying that the DEAL will take place
around January 15th...If I had to rely solely on the newspaper reports
for my posts, I wouldn't post at all, guys...Relax and have some eggnog!

December 24 : Thanks to all who read, replied and had fun with it...
Thanks to Bill for letting me be part of this...Happy Holidays!

-Mark

This was recently discussed on the WELL (an online system, not call
letters).

About a year ago, Osgood ended his relationship with CBS Radio as an
employee. Now he sells "The Osgood File" to stations through his own,
CBS-blessed syndication. (Or maybe CBS still syndicates, I forget.)
The primary reason Osgood went independent was so he could make money
shilling for things like Nordic Track. CBS journalists are strictly
forbidden to endorse products.

Osgood has never sold like Andy Rooney. If he wanted wider exposure,
it would almost certainly have to have been by a route like this. You
may grumble about what's happening to American journalism, but I'm not
casting any stones. He's quality and if he feels he should be compen-
sated better, well, he's paid his dues, let him.

Aaron

## 2205. Osgood for Nordic Track

Newsgroup: rec.radio.broadcasting
Date: 1993-12-27 10:04:13 UTC
From: EK <70324.64@CompuServe.COM>
Message-ID: <2fmbut$fjr@vixen.cso.uiuc.edu>
Source record: 41743

While I haven't heard the Nordic Trak spot, I have heard Osgood do an advertisement on WCBS (CBS Radio) where he endorses Delta Airlines and I too thought that it was extremely inappropriate. The ad was done in a conversational style that closely mimicked his radio commentaries, without even a "The following is a paid advertisement" disclaimer... Your concern and surprise are well justified...

This, in my opinion, is hilarious. As soon as I read this, I tuned
right in. In fact, I am listening to it as I type. ::grin::

>[...]
>Two questions:
>1. Why would they do this? Do they want to get rid of every single
>listener, thus starting fresh/from the bottom up with a new format?

Well, from a business standpoint, two co-owned stations competing
with each other's audience limits the total combined audience that
the two stations can cover. The more people the two stations reach,
the more enticing the company is to advertisers looking for places
to spend their money.

>2. What will be the new format? Does everyone/anyone know what their
>plans are?

Something that won't draw listeners from Mix106. Hard rock, country,
and adult contemporary are three formats that seem to be doing well
these days (based on R&R ratings figures) and wouldn't compete too
much with a Mix station. I'd bet more on rock or country, since AC
might cross over with Mix a lil'.

All of this is based on speculation and a fair knowledge of how duopolies
operate.

-Me

Cp> 1. Why would they do this? Do they want to get rid of every single
Cp> listener, thus starting fresh/from the bottom up with a new format?

Yup. From what I've read elsewhere, some radio stations are
afraid that if they change directly from one format to another,
loyal fans of the old format will write letters to the FCC which
could cause problems at license renewal time.

So they play a bunch of garbage designed to drive the old
listeners away before starting the new format.

... Women are like software....You should have a backup!

Why? Someone should get a raise for thinking this up! If you do a sudden change of format, you do lose a lot of listeners -- that's a given. But this is going to get people talking -- word of mouth is still a powerful form of advertising. When they do announce a format, it will be a fresh start, and there will be a great opportunity for both publicity splash and huge listener draw in the early going.

Source record: 41747

and lo, there was much rejoicing among the people, as
cpaulus@clark.net (Chris Paulus) writes:

>Capital Broadcasting purchased the broadcast frequency of 104.3, formally
>WVRT, which is no longer on the air as of this writing. To recap, they
>simolcasted WWMX 106.5 (just up the dial.)
>
>As of midnight on Dec 20, they switched to a 5-song format, with each

>The 5 songs are:
>"You Light up my Life" -- DEBBIE BOONE (SP?), "Copa Cabana", some rap song,
>"Achie Breaky Heart", and a Def Leppard hit. This is all comeriial free.

i *thought* i was hearing ''copa cabana'' a little to much for one station...

>Two questions:
>1. Why would they do this? Do they want to get rid of every single
>listener, thus starting fresh/from the bottom up with a new format?

very possibly. is it possible that there is some requirement that they
broadcast *something*, *anything*?

>2. What will be the new format? Does everyone/anyone know what their
>plans are?

there is only one ''plan'' that they have released.

in keeping with the ''variety'' concept that 104.3 used to have, they will
pick five new songs on monday; 5 new songs on 3 jan, and the new format
will appear on 10 jan.

# 2210. Creative Radio Programming in Baltimore

Newsgroup: rec.radio.broadcasting
Date: 1993-12-27 10:04:55 UTC
From: ljason@wam.umd.edu
Message-ID: <2fmc07$fmh@vixen.cso.uiuc.edu>
Source record: 41748

So. The premise here in Baltimore, Maryland, is that there are
two leading "variety/Best-of-the-50s-60s-70s-80s-90s-18th-century" stations
in town: Variety 104.3 and MIX 106.5.
Maybe they were competitors, but now, the folks at 106 have bought 104.
The goal: get Variety listeners AWAY from 104 and onto 106.

***The first, tame, action: simulcast MIX 106.5 on *both* stations.

Effect: interesting, but most brain-dead Variety listeners
won't know the difference. haven't scared 104 listeners
away sufficiently, only confused them.

***The second, more drastic, action (in effect at this moment):
play, in random rotation, the SAME FIVE SONGS, from
December 20 1993 until January 10 1994, when 104.3
adopts a new format.

THE FIVE SONGS CURRENTLY IN ROTATION ON WVRT 104.3 FM-BALTIMORE:

1. "Copacabana" - Barry Manilow
2. Some cheesy-ass song by Def Leppard (not one of their "hits")
3. "Achy Breaky Heart" - Billy Ray Cyrus
4. a rap tune by the basketball player Shaquille O'Neal

and, of course...

5. "You Light Up My Life" - Debbie Boone

These five songs are being played in random rotation, without
commercial interruption, and have been since Monday, December 20th, 24
hours a day. Only broken up by a message saying "FORMAT UNDER CONSTRUCTION.
FOR VARIETY, TUNE TO MIX 106.5. NOW."

I have been listening now for about 4 hours.

You never know *exactly* what's going to come next.

5 new songs to be featured next week. Cassette copies available
upon severe behest.

Quoted From: cpaulus@clark.net (Chris Paulus)

>Capital Broadcasting purchased the broadcast frequency of 104.3,
>formally WVRT, which is no longer on the air as of this writing.
They are still giving their station I.D. as WVRT, Baltimore at the
top of each hour.

>The 5 songs are:
>"You Light up my Life" -- DEBBIE BOONE (SP?), "Copa Cabana", some
>rap song, "Achie Breaky Heart", and a Def Leppard hit. This is
>all comeriial free.
Wow .... what a mix .... Actually, it's pretty funny to tell
friends to listen and see how long it takes before they figure out
what 104 is doing.

Copa Cabana and Achie Breaky Heart are kind of growing on me. I
wonder if album sales of these songs are up in this area.

>Two questions:
>1. Why would they do this? Do they want to get rid of every
>single listener, thus starting fresh/from the bottom up with a new
>format?
They want to annoy every Variety 104.3 listener into switching to
Mix 106.5 ... now! I'm guessing that the new format is going to be
very different from the "Variety" format. Therefore, these
listeners probably would not continue to listen to 104.

>2. What will be the new format? Does everyone/anyone know what
>their plans are?
Dunno ... if they are completely changing their format, they are
probably trying to build up a music library and interviewing
personalities.

# 2215. 104.3 WVRT, Baltimore Update As of 12/27

Newsgroup: rec.radio.broadcasting
Date: 1993-12-27 10:05:23 UTC
From: NONE <S72UKOE@TOE.TOWSON.EDU>
Message-ID: <2fmc13$foe@vixen.cso.uiuc.edu>
Source record: 41603

At 12:00 AM on Monday morning, WVRT started playing five different songs to replace last week's five songs (I miss Copa Cabana and Achy Brakey Heart already). This week, the "cycle" totals 23 min. 45 sec.

Here are the Construction 104.3 "Songs of the Week" (Hope I have the titles right :-)

I Hope you Never Find Somebody Like You (Country)
(Classical {Synthesized})
In the Still of the Night (Hard Rock)
I've Got Friends in Lonely Places (Country)
YMCA (70's song)

They still have the same announcement in between each song:

3-4 SEC. SILENCE

SFX: CONSTRUCTION SOUNDS UNDER FOLLOWING

ANNCR: Format under construction at 104.3 FM ... If you want variety, tune to Mix 106.5 ... NOW!

3-4 SEC. SILENCE

Also, they are still inserting the same "WVRT, Baltimore" ID around the top of each hour.

What I wonder is: What about the people who took the old B-104's (before it was Variety 104.3 or Under Construction 104.3) advice when they said, "B-104 ... Lock it in ... and rip the knob off!"? I guess they have to listen to the "5 songs of the week" over and over and over and over...

It's funny ... some of my friends and I voulentarly listened to this "Construction" format last week every day. Every time we would get into the car ... we listened to and sung along with at least one cycle of the songs. I wonder if we will continue listening this week with the new songs. Anyone else actually listening to this crap?

Happy Holidays,
Jeff

## 2216. Decline of NPR and classical in Boston

Newsgroup: rec.radio.broadcasting
Date: 1993-12-27 10:05:28 UTC
From: seb@draper.com
Message-ID: <2fmc18$fog@vixen.cso.uiuc.edu>
Source record: 41604

The recent news of New York's WNCN switching from a long-time classical format merely reflects the general dismal state of affairs as affects classical and other non-commercial musical radio programming.

Take the Boston market. Here there are two major NPR stations (WBUR and WGBH) and one major commercial classical station (WCRB) on the FM dial. All three stations over the past few months have taken steps which result in the reduction of high-quality music programming.

Both WGBH and WCRB are implementing cost-cutting measures which result in their eliminating some locally produced high-quality programming in favor of satellite feeds and pretaped programs.

In the case of WGBH, this means the departure of one of their best DJ's (if that term is appropriate), Ellen Kushner, host of Caravan and Night Air, two original and innovative music programs that have been cancelled. Apparently their budgetary measures include reducing their personnel as well as their production expenses.

WCRB made the switch to satellite programming for at least some of their content a few months ago. Some listeners have described this as a "dumbing down" of the broadcasting to reach a larger audience. I reserve judgment on this, though I seem to detect a slightly different flavor to some of the between-music goings-on that I do not find pleasant.

As for WBUR, they have been steadily cutting back on their classical programming for years now, in favor of news and public affairs. I have no quarrel with this, for the station has been filling a large gap in the Boston radio market (which has lost an all-news station that was never really all-news to begin with, and now has two partial-news AM stations to make up for it). What's more, they carry a good deal of BBC news and ATC/NPR special events. It seems, though, that come early next year, there will be no classical music on WBUR at all, which would be a pity. Note that Peter Ross only recently joined WBUR as a classical jockey after departing from the streamlined WCRB.

Of course, WBUR has a good variety of locally produced programs of various forms of popular music (as does WGBH), and the station supports these programs well. Still, it is the unpopular forms of programming that need the support of noncommercial radio.

What is unsettling to me is that, before I became involved with public radio, I used to believe that it was "different" somehow (ha) - that it was supposed to have a mandate. There have been all too many "listener surveys" to figure out what to program at what time to bring in the callers with the pledge money. Is that what the charter of public

radio is supposed to be? At a time when classical stations are finding it harder to survive, as WNCN and WCRB have shown, it seems that NPR/APR/PRI/what-have-you should be picking up the slack. At least WGBH is substituting an overnight (taped) classical program for "Night Air", for what that's worth.

Ah, well, given the mostly bad news one reads in rec.radio.broadcasting about the brutal world of format changes and multiple ownership of radio outlets, I suppose this is inconsequential by comparison.

Since there seems to be a need for this article now, I'm posting it in advance of its forthcoming publication in the next issue of _The AFU Shergoldian_. It is well worth the reading for any serious student of urban folklore.

Please note that every single fact and quotation contained within the article is keyed (by a number enclosed within parentheses) to a list of documented sources included at the bottom of the article.

---

The affable host finished telling his last story of the day, wished a good night to all the children in his audience, and sang his familiar sign-off ditty. As the station went to a commercial break, he leaned back in his chair, sighed, and said to no one in particular, "There, that oughta hold the little bastards!" Unfortunately for the ill-fated host, the engineer was late in cutting to the station break, and the host's disparaging remark was picked up by the still-open microphone and broadcast into millions of homes. The station was immediately flooded with thousands of telegrams from outraged listeners, and the humiliated host was fired before the day was out, never to broadcast again. Disgraced beyond redemption, he lived out the rest of his life in obscurity and died, an impoverished drunk, some years later.

Everyone has heard this story. And almost everyone who has heard this story has a friend or relative (a parent or grandparent, perhaps) who remembers actually hearing the infamous broadcast. At the very least, most everyone knows someone who recalls the national uproar caused by the incident, or who remembers reading about the firing of the hapless host in the newspaper. Very few of the people who recollect this event could tell you the name of that unlucky host, however, or recall the year the notorious broadcast took place. And even if you managed to find a few individuals who could supply some of these particulars, you probably wouldn't get the same answers from any two of them. How is it that so few people can provide any specifics about such a widely-known incident? Why does anyone rarely pause to wonder about the missing details or puzzle over the variety of differing accounts of this episode? The answer is that this tale is one of the most well-known pieces of modern urban folklore --

it is a classic among urban legends, and legends don't stand on detail. A few among us wish to know more than that this tale of a kiddie host gone wrong makes a good story, though. There are still a few intrepid souls who want to know whether this time-honored anecdote of broadcast naughtiness has a factual basis, or whether it is nothing more than the product of a mischievous imagination, preserved and handed down from generation to generation.

In investigating the authenticity of this story, we must start with what little detail we have. Although we may not be able to place the date of this event with any certainty at the outset of our quest, the fact that it pertains to radio makes narrowing our timeframe to the three decades of radio's heyday (1920-50) seem a reasonable choice. Given the myriad of children's shows that were broadcast by hundreds of different stations throughout America over that thirty-year period, however, we have quite a formidable task ahead of us. If we could start our search with a few specific names, we would at least have a manageable starting point from which to commence our investigation.

The outlook is not promising. This story seems to have been attributed, at one time or another, to virtually everyone who ever hosted a show for youngsters on radio _or_ television. Adults who grew up in America during the years of radio's prominence between the wars tend to name whichever local children's host they listened to or were most familiar with as the culprit. Those who grew up after television became a fixture in American households are likely to identify one of the many ubiquitous kiddie TV personalities as the guilty party. Folklorist Jan Harold Brunvand, in one of his popular books of urban legends, illustrates this phenomenon perfectly. After devoting a few pages of his book to letters debunking the notion that this incident took place on a "Bozo the Clown" television show, Brunvand offers his own perspective on the matter: "To tell the truth, I always thought that the host of my own favorite kids' _radio_ show, 'Happy Hank' (heard in Lansing, Michigan, mid-1940s), had spoken these naughty words into a live mike." (1) Although the original identity of this celebrated host has become clouded by the passage of time (and by the introduction of numerous additional suspects as the story was passed down into the television age), there is one name above all others that has historically been associated with this incident: that of Don Carney, known to millions of prewar youngsters as "Uncle Don".

As radio rapidly gained in popularity during the early 1920's, stations began aiming more and more programming at children, leading to rise of numerous radio "uncles", "aunts", and "brothers", broadcasters who related stories and songs and acted out skits with regular characters they invented for a largely preschool audience. These shows typically aired in the hours after school, on Saturday mornings, and in the early weekday evenings. (2) By far the longest-lived and most well-known of these children's hosts was "Uncle Don" Carney of Station WOR, who broadcast his show throughout a seven-state area, including metropolitan New York, six days a week for twenty-one years. (3)

Uncle Don, born Howard Rice in 1897, hailed from St. Joseph, Michigan. He left home to join the circus as an acrobat, but he ended up in vaudeville. There, at age fifteen, he first started using the stage name of Don Carney while performing stock Irishman parts. He traveled throughout the Midwest, performing in various stock and repertory companies, before gaining minor notoriety as a trick pianist who could play the piano while standing on his head. (4)

Don Carney eventually made his way to New York, where he obtained a job at station WMCA as an announcer and entertainer. He soon left WMCA to join WOR, and there he worked as a vocal handyman until the day a toy manufacturer came to the station looking for a children's show to sponsor. Mr. Carney put together a show, passed the audition, and launched his career as the beloved kiddie host "Uncle Don". Uncle Don's regular show made its debut in September 1928, from 6:00 to 6:30 P.M., and continued in that time-slot until February 9, 1949. His program aired six nights a week, Monday through Saturday, and at various times he also read the funnies to his audience of youngsters on Sunday mornings. His program was a combination of original stories and songs, jokes, advice, personal messages, birthday announcements, club news, and lots of commercials. (6)

If we begin our investigation with the career of Uncle Don, we quickly find that whether or not this well-known event really took place, its alleged repercussions obviously did not. Uncle Don clearly was never fired, over this incident or anything else. He broadcast day in and day out, six and sometimes seven days a week, starting in 1928 and ending only when he finally stepped down from daily broadcasting in 1947. Even then, he continued on with WOR as a disk jockey devoted to playing children's records before moving to Miami Beach in 1948 and hosting a weekly children's show on Station WKAT until his death in 1954. (7) The claim that Uncle Don's career came to any sort of premature end is patently untrue, and could only be advanced by someone who knew little or nothing about Uncle Don or children's radio in general. The simple truth is that he hosted the same children's show, on the same station, for twenty-one continuous years. Some faithful adherents to this version of the legend claim that Don Carney was meted out a lesser punishment -- that he was merely suspended for a while, or fined, or even replaced by a sound-alike for a period of time -- but there is simply no evidence of any kind that Uncle Don was ever penalized for anything he said as an on-air radio personality.

What if we proceed from the assumption that Uncle Don somehow managed to avoid paying a price for his blunder? Perhaps he was too popular a personality -- and therefore too valuable a commodity -- for WOR to take off the air, no matter how much of a scandal he caused with his unfortunate lapse. Even if the station decided not to take any action against Uncle Don, surely the event would have been reported by the media. Such a gaffe, committed by the most popular children's host in the history of radio, couldn't help but make the news, but it didn't. Not one contemporary account of Uncle Don's involvement in the "bastard" incident appeared in any major news or trade publication of the day. The only articles linking Uncle Don to the tale do not report it as recent news, but merely recount

the incident much later as an occurrence that took place at some indeterminate time in the past. Even articles contemporaneous with Uncle Don's career describe the story as apocryphal, as can be seen in this excerpt from an article which appeared in _Newsweek_ in 1939, at the mid-point of Uncle Don's career:

" . . . [Uncle Don] would part with plenty to be rid of the persistent but apocryphal tale that one day, when he mistakenly thought he was off the air after a particularly luscious cluster of cliches and commercials, he sighed and said: 'There! I guess that'll hold the little bastards.'" (8)

An even earlier debunking of this legend appeared in an article written by Alton Cook, Radio Editor of The New York World Telegram, in the March 2, 1935, edition of that newspaper:

"The most famous chapter in WOR history concerns Uncle Don. The story goes that as he finished his program for the kiddies he muttered to himself, 'There, I guess that will hold the little so-and-sos until tomorrow.' Unfortunately, the microphone had not been disconnected and the remark went out on the air.

"The story has been told and retold but the whole thing is untrue. A Baltimore columnist made it up one dull afternoon and used Uncle Don's name because these programs were not on a Baltimore station." (9)

Even if we take these samples to be nothing more than denials made out of professional courtesy to a fellow media figure, they clearly demonstrate that the Uncle Don myth was already old enough to have been "told and retold" (and refuted) as early as 1935, and anyone who places the incident at a later date is therefore either lying or mistaken. In fact, since the same story was reported in _Variety_ (about a _different_ kiddie host) as early as 1930 (10), any involvement by Uncle Don in this incident would have had to have taken place before then (unless, of course, one wants to resort to the ridiculous proposition that two different hosts accidentally uttered the very same phrase into an open microphone at two different times).

But what about all those millions of children and adults who claim to have been listening to the actual broadcast when Uncle Don said those words? They couldn't all be wrong, could they? How could so many people all come up with the same story if it weren't really true?

The problem is that everyone _doesn't_ tell the same story. Accounts of the incident vary widely, even in such fundamental details as what was said, who said it, when it was said, and what the subsequent consequences were. Reports from persons who claim to have heard the infamous live broadcast are so disparate and contradictory as to cast doubts on all of them. What are we to make of "earwitness" accounts such as the one from a woman who claims not only to have heard, but to have actually _witnessed_

the broadcast take place? According to her, it happened at the New Jersey Building of the New York World's Fair in 1940, and "the audience almost pulled down the building when he made the remark." (11)

Her testimony is unquestionably in error, as we have just seen that Uncle Don's alleged remark was already old news by 1935. Maybe she was just a little confused. Maybe she really did witness what she described, but she got the year mixed up. It really happened earlier, before 1935, and she just forgot exactly when over the course of time. Her description of _where_ this all occurred is very specific, though, so there's little chance of her being confused about that. And Uncle Don did broadcast his shows from the World's Fair grounds in New York for a period of time, so that part of the story checks out. The trouble is, Uncle Don didn't start broadcasting from the fairgrounds until 1939. (12) Her account either places the event as happening ten years _after_ it was described in _Variety_ (and five years after it was mentioned in a New York newspaper), or else it has Uncle Don holding his show in a complex of World's Fair buildings several years _before_ they were constructed. And even if the all the details worked out, there would still be no rational explanation as to how Uncle Don could call children 'bastards' during a live broadcast, in front of a live audience, at a World's Fair, yet keep the incident out of the newspapers -- much less remain on the air.

The contradictory nature of alleged personal accounts of the broadcast is further demonstrated by this example from Sidney Skolsky's syndicated column "Hollywood Is My Beat" of July 24, 1957:

"I've just run across your reference to Uncle Don's classic blooper on radio and your bid for the exact story from a reader, who had some connection with the incident," writes Oliver M. Sayler.

"It was back in the winter of 1928-29. The station was WOR. I was in the fifth year of my weekly book and play review, 'Footlight and Lamplight.' One of Uncle Don's programs for children immediately preceded my time on the air. I had no contact with it except, when occasionally, other studios were occupied and I was asked to broadcast in the studio he had used.

"On this particular occasion, I was to follow Uncle Don on the spot, and I was standing by in his studio, waiting for the late Floyd Neal to sign him off, give the station break and introduce me. Uncle Don twittered his usual cheery wind-up, and then, not realizing that I was to follow on the same microphone, and thinking he was off the air, blurted out: "There, I hope that'll hold the little b_____.'

"Well, he wasn't off the air! The nation-wide reaction to his blunt statement raised a furor that impaired his celebrated program. Only after a 10-year atonement and the spending of a fortune on his part to conduct a children's entertainment

concession at the N.Y. World's Fair in 1939, did he manage to return fully to radio's good graces. But he never again achieved his former vogue." (13)

On the surface, this would appear to be a fairly credible account of the incident in question. It comes from someone who purports to be in the broadcasting business, working at the same station as Uncle Don, and it describes a fairly specific time and place of occurrence (even if it does rely on the amazingly fortuitous circumstance of the claimant just happening to be in precisely the right spot, sharing the very same microphone as Uncle Don, on just the right day to witness the event.) Moreover, the alleged timing of the events predates the 1930 _Variety_ article. What then are we to make of the fact that every one of Mr. Sayler's comments about the backlash that followed in the wake of this broadcast is wrong? How could there be a "nation-wide reaction" to an incident that wasn't reported in a single major newspaper, entertainment magazine, or industry publication? How could this incident have "impaired [Uncle Don's] celebrated program", when during the very same period of time (1928-29), Uncle Don's show was chosen as one of radio's "blue-ribbon programs," and Uncle Don hauled in an astronomical $75,000? (14) If it took a "ten-year atonement" (starting in 1929) for Uncle Don to "return fully to radio's good graces," why did Radio Guide hail him as "saint, oracle, and pal to 300,000 children" in a 1931 article? (15) If Uncle Don "never again achieved his former vogue," why was he appearing on over a dozen programs a week and pulling down in excess of $90,000 a year at the height of the Depression? (16) And why would the Mutual Broadcasting Network elect to give a disgraced kiddie show host an unprecedented nationwide spot on their network in 1938? (17)

Furthermore, since Uncle Don didn't even begin broadcasting his kiddie show until September of 1928, this incident would have had to have occurred within months of the beginning of his career. It is wildly improbable to think that _any_ host could have survived such an incident with his career intact, much less a fledgling broadcaster in his first few months on the job. (And how is it that Uncle Don "never again achieved his former vogue" if he only been on the air a short time before everything came crashing down on him? He must have made _quite_ an impression in the few months he was on the air before letting loose with his celebrated faux pas!) As veteran radio writer Bill Treadwell offers in the chapter he devotes to this story, "If Don had really said this, he would surely have been removed from the air (which he definitely wasn't). The trip . . . to the carnival circuit would have been an overnight one . . ." (18) Another point beyond belief is how _Variety_ could recount the same events a year later, yet attribute them the wrong host and describe them as having taken place "a few weeks ago". (19) Mr. Sayler's "eyewitness" account, like so many others, is so overwhelmingly wrong in so many details that it simply cannot be considered anything more than a complete fabrication.

Some people have tried to point at Uncle Don's relatively brief stint on the Mutual Broadcasting System as evidence that his popularity

declined and his broadcast career was curtailed as a result of this incident. The claim is nothing more than an attempt by a few close-minded believers to grasp at the scant remaining straws. The 1930 _Variety_ article establishes that year as a cutoff point for this event to have occurred. Since Uncle Don did not join the Mutual Broadcasting Network until 1938 (20), it's hard to imagine how an incident that took place at least eight years in the past could suddenly have risen like a phoenix to mar a career that had made it through the original occurrence unscathed and enjoyed tremendous success in the ensuing years.

The truth is that Uncle Don was honored by being given an unprecedented (for a kiddie host) national spot on Mutual in 1938, and his show was taken off the network a little over a year later (21) for reasons that had nothing to do with a decline in his popularity, low ratings, or any connection to the legendary "bastard" incident. The decision by Mutual to stop carrying his show nationally was made because:

o The lack of brand products aimed at young children and marketed on a national basis made finding sufficient sponsorship to keep the show profitable a continual difficulty.

o Broadcasting to a very large audience dispersed over a wide geographical area across several time zones fouled up the birthday mailings, hiding of presents by conspiring mothers, and other popular features of the show.

o The popularity of Uncle Don's show was heavily dependent on local publicity and local interest (including his frequent and numerous personal appearances before listeners) that just could not be sustained with such a vast audience. (22)

What have other researchers had to say about this topic? Given the tremendous number of articles, books, and encyclopedias devoted to radio that have been written over the years, some intrepid reporter must have turned up something by now. Unfortunately for the faithful, it doesn't appear that anyone has. Buxton and Owen, in their reference work on radio, have this to say about the story: "None of it is true, even though you can find people today who swear they heard it . . . It simply never happened." (23) Robert St. John's encyclopedia of radio and TV broadcasters labels the tale the "most apocryphal story in radio". (24) John Dunning's encyclopedia of radio maintains that the incident is "unsubstantiated" (25), and J. Fred MacDonald's book on radio programming asserts that "[Dunning] is correct to argue that Uncle Don, much maligned with this rumor, did not utter the infamous profanity." (26) Even Uncle Don's obituary from the The New York Times reported the incident as "an apocryphal tale". (27)

More importantly, those persons who unquestionably know the real truth report that the story is indisputably untrue. Uncle Don himself "spent most of his professional life denying [the] story", and "swore in every interview that it never happened." (28) Bill Treadwell, long-time aide to Uncle Don and a writer on his show, devoted a entire chapter to the

incident in his 1958 biography of Don Carney. His simple revelation: "It never happened!" (29) Lest one jump to the conclusion that Mr. Treadwell was simply seeking to protect the reputation of his former close friend and employer, it should be noted that he deliberately waited until after Don Carney had died before publishing the biography, as Don led a "Jekyll-Hyde existence", was "a guy who dipped into . . . many fleshpots" (30), and was "a real heel when it came to the multitudinous women in his life." (31) The book did not come out until four year after Don Carney's death, because what Treadwell wrote was "true and could not have been written while Don Carney and some of his wives lived." (32) If Treadwell had no qualms about exposing some of the more unsavory aspects of Uncle Don's private life, he would have had little reason to gloss over a thirty-year-old story that everyone already believed anyway.

But if Uncle Don isn't the source of the infamous quip, why has his name become so inextricably intertwined with this story? A simple answer lies in the fact that Uncle Don was one of the first -- and certainly the most popular -- children's hosts of his day. He had the longest run of all the radio "uncles" played by the same man (Uncle Wip of Philadelphia was on the air for a longer period of time, but his character was voiced by a succession of different broadcasters) (33), and he had a larger audience by far (extending into eighteen different states at one point) (34) than any of his fellow radio "relatives". True or not, urban legends tend to gravitate to the most well-known examples as their subjects, and just as Johnny Carson is reported to have been involved in all the outrageous stories of TV talk show mishaps over the last thirty years, so Uncle Don would have been a natural target for a scandalous tale about a kiddie show host. As Treadwell says, "The story has been told so often even his close friends believe it," (35) so "who can blame the public for not wanting to forget a bit of its folklore?" (36)

Uncle Don himself always maintained that the story was started by one of his numerous rival uncles. (37) Alton Cook's 1935 article suggests that the story was made up on a slow news day by a reporter for a Baltimore newspaper, who used Uncle Don's name because his show was not carried in the Baltimore area. (38) Buxton and Owen offer the same origin for the story (39), but neither source gives the name or even the approximate date of the newspaper in question. The original article, although apparently a complete fabrication, would be interesting to see (if it exists) to determine whether it predates any of the known newspaper accounts of this story, or the linking of Uncle Don's name to them.

The whole story might have died down after Uncle Don's death, or at least been less frequently associated with his name, were it not for a series of popular "blooper" records that rekindled public interest in the legend. During the mid-50's, Kermit Schafer compiled several albums of alleged boners, fluffs, and outtakes from radio and TV, calling them "Pardon My Blooper". The record jackets claimed that the events contained within were "actually recorded" at the time of their happening. Treadwell describes the inevitable results:

"Uncle Don got his place in the sun on Volume 1 -- after a few words from the announcer which set the stage, Don was cut in saying his usual 'Good-night' to the kiddies. There was a moment of silence, and then a muffled voice off mike muttered, 'That oughta hold the little bastards.' Only it wasn't Don's voice!" (40)

Schafer had fabricated an "actual recording" by adding the infamous tag line onto an genuine clip of Uncle Don closing his show. Even when described as a "re-creation" rather than an "actual recording", Schafer's record was just as disingenuous, for one cannot "re-create" an event that never took place. The voice heard in the infamous tag line is not that of Uncle Don, the words ascribed to Uncle Don on the track were never spoken by him, and the account was not based on any real incident. There is no actual recording of Uncle Don's alleged "blooper" in existence; the Schafer record was produced solely through studio trickery. Although the Kermit Schafer records helped to propagate the story to yet another generation of gullible young minds, the placing of a fabricated account on a phonograph record no more proves the incident true than Hollywood biographies of George Washington demonstrate that he really did chop down a cherry tree. Both examples are simply dramatizations based on well-known myths, nothing more.

Even if Uncle Don was not involved in the incident, what about the possibility that some other host actually was? Although the exact origins of the story may always remain unclear, it evidently dates back to the earliest days of radio, and even then it was told about a multitude of hosts and not one personality in particular. Carney's biographer claims to have first heard the story in 1931 (41), and Uncle Don himself said to have heard the tale told about Graham McNamee back in the late 1920's. (42) Buxton and Owen report that the same story was attributed to two other radio performers of the time: "Uncle John" Daggett of KHJ in Los Angeles, and John "Big Brother" Keough of KPO in San Francisco. (43) Glenhall Taylor relates that he first heard the anecdote told of John Keough in the late 1920's, and only later heard it ascribed to Daggett and Carney. (44)

The true origins of this anecdote are made even murkier by a mysterious little article that appeared in the April 23, 1930, issue of _Variety_:

His Error!

"A wisecracking radio announcer in a Philadelphia station lost his job about two weeks ago as a result of a stern reprimand of the station by the Federal Radio Commission. Announcer had concluded a bed-time story for children and thought the power was off. For the benefit of the control room he added: 'I hope that pleases the little b_____.'

"This went out over the air. Within 10 minutes several telegrams of protest, among them the Federal Radio Commission, had arrived. Others came later in bundles." (45)

At first glance, this items looks as if it could possibly be the actual source of the "bastard" legend. It is the only article to appear in a major publication and (claim to) report the event at the time it happened. Upon closer inspection, however, one notices that the wording reveals several hallmarks of a typical urban legend. There is a curious lack of detail for an event that supposedly happened only "two weeks ago": no specific host is named, no particular radio station is identified, and no date is provided, even though the story is supposedly quite recent. Just enough information is supplied (an approximate date of "about two weeks ago" and the name of a city) to lend the story an aura of authenticity. Moreover, telegrams of protest allegedly arrived "within 10 minutes", as if everyone listening to the broadcast (including the Federal Radio Commission, who apparently had the facilities and staff to monitor every single program on the air) lived within yards of a telegraph office and had nothing better to do than pop out the door and dash off a telegram to complain. And the date of the article doesn't square with the accounts of numerous radio veterans who profess to have heard the story back in the 1920's. (46)

Even though the article clearly isn't about Uncle Don, and has all the appearance of yet another retelling of an already well-traveled story, isn't it possible that the events described therein really did occur? Radio veteran Ted Husing (47) and writer Llewellyn Miller (48) both identify the host alluded to as Uncle Wip of Station WIP in Philadelphia. Unfortunately, both also report that Uncle Wip (or more specifically, as Miller puts it, "one of the many embittered men who have been Uncle Wip since the program started in Philadelphia in 1921") (49) didn't utter the infamous words, and there is no other newspaper account of _his_ being fired, either. And there it stands.
